stage, when paid quarterly in advance, five cents.

For "The Friend."

Esquimaux Dog Teams.

From Dr. Hayes' "Open Polar Sea," we con-
pose the following account of the dog teams so
essential to the traveller in the icy regions of
Greenland—and not less so to the native hunters.
"Oct. 16. I had to-day a most exhilarating
e. Jensen was my driver, and I have a superb
n-out,—twelve dogs and a fine sledge. The
imals are in most excellent condition,—every
e of them strong and healthy; and they are
y fleet. They whirl my Greenland sledge over
ice with a celerity not calculated for weak
e. I have actually ridden behind them over
measured miles in twenty-eight minutes; and
about stopping to blow the team, have returned
the track in thirty-three. We harness the
imals each with a single trace, and these traces
of a length to suit the fancy of the driver—
longer the better, for they are then not so
ily tangled, the draft of the outside dogs is
re direct, and if the team comes upon thin
and breaks through, your chances of escape
in immersion are in proportion to their distance
ou. The traces are all of the same length,
hence the dogs run side by side, and, when
perly harnessed, their heads are in a line. My
es are so measured that the shoulders of the
imals are just twenty feet from the forward part
the runners.

The team is guided solely by the whip and
e. The strongest dogs are placed on the out-
e, and the whole team is swayed to right and
e according as the whip falls on the snow to
one side or the other, or as it touches the lead-
dogs, as it is sure to do if they do not obey
gentle hint with sufficient alacrity. The voice
e the whip, but in all emergencies the whip is
only real reliance. Your control over the
team is exactly in proportion to your skill in the
use of it. The lash is about four feet longer than
the traces, and is tipped with a 'cracker' of hard
wood, with which a skilful driver can draw blood
if inclined; and he can touch either one of his
imals on any particular spot that may suit his
purpose. Jensen had to-day a young refractory
imal in the team, and, having had his patience
completely exhausted, he resolved upon extreme mea-
sures. "You see that beast?" said he, "I take a
good deal out of his ear;" and sure enough, crack went
the whip, the hard sinew wound round the tip of
the ear and snipped it off as nicely as with a
pair of scissors.

"This long lash, which is but a thin tapering
strip of raw seal-hide, is swung with a whip-stock
only two and a half feet long. It is very light
and is consequently hard to handle. The peculiar
turn of the wrist necessary to get it rolled out to
its destination, is a most difficult undertaking. It
requires long and patient practice. It is the very
hardest kind of hard work. The dogs are quick
to detect the least weakness of the driver, and
measure him on the instant. If not thoroughly
convinced that the soundness of their skins is
quite at his mercy, they go where they please. If
they see a fox crossing the ice, or come upon a
bear track, or 'wind' a seal, or sight a bird, away
they dash over snow drifts and hummocks, prick-
ing up their ears, and curling up their long bushy
tails for a wild, wolfish race after the game. If
the whip-lash goes out with a fierce snap, the ears
and the tails drop, and they go on about their
proper business; but woe be unto you if they get
the control. I have seen my own driver only to-
day sorely put to his metal, and not until he had
brought a yell of pain from almost every dog in
the team, did he conquer their obstinacy. They
were running after a fox, and were taking us
toward what appeared to be unsafe ice. The wind
was blowing hard, and the lash was sometimes
driven back into the driver's face,—hence the
difficulty. The whip, however, finally brought
them to reason, and in full view of the game, and
within a few yards of the treacherous ice, they
came first down into a limping trot, and then
stopped, most unwillingly. I have had an adven-
ture with the same team, and know to my cost
what an unruly set they are, and how hard it is
to get the mastery of them.

"Wishing to try my hand, I set out to make a
turn round the harbor. The wind was blowing
at my back, and when I had gone far enough, and
wanted to wheel round and return, the dogs were
not so minded. There is nothing they dislike so
much as to face the wind; and, feeling very fresh,
they were evidently ready for some sport. After
much difficulty I brought them at last up to the
course, but I could keep them there only by con-
stant use of the lash; and since this was three
times out of four blown back into my face, it was
evident that I could not long hold out; besides,
my face was freezing with the wind. My arm,
not used to such violent exercise, soon felt almost
paralyzed, and the whip-lash trailed behind me
on the snow. The dogs were not slow to discover
that something was wrong. They looked back
over their shoulders inquiringly, and, discovering
that the lash was not coming, they ventured to
diverge gently to the right. Finding the effort
not re-sisted, they gained courage and increased
their speed; and at length they wheeled round
round, turned their tails to the wind, and dashed
off on their own course, as happy as a parcel of
boys freed from the restraints of the school-room,
and with the wild rush of a dozen wolves. And
how they danced along, and barked and rejoiced
in their short-lived liberty!

"If the reader has ever chanced to drive a pair
of unruly horses for a few hours, and has had oc-
casion to find rest for his aching arms on a long,

steep hill, he will understand the satisfaction
which I took in finding the power returning to
mine. I could again use the whip, and managed
to turn the intractable team among a cluster of
hummocks and snow-drifts, which somewhat im-
peded their progress. Sprigging suddenly off, I
caught the upstander and capsize the sledge.
The points of the runners were driven deeply into
the snow, and my runaways were anchored. A
vigorous application of my sinew-tipped lash soon
convinced them of the advantages of obedience,
and when I turned up the sledge and gave them
the signal to start they trotted off in the meekest
manner possible, facing the wind without rebel-
ling, and giving me no further trouble.

"My teams greatly interest me, and no pro-
prietor of a stud of horses ever took greater satis-
faction in the occupants of his stables than I do
in those of my kennels. Mine, however, are not
housed very grandly, said kennels being nothing
more than certain walls of hard snow built up
along side the vessel, into which the teams, how-
ever, rarely choose to go, preferring the open ice-
plain, where they sleep, wound up in a knot like
worms in a fish-basket, and are often almost buried
out of sight by the drifting snow. It is only
when the temperature is very low and the wind
unusually fierce that they seek the protection of
the snow-walls."

For "The Friend."

The decline now so apparent in our religious
Society, from the simplicity and spirituality of
the Gospel, which marked its earlier days, cannot
fail to be cause of sorrow to all among us who
love the Truth as it is in Jesus, and it behoves all
such to search narrowly for the cause. The sim-
plicity of love, of faith, of obedience, and of trust,
which must ever accompany true spirituality, were
strikingly exhibited in the lives of our early
Friends. Having found that within, which they
had been seeking without in the empty forms and
ceremonies of religion, they became a spiritually-
minded people; their attention was turned unto
Him who first loved them, and feeling His love
shed abroad in their hearts, they had faith in His
power to enable them to become conquerors
through Him who died for them, and in this faith
they stumbled not at His requirements, though they
involved deep suffering, but in simple obedience
to these they found peace, and knew their trust
to be centered in Him whose servants they were.
Thus they became as a city set on a hill which
cannot be hid: the light which shone through
their daily walk, shed its radiance on those around
them, and many were drawn to examine into the
truth of those principles which produced such
fruits. How is it now with us who bear their
name? Where are the evidences of our love to
the Author of all good? Are these at all com-
mensurate with the blessings received? As "faith
without works is dead," so is love also. We may
persuade ourselves we love the same Lord whom
they so faithfully served, we may acknowledge
Him as our Redeemer, but if we do not keep His
commandments, and are not willing to deny our-
selves and to suffer for Him who laid down His
precious life for our sakes, we are not of the num-

ber who truly love Him. We may have faith in His power to save us from our sins, but if we do not receive Him in the way of His coming, we frustrate His grace and virtually deny His presence. If we obey not His voice as heard in the secret of the heart, we cannot be numbered with His sheep. If we walk by sight, by the natural understanding, we are not children of the light, and though we may be able to appear fair outwardly, unto men, the Searcher of hearts cannot be deceived. How important, then, that we seek to have the eye placed singly upon Him, and in sincerity of heart and of purpose, yield child-like unquestioning obedience to His holy will. The Good Shepherd would not fail to fulfil His promise to go before His sheep, if there was a willingness to follow Him in the way of His leadings, though it be into paths these have not known, and which, unaided by Him, they could not tread. How much would this simple following of our Divine Master do for us individually and as a Society. How it would set at naught those reasonings which destroy the life of religion and mar and hinder the Lord's work in our own hearts and in the church; and it would also cast out that will and wisdom which lead either into creaturely activity or set at rest in a formal belief in and support of our christian doctrines and testimonies. What works of faith and labors of love would be manifest, and all performed in that fear which is as "a fountain of life, to depart from the snares of death." The fear of man, that potent snare to discourage and turn aside from the path of unreserved faithfulness, would lose its power, in the full recognition of the solemn truth that it is to our own Master we stand or fall, and that He alone can hold us up. Then the query which, upon the presentation of any duty, would find place in the heart would not be, How will others regard this? but, Is it the will and requiring of my heavenly Father? By this simple dedication in humility of soul to Him, a growth in grace would be experienced,—the whispers of the still, small voice would become more and more perceptible to the awakened soul, until there would be a qualification to understand experimentally the language of the Most High through the Psalmist, "I will guide thee with mine eye." As a loving devoted child needs not to have the wishes of his parent always expressed by words, but can often comprehend the slightest intimation, so the humble, watchful, faithful children of our heavenly Father will be sensible of His will and requisitions, though very gently communicated; and as these are cheerfully complied with, without reasoning with flesh and blood, the truth of the language, "God loves a cheerful giver," will be sealed upon the heart by that peace which only He can give; while the humbled, contrited soul will return unto Him all the praise. This willingness to run the way of His commandments, differs from that creaturely activity which would choose its own path; the latter proceeds from a desire to be doing, and from an unwillingness to wait for the arisings of light, while the former is the result of knowing the heart enlarged by the constraining love of Christ, joined to an unwavering belief and an abiding sense that of ourselves without Him, we can do nothing. It is very important that individuals and the church distinguish between these, that one may be watched against and the other cherished; for one brings death, the other life; a life which can only be nourished by daily waiting upon Him who declared, "It is the Spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit and they are life." It was this entire dependence upon their Divine Master, and unreserved faith-

fulness and childlike obedience to Him which made our early Friends living members of His church, and lights in the world. If, then, we would witness a restoration to the simplicity, spirituality and dedication of former days "let us walk by the same rule, let us mind the same thing." E. A.

Eighth Month, 1867.

A Mississippi Slave Family.

N. L. Brakenau, of the Methodist Episcopal Church, preacher in charge at Handsborough, Mississippi, describes a marked character in his church, named Father Baeuchus, an intelligent freedman, over seventy-two years old, a church officer, and Secretary of the quarterly Conference. "During the war he was arrested and expected to be hung, but the tender-hearted 'Vigilance Committee' commuted the old man's punishment to stripes; and in his age and feebleness extreme, he was stripped and brutally flogged. And to this day it is not known for what he was whipped, except that it was rumored that he had expressed the belief that the war would end slavery."

He had been married in early life, he being owned by one family and his wife by another, but all living in Vicksburg. After a time his wife undertook to support herself and three children, besides paying her master \$120 a year. She rented a cabin, and beside its door kept a small fruit-stand, and made and sold pies, cakes and ice cream, and took in washing and ironing. At the end of the first year, finding that she had a snug little sum after paying all expenses, she conceived the idea of buying her freedom, and in seven years had paid \$2,500 for herself and her children. But then she could no longer remain in Mississippi. So, in 1848, parting from her husband, she removed to Cincinnati. The oldest child soon died, but the two daughters were sent to school and carefully educated. The story closes thus:

Years passed, the war came, emancipation followed, Union and liberty triumphed, and with returning peace the mother and daughters, now grown into womanhood, returned South, sought out and found the father here, where they are now living, free and happy, after twenty years' separation. The two daughters are now teaching a freedmen's school and a Sabbath school."—*N. Y. Even. Post.*

For "The Friend."

The writer of the following letter is a woman who, in addition to teaching large classes of children and adults among the freedmen of Florida, has exerted herself to promote the interests of that class in other respects, and to guard them against being imposed on in their contracts with the whites. Her courageous interference in this way has exposed her to much obloquy and even to threats of violence. To such an extent were these threats made, that the freedmen in that vicinity offered to detail six of their number as a guard to protect herself and premises. But believing that she was in the line of duty, and preferring to rely upon Divine Providence for protection, she declined the offer.

Palatka, Fla., July 11th, 1867.

I write to inform you of the disposition of the articles sent me at your suggestion, by the Friends' Freedmen Aid Society of Philadelphia, and also to thank you for the kind effort in behalf of my charge, the freed people of Palatka, Fla.—about of the clothing was given to my school—about eight aged women had a liberal supply from it. The books I shall send into the interior toward Ocala, where is a large body of freedmen who

are trying to have a school. The "British World man" is giving great pleasure to the people here and I hope some profit; I shall send some of these papers also with the books.

The garden seeds came most timely; I had just received forty receipts for homesteads I had entered about Palatka, for the freedmen, and had the seeds to give them, together with their receipts. Nearly all the seeds will be planted in these lands the last of August—the time for making winter gardens. Quite a number will raise a crop of sweet potatoes and peas this summer on their land. Not one is able to go on his land at once and devote his whole time to it, for since their freedom the freedmen of this place have been working for bread and meal and scanty allowance of clothing, and that too, from sunrise till dark; getting nothing in advance often finding themselves in debt to their employer at the end of the term of service. It has had depressing effect upon them, but now they have become owners of land, I think they will work of this condition in another year.

Very truly yours,

CHARLOTTE L. HENRY.

For "The Friend."

Having recently met with a printed copy of one of the London Epistles of last century—a practical character of the exhortations it contains and the brevity with which they are expressed seemed to me to render it worthy of being again brought to notice.

An Epistle from our Yearly Meeting, held in London, by adjournments, from the 20th of 17th month, 1771, to the 25th of the same, inclusive.

To our friends and brethren, at their next Yearly Meeting, to be held in Philadelphia, for Pennsylvania and New Jersey.

Dear Beloved Friends, and Brethren,—this our annual solemnity, feeling a renewed engagement and travail of spirit, for the prosper of Truth in the earth, and in a more particular manner, in all the flock and family of our heavenly Father, however remotely separated from us, are remembered by us with brotherly and affectionate regard.

The epistle from your Yearly Meeting, held the Ninth month last, was received and read amongst us, and we are impressed with an affecting sense of gratitude, to the Father and Fountain of all our mercies on your behalf, that he, who gracious regard is freely extended to his dependent children throughout all the regions of earth, hath by the operation of his good Spirit raised and preserved amongst us a precious sear labouring after sanctification of heart; when being made fit objects for the reception of his gifts and graces of his good Spirit, they being rightly qualified members for service in his church and the godly care resting on their minds for supporting our christian discipline, as they are to the influence of the Holy Spirit, will be grateful to bring others forward into the like precious experience. The salutation of our affection in that precious unity which is the bond of peace, extends to all these, and all the heirs of God our Father amongst you.

An epistle from your Meeting for Suffern dated the 21st of the Second month past, to Meeting for Sufferings in London, was likewise read in this meeting to our satisfaction, and referred to the Meeting for Sufferings here to answer.

For the rising generation we are engaged in earnest travail, that they may early know the will of their fathers, that the religion of their fathers

ion, may become the religion of their judgment; and the light of Christ within, the rule of their conduct; whereunto as they are careful to take heed, they will gradually witness an increase and establishment in righteousness, be made serviceable in their generation, and continuing in faithfulness, receive what is incomparably more valuable than all the deceiving and perishing glories of this world, "the end of their faith, even the salvation of their souls."

This important point let all, of every rank, be principally concerned to press after; carefully watching against the inordinate desires after transitory enjoyments, and that the necessary concerns of employments of life, be kept in due subordination, and not suffered to obstruct the growth of the plant of renewal, of our heavenly Father's right hand planting. Let us ever bear in remembrance, that we are created not to serve ourselves, but to live to the gratification of our eternal desires; for happier, and nobler purposes, even for a purpose of God's glory, that he may be glorified us through life, and we be made happy in him through time, and in eternity.

While we contemplate this glorious end of our existence, we cannot help commiserating, and deploring the wretched mistake of such as are pre-occupied from attaining thereto, by directing their efforts, and devoting the strength of their affections to objects comparatively unworthy thereof; and which we sorrowfully observe, is too much the case of many who are connected with us in the Society, but much estranged from that eternal life, wherein our spiritual communion consists: for such our ardent desire, and breathing to the Father of Spirits, is, that through the merciful visitation of the Day-spring from on high, they may be brought timely to a sense and conviction of their mistake and danger, and be reclaimed from the pursuit of lying vanities, to flow, with ardency, after durable riches and righteousness.

In this our solemn assembly, we have been comforted together, under the renewed experience of feeling the presence of our holy Lord and highest Ruler amongst us, shedding his love abroad in our hearts, and uniting us in one joint concern for his honor, and the edification of the body in good and good works. The affairs before us have been conducted in such harmony and brotherly dissection, to our mutual consolation.

May grace, mercy, and peace, be multiplied amongst you, and in all the churches of Christ. Signed in and on behalf of the said meeting,

WILLIAM FRY,
Clerk to the meeting this year.

Queen Victoria.—I was told the other day an anecdote of the Queen, which illustrates her good sense and desire to promote the real welfare of her subjects. She had agreed to have her photograph taken, for the gratification of such of her subjects as might desire to possess the counterfeit sentiment of their ruler. She presented herself in a plain black silk, without a particle of ornament. The photographer ventured to suggest that she should sew for some jewels. "No," said the queen, "this photograph is to go amongst the poor people, and I wish to do all in my power to encourage extravagance." It is such little incidents as these that have secured the queen a high place in the regard of the people. I have every where heard her spoken of with affectionate respect.—*Correspondent of the New York Sun.*

"Honoring all men" is reaching that of God every man, for that brings to seek the honor of God.—*George Fox.*

High vs. Low Lands for Fruit-Growing.—A correspondent of the *Country Gentleman* says very truly:

"It is a common remark that our hills are cold during the winter; and they who live upon the plains and in the valleys flatter themselves that they are favored with sheltered situations and a milder atmosphere. But the mercury sinks lower on the low lands than it does on the hills; the frosts are later in spring and earlier in autumn; the season is shorter, and consequently the hills are more favorable for many varieties of fruit than the vales.

"For several years I have observed that the peach orchards on the hills and mountains have borne a full crop when every bud will be killed on the plains. It is so this year; my trees are now in bloom, while not a flower is seen on the flats half a mile below, and only a few hundred feet lower. So it has been with the cold during the last of April. Though the ground froze on the hills no fruit buds were injured, while the cold was so severe below as to destroy buds on the cherry.

"That the season is longer on the hills is evident from the fact that my Isabelas and Catawas are usually thoroughly matured as high north as the south line of Massachusetts. But the early frosts cut them on low lands all around me. In the plains in the evening one feels a damp chill in the atmosphere, which changes to a warm current upward as you ascend the hills.

Power of a Christian Life.—There is one department of christian evidence to which no skill or industry of the champion of revealed truth can do justice—one also with which the sceptic is little disposed to meddle. It is that which is spread before us in the noiseless and almost entirely unrecorded lives of thousands of the faithful followers of Christ. Ambitions of no distinction; intent only on the Master's service; pursuing the even tenor of their way in the discharge of common duties, their lives are ennobled, and sometimes become heroic, through the lofty purity of their aims, and the singleness of their devotion to life's great end. No theory of infidel philosophy can account for them. The attempt to explain them by means of enthusiasm or fanaticism is an insult to common sense.

Cowper has graphically portrayed the lot of one who may be taken as the representative of the class of which we speak:

"That, as she sweeps him with her rustling silks,
Scarce deigns to notice him; or, if she sees,
Deems him a cypher in the works of God,
Receives advantage from his noiseless hours
Of which she little dreams. Perhaps she owes
Her sunshine and her rain, her blooming spring
And plentiful harvest to the prayers he makes,
When, Isaac-like, the solitary saint
Walks forth to meditate at eventide,
And thinks on her that thinks not on herself."
—*Boston Recorder.*

A Small Piece of Work.—A most curious and interesting model at the French exhibition, is that of the rock and fortress of Gibraltar, with a fleet of ships lying in the harbor. This fleet consists of a ship of the line, a frigate and a steam corvette, a brig and a schooner, every spar and rope being faithfully represented; and yet the hulls of these little vessels were constructed out of less than the tenth part of a cherry stone. The rock and fortress of Gibraltar are in the same proportions, and the noble structure can be covered over with a florin.—*American Agriculturist.*

A Mountain Railway.

When the British government determined to construct a net-work of railways throughout India, considerable discussion took place as to the best means of connecting Bombay with Calcutta and Madras, for, as there was no break in the Western Ghats, the idea of constructing a railway across them seemed utterly impossible. However surveys were made, and at length it was determined to build the railway as it now exists; that is, run from Bombay to Calicut, a distance of thirty miles inland, and there it forks into two branches, one going north-east to Agra, where it joins the East India railway leading from Agra to Calcutta, and the other going in a south-easterly direction towards Poona and Madras. The first of these crosses the Thell Ghaut—a mountain rising 1,912 feet above the level of the sea—and the latter crosses another mountain called the Bhor Ghaut, which rises to the height of 2,037 feet above the sea. The difficulties which the engineers encountered in the construction of this work were something stupendous; but as most of the ground over which the line passes is now cleared of jungle and levelled, and the all-but inaccessible mountain scarp, along which the track has been laid, have been well nigh obliterated, the obstacles in many places are scarcely apparent.

The Bhor Ghaut incline, which is the larger of the two mountain ways, is fifteen miles and sixty-eight chains long.

The level of its base is 196 feet above high water mark at Bombay, and of its summit 2,027 feet; so that the total elevation of the incline is 1,831 feet. Its average gradient is one in forty-eight; its least one in three hundred and thirty, and its steepest, one in thirty seven. Throughout its length are twenty-six tunnels, ranging from forty-nine to 437 yards long, and forming a total length of 3,985 yards, or two and a half miles. There are eight viaducts, most of which consist of arches of 50 feet span, varying in length from 52 yards to 108 yards, and from 45 feet to 139 feet high; so that the total length amounts to fully half a mile.

It is obvious that to make a train laden with freight or full of human beings, ascend a gradient of upward of eighteen hundred feet must require extraordinary locomotive power. Accordingly, when an ordinary passenger train approaches a station at the foot of the Ghats, it is divided into two sections, and generally two exceedingly powerful engines are attached to pull, and a third to push each section up the ascent. Powerful brake vans are also attached, so that in case of accidents the train may be stopped and prevented from receding down the slope. In descending the Ghats, similar precautions are taken to prevent the trains from going too fast, and fewer locomotives and more brakes are dispatched with each train. Even then it requires the utmost caution to prevent the train getting too much headway, lest it run off the rails and be dashed to pieces over some of the yawning chasms with which the mountains abound.

A terrible accident of this kind occurred in 1865. A heavy goods-train started from the top of the incline early one morning. It went on all right until it got to a steep portion of the line, where the guards and brakemen should have applied the brakes. They neglected to do so: the train acquired accelerated speed with every foot of space it traversed; the driver shut off steam and reversed his engine; the brakemen applied the brakes with all their might, and some of the men at the risk of their lives actually jumped off and tried to put plunks of wood between the spokes of the wheels. But all efforts were unavailing.

The momentum increased. The train rushed down the descent with terrific velocity. It dashed past the reversing station with a whirl and a rush, and plunged over the precipice beyond. Its motion was so swift that, enveloped in the dense cloud of dust which it raised, it was not seen by the inmates of the solitary station past which it swept; and but for the remarkable noise which it made, the accident would have remained unknown. Search was made, and the train and its freight were found smashed to pieces at the bottom of the precipice, and the poor men who had charge of it crushed to death beneath its ruins.—*Can. Com. Journal.*

TRUST IN JESUS.

JER. XXXI. 9.

"Trust in Jesus, weeping mourner!
Fear not! He is guiding thee;
By the streams of living waters
He is leading tenderly.

All thy tearful supplications
Fall upon His listening ear;
He will grant relief in anguish,
And have pity on thy prayer.

Though thy path be rough and lonely,
He will never lead thee astray;
He is guiding thee with wisdom,
By a straight, though painful way.

Every step He takes before thee,
Whispering comfort all the while;
He will brighten every spot,
And three hours of grief beguile.

By the waters so refreshing
Thou shalt never fainting be;
For the loving arms of mercy
Are around to shelter thee.

All along thy pathway flowing,
Is this stream of life divine;
Thou art passing on to glory,
And a Father's care is thine.

Trust thy Father, tried believer;
Dwell and live not on thy grief;
Thy His love appoints thy sadness,
"Thy His joy to grant relief."

SOME PLACE FOR ME.

What if a little ray of light,
Just starting from the sun,
Should linger in its downward flight,
Who'd miss the tiny one?
Perhaps the rose would be less bright
"T was sent to shine upon.

What if the rain-drop in the sky,
In listless ease should say,
I'll not be missed on earth, so I
Contented here will stay;
Would not some lily, parched and dry,
Less fragrant be to-day?

What if the acorn on the ground
Refused its shell to burst?
Where would the stately tree be found?
Or if the humble dust
Refused the germ to nurture round,
What could the sailor trust?

I am a child. It will not do
An idle life to lead,
Because I'm small—with talents few—
Of me the Lord has need,
Some work or calling to pursue,
Or do some humble deed.

I must be active every hour,
And do my Maker's will;
If but a ray can paint the flower,
A rain-drop swell the rill,
I know in me there is a power
Some humble place to fill.

—Congregationalist.

"While the pulse of life is beating,
Time is passing, time is fleeing,
Opportunities retreating."

Selected for "The Friend."

A Troublesome Sliver.

Charley came to his father one day with a pitted face, and, holding up his finger, said: "It hurts so, I wish you would see what is the matter." His father examined it carefully, noticed a small red and swollen place, and when he touched it, Charley flinched, saying, "Oh! it's sore there." "I think there must be a sliver in there," said his father, and, taking out his pen-knife, he carefully picked away the skin, and soon brought out a small, sharp bit of wood, which had caused the trouble. "Now, it will soon be well." "Thank you, sir, it feels better already; I must have got it in yesterday, when I was piling up boards." "Don't get a sliver in your conscience, my boy," said his father, and Charley started off for his play, thinking of his father's curious remark. Soon he was enjoying a lively game of base ball. Quarter to nine came, and he knew it was time to start for school, but his side had the "innings," and it would soon be his turn to strike, and he waited. Somehow, every boy before him took a long time, and after he had sent the ball flying across the field and made a good run, he waited to have another turn at it, for the game was a close one, and a few more runs would decide it in favor of his party. Boom! boom! sounded out the village clock, just as the innings were finished, and then Charley knew he must be late to school; the door would be locked, and he must wait until half-past nine before he could be admitted. He gathered up his books, and slowly sauntered off, thinking what excuse he could give for his tardiness. It seemed to him that half-past nine would never come, as he waited before the door, and heard his companions inside singing their morning song, and he could not make up his mind what to say to his teacher. At last he entered. The teacher looked at him pleasantly, saying: "An unusual thing for you to be late, Charley; you were busy, no doubt." "Yes, sir," replied the boy promptly. "I was busy," thought he, pleased that his teacher had shown him how to evade the truth. "I know it must be so, for you are a pattern for punctuality," said his teacher, and sent him to join his class in the recitation room. "I got off nicely, and I didn't tell a lie, either," was Charley's first thought; but somehow it didn't satisfy him, and he couldn't get it out of his mind, that he had done wrong. Things did not go pleasantly all day; his mind wandered from his books, he was reprimanded for want of attention, and altogether had a hard time of it. Just before school was out, while sharpening his pencil, he slightly hurt his finger, which was yet tender, and like a flash it came to his mind, "there's a sliver in your conscience." Now he knew what his father meant. "I'll have it out," bravely said he to himself. He waited until the other boys had gone, and then told his teacher the whole story about the real cause of his lateness in the morning. Then his penance returned—the "sliver" was out, and you may be sure he remembered it many times afterward, and when he had done wrong, made haste to confess it, and in this way to get rid of his trouble.—*Late Paper.*

Story of an Oriole.—The Springfield Republican says: "A juvenile oriole was caught and caged a few days ago; and every day since, its supposed father has flown through the open window into the room where its cage hangs; and fed it with insects innumerable. He flies constantly in and out, no matter how many persons are in the room, and seems determined that the little bird shall not want for food so long as he can help it."

A Lesson of Trust.—Some time ago, a boy was discovered in the street, evidently bright and intelligent, but sick. A man who had the feeling of kindness strongly developed went to ask him what he was doing there.

"Waiting for God to come for me," said he. "What do you mean?" said the gentleman touched by the pathetic tone of the answer, at the condition of the boy, in whose eye and flushed face he saw the evidence of a fever.

"God sent for mother, and father, and little brother," said he, "and took them away to home in the sky; and mother told me when she was sick that God would take care of me. I had no home, nobody to give me anything, and so I came out here, and have been looking so long at the sky for God to come and take care of me, mother said he would. He will come, won't he? Mother never told me a lie."

"Yes, my lad," said the gentleman, overcome with emotion. "He has sent me to take care of you."

You should have seen his eye flash, and the smile of triumph break over his face, as he said: "Mother never told me a lie, sir, but you have been so long on the way."

What a lesson of trust, and how this incident shows the effect of never deceiving children with tales.

Perseverance Under Difficulties Rewarded.

Early this spring a pair of blue-birds commenced a nest in one of the ventilators of a car on the South Reading (Mass.) Branch Railroad, which car arrives at South Reading at half-past five P. M., and is set on a side track until eight A. M. when it is used for the day between South Reading and Salem. The birds finished their nest, laid five eggs, from which they hatched their young ones. When they were a few days old, the car was taken to Salem and kept over night, as the exposure proved fatal to the young brood, the parents cleared the nest, and in forty-eight hours commenced laying again. This time they laid four eggs, and hatched but one, which is some ten days old. Conductor Charles Skinner feels confident that this one will live. The car has run over one thousand miles since the eggs were laid. The old bird sits on an apple tree near the track, with its mouth full of insects patiently waiting for its family to get to its customary place before it attempts to feed charge. The usual time required by those birds to hatch their eggs is about fourteen days, but this case twenty were required, owing to the exposure uncovered from eight A. M. till half-past five P. M. The young hero is fat and healthy although he eats but two meals per day.

For "The Friend."

The Power of Goodness.

The following narrative, in substance, is taken from the *British Workman*:—John Kant, (the German philosopher of that name) was Professor and Doctor of Divinity at Cracow. He a pious, holy man, with a spirit peculiarly gentle and guileless, and he at all times would have preferred to suffer injustice rather than to exert it. His head was covered with the snows of when he was seized with an ardent desire to visit the scenes of his youth in his native country of Silesia. The journey appeared fraught with peril to one of his advanced age; but he set his feet in order, and started on the way, trusting in protection of Him who cares for his children. One evening as he thus journeyed along through the gloomy woods of Poland, holding communion with God, and taking no heed of objects be-

him, on reaching an opening in the dark forest, a trampling noise was suddenly heard, and he was instantly surrounded by figures, some on horseback and some on foot. Knives and swords glittered in the moonlight, and the pious man saw that he was at the mercy of a band of robbers. Fearfully conscious of what passed, he alighted from his horse, and offered his property to the gang. He gave them a purse filled with silver coins, unclasped the gold chain from his neck, took the gold lace from his cap, drew a ring from his finger, and took from his pocket his book of prayer, which was clasped with silver. Not till he had yielded all he possessed, and seen his horse led away, did Kant intercede for his life.

"Have you given us all," cried the robber chief threateningly. "Have you no more money?"

In his alarm and terror, the trembling doctor answered that he had given them *every coin* in his possession; and on receiving this assurance, he was allowed to proceed on his journey.

Quickly he hastened onward rejoicing at his escape, when suddenly his hand felt something cold in the hem of his robe. It was his gold, which having been stitched within the lining of a dress, had thus escaped discovery. The good man, in his alarm, had forgotten this secret store. In heart, therefore, again best with joy, for the money would bear him home to his friends and kindred, and he saw rest and shelter in prospect, instead of a long and painful wandering, with the necessity of begging his way. But his conscience was a peculiarly tender one, and he stopped to tell to his voice. "It cried in disturbing tones, 'Tell not a lie! Tell not a lie!'" These words lived in his heart. Joy, kindred, home, all were forgotten. Some writers on moral philosophy have held that promises made under such circumstances are not binding, and few men certainly would have been troubled with scruples on this occasion. But Kant did not stop to reason. He hastily retraced his steps, and entering into the midst of the robbers, who were still in the same place, said meekly: "I have told you what is true, but it was not intentionally; fear and anxiety confused me; therefore pardon me."

With these words he held forth the glittering gold; but to his surprise, not one of the robbers would take it. A strange feeling was at work in their hearts. All were deeply moved. Then, as seized by a sudden impulse, one went and bought him back his purse; another restored the book of prayer, while still another led his horse towards him and helped him to remount it. They then unitedly entreated his blessing; and finally giving it, the good old man continued to walk, lifting up his heart in gratitude to God, who brought him in safety to the end of his journey.

Female Influence and Energy.—I have noticed that a married man falling into misfortune is more likely to retrieve his situation in the world than a single one, chiefly because his spirit is soothed and relieved by domestic endearments, and self-respect kept alive by finding, that although abroad darkness and humiliation, yet there is still a world of love at home of which he is part. Whereas, a single man is apt to run to waste and self-neglect; to fall to ruins like the deserted mansion, for want of inhabitants. We often have occasion to mark the fortitude with which women sustain the most overwhelming reverse of fortune. Those disasters which break upon the spirit of man, and prostrate him in the dust, seem to call forth all the energies of the weaker sex, and give such intrepidity and elevation

to their character, that at times it approaches sublimity. Nothing can be more touching than to behold a soft and tender woman, who had been all weakness and dependence, and alive to every trivial roughness, while treading the prosperous path of life, suddenly rising in mental force to be the comforter and supporter of her husband under misfortunes, abiding with unshrinking firmness the bitterest blasts of adversity. As the vine which has long twined its graceful foliage about the oak, and has been lifted by it into sunshine, will, when the hardy plant is rified by the thunderbolt, cling around with its caressing tendrils, and bind up its shattered brow, so too, it is beautifully ordained by Providence that woman, who is the ornament and dependent of man in his happier hours, should be his stay and solace when smitten with dire and sudden calamity; winding herself into the rugged recesses of his nature, tenderly supporting his drooping head, and binding up the broken heart.—*Washington Irving.*

For "The Friend."

On the settlement of Pennsylvania, Friends were early impressed with a religious care to walk wisely before the natives of the land, giving them no occasion of offence or cause of reproach, which might bring a blemish on the Truth they professed; and as the supplying those people with spirituous liquors was observed to have a pernicious effect, they not using moderation therein, the following advices of our Yearly Meeting on that subject, are extracted in order to set forth the concern of Friends to caution their members against supplying them with such liquors, also against settling on lands which had not been first purchased of them by those properly authorized for that purpose.

"1685. This Meeting doth unanimously agree and give as their judgment, that it is not consistent with the honor of Truth, for any that make profession thereof, to sell rum or other strong liquors to the Indians, because they use them not to moderation, but to excess and drunkenness.

1686. The above advice repeated.

1687. We give forth this our sense, that the practice of selling rum or other strong liquors to the Indians, directly or indirectly; or exchanging rum or other strong liquors for any goods or merchandise with them, considering the abuse they make of it, is a thing contrary to the mind of the Lord, and great grief and burden to his people, and a great reflection and dishonor to the Truth, so far as any professing it are concerned.

1719. Advised, that such be dealt with as sell, barter, or exchange directly or indirectly to the Indians, rum, brandy, or any other strong liquors, it being contrary to the care Friends have always had since the settlement of these countries, that they might not contribute to the abuse and hurt those poor people receive by drinking thereof.

1722. When way was made for our worthy friends, the proprietors and owners of lands in those Provinces, to make their first settlements, it pleased Almighty God, by his over-ruling Providence, to influence the native Indians, so as to make them very helpful and serviceable to those early settlers, before they could raise stocks or provisions to sustain themselves and families. And it being soon observed that those people, when they get rum or other strong liquors, set no bounds to themselves, but were apt to be abusive and sometimes destroyed one another; there came a religious care and concern upon Friends, both in their meetings and legislature, to prevent those abuses; nevertheless, some people preferring their filthy lucre before the common good, continued

in this evil practice, so that our Yearly Meeting, held in Philadelphia in the year 1687, testified that the practice of selling rum or other strong liquors to the Indian, directly or indirectly, or exchanging the same for any goods or merchandise with them (considering the abuse they make of it) is a thing displeasing to the Lord, a dishonor to Truth, and a grief to all good people." And though this testimony has been since renewed by several Yearly Meetings, it is yet too notorious, that the same hath not been duly observed by some persons; and therefore it is become the weighty concern of this meeting, earnestly to recommend the said testimony to the strict observance of all Friends; and where any under our profession shall act contrary thereto, let them be speedily dealt with and censured for such their evil practice."

1759. Near the close of the printed epistle this year, is as follows, viz: "The empires and kingdoms of the earth are subject to his Almighty power; he is the God of the spirits of all flesh, and deals with his people agreeable to that wisdom, the depth whereof is to us unsearchable. We in these Provinces may say, He hath, as a gracious and tender parent, dealt bountifully with us, even from the days of our fathers; it was He who strengthened them to labour through the difficulties attending the improvement of a wilderness, and made way for them in the hearts of the natives, so that by them they were comforted in times of want and distress. It was by the gracious influence of his Holy Spirit, that they were disposed to work righteousness, and walk uprightly one towards another and towards the natives, and in life and conversation to manifest the excellency of the principles and doctrines of the christian religion, and thereby they retained their esteem and friendship. Whilst they were laboring for the necessities of life, many of them were fervently engaged to promote piety and virtue in the earth, and educate their children in the fear of the Lord.

1763. It is the solid sense and judgment of this Meeting, that Friends should not purchase or remove to settle on such lands as have not been fairly and openly first purchased of the Indians, by these persons who are or may be fully authorized by the government to make such purchases; and that Monthly Meetings should be careful to excite their members to the strict observance of this advice. And where any remove so contrary to the advice of their brethren, that they should not give certificates to such persons, but use their endeavours to persuade them to avoid the danger to which they expose themselves, and to convince them of the inconsistency of their conduct with our christian profession."

Scripture Illustrated.—Not long since a man in India was accused of stealing a sheep. He was brought before the judge, and the supposed owner of the sheep was also present. Both claimed the sheep, and had witnesses to prove their respective claims, so that it was not easy for the judge to decide to which the sheep belonged.

Knowing the customs of the shepherds, and the habits of the sheep, the judge ordered the sheep to be brought into court, and sent one of the two men into another room, while he told the other to call the sheep, and see if it would come to him. But the poor animal, not knowing the voice of a stranger, would not go to him. In the meantime the other man, who was in an adjoining room, growing impatient, and probably suspecting what was going on, gave a kind of "cluck," upon which the sheep bounded away towards him at once. This "cluck" was the

way in which he had been used to call the sheep, and it was at once decided that he was the real owner.

Thus we have a beautiful illustration of John x. 4, 5: "And the sheep follow him, for they know his voice: and a stranger will they not follow, but will flee from him; for they know not the voice of strangers."—*British Workman*.

For "The Friend."

Colored Orphanage at Richmond, Va.

Some Friends seeing the great necessity there is for a colored orphanage in the city of Richmond, have for more than a year past been making an effort to raise funds for that purpose; and in order that an official record might be made, to which all who contributed should have access, they requested the Monthly Meeting of Cedar Creek to appoint "a committee to solicit subscriptions for building a Colored Orphanage in Richmond;" the reports of which committee are recorded on the minutes of said meeting.

That committee recently applied to the Common Council of the city of Richmond for the donation of a lot in a suitable location, which was promptly granted. Encouraged by this grant, and by the interest manifested by those of our citizens to whom the subject has been mentioned, we now confidently appeal to Friends and others interested in the cause to aid us in this good work. If one Friend in each Monthly Meeting will solicit aid, we are confident the work will soon be accomplished. The orphan's cry is always touching, but it comes with peculiar force at this time from the little colored orphans of the South. Owing to the unsettled and perfectly destitute state of the country, many who hear their cry feel an answering pang of sympathy, but are compelled to turn a deaf ear, lest on the morrow they have not enough for their own hungry household.

Open, then, your hearts to the orphan's cry, your purses to his necessities, remembering "He that giveth to the poor lendeth to the Lord," and will be sure to receive back his own with usury. We have received donations from England per J. B. Braithwaite and Jos. Crossfield, \$182.78

Per J. J. Neave, 342.50

"Samuel Boyce, from some little girls in Boston, 20.00

From Virginia Half Yearly Meeting, the balance of a fund held by that meeting for defending the rights of colored persons illegally held in bondage (now no longer needed) with interest on above amounts, 454.72

Cash on hand, \$1000.00
We want \$4000: making in all the cost of such a building as seems to be needed at present \$5000.

Contributions may be forwarded to Jeremiah Willits or John B. Crenshaw, Box 1037 Richmond, Va.

Snake-Poison.—Professor Halford, of Melbourne, has published a paper in the *British Medical Journal* upon the subject of poison of the cobra-di-capello, and indicates some important points in regard to the action of the poison. He has found that the immediate result of the poison is to develop in the blood a number of corpuscles of living "germinal matter," which increase in great numbers, till at length they constitute the bulk of the blood. These cells appear to be of a vegetable growth, and by their number they so completely absorb the oxygen of the blood that the person poisoned may be said to die of asphyxia.

Hygienic.—If the physicians who make their weekly returns to our Board of Health are consulted, it will be found that deaths sometimes are occasioned in this, as in other cities, by persons sleeping together, one of them being in a morbid condition. At night there is considerable exhalation from the human body, and at the same time we absorb a large quantity of the vapors of the surrounding air. Two healthy young children sleeping together will give and receive healthy exhalations; but an old, weak person near a child will, in exchange for health, only return weakness. A sick mother near her daughter, communicates sickly emanations to her; if the mother has a cough of long duration, the daughter will at some time also cough and suffer by it; if the mother has pulmonary consumption, it will be ultimately communicated to her child. It is known that the bed of a consumptive is a powerful and sure source of contagion, as well for men as for women, and the more for young persons. Parents and friends ought to oppose as much as is in their power the sleeping together of old and young persons, of the sick and the healthy.

"Among late items of news from England is the announcement that the Prince of Wales has taken the temperance pledge. The fact of a young man foregoing, of his own free will, the pleasures of the bottle, and breaking up the seductive associations which poetry, song and false sentiment have thrown around them, is worthy, at any time, of commemoration and praise. Every case of this kind is good in itself; it is good also as serving for an example and encouragement to others to do the like, and thus the process of imitation is going on, a pure and salutary is gradually substituted for a polluted and noxious moral atmosphere.

"But when a prince royal and heir apparent to the throne takes such a bold and decided step in favor of temperance, he will soon be followed by large numbers of the aristocracy, the fashionable and wealthy, who would have held back or ridiculed a similar proceeding by a less distinguished personage. Even though they may not at once banish alcoholic liquors from their entertainments, they will no longer think it necessary to procure the most delicately flavored or costly wines to offer to the prince or press them on others in his presence.

"It is not for us to say, though we may conjecture what has been the directly inciting cause of the present pledge taken by the Prince of Wales. In the rounds of revelry and song which he has run of late, both in Paris and his own capital, he may have found himself going too fast, and that both health and temper were beginning to suffer. He is a husband and a father, and cannot be insensible to the new and positive duties which these new relations impose on him as head of his household and an exemplar to his children.

"Another view of the subject may have presented itself to the mind of the prince. His thoughts quite probably ran on the history of his great uncle, George IV, the greatest debauchee, and in all respects the most profligate man of the age in which he lived. A sensualist without any redeeming trait of refined epicureanism! A drunkard without a single gleam of wit, humor or sentiment! The generous heart and noble traits in the character of Fox were obscured and perverted by the contaminating and corrupting association of George IV, when Prince of Wales. The genius and eloquence and wit of Sheridan could not protect him from the degradation, and final beggary, effected by the carousals and midnight orgies, in which he found ready companion.

ship in the person of his royal friend. With such a dark picture in his memory, and contrasted with the purity of life of his father, Prince Albert, it must have occurred to the Prince of Wales, that one of the surest means of avoiding the gross vices of his great uncle, and imitating the virtues of his father, and of securing for himself an honorable name in the line of British sovereigns, would be to follow the advice Solomon, "It is not for kings, O Lemuel! to drink wine."—*Public Ledger*.

"It is a nice matter, in this day, to be a eleventh sighted elder, one who is united to the true self in himself, and in the exercised minister able to judge of fitness of communication to the company ministered unto, in short, to live in the life, that the life in public communications may answer to the life in us. I do believe it is quick as a touch, and I would advise thee to be for thyself, and to be quite satisfied; then I say easy thou should encourage or discourage, but not to go at the instigation of another; that is a poor way of doing, and will hurt thyself and the other may be sent to. Faithful hand-elder clear-sighted Friends, may be a great blessing to another. They who feared the Lord, speak often one to another. Beside faithful 'watchers' concerned to give the alarm at the approach of the enemy; we have watchers through jealousy and they are listeners and whisperers; I mean with them, but it is best to be wise and harmless. Do let us try to do nothing against the Truth while we be very much concerned to keep our places and act upright. A word to the wise is sufficient." H. W.

Among the many new applications of electro-magnetism to the arts and manufactures is that making it instrumental in the smelting of iron. A fixed electro-magnet is placed opposite an opening in the side of a furnace containing the metal to be melted, and a current of magnetism directed into the molten metal. The effect the iron is said to be very remarkable, rendering it extremely tough and hard. The process carried on with great success at one of the most important works in Sheffield.

THE FRIEND.

EIGHTH MONTH 31, 1867.

With this number, "The Friend" enters its forty-first year of its existence. There are 1 periodicals, whether daily, weekly or monthly that attain such an age without any failure in their issue or change in their character. Generally, when those who were induced to undertake the establishment of such a serial and have succeeded, have passed from the stage of action, and circumstances which appeared to call for it have been succeeded by different and perhaps dissimilar events, the original interest excited by it subsided fresh concerns absorb the attention, new claims for favor start forth, and after a longer or shorter struggle for the elements of life, it ceases to exist.

"The Friend," at its outset, entered upon a new and untried field of labor. The circumstances which seemed to demand that such a periodical should be attempted were peculiar arising from the convulsion that rent from religious Society of Friends a large portion members who were endeavoring to fasten upon it the anti-christian views of their leaders. It was felt to be a duty resting on some of the most

ers in Philadelphia, to establish and conduct a journal, which beside furnishing "an agreeable and instructive Miscellany" to the families of friends, should aid in promulgating and defending the religious principles and church government of the Society, in bidding up and healing wounds inflicted on its widely separated constituents, and to raise a warning voice at the approach or presence of that which might again divide and scatter. Such was the origin, and such the design of "The Friend."

But although that condition of our religious society in this country which gave birth to this journal, changed in the course of a few years, experience proved that as the primary object for which it had been projected and carried on was to promote the well-being of the members, to maintain and commend the benign principles of the gospel as held by Friends from the beginning, and to illustrate the oneness of interest and feeling that should pervade the several parts of our widely scattered brotherhood, whatever novel circumstances presented or different relations occurred, they only required the adaptation of the paper published, to the new state of things, and that the original object be pursued with the same determination and temper.

Thus our Journal has passed along from year to year, unaltered in spirit or in its efforts to fulfil its promise, and attain the end which it announced at its birth, though a generation of men has nearly passed from this stage of being since it first ventured to try its vitality and force. Nearly all of those who in the beginning volunteered to conduct it, and supply the varied matter for its columns, have been called from works to wards; new hands and minds have again and again enlisted in its service, and still it pursues the tenor of its way, and enters its forty-first year with the same aims, the same desire to benefit fellow professors, the same disposition to cultivate those things and feelings which make for the charity and enduring peace, as characterized in 1827.

Whatever else may be said of the present time, must admit that it is an age of free inquiry. The human intellect developed to its full power, and that trained to the most efficient use, sharpened and stimulated by the wonderful discoveries achieved in the various branches of science and literature, is intensely occupied, not only in pushing research into the phenomena of all material things and the laws which govern them, but in going within the scope of its investigations, striving to subject to the analysis and test of reason, the truths of religion which it has received Divine Goodness to reveal for the salvation of man, and through "enlightened criticism," lift the claims to inspiration of the holy men and women who wrote the Scriptures. The cry of revolt has become familiar, not only as a watchword to enlist men and means for the overthrow of social evils, but as a pretext for subjecting Christianity itself to the law of change, so as to sweep away that which is unpalatable in its final simplicity and its superhuman requisites.

We believe there is no contrariety of opinion as to this spirit of inquiry and desire for progress, and that entered and being at work within our own religious Society, though there is a wide difference of estimate by different members, of the value of its manifested effects on our principles and practices as Friends. In the sharp transition from what was undoubtedly a too inactive condition, with very many resting in a traditional belief, we have started up a new school of thought and feeling, giving rise, in the extreme oscillation, to

an unprecedented course of speech and action among very many, unsettling the long received faith of the Society, overturning many of its well known and characteristic testimonies, and spreading disunity, distrust and disputation. Hence we are a divided people: manifested not merely by organic separations in two or three Yearly Meetings, or by suspended epistolary correspondence between two Yearly Meetings and all the others, but, as sadly, by there being in all parts of the Society two distinct classes, one of which rejoices in and urges on the so-called revival and reform as the dawn of a more enlightened and liberal day, while the other believes it sees in them—and therefore grieves over them—a spirit inconsistent with Quakerism, which would rob it of nearly all that makes it worth while to support the Society as a distinct body of professors.

We refer to this unhappy state of things, on the present occasion, not to enter into argument as to its origin or its probable result, nor yet to set forth the sentiments entertained in relation thereto by "The Contributors to The Friend;" they are already known to our readers; but to remind them of some analogous points between the present condition of the Society, and that in which our Journal was first published. There is, however, this wide difference, that the cardinal doctrines of the christian religion,—the divinity, atonement and offices of Christ, as held by all orthodox professors,—are freely acknowledged by us all. The divergence, as we believe, is in the acceptance and application of the doctrine of universal, saving Light, and of the immediate perceptible guidance and government of the Holy Spirit, not only as convicting of sin, and administering the necessary baptisms to prepare the soul for the purchased gift of forgiveness and salvation, but as being indispensable to qualify for and call into every spiritual service in the church. It was this that led the founders of the Society into unity of principles and practices, and has kept their successors, who have walked by the same rule and minded the same thing, in harmony with them and with one another. "Duth a fountain send forth at the same place sweet water and bitter?"

But while we are opposed to innovations destructive of the characteristic traits of Quakerism, and feel it a duty to point out such and strive to prevent their spread, we also feel the obligation of christian charity, and the desirableness of laboring for the restoration of unity in the Society, on the basis of its original and unchangeable faith. We believe there has been too much party spirit, too much mis-judging, and not a little misunderstanding of each other. These we apprehend have separated many who are really one in belief and one in desire to sustain the testimonies given us as a people practically to exhibit before the world.

In all parts of the Society there are those who understand the departures from our holy religion that are devouring its strength and usefulness, and who long to see a day of settlement and stability in "the old paths" and "the good way." We shall rejoice, if in continuing "The Friend" our earnest wish may be gratified to make it conduce towards bringing all such to see eye to eye, and assist in removing those obstacles that now prevent the applicability of the language once deserved and appropriate, "See how the Quakers love one another."

In conclusion, "The Contributors" while asking the continued support of their friends, and the extension of subscriptions to their Journal, can adopt the language that terminates the prospectus issued in 1827, "We enter upon the duties of editors

with feelings chastened by a sense of the responsibilities we have assumed, and of the arduousness of the undertaking; yet animated by the prospect of an honorable and useful career.

It is seldom that we introduce into our columns the name of any one connected with the political movements of the day, but seeing it announced that Edwin M. Stanton is no longer Secretary of War, has revived the recollection of the uniform respect and consideration he manifested towards Friends, whenever it was found necessary to apply to him in consequence of the difficulties many of our members were brought into during the late war. Having had an opportunity of becoming acquainted with their principles in relation to all war and fighting, though he did not coincide with them therein, he knew those principles sprung from conscientious convictions, and were maintained as a christian duty. Together with our late lamented President, Abraham Lincoln, he was ever ready to listen patiently to the representations made to him of cases of suffering on account of those religious principles, and to afford such relief as was within the scope of the law and consonant with the duty of his office.

Having had frequent intercourse with him in relation to such cases, we think it proper thus to record the grateful sense retained of his kindness and urbanity.

SUMMARY OF EVENTS.

FOREIGN.—The conference of the Emperors of France and Austria, at Salzburg, has naturally excited much interest. The conference, it is believed, will tend to preserve the peace of Europe. It is rumored that an explicit understanding was arrived at between the two emperors, not only in regard to the formation of a South German Confederation, but also to resist any intervention in the Eastern question. It was also alleged that the States forming South Germany should remain in the Zollverein as long as Prussia abides by the treaty of Prague. In regard to the Schleswig question, it was proposed that the Austrian Emperor should interpose his good offices, and that on the other hand, Denmark should make considerable concessions in her demands. The semi-official journals at Berlin fiercely attack the policy of France, and denounce the action of the Emperor Napoleon at the conference. They assert that definitive arrangements for a South German band have actually been made between Austria and the States of Southern Germany.

The English competitors in the recent trials of safes at Paris, deny the superiority of the Herring safe, and charge that the decision to that effect was obtained by unfair means.

The Italian Parliament was prorogued on the 21st inst. Garibaldi has again been obliged to defer the movement in Rome, and the preparations which were being made by the party of action throughout Italy have been suspended by his orders.

The British Parliament was prorogued on the 21st. The Queen's speech, before the Houses, was read by a royal commission. The speech declares that there is no longer any ground of apprehension in Europe of war. The Fenian revolt in Ireland has been suppressed almost without bloodshed. The speech refers with satisfaction to the passage of the Reform bill, the completion of the Canadian Union, and the new postal treaty with the United States.

A dispatch from Constantinople states that the Sultan has resolved to form a new Council, composed in equal numbers of Greek and Turkish members.

A St. Petersburg dispatch of the 23d states, that the Czar was then in the Crimea and was reported to be quite ill. The Emperor, accompanied by his wife, accompanied the Sultan throughout his western tour, has gone to the Crimea to meet the Emperor of Russia.

The King of Portugal has signed bills passed by both Houses of the Portuguese Parliament, providing for the abolition of slavery, and of capital punishments.

Official cholera reports in Italy show that in the first six months of the present year, there have been 63,376 cases of the disease, with 32,074 deaths. The Pope proposes to re-establish the Roman Catholic hierarchy in Scotland by giving territorial jurisdiction to the vicars

apostolic and by the appointment of other bishops. There will be an Archbishop of Glasgow, with six suffragans, who will take their respective titles from Edinburgh, Aberdeen, Perth, Inverness, Stirling and Kilmarnock.

A Berlin dispatch of the 26th states, that the preliminaries for a meeting between the King of Prussia and the sovereigns of the South German States, have been arranged. The conference will be held at Baden at an early day. The Russian government has sent an order to the United States for one hundred thousand Russian rubles.

Affairs in Spain appear to be unsettled, and disturbances continue in various parts of the country, but the accounts respecting them are conflicting. The official dispatches from Madrid say all the risings have been put down, while those from the insurgents assert that the insurrection is going on successfully.

An Abolition Congress, composed of leading anti-slavery men from various parts of the world, commenced its session in Paris on the 26th inst.

The following were the quotations on the 26th inst. *London*.—Consols, 94½. U. S. 5-20's, 73½. *Liverpool*.—Wheat, 13s. 6d., middling uplands 10½d.; Orleans, 10½d.; Wheat, 13s. 6d., per 100 lbs. for southern, and 13s. 6d. for California.

UNITED STATES.—The Indians.—The Indian Commissioners have gone up the Missouri river to obtain information from persons familiar with the country north of them, in order to select the most suitable territory for a general northern Indian reservation. Agents have been sent out to notify both the hostile and peaceful Indians of the desire of the Commissioners to meet them in council at Laramie, between the 13th and 16th of the Ninth month, with a view to reconcile and harmonize all differences, and establish a proper understanding of the rights and interests of all parties.

The South.—General Sheridan has issued an order removing the City Surveyor, City Attorney and Assistant City Attorney of New Orleans, for reasons similar to those for which the Common Council was readjusted.

An order declaring that no person who has been convicted of a crime shall be considered as a duly qualified voter of Louisiana, and that no other persons are eligible to serve as jurors in any of the courts, has been issued by Gen. Sheridan.

The President, on the recommendation of General Grant, has suspended the execution of the order assigning General Thomas to the command of the Fifth Military District in lieu of General Sheridan. The reason for this action on the part of the President is the ill health of General Thomas.

The Washington city Councils have repealed all ordinances which formerly made discriminations on account of color in that city.

North Carolina, as well as other localities, the heavy rains of this month have done great damage. The Roanoke river rose to a great height, submerging the lowlands and destroying the crops of corn, &c.

The New Orleans Times says that in the southern States east of the Mississippi the cereal crops are not doing enough for home consumption, and that the freed-men in all this section are continuing to work well.

General Schofield has decided that the Virginia poor laws shall be enforced in reference to the paupers with whom the Freedmen's Bureau has ceased to issue returns.

Telegraph to Cuba.—The submarine cable between Key West and Havana, was completed on the 18th inst., and is working well. The cable broke on the first attempt to lay it, and it was not recovered and spliced without considerable difficulty and delay.

Union Pacific Railroad.—The Omaha branch is now completed for 546 miles.

Wheatman.—The wine crop of California this year is estimated at 5,000,000 gallons, and of brandy 500,000 gallons.

The offer of the United States for the purchase of the Bay and port of Samana, in the island of Hayti, for \$5,000,000, has been rejected.

Professor J. C. Watson, of Ann Arbor, Michigan, announces the discovery of a planet hitherto unknown, which was first seen by him on the night of the 24th inst.

The number of immigrants that arrived at New York from European ports from 1st mo. 1st to 8th mo. 1867, were 154,299. During the same period of 1866, the number of arrivals was 155,799. The immigrants from Ireland and Germany came this year in about equal numbers.

It appears from statistics kept in France, that during the last thirty years more than ten thousand people were struck by lightning, of whom two thousand two hundred and thirty-two were killed outright. Eight hun-

dred and eighty were killed during the last ten years, and of these only two hundred and forty-three were females.

In the case of a colored Canadian, who applied for redress in Richmond because of the want of a steamer refused him a first-class passage, the U. S. Commissioner decided that the Civil Rights bill applied to American citizens only.

An official statement of the export of cotton for the fiscal year ending 6th mo. 30th last, shows that the total exports were 656,572,829 pounds, valued at \$281,385,223.

The yellow fever prevails in New Orleans and at Galveston, Texas. In the latter city there were 123 deaths of the disease in the week ending on the 26th inst.

Philadelphia.—Mortality last week, 341.

The Market.—The following are the market quotations on the 26th inst. *New York.*—American gold 141. U. S. sixes, 1841, 111½; ditto, 5-20, new, 108½; ditto, 5 per cent, 10-40, 102½. *Superfine* State flour, \$7.10 a \$8. *Shipping* Ohio, \$6.00 a \$10. *Baltimore* flour, fair to good, \$9.00 a \$11.30; trade and family, \$12 a \$13.80. *Ambur* State wheat, \$2.30 a \$2.31; white Michigan, \$2.30 a \$2.63. *New Ohio* oats, 78 cts. southern, 68 a 72 cts.; Jersey, 50 a 65. *Western* mixed corn, \$1.10 a \$1.12. *Middlings* cotton, 27½ a 28 cts. The market for beef cattle was dull, about 700 head sold at 16 a 16½ for extra, 15 a 16 for prime, and 10 a 15 cts. for common to fair. *Philadelphia.*—*Superfine* flour, \$7.30 a \$7.37; finer grades from \$8 to \$14.50. *New red* wheat, \$2.35 a \$2.45, for good to choice. *Rye*, \$1.67 a \$1.72. *Yellow corn*, \$1.25. *Oats*, 50 a 70 cts. *Clovered seed*, \$8.75 a \$9. The arrivals and sales of beef cattle reached about 2200 head. Extra sold at 16 a 16½ cts.; fair to good, 13 a 15 cts., and common, 10 a 12 cts. Sheep were dull and lower, 12,000 arrived and partly sold at from 4½ a 5½ cts. per lb. gross. Hogs, \$10 a \$10.50 per 100 lbs. net. *Baltimore.*—Prime red wheat, \$2.50. *Yellow corn*, \$1.15 a \$1.16. *Oats*, 58 a 60 cts. *Chicago.*—No. 1 spring wheat, \$1.70 a \$1.71. No. 1 corn, 95 cts. *Oats*, 40 a 42 cts. *Cincinnati.*—No. 1 red wheat, \$2.18 a 2½. *Yellow corn*, 50 a 55 cts. *Red* *Louis.*—Prime and choice wheat, \$2.18 a \$2.28. *Yellow corn*, 60 a 65 cts. *Louisville.*—No. 1 wheat, \$2.05 a \$2.10. *Corn*, \$1.05, 55 cts.

RECEIPTS.

Received from M. M. Morlan, Agt., O., for Elizabeth Fawcett, R. B. Fawcett, S. Cook, Sen., J. Taylor, and David S. each, \$2 each, vol. 41; from A. Allen and Lynch, \$2 each, vols. 40 and 41; from Achsah Hall, \$2, vol. 40; from L. B. Walker, \$2, vol. 39, and from M. Morlan, 48 cents, to No. 52, vol. 41; from G. Macomber, Mass., \$10, to No. 52, vol. 41; from Sarah Greene, R. I., \$2, vol. 41; from J. Tyler, N. J., per Anna M. Roberts, \$4, vols. 40 and 41; from Elizabeth Lewis, Pa., \$2, vol. 40; from W. Baxter, Ind., \$4.50, vols. 40 and 41; from J. A. Potter, Agt., N. Y., \$2, vol. 41, and for R. W. Wright, \$4, vols. 40 and 41, and for G. Weaver, T. Bowerman, F. Owen, and A. Mekeel, \$2 each, vol. 41; from S. Hobson, Agt., O., for D. M. Mott, \$4, vols. 40 and 41, for Edwin Hollingsworth, \$2, vol. 41, and for C. Angle, \$2, vol. 32, vol. 40 and 41; from W. Woodcock, \$2, vol. 21, 40, and 41; from J. Cope, Pa., \$2, vol. 41, and for Elizabeth Bundy, \$2, vol. 41; from Ann Kaighn, N. J., per Rebecca Kaighn, \$4, vols. 40 and 41; from Parker Hall, Agt., O., \$2, vol. 41, and for W. Hall, Sen., I. Mitchell, and L. Teber, \$2 each, vol. 41, and for N. Hall, \$1, to No. 52, vol. 41; from J. Hall, Pa., \$2, vol. 41; from S. Lincoln, Mass., \$2, vol. 41; from A. King, Agt., N. Y., \$2, vol. 41, and for W. Battey, S. Simkin, F. Armistead, and Susan King, \$2 each, vol. 41; from J. Waring, C. W., \$2.20, vol. 41, and for J. Pollard, \$2.80, vol. 41; from Phoebe McBride, Ind., \$2, vol. 41; from M. Cope, Pa., \$2, vol. 41; from Josiah P. Pusey, \$2, vol. 41; from J. H. Parker, Palmer Good, and Joel B. Pusey, \$2 each, vol. 41; from E. Hollingsworth, Agt., O., for W. Pickett, \$2, vol. 41, and for J. S. Masters, \$2, vol. 41; from Lydia A. Hendrickson, N. J., \$2, vol. 41; from R. P. Gibbons, Del., \$2, vol. 41; from J. Ballard, O., \$2, vol. 41; from Est. of John Leeks, N. J., \$2, vol. 41; from Margaret C. Webb, Pa., \$2, vol. 41; from J. Foster, R. I., per E. J. Foster, \$3, vol. 41; from I. Deuel, \$2 each, vol. 41, and for W. Brownell, \$2, vol. 40.

A State Meeting of the Women's Aid Association will be held at No. 113 North Seventh St., on Seventh-day the 31st inst., at 5 P. M.

SARAH LEWIS, Secretary.

WANTED, A PERMANENT TENANT

For a nice country home, at Friends' South-wester Burial Ground, 3½ miles west of Market St. permanent bridge; it has a fine large garden and superior outbuildings, with pasture and hay sufficient for a horse and cow. Apply to S. F. Troth, 1019 Cherry St., Philadelphia.

JUST PUBLISHED,

An edition of Memorials of Deceased Friends, Members of Philadelphia Yearly Meeting, concerning our friends Stephen Grellert, Hannah Rhoads and Elizabeth Pitfield. Price 15 cents.

For sale at Friends' Book Store, 304 Arch street.

AN APPEAL.

The Home for Aged and Infirm Colored Persons located at 340 South Front street, has now an exhausted treasury. Friends are solicited to come forward with contributions in aid of this worthy charity. Friends! the country can materially assist by donations of produce from their farms, which should be sent to the Home.

Contributions in money may be sent to the President Dillwyn Parrish, 1017 Cherry St., or to the Treasurer Samuel R. Shipley, 111 South Fourth street.

EVENING SCHOOLS FOR ADULT COLORED PERSONS.

Teachers are wanted for these schools, to open about the first of Tenth month. Application may be made to Isaac Morgan, Jr., 622 Noble St. Elton B. Gifford, 457 Marshall St. Geo. J. Scattergood, 143 Spruce St.

TO TEACHERS OF FREEDMEN APPOINTED BY FRIENDS' ASSOCIATION OF PHILADELPHIA.

The time for opening Freedmen's Schools, under a direction, at Danville, Va., and in the State of North Carolina, is changed from the 2d of Ninth month to 10th.

Teachers appointed for this circuit are requested by at their respective posts on, or before, the 25th Ninth month.

(Signed) YARDLEY WARNER, On behalf of Committee on Appointment of Teachers, Philadelphia, 8th mo. 10th, 1867.

FRIENDS' SELECT SCHOOLS.

These schools, under the care of the four Month Meetings of Philadelphia, will be re-opened after summer vacation, on the first Sunday in Tenth month next; the Boys' School, on Cherry street, under the charge of Jesse S. Cheyne as Principal, and the Girls' School, on Seventh street, under that Margaret Lightfoot.

There are also Primary Schools in the rooms attached to Friends' meeting-houses in the Northern and Western Districts, in which provision is made for the careful elementary instruction of children who are too young to attend the principal schools.

The attention of Friends residing in this city and neighborhood is respectfully invited to these seminar in the principal schools their children may enjoy advantages of a liberal education, embracing a variety of the more useful branches of study at a very moderate cost, while in the primary schools the pupils are grounded in those of a more elementary character.

It is desirable that application for the admission of pupils should be made early in the session.

HAYFORD COLLEGE.

The Winter Term will begin on Fourth-day, 11th Ninth month, 1867.

Application for the admission of students must be accompanied by certificates of character, the studies pursued, signed by the last teacher; who may be addressed to John M. Whittall, or James Whit, 104 Race St.; or to Thomas P. Cope, No. 1 Walnut street.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) PHYSICIAN AND SUPERINTENDENT, — JOSHUA H. WORTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, C. of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

WILLIAM H. PILE, PRINTER,

No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLI.

SEVENTH-DAY, NINTH MONTH 7, 1867.

NO. 2.

PUBLISHED WEEKLY.

Price Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

Testimony of Burlington Monthly Meeting, New Jersey, held the 7th of Second month, 1856, concerning our beloved friend Stephen Grellet, deceased.

"The grace of God that bringeth salvation hath appeared unto all men, teaching us, that denying godliness and worldly lusts, we should live soberly, righteously and godly in this present world; looking for that blessed hope, and the glorious appearing of the great God, and our Saviour Jesus Christ; who gave himself for us, that he might redeem us from all iniquity, and purify unto himself a peculiar people, zealous of good works."

This meeting is concerned to bear testimony to the blessed efficacy and all-sufficiency of this grace, evinced in the experiences of our beloved friend Stephen Grellet, who thereby, without man instrumentality, was called with a high and holy calling, when he was in the darkness of belief, and living as it were without God in the world.

He was born at Limoges in France, 2nd of Seventh month, 1773, and was subjected to the cares attendant upon wealth, rank and luxury. He was trained in the observance of the Romish Church, and received a liberal education at a literary college.

At the early age of seventeen he was chosen one of the king's body guard, but although a soldier in times of extraordinary excitement, he was preserved from ever taking human life, which exemption from blood-guiltiness was through many years, a cause of gratitude to Him who had preserved him for warfare in the army of the Lamb. On the breaking out of the French revolution he was a whole family of Stephen Grellet were exposed danger of their lives, and their estate was confiscated. His parents being sentenced to death were actually taken out for execution, but were pardoned to prison. Stephen Grellet and his father being taken prisoners of war, were ordered to be shot, the completion of which sentence was at that moment expected, when some sudden commotion gave them an opportunity to escape, and they eventually found their way on board a ship and sailed to the West Indies, after a series of Providential deliverances, at one time actually brushing past soldiers, who, with fierce profanity, were declaring their bloody intentions respecting them. After being engaged in business for two years in Demarara, the brothers embarked for New York, where they landed in the spring of 1795,

and proceeded to Newtown, on Long Island, Stephen Grellet being then twenty-two years of age. His experiences about this time furnish a signal illustration of the blessed reality of the doctrine of the immediate and perceptible influences of the Holy Spirit: a doctrine to which he was ever after concerned to bear witness. It was alone by this powerful influence that he was awakened to a sense of his alienation from his Almighty Father and gracious Creator. Whilst walking alone in the evening twilight, he heard a voice sounding in his ears, "Eternity—Eternity—Eternity!" Struck with the awfulness of this voice, which was accompanied with a light that reached his soul and manifested to him his depravity, he cried out: "Surely if there is no God, there is a hell, and it is my just portion!" Retiring to his sleepless bed, he lay during the night, hoping that the Lord might again visit and bring consolation to his distressed mind. Secluding himself from society, he continued for many days and nights in this waiting state.

About this time, those dedicated disciples, Deborah Darby and Rebecca Young, having appointed a meeting at Newtown, a young woman who spoke French, and who was of a seeking mind, invited Stephen Grellet and his brother to attend it and afterwards to accompany these Friends to her father's house. During the silence of this meeting his mind was introduced into a state of awful reverence, and he found that for which he had been seeking, revealed within him, the inward illumination and the inspeaking voice [of the Holy Spirit,] ministering the consolation for which his soul yearned. Thus the work was wholly the Lord's, to whom we ascribe the glory. After they had dined, a religious opportunity occurred. Stephen Grellet comprehended little that was communicated, till Deborah Darby was led to address herself particularly to him and his brother, when his spiritual understanding was so opened as to enable him to feel and to know what was said. She spoke as one acquainted with the whole course of his past life.

Continuing to attend the small and silent meetings held at that town, he was at one of them brought to feel the weight of his past sins and transgressions in such a manner as to be introduced into the deepest distress. Earnest were his supplications that He whom he had pierced would speak peace to his soul; when in the riches of His everlasting compassion and marvellous condescension, He was pleased to grant the request. His heart glowed with love and gratitude, and he thought that he must then proclaim to others what great things the Lord had done for him. He continued in this state of solemn prostration before the Most High, until on raising his head he saw no one in the house but his brother, who was also bathed in tears.

Our dear friend was made a witness of the operations of the Spirit as a Reformer, Teacher, Comforter and unerring Guide. Marvellous were the Lord's dealings with him from time to time, and though in silent brokenness of spirit he could magnify His gracious providence, yet his allegiance was closely proved; for when a clear evidence

was afforded that he would be called to the work of the gospel ministry, he sought to be excused, pleading his unworthiness, his inability, and his want of a knowledge of the English language. Very great were his distress and conflict before he yielded obedience to this awful requisition, but he was brought to feel that it was only in entire dedication of body, soul and spirit that he could be accepted, and fervent were his aspirations that he might be influenced by the Spirit of his Redeemer, humbly to draw near to the throne of Grace.

Having removed to Philadelphia, his first appearance in the public ministry was at the Northern District Meeting in the First month, 1796. He continued in lowliness of mind, fearful of exceeding in expression, the more so as he was not yet a member of our religious Society; yet, in seasons of weakness and poverty he was thankful in finding the Lord to be a God near at hand, and he notes at this time that; "upon serious inquiries in my mind, I find that truly I love Him, and am ready to forsake all in obedience to His divine requirements; and I have prayed earnestly that I may be favored with a true discernment of His will and an understanding of His still small voice." On the 5th of the Eighth month, he wrote: "I have had this morning my mind tenderly turned towards the Lord, and have participated early in the breaking of spiritual bread, the heavenly manna. Oh, what sweetness to be in the presence of the Lord—to be in an awful and solemn silence before Him. What an instructive school is His! there is no teacher like Him. In His presence we see our faults, past and present, and the means to avoid them. He opens to us His mysteries, and brings joy, peace and quietness into our minds, and goodwill for all our fellow creatures. O Lord, let me more often approach the throne of Thy Grace. Let me become Thy true disciple. Let me grow in godliness and charity. Oh, clothe me with the white garment, and let me experience that my name is written in the Lamb's book."

In the Ninth month of this year he was received into membership, and notwithstanding the tenderness and sympathy of Friends, his sense of unworthiness was great, of which the accuser of the brethren taking advantage, endeavored to persuade him that in speaking in the name of his Divine Master, he had sinned against the Holy Ghost. This brought him very low. But as he was returning in anguish of spirit from an evening meeting in which he had been disobedient, he was made to believe that the judgments of an offended God would stand in array against him if he did not wholly resign himself to the work whereunto he had been called. Being by the Lord's strength enabled to resign his own will, the divine command when again given, was attended with such evidence, that he dared not resist.

In reliance upon his inward Teacher he was required to rise, without knowing what would be given him to express, and having uttered a sentence, to wait in reverent humility for further opening.

In the Seventh month of 1797 he went with Joseph Clark into New Jersey, to distribute Testaments and religious books among the poorer classes of the inhabitants about the sea shore, and he was careful to obtain the unity of his friends at home (ministers and elders,) before engaging therein. "I proceeded in it," he notes, "with much lowliness of spirit, keeping close to my Heavenly Guide. He so condescended that on my coming into a family, it seemed as if I could read at once their state, and a feeling of Divine love clothing me, enabled me to communicate my concern for them, so as in many instances to reach the witness for Truth in them. Many of these opportunities were favored seasons, and proved visitations of Divine love and mercy to the people."

He was acknowledged as a minister in the Third month, 1798, about which time he notes: "I felt led to a renewal of covenant on this solemn occasion, that I may increase in watchfulness, humility, obedience and dedication of heart, so that, at all times, I may by my conduct evince whose servant I am. Oh, may I never lose sight of the pit from whence I have been dug, or the rock from whence I have been hewn! May I ever look at my steps lest I fall and bring a wound upon the Truth. May my heart be more and more single and low before the Lord! I have often to experience that I am nothing of myself. May I never presume to move without feeling the Spirit of Truth going before me."

In this and the following three years he travelled with certificates of the unity of Friends in the service of his Divine Master, being, through the Lord's continued mercy, preserved in humility before Him.

During the prevalence of yellow fever in Philadelphia in 1798, Stephen Grellet was unwearied in his attentions to the sick, ministering to their emergencies. He became ill with the prevailing malady, all prospect of his recovery was relinquished, and he turned him to the wall to die, with the peace of God in his soul, and desiring to depart and to be with Jesus. At this moment it was distinctly revealed to him that he would yet have to proclaim the Gospel of the dear Son of God in the North, the South, the East and the West. Although distressed at the thought of returning to the world, a willingness was wrought in him to go whithersoever his Divine Leader should require, and the prayer of faith was raised that when again brought to the near prospect of death he might experience the same peace and the same glorious prospects.

Soon after this, he engaged in mercantile business in New York, but lived so loose from the world as to be ready for the services into which he was called; and in the few years immediately succeeding, he travelled as a minister over most parts of this nation and in Canada.

In the year 1804 he was married to our beloved friend, Rebecca, daughter of Isaac Collins. He four times visited Europe, and was enabled to preach the unsearchable riches of Christ in the various European nations. The first of these voyages was undertaken in the Sixth month, 1807, when he encountered a storm of great violence, in which he was "brought in humble resignation to bow before Him who holds the winds in his fists, who maketh the clouds His chariot, and rideth on the wings of the wind, who can rebuke the winds and the sea, and make a great calm."

At this time he wrote as follows: "My soul can never enough praise and magnify His holy name for His divine help, fulfilling His most gracious promise to be a shield, a rock, a strength, a sure

hiding place. The promise has been renewed to my poor drooping soul, that if I keep near Him in humility and dependence, He will be near me in the midst of the many storms that I may expect to encounter in the course of succeeding exercises, as He has been pleased to keep me in a great degree of calmness and resignation above the raging elements, so as to sing His song of 'great and marvellous are Thy works.' Sweet, safe retreat is the Lord's sanctuary—the holy enclosure. Therein, as with Noah in the Ark, storms cannot prevail."

The aggregate time occupied in his European journeys was nearly ten years, and his labors were extensive and his experiences remarkable. Being led to plead as an ambassador for Christ, with kings and rulers, the labor was blessed to some of these and their families, as well as to many in more obscure stations. His way was wonderfully made through dangers and difficulties, and in commemoration of the faithful dealings of the Most High with those who forsake all things at His requiring, we feel bound to record a few instances. At one time, when, unknown to himself, he was regarded as a political spy, and his track watched by the emissaries of a jealous monarchy, he felt a stop in his mind, and by close attention to the Hand which alone could lead him in safety, his feet, without apparent motive, were turned into an unexpected path, and thus was avoided a pursuit full of danger, but of which he was then and for many years ignorant. On another occasion, when embarking on ship-board under feelings of discouragement, the language of the inspeaking Word to him was: "Now I am going to magnify my Name before thee." The sea becoming very tempestuous, the waves on one side mountain high, on the other a deep abyss, our friend, whilst others were in terror, felt the assurance to be realized. During the wars of Napoleon, our friend was often brought into perilous proximity with the soldiery, but being never ashamed of the garb and manner of a Quaker, and never using any subterfuge, he was respected and allowed to pass unmolested. It being his lot to travel in the rear of the allied army, which quartered by night in the towns and villages, our friend for many weeks pursued his journey in the night, holding meetings by day in the towns just evacuated by the soldiery. The people in their distressed circumstances were glad to seek for consolation by going in throngs to these religious assemblies. A fearful pestilence attended the course of the army, and many persons to whom he was led to proclaim the way of life and salvation, were found dead on the following day. Thus a faithful Creator, in the midst of his judgments remembering mercy, extended to the people in their extremity, the messages of saving love and grace, and carried His messenger in safety through scenes of varied danger.

It was his practice to take his meals at the hotels, where he frequently met with the military officers, and he found it required of him at such times to keep on his hat. This singularity gave rise to questions and opened his way to explain to them the objects of his peaceable mission, and the views of the Christian Society of which he was a member.

In various parts of Europe he visited the convicts in prison, and was frequently exercised in great love for the souls of those who were condemned to die. To the Jews, in different cities and in settlements of their own, he preached the outward advent and the spiritual appearance of Him of whom Moses in the law, and the prophets did write. In many parts he found seeking people, whom the Lord had favored with a perception

of spiritual worship, and who had adopted view in some respects analogous to those of Friends in Norway he was instrumental in the establishment of Meetings for Discipline, and in Russia he and his fellow-laborer William Allen, introduced a book of selections from the Holy Scriptures, which being, by imperial law, adopted in their schools, was still retained in use in after years when the Bible was interdicted. In 1811 he made a religious visit to the Island of Hayti. In 1823 he became a member of this Monthly Meeting.

Subsequent to his last return from Europe which was in 1834, he labored within the limits of the different Yearly Meetings on this continent. In these extensive and arduous journeys he was careful not to go forth except as his steps were ordered of the Lord.

In conducting his temporal affairs he was scrupulously just and exemplary, desiring to give offence in anything, that the ministry be not blamed; and having received freely the heavenly gift, he was careful to make the Gospel of Christ without charge. He was diligent in the daily perusal of the Holy Scriptures, in which he had never read until he was awakened by the Spirit which gave them forth, and as he progressed in his perusal of them, their spiritual meaning was opened to his understanding, which was enlightened to perceive that liberty wherewith Christ hath made his people free from the necessity of dependence upon forms and ceremonial observances. And in his public labors these precious writings were opened, passages both from the Old and New Testament being brought into view with freshness of life, in elucidation of the glorious plan of Redemption, and of the blessedness of the unspeakable gift of Him, who, having finished his work in the prepared body, would not leave his faithful followers comfortless.

His ministry was weighty, and characterized by great simplicity. He was led to dwell on the sinfulness of sin, the uncertainty of life, the awfulness of eternity and the marvellous love and mercy of Him who tasted death for all men, that all might live, and whose light hath shined in every heart; exhorting the people, frequently with tears, that they should not neglect so great salvation. He was a minister of consolation to the sincere in heart, and a nursing father to the babes in Christ.

In his relations as husband, parent and friend his tenderness and fidelity were instructive. Seeming to forget his own sufferings in the grief of others, he went so long as health permitted from house to house, and with humility imparted consolation and counsel. Even at his home he was careful to wait on his ministry, and to be tender to the touches of the heavenly Monitor so that persons who visited him were sensible of the weightiness of his spirit, and often made partakers of the precious overshadowing which the human will cannot command.

In the last fourteen years of his life he was subject to frequent attacks of illness, accompanied with excruciating physical anguish, which he was enabled to bear with patience and resignation, often saying that it was his desire to glorify God and give him the opportunity to do it in suffering. During spasms of agony affecting to behold and which sometimes for many hours together baffled medical skill, he was not known to utter a word of complaint, and the utterance which of extremity of anguish elicited took the form of prayer or praise: "Dearest Father, be with Thy servant!" "Though He slay me, yet will I trust in Him!" "Good is the Lord!" Patient "looking unto Jesus" he referred touchingly

Redeemer's greater sufferings. No ejaculations for ease escaped him, but only for ability to signify the name of his gracious Lord and Saviour, chieflly desiring the completion in himself his blessed Master's will, often expressing it in his sanctification, and repeatedly appealing to those about him whether they could not unite with him in the ascription of gratitude and praise. Him who was with him in the furnace and whose everlasting arms were underneath, "I do not complain," he said on such an occasion when his friends were weeping beside him, "Whom the Lord loveth He chasteneth, and scourgeth every son whom He receiveth. If we had not chastening we should be bastards and not sons." Although his sickness repeatedly appeared likely to be unto death, he was again and again seized up to testify of the Divine goodness, and the tenderness of religious meetings, allowing neither clemency of weather nor physical pain to induce him to seek his own ease in preference to the service of Him who had redeemed his life from destruction and to whom, with full purpose of heart, he had dedicated his days. We believe it may be recorded that whilst his outward man failed, the ward was renewed day by day.

Within the last few months, although his strength was evidently yielding, he was rarely sent from our meetings either for worship or discipline, his last attendance being at our Monthly Meeting eight days before his decease. On one occasion he spoke on "the joy of believing," and participated in the business, but was obliged to withdraw before the adjournment. He was in this time confined to the house in extreme physical anguish, in the midst of which he requested that his friends might be informed that though tribulation abounded, consolation did not lie more abundant. Remarking upon his remaining strength of pulse, and that he might yet live much to suffer, he added: "I desire not to go to do so submissively but cheerfully. These sufferings are indeed agonizing, but in this my hour of extremity, my Heavenly Father has not forsaken me but is comforting me. I have had to advocate his cause, and now I am called to live by patiently suffering, and to glorify Him in the fires." His humility and love of the use of Truth were at this deeply afflictive period of his experience remarkably evidenced, his fear of lest, during these paroxysms, any thing might escape from him or should occur to bring reproach upon it or to weaken his testimony to the power and efficacy of Divine Grace to strengthen the recipient thereof to bear and to suffer in a manner becoming a christian. In child-like simplicity he requested some who were with him, to intercede as ability might be afforded, for his preservation from any thing calculated to hurt the cause. Being asked how he felt, he simply answered: "My dear Master is very good to me." Again: "I cannot think that I shall be forsaken. That careth for the sparrows will surely remember me." "My heart and my strength remain, but,"—and an expressive smile told his opinion of the remainder of the text which he had recited a short time previous. In a severe manner, he said: "Do not be discouraged—it is my flesh." The 12th and 13th of Eleventh month were days of almost constant agony, but a groan was turned into a prayer ending with "not my will but thine be done." Towards evening on the 14th he petitioned for a mitigation of suffering, if consistent with his Heavenly Father's will, very soon after which the painfulness ceased, and whilst he took no notice of external things, his reverent countenance indicated

a peaceful communion in the spiritual life. He slept sweetly much of the following day, and a little before noon on Sixth day the 16th of Eleventh month, 1855, without any struggle, with his family around him, in the prevalence of a peaceful and profound solemnity, his mortal life ceased.

Ventilation.

Look at an asthmatic sitting before an open window, regardless of the cold, though it be winter, with his chest heaving laboriously, and his countenance expressive of exquisite anguish. What is the matter? Is he in pain? No. What, then, is the distress? It is simply from want of a due supply of fresh air. The spasm in his lungs not only prevents the free admission of air from without, but the free egress of that which is within, so that the air which is in the lungs is a mixture of foul and good air.

When so many died in the famous Black Hole at Calcutta, it was because the pure air was so shut out, that they could not even get as much as the asthmatic does.

Here we have palpable results, and they startle us; and yet we may be suffering from day to day; in so small a way as to be imperceptible, the evil results of deficiency of air, which may so accumulate as to impair the health, and even perhaps ultimately destroy life. It is only a few that occasionally lose their lives suddenly from want of air, but a comparatively slight but continuous deficiency in its supply is constantly destroying vast multitudes by a slow poisoning.

A good supply of fresh air is an imperative necessity. Such a supply it is easy to get when we are out of doors; but we do not get it when we are in doors unless we make special provision for it; or, in other words, unless we take measures to secure ventilation.

A proper supply of pure air in our habitations and places of public meeting costs something, at least in cold weather. That is the chief difficulty. Economy is in the way. Less fuel is required with defective than with proper ventilation.

A small room closely shut up is warmed at less expense than a large room with suitable inlets for fresh air and outlets for foul.

The necessity for freshness in ventilation may be seen if we look at the amount of fresh air required for consumption. Each person requires a gallon every minute, that is, fourteen hundred and forty gallons in twenty-four hours. It is easy to see that small and closely shut-up apartments, and large gatherings of people in public buildings, as they are ordinarily constructed, are incompatible with any such supply as this.

That you may see clearly what the necessity for ventilation is, observe what the lungs actually do with the air which they receive. Pure air is composed of three gases in certain proportions: oxygen, nitrogen, and carbonic acid; this latter being in very small quantity. These proportions are altered in the lungs, so that the air which is breathed out is different from that which is breathed in. It has less of oxygen and more of carbonic acid. It is less vivifying by the loss of oxygen—that is, it thus negatively injured—and it has also acquired a positively bad character by the increase of the carbonic acid. Much increase of this renders the air palpably poisonous.

If, therefore, there be great lack of ventilation, as there often is in small rooms in dwellings, or in crowded public assemblies, much injury is done to the health by the diminution of vigor from the loss of oxygen, and by the direct poisonous influence of the added carbonic acid. And if the exposure of these deleterious influences be frequent,

there will inevitably be an accumulation of evil results, seen in a broken-down system, in positive disease, and at length in death.

Observe what provision is made in nature for the constant purification of the air, and how this is often more or less defeated by the arrangements of man. As oxygen is taken up in the lungs of all animals, and carbonic acid gas is sent forth from them, breathing is continually deteriorating the air. But this is remedied by a counter operation.

Every leaf that you see is doing just the opposite of what lungs do—it takes in carbonic acid and emits oxygen—so that there is an exchange going on between leaves and lungs. In this way the due proportion of the ingredients of the air is everywhere maintained, so that if the chemist examines air taken from various quarters of the earth he always finds precisely the same proportions.

But this is true only of air that is free, and not of that which is shut up where there are sources of contamination. Wherever there is breathing going on, if ventilation be not properly attended to there is a want of these natural proportions, and the deterioration is increased by fires and lights, for they, like lungs, use up oxygen, and return carbonic acid to the air.

There is still another important provision for the purification of air. The three ingredients of the air are not of the same specific gravity. The carbonic acid gas is decidedly heavier than the oxygen and nitrogen, and therefore has a tendency to lie below them, as water lies below oil. Now if this tendency were not obviated in some way, the carbonic acid, generated from lungs and fires and various decompositions, would accumulate all over the surface of the earth, pushing up the oxygen and nitrogen above it, as water does oil, and would destroy life, and put out fires everywhere.

But this tendency is obviated by another—the tendency of gases to mingle together. It is just as the heavier water does not remain below the lighter alcohol poured upon it, but mixes with it. Agitation promotes this mingling, and therefore, in ventilation, the communication of motion to the air is an important measure, and should be accomplished so far as it can be done without inconvenience.—*London Herald.*

In Carbondale, Pa., in 1849, I was one day walking along the street with my little son, then about three or four years old. Looking before us a few rods, I saw the sidewalk broken by a deep ditch which had been cut through it for the purpose of laying pipe or something of the sort. Two planks had been laid across the chasm for the convenience of passers-by. On seeing it I instantly thought, now I will see what Willie will do when he comes to see it. So we walked on and talked on, and when we were within a few feet of the place, I knew by his sudden start that my boy had then first seen the dangerous place to which we were coming. He was grasping the middle finger of my left hand. Instantly he let go his grasp of me and reached his hand up that I might grasp him, as if he had said, "I dare not trust my own strength to hold on to father now, I want father to hold on to me." It was an appeal from his power to mine, a new abandonment of himself to my control, in view of a new danger. I said at the time, thank God for this lesson of faith taught me by the child, and I know by experience how blessed it is to yield up the soul to God by deeper consecrations when sorrows are multiplied and dangers threaten.—*Methodist Home Journal.*

For "The Friend."

A Blackberry Story.

Edmund Morris, of Burlington, N. J., writes to *Tilton's Journal of Horticulture*:

"The blackberry having lately taken its place in horticultural staples, is attracting the attention of hundreds of acute and persevering seekers after fresh novelties. Its commercial value has been satisfactorily determined. It fully equals the raspberry in productiveness, and as a general rule, far outstrips the strawberry. In this section, where the two great city markets are within a few hours of us, the profit from a well-managed acre will pay the fee of the land annually. A gentleman within two miles of me, by way of interesting his son (a young lad) in agricultural pursuits, gave him the free use of an acre to cultivate as he pleased. The shrewd boy located a half-acre on one side of his father's barn-yard, and the other on the opposite side. He could thus trundle out a dozen barrow-loads of manure upon his ground whenever so disposed. He planted his acre in Lawton blackberries; cultivated them himself; and last year his gross sales of fruit amounted to \$600.

The year preceding, his clear profit from the same acre was four hundred and fifty dollars. I have walked through this magnificent creation of juvenile acre and shrewdness, and must confess that no engineering of my own in the same line has been able to equal it. The contents of the convenient barn-yard told powerfully on the canes, but more powerfully on the quality and quantity of the fruit. The fee of the land, though in the best location, was much less valuable than the annual crop.

Within gun-shot of this field are ten acres of the same berry, which last year yielded a net profit of four thousand two hundred dollars—more than the land would sell for.

The father of the lad referred to was engaged in mercantile business in Philadelphia; but he never realized such profits as he thus saw his enterprising son to be annually securing. The example set before him by the lad, inflamed his ambition to drop some one or two branches of agriculture, and take to raising briars also. He began his plantings several years ago,—for the son has long been harvesting very paying crops—and has been planting annually from the increase of his own fields, until he now has thirty acres of Lawtons. Last winter he cut down an apple orchard of large bearing trees, to make room for more briars. The profit from the latter far outstripped the best orchard in the county.

It is thus manifest that the commercial value of the blackberry has been satisfactorily ascertained, in Burlington at least, and doubtless in a thousand other localities."

Let this little incident stimulate other parents who have landed property, to do likewise, not for the pecuniary profit alone to their sons, but that it may be the means of inculcating a fondness for country pursuits, and keep them from much evil, by giving them employment for leisure moments whereby they can feel they are reaping a reward.

Selected.

First-day 25th of 3d mo. 1804, Richard Jordan says in his journal, "At our meeting I was favored with rather uncommon peace and tranquility of mind, and towards the latter part of it, I had considerable communication, I thought with a good degree of clearness; but very soon after meeting a fear possessed my mind, that it had been too much my own, or at least that notwithstanding the vision seemed to be clear, I had taken my own time in opening it to others, and for a

considerable time after I felt miserable. Lord, if it be thine hand it is thus chastening me, go on, spare not, nor let thine eye pity until thou hast made a full end, and brought me into unreserved conformity to thy own blessed mind and will concerning me, as thou art pleased clearly to manifest it to me on all occasions; that so, O Lord, I may be preserved watchful and attentive, not only to the opening of thy holy visions of light, but also to the times and seasons, as thou art pleased to make them known in thy own blessed power. So, O Lord, take unto thee thy own power, and rule and reign both inwardly and outwardly over all, who art God over all, blessed forevermore. Amen."

ONE THING IS NEEDFUL.

Selected.

"But one thing is needful, and Mary hath chosen that good part which shall not be taken away from her."

Ah! the heart that has forsaken
All things to secure the one,
In the secret of its chambers
Finds the joy of heaven begun.

Ah! the heart that is contented
Nought to know save God alone,
In the fulness of His blessing
Finds a peace before unknown.

Ah! the heart that once has bathed
In salvation's boundless sea,
In its waters drops the burden
Of a lifetime's misery.

Ah! the heart that lives disordered
From the vain delights of time,
By a peaceful path is treading
Through this vale of tears and crime.

O that thus we could surrender
Worldly pomp, and pride, and show,
Seeking Him in whom is centred
All of good that man can know!

O that thus His blessed presence
In our hearts we here enjoyed!
For without Him all is dreary,—
Earth is dark, and vain, and void.

O that thus our eyes were resting
Evermore on Christ our King,
Until conscience lose its burden,
Life its load, and death its sting!

Oh! Thou fount of every blessing,
Why draw us by the cross, till we,
Heart and soul, and will and spirit,
Are forever one with Thee.

Hymns from the Land of Luther.

THEY SAY.

Selected.

They say—ah, well! I suppose they do?
But can they prove the story true?
Suspicion may arise from naught;
But malice, envy, want of thought;
Why count thyself among the "they"
Who whisper what they dare not say?

They say—but why the tale rehearse,
And help to make the matter worse?
No good can possibly accrue to
From telling what may be untrue;
And is it not a nobler plan
To speak of all the best you can?

They say—well if it should be so,
Why need you tell the tale of woe?
Will it the better wrong redress?
Or make one pang of sorrow less?
Will it the erring one restore,
Henceforth to "go and sin no more?"

They say—oh pause and look within!
See how thy heart inclines to sin!
Watch, lest in dark temptation's hour
Thou, too, shouldst sink beneath its power!
Pity the frail—weep o'er their fall,
But speak of good, or not at all!

A Balloon Survey of a Coming Storm.—The English aeronaut Coxwell writes the following account of a remarkable series of storm observations in his balloon:

"I ascended from the Crystal Palace at Sydenham, and witnessed, during a tour into Berkshire, the peculiar formation of vapor and clouds which ended in one of the most disastrous storms on record. When we rose over the centre transept the country southward was clear for many a mile distant. Towards London, however, and down the mouth of the Thames, heavy vapor rose from the river, and continued westward until mixed with the London fog. It ceased to follow the river's course at Chelsea, and so clear was the water at Richmond round to Chertsey, that we discerned patches of weeds at the bottom of the Thames, as numerous boats rowed over its transparent surface. From the metropolis this long line of leaden vapor made a continuous course towards Windsor Castle, so that it was impossible to discern the Castle. As Captain Woodgate wished to visit the barracks, I descended near the Great Park, and, taking in sand equal to his weight, Mr. Woodgate and I resuscitated with the intention of going on further.

"We had not long entered upon our second voyage when the clouds gathered overhead in tempestuous form; the deep line of mist resting on the earth had effected a reunion with the Thames. On passing over it the temperature was less by six degrees at four thousand feet than was at a similar altitude when we moved in a clearer atmosphere. I observed that twice previously I had seen that kind of cloudscape, and that each time it was followed by stormy weather. At 8.30 heavy clouds gathered up from the south and west. We were then passing Reading, which was lighted up with gas. The clouds were fast closing in around us, and fine rain began to fall. At last these huge clouds, the land mist and northerly masses of vapor all met, and so dark and dreary was the landscape that we descended to Englefield Farm, and had not long packed up before the rain commenced.

"This was not an ascent for meteorological observations, and I only had with me a barometer and thermometer; but the cloud modifications were most striking, and have, without doubt, an interesting connection with the law storms."

The Christian's Gloomy Death; or The Warning to His Three Profligate Sons.—A pious parent had three sons, who, notwithstanding all his admonitions and instructions, mingled with many prayers and tears, grew up to manhood in scepticism and profligacy. The father lay dying; and conceiving that it might perhaps produce a good impression on the minds of his abandoned children, to let them see how a christian died, his friends of the family introduced them to the bedside of their expiring parent. But to their unspeakable grief, the good man died without an expression of christian confidence, and appeared destitute of those strong consolations which believers in Jesus often experience in the closing scene. It was now apprehended that the effect of this melancholy circumstance on the young man would be, to confirm them in their prejudice against religion, and afford them, in their opinion, a sufficient evidence that it was a cunningly devised fable. However, it was not so: the ways of God are not as our ways, neither are His thoughts as our thoughts. A few days after the funeral the younger brother entered the room in which the two others were; and, observing that he had been weeping, they inquired the cause of his grief.

have been thinking," said he, "of the death of our father." "Ah," said they, "a dismal thought it was; what truth or reality can there be religion, when such a man as he died in such state of mind?" "It has not affected me in any way," replied the younger brother; "we all know what a holy life our father led, and what a pious death he died; now I have been thinking of the dreadful our death must be, who lead such a wicked life." The observation was like an arrow to their consciences; they began to be alarmed, and ultimately became as eminent for godliness as their exemplary parent had been.

Use of Distilled Water.—In M. Quin's report in the Paris Exhibition, reference is made to the use of distilled water at the Wallaroo Copperworks in South Australia, stating that until tanks collecting rain water had been constructed, sulphur for the first time in the history of the world, there was a population of some thousands, and all their horses, cattle, sheep, &c., drinking "acid distilled water." As many readers may not be aware of the fact, it may be interesting here to mention that in the rainless region of the Pacific off the coast of South America, the entire population of a country between about the 18th and 28th parallels of south latitude, or some 600 miles from the north to the south, including the important towns of Lima, Callao, Iquique, Pisco, and several other ports, have for many years derived their supply of potable water from the sea water of the Pacific, distilled in greater part by coal imported from England, and costing above £3 per ton. It is only in a population of many thousands, inhabitants, principally engaged in the mines of the district, as well as a still larger number of slaves of burden and other animals, supplied from sources, but even the locomotives on the Callao and Caldera railway, and some steam engines for other purposes, are actually driven with distilled water. For a distance of some thirty miles inland from the coast, very few natural springs are met with in this rainless desert, and to meet with them is seldom sufficiently free of saline matter to be potable.—*Chem. News.*

Come unto Me and I will give you Rest.—"Come unto Me and I will give you Rest," is a well known invitation of our Lord, "Come unto Me, all ye that labor and are heavy laden, and I will give you rest," knows no exclusion. It speaks of a description which is common to all; its boast and glory is that it is intended for all who need it, all who labor and are heavy laden. It does not even pry into the cause of our distress; it does not ask what occasions our distress; it only enquires whether or not we are subjects of disquietude. In uttering it, our Lord undoubtedly selected language which would reach the condition, and fall soothingly on the ear of every man. His eye travelled over scenes and faces of human woe, in which he saw the struggles of poverty; the disappointments of ambition; the misgivings of the self-righteous; and the excited efforts of the sinner lashed by the reaches of a guilty conscience, and aiming to be free from a load of guilt. His omniscience penetrated every heart, and saw the tooth of care gnawing the peace, not merely of the poor and afflicted, but praying alike on the learned, the rich, and the mighty of the earth. He beheld a man in which every one was seeking for shelter without knowing where to obtain it; and he publicly exposing himself to all its horrors, he led forth into the midst of it and exclaimed, "Come unto Me, and I will give you rest."—*Dr. Loring.*

From "The British Friend."

No one, I think, who has looked with a thoughtful eye upon the state of our religious Society, but must be aware that a painful difference of sentiment exists amongst us. It is seen in various forms, and on many occasions; and in the observations I am about to make I wish to approach the subject with the solemnity befitting a question which so intimately concerns our well-being as a religious body, and our reputation and influence in the world at large. There was a paragraph lately in the *Nonconformist* relative to the Yearly Meeting, and the decline in our numbers as a religious Society. This was attributed to two causes—birth membership, and the want of a missionary spirit. Of the first I have nothing further to say than that I consider it to be a considerable source of weakness, and out of harmony with our general principles. Of the second, the need of greater missionary zeal—a view shared in by many of our members—I regard it as putting the effect for the cause. The early Friends, largely endowed with the spirit of their Divine Master, were devoted and self-denying men, fitted and prepared for the work given them to do, full of zeal and the true missionary spirit; being converted men, it was their mission to convert others, but until a great and radical change had been wrought in themselves, often in secret and solitary places, and under much privation and suffering, they went not forth to convert others.

Of the Son of man himself, as Erasmus has well said, "It was not until after he had been tried and proved by forty days' fast, and the temptation of Satan, that he commenced the work of preaching." Why then should his followers be exempt from the operation of the same law? And this, whether we look at the highest example—the primitive Christians, or our predecessors in religious profession—is the true gospel method. But to engage in such labors without the necessary preparation and training in the school of Christ, is but to "compass ourselves about with sparks of our own kindling," to result only in disappointment. A revival of true Quakerism must precede the growth of a missionary spirit; the latter is the direct and necessary fruit of the former. Missionary zeal will not create a revival, but the restoration of our ancient faith and practice will give birth to the true missionary spirit. An advocate of foreign missionary enterprise quotes a paragraph from the address of Daniel Wheeler to York Quarterly Meeting, as an authority on his side the question; and if the sentiments of one whose orthodoxy and devotion to the principles of our Society cannot be gainsaid, were in harmony with this writer's views, he has good reason for maintaining his position, but I do not see how this inference can fairly be drawn from the premises. Daniel Wheeler declares his belief that if the world, and the things of the world, had not alienated our hearts from heavenly things, many would have been raised up amongst us, ere this, to proclaim the gospel, which is the power of God unto salvation, to distant and heathen lands. He traces our inaction and lukewarmness to its right cause, and implies that if the cause were removed, the effect would cease, and we should again shine forth "as lights in the world, as a city set upon a hill, that cannot be hid." He deplores our shortcomings and unfaithfulness, and solemnly warns us to beware lest the kingdom of God be taken from us, and given to a nation bringing forth the fruits thereof. There is nothing in all this that can be fairly construed into an approval or encouragement of missionary effort upon any other ground than the direct leading and guidance of the Holy Spirit; a clear and

imperative call upon the servant of Christ as to the prophet of old, "Arise, go to Nineveh, that great city, and preach unto it the preaching that I bid thee."

While some of our members look upon the present state of things amongst us with feelings of hope and encouragement, others can by no means take this cheering view of it. If there is a revival, where are the signs? I see little in the present aspect and action of the body. "Revolutions," as they are popularly termed, are usually accompanied by much religious excitement and activity, but they seem to be temporary and short-lived, leaving few solid results. Some years ago there was a "revival" among the civilians and military employed in the Woolwich arsenal, but we do not hear that it resulted in that warlike establishment beating its swords into ploughshares. Nor did a subsequent "revival" in the United States prevent the outbreak of a sanguinary and desolating war, wherein thousands of the youth and flower of the population were consigned to a violent and premature death, leaving widows and orphans to mourn over their bitter loss. But a revival in our religious Society, to be genuine, would appear to me to exhibit a very different appearance. If "the kingdom of God cometh not with observation," surely something consistent with this should be regarded as more in accordance with the spirit of our profession. Still water is the deepest, and the cloud no bigger than a man's hand may be the herald of important events. A searching at the root, a working beneath the surface to find the spiritual depths of the true foundation, and make our anchorage there, may be so little demonstrated by any external signs, that the humble disciple working patiently and hopefully in his allotment, may, like the prophet of old, be unaware of the existence of the seven thousand who have not bowed the knee to the image of Baal, but whom the great Head of the church may be secretly preparing to take part in the restoration of his church to her primitive glory.

The "church of the future," says a late writer, "if it ever comes into being, must rise, like the temple of Solomon, without sound of axe or hammer. It must be planted like the gospel itself, as a grain of mustard seed, the smallest of all seeds, but capable, under the divine blessing, of becoming in time a great tree."

"Doth a fountain send forth at the same place sweet water and bitter?" yet something analogous to this is transpiring amongst us. While some under our name are proposing such alterations in our religious usages as amount to a reconstruction and formation upon a different basis, destructive of the characteristic and distinctive traits of our religious system, and eventually of Quakerism itself, others, with evidently the best intentions, are actively engaged in the promotion of the various philanthropic enterprises—the Bible readings, prayer or devotional meetings, and other movements of a similar character, which are to be found in this city in full operation, within the walls of the Bedford Institute; and a third class take no part in these matters, as not being in their line of service, or having no true fellowship therewith.

"For the divisions of Reuben there were great searchings of hearts." I believe the root of all our difficulties—unconscious as some of us may be of it—is to be found in a departure from, or distrust in, the motions of the Holy Spirit as our guide, instructor, and deliver, in every possible contingency that may arise in the church and the world, whereby we have lost the true spiritual discernment, and become more or less conformed

to the world, its maxims, fashions, and allurements. To this spirit of unbelief, this despising the day of small things, must be attributed the Bibliolatory and doctrinal superficiality which have sprung up in our midst, the weeds that grow apace where the true seed is neglected. In the unity of the spirit is the bond of peace, and there can be no true peace out of it. "The wisdom that is from above is first pure, then peaceable." If, by way of distinction, we speak of the active and the passive amongst us, we see two sections of the Society taking different views, and different paths; both cannot be right, neither can a half-way compromise between the two be of any avail; there is but one and only way, and it is our duty to ourselves and to the religious body of which we form a part, and whose prosperity we profess to desire, to "stand in the ways and see, and ask for the old paths, where is the good way, and walk therein." Simple and all-comprehensive as this is, its very simplicity causes it to be overlooked and neglected, to our irreparable loss. And yet, if each one for himself were to follow implicitly the course pointed out to him by the unerring finger of Omnipotence, we should become collectively all that the great Head of the church would have us to be. There is no originality in this counsel, we have had it again and again, "line upon line, and precept upon precept," but it needs to be often repeated.

It is a day of unusual excitement and inquiry in every region of religious thought. In quietness and confidence, in humility and watchfulness, will be our safety and our strength. And while it is our duty to uphold unflinchingly the doctrines and testimonies given us as a church to bear, may we strive to possess our souls in patience, that whether our controversy with what we believe to be error be oral or epistolary, we may conduct it towards those of our brethren from whom we are compelled to differ, in a spirit of christian love and forbearance to the furtherance of the great interests of truth and righteousness, remembering that if we are in possession of the truth, the best evidence we can give of our faith in its omnipotent power is a calm confidence in the assertion of it. And now, to conclude, what is the remedy? I have already indicated my views in this direction, and I cannot do better than to revive in our remembrance, and commend to our serious reflection, the words of one who, "being dead yet speaketh" in the deep, practical, and instructive counsel left on record for our edification, and particularly appropriate to our present condition as a church. Having defined what spiritual unity is, and how it may be preserved, how interrupted, and how recovered when at any time decaying, Isaac Penington proceeds to the true solution of the latter question: "In the Lord alone is the recovery of loss in any kind at any time, who alone can teach each to retire into, and to be found in that wherein the unity is and stands, and into which division cannot enter. This is the way of restoring unity to Israel; upon the sense of any want thereof; even every one through the Lord's help returning in his own particular, and furthering the returnings of others to the principle of life, that every one may feel the washing from what hath in any measure corrupted, and the new begetting into the power of life. From this the true and lasting unity will spring again to the gladdening of all hearts that know the sweetness of it, and who cannot but naturally and most earnestly desire it."

7th month, 1867.

A CITIZEN.

"Blessed are the pure in heart for they shall see God."

For "The Friend."

Report of the Freedmen's Aid Society of West Chester, for fourteen months ending 6th mo. 1st, 1867.

By the Treasurer's account it appears that the following sums have been received:

\$567.76	from West Chester.
164.00	" Bradford.
140.00	" Concord.
135.00	" Bucks county.
82.06	" Different localities.
5.43	" Rags sold.
128.00	" Monthly subscriptions.
95.77	Balance 4th mo. 1st, 1866.

\$1,313.02

1,313.02 Expended.

At the last report, the Society had on hand 280 garments and some material, and have since made 1854; 626 garments were made by women of this place who needed employment; the principal part of them were paid for out of a fund contributed for that purpose.

160	were sent to M. Parker, Alexandria.
340	" R. W. Smith, Yorktown.
179	" I. H. Remington, Winchester.
182	" W. F. Mitchell, Nashville.
167	" M. Jennings, Suffolk.
205	" A. Gibbons, Richmond.
490	" E. Yarnall, Charleston.
71	" E. Kelly, for Charleston.

1,794

We have 340 on hand. We have also sent to the same places 571 yards of material, 13 lbs. of stocking yarn, knitting needles and a variety of trimmings.

To all who have aided us by contributing money or materials, we return grateful acknowledgments, and to those in this place and in the vicinity, who rendered assistance in making up the clothing.

To the Directors of the National Bank of Chester county we are indebted for the use of their room. To the West Chester and Philadelphia Railroad Co. for free transportation on their road, and to the Friends' Association of Philadelphia, and Pennsylvania Freedmen's Relief Association for forwarding most of our goods without expense.

Our report shows that our funds are exhausted. If the necessities of the freedmen require the continuance of our efforts, we will have to appeal to those friends who have so generously aided us heretofore, for means to assist us in carrying on our work.

NAOMI GIBBONS,

T. S. SMITH, Sec'y.

President.

For "The Friend."

The promise of the Saviour to his disciples of the gift of the Holy Ghost, to be their guide and director, has rested upon my mind, accompanied by a fear that many professing to be Friends, are not sufficiently attending thereto, in the present mixed and low state of things among us. It is my earnest desire that all of us may be brought to act more and more in accordance therewith.

It was to this divine gift that the members of our religious Society were turned at the beginning; and it was a practical belief in it, that constituted the Society, not a sect, but a church, gathered, and gathering from the various sects, formed too much in the will and wisdom of man, derived from school learning, and mixed with carnal ordinances, ceremonies and the rudiments of the world. But it was denied by George Fox and other Friends eminent in their day, that a people gathered by and acting under the immediate influence of the Spirit of Christ was a sect, or sectarian.

It appears by the writings of not a few in membership with us in the present day—actuated many of them may be by a desire to be liberal that they wish to inculcate the idea that the Church of Christ is composed of all the different sects, each one being a section thereof. This, however, is contrary to the recorded belief of Friends, as to the composition of the true Church the mystical body of Christ. But I trust that none among us are prepared to deny the truth of the declaration of the late Sarah L. G. Grul "This people [Friends] were first formed upon the Divine hand." If this be so, apostates Judases cannot destroy the foundation. There have been and still are those amongst us who, on this foundation, as there were the seven thousand of Israel who had not bowed the knee to Baal. These "walk by the same rule and mind the same thing," and constitute a part of the Church, which Barclay speaks of as sanctified a gathered home to Christ, alive unto God, and dwelt unto the world.

That the Lord has in all ages preserved so must be apparent to all, and that the enemy will be permitted to prevail against such now, let us be willing to believe. But O! may all be slow to move, unless under the Divine anointing and the bidding of their Lord; and on the other hand may none give way to fear and act the coward when the Word burns within them, but be valiant for the cause and honor of the ever blessed Jesus. S. O.

Orleans Co., N. Y., 8th mo., 1867.

Now Paris is Fed.

Some hours before daybreak the market gardens of the suburbs of Paris begin to throng into the town, and converge, with the great drays which bring in the provisions, sent up railway from the provinces, to the great market of the Halles Centrales.

The twelve pavilions of this magnificent bazaar of buildings are entirely constructed of brick and iron, and each one is devoted to some special branch of the business. Thus one is set apart for the sale of meat by auction; another for the sale of fish, or by private contract; a third for meat by retail, or by butter and eggs; a fourth for fish, and a fourth for butter and eggs.

There are several other markets in Paris. Most of them are built on the same model as the Halles Centrales, and they are nearly all supplied with there with provisions.

Some notion of the amount of animal food consumed in Paris may be obtained from the following figures: In the year 1866, besides 19,000, kilograms of meat sold by auction at Halles Centrales, 110,000 oxen, 46,000, 169,000 calves and 840,000 sheep were sold at the cattle markets. It is to be remarked, although more than 46,000 cows are consumed in Paris in a year, yet no one will own to buying, selling the meat.

The official returns show a sale of ten mill and a half kilograms of butter and 232 lions eggs passed through the hands of the sort who, at work all day in the cellars of the market, gain from three to four thousand francs a year their occupation, which is, briefly, to pick out good eggs from the bad ones. The consumption of this enormous number of eggs may be understood when the vast quantities bought by the confectioners are taken into account. Guillot, for instance, the manufacturer of Biscuits, uses 23,000 a day.

Everybody has heard the complaint of gourmand that there is no more of the celebrated "Frouge de Brie." Last year four hundred and forty thousand of these cheeses were

in the Halles Centrales, which, with about a million and a half cheeses of other kinds, and an equal number of Neufchâtel cheeses, make a total of nearly three and a half millions.

Three hundred and fifty-three thousand cartons of vegetables came into Paris last year, fourteen millions kilograms of fresh fish, which one-fourth was imported from abroad: land sending salmon, trout and lobsters; land sending salmon, shrimps, eels, pike and cod; Switzerland, trout from Lake Geneva; Russia, salmon and trout; and the rest of Germany enormous quantities of prawns.

Last year two hundred and sixty millions of fish were eaten in Paris, and there was a great about the increase in their price. Their resale price had, however, only increased twelve times a dozen on that of the previous year, the public may imagine what the retailers have pocketed out of the exorbitant charges paid at the restaurants. Add to this enormous quantities of eatables twelve and a half millions of which Paris eats annually at dessert.

The poultry and game market, called *Le marché de la Vallée*, must certainly not be omitted. Poultry is so much care taken about the raising and trussing of poultry for the market in France, and here you will find rabbits and ducks packed with the utmost neatness in clean barrels, and ready for the spit. Game is carefully packed up, and no pains are spared to keep it sufficiently fresh for the French taste.

Pigeons are brought in alive generally from the country, and being shut up in baskets, are very soon exhausted when they arrive at their destination. Food, too, they are greatly in want of, and there is usually great difficulty in supplying them with it on their way. They are given over to the so-called *gaveurs*, who fill their mouths with bread, and allow the pigeons to take it from between their lips.—*Late Paper*.

Stop, for Your Soul's Sake.—A bold boy, rambling among the Alps, saw some flowers on the side of a fearful precipice. The guide saw him standing on the dizzy edge, and shouted: "Come back!"

"Not yet; I see some flowers just below, which I want to get," replied the boy.

"Stop," responded the guide, "you will be killed."

"I must have the flowers," replied the boy. The guide, with the boy's friends, hurried to the infuriated boy, as he leaned over the edge of the dreadful gulf. They heard him say, "I must have them;" and then, "I have them;" and his words were scarcely uttered before he lost his footing, and fell a thousand feet upon the pitiless rocks below. He had given his life for a flower which he had never seen.

"Shocking!" exclaims my young reader. I had to see it so, because it may help you to your own danger. Are you not seeking a dangerous risk, to pluck a flower? What is that you cherish for a place in that circle of youth to which you are invited? What is that habit which brings a blush to your cheeks when it is hinted at? What is that resolution to enter the charmed ring of forbidden amusement? Are not these things your flowers?

Are not your desires the reachings of your soul to the edge of innocence? Dear youth, take heed. The gulf below your flowers is bottomless. You pluck your flowers, you may fall, and with them in that fearful realm of darkness and death. Seek them no longer, therefore, but stop. For your soul's sake, stop!—*Late Paper*.

Napoleon Buonaparte and Novel-Reading.—By common consent, says Abbott, all novels were banished from the circle, as Napoleon inveterately abominated every thing of that kind. If he happened to find a novel in the hands of any of the attendants at the palace, he unhesitatingly tossed it into the fire, and soundly lectured the reader upon her waste of time.

For every sacrifice, which was offered up to God, was to be seasoned with salt; so every sacrifice now that is to be offered up to God, must be seasoned and made savoury with this heavenly salt of his heavenly spirit, so that all may give a good savor to him, and be as a sweet smelling sacrifice to the pure, holy God, that made all to his glory.—*George Fox*.

THE FRIEND.

NINTH MONTH 7, 1867.

Among the events chronicled by the European press, as indicative of the unsettled condition of political relations and existing nationalities, are the frequent visits and interviews between the more conspicuous crowned heads on that continent. These visits, whatever the ostensible reason or object assigned for their taking place, are generally understood to embrace consultation and arrangements relative to matters of State, bearing with more or less weight on the stability of the governments represented, or on the political attachments and rights of the people.

The facility with which these meetings appear to be brought about, and the unostentatious manner in which they are conducted, are certainly significant of a change having taken place, and still going on in the minds of both rulers and people, as to the supposed sacredness of royalty and the mystery attending the exercise of kingly power. The idea of divine right attaching to those who are born to, or occupy a throne, has been exploded or is passing away, and the people are becoming more and more generally recognized as the source of legitimate power, which they have the ultimate right to depute to whomsoever they may elect, to be exercised according to such form of law as they may approve.

The whole course of circumstances attending the great changes that have been effected in different governments of Europe within the last ten years—as those in Italy, in Prussia, Denmark and Germany—shows that the will of the people is making itself actively felt in both the form of government, and the selection of those who shall administer it. The potency of the Emperor of France, who makes a boast that his right to the imperial crown is based on the election by the people, is a most striking commentary on the progress of the age in the recognition of popular rights; while the obsequious deference paid him—plebeian as he is, and the representative of a man who once bumbled them in the dust—by the crowned heads of the oldest dynasties in Europe, together with their avowed desire to consult the wishes of their subjects, show that these once dreaded potentates are sensible the formerly despised and down-trodden people have now acquired too much knowledge of their rights and power to be much longer repressed, and that their own assumed prerogatives are liable to be lost in the revolution of a day. Hence they are beginning to move about very much like other men; to look upon the people at home and abroad; to inquire into their views and temper, and to consult together as to what changes they may attempt and

what schemes they must forego. However much of this may be attributed to the disturbance recently given to the "balance of power" and the desire of each sovereign to fortify himself in his tenure of authority, it is none the less indicative of the revolution going on in relation to human rights, the source of political power, and the felt though unexpressed necessity for those who wear a crown to take heed to the lessons of the hour.

No one of the visits abroad, by King, Emperor or Czar, more strikingly illustrates the inauguration of a new era, than that of the reigning Sultan of Turkey, to France and England. When we reflect for how many centuries the Sublime Porte has deemed it beneath it, except through diplomatic ceremonials, to hold intercourse with infidels, as it termed all who did not bow at the shrine of the Mussulman, and that its meanest subjects thought it disgraceful to eat bread with "a christian dog," we must be convinced that a marvellous change has, by some means, been wrought, when we see the reigning Prince of the Orient and sovereign Pontiff of Islamism, laying aside his hereditary prejudices and voluntarily accepting the proffered hospitalities of christian courts, with the open avowal that he came to see wherein he could promote the improvement of his people. Such a circumstance never occurred before, nor indeed can we recall any historical account of the reigning Turkish sovereign having travelled, for any other purpose than conquest, outside his own dominions.

But the elements of modern civilization have overleaped the barriers raised by the fanatical creed and determined exclusiveness of the haughty Turk, and with the mighty upheaval of the oppressed and almost frenzied masses of his subjects which is threatened, have forced this well-instructed occupant of the throne of the Ottoman, to throw aside the drowsy routine of his idle, luxurious life, to open his eyes to the grave defects and abuses of his system of government, and to inquire what are those sources of material wealth and comfort, and those principles of social improvement which have advanced the traditionally despised western peoples so far beyond his own.

Abdul Aziz Khan, is evidently a man of strong and cultivated mind, and has given reason to suspect that the fanatical superstition of the Moslem, has in measure lost its hold on him, otherwise, he would hardly have braved the rabid prejudices of his people, and journeyed among the hated ghouls, for the purpose of obtaining more intimate knowledge of them and their institutions. That he fully appreciates the historical significance of his visit is manifested by the emphatic declaration in his speech to Louis Napoleon, that "Islamism now makes its salutation to christianity," and from his having freely expressed himself when in England, that it was his desire to break up oriental exclusiveness, and bring his government and people within the range of a common sympathy and fraternal relations. Since his return home he has announced to his counsellors and officials that he is determined to initiate extensive and important reforms, so as to open the way for religious toleration, and the cultivation of those arts and sciences that minister to social improvement and domestic comfort.

Without allowing ourselves to anticipate any sudden great advance in those things which characterize christian civilization, we are justified in interpreting the events we have been alluding to, as speaking emphatically of the moral march of the nations of the earth, and proclaiming unmistakably the momentous character of the unfoldings of the future, as truth shall triumph more

Memorial of Chester Monthly Meeting, Pennsylvania, concerning Hannah Rhoads, deceased.

From the lively remembrance we have of the pious services and exemplary christian walk our late beloved friend Hannah Rhoads, we engaged to give forth a Memorial concerning her in order to show the blessed effects of early mission to the transforming power of the Holy Spirit, which made her what she was, and to survivors to follow in her self-denying, watchful, as she followed Christ; that so they also become prepared to serve their generation according to the will of God, and receive the life of everlasting life.

She was the daughter of Jonathan and Hannah Rhoads, late of the City of Philadelphia, and was born there the 7th of the Ninth month, 1793.

Possessing much vivacity of disposition, a sound intellect, and an affectionate heart, combined with attractive manners, she was a pleasing companion, and was often drawn into the levity vain conversation to which unwatchful youth are prone.

When about seventeen years of age, she was divinely favored with an effectual visitation of the Spirit of Christ, revealing her lost condition, and her sins in order before her, and opening the way of salvation by sincere repentance and amendment of life, and living faith in our Lord Jesus Christ, as the crucified and risen Saviour.

Deep were the humiliation and self-condemnation to which she was brought, and long and assiduously did she mourn, and seek for an assurance of pardon and reconciliation to her Heavenly Father; which at length she was permitted to experience, by being enabled to look in faith to the Father of God, that taketh away the sin of the world.

Having set her face heavenward, there was no turning back to "that country from whence she came out;" but taking up her cross daily, and following the path of duty as it was marked out by the Holy Spirit, she was made an example of to the faithful-servants and watchfulness. In conversation her words were few and seasoned with grace, and she felt constrained to observe plainness and simplicity in her attire, language and manner. Patiently and steadily abiding under the Lord's forming hand, she grew in religious grace and stability, and became qualified for usefulness in the Church.

In the twenty-fourth year of her age, being

entrusted with some important services in religious Society, she made the following memorandum, viz: "I feel that a narrow search into my own heart is necessary. I cannot know what offensive thing may be lurking there, unless it is made known by the light of Truth inwardly revealed. The heart of unregenerate man is deceitful above all things, and desperately wicked; who can know it? If we seek, and knock, and ask aright, it will be opened to us; and the gracious promise is, The Lord is a rewarder of all them that diligently seek Him. We may think that we are desirous of doing something for the good cause, and even willing to serve Him faithfully, but it is necessary first to be engaged diligently to seek to know and feel Him in our own hearts, and what his blessed will concerning us is."

In 1818 she was married to our late beloved friend Joseph Rhoads, and removed to his residence at Marple, Delaware county, Pennsylvania, which continued to be her home for nearly forty-four years; during all which time she was a member of this Monthly Meeting. She was a true help-meet to her husband, aiding and encouraging him in the various social and religious duties which devolved upon him. They earnestly endeavored by watching unto prayer, to seek for Divine ability to train up their offspring in the fear of the Lord, to walk worthy of their vocation as servants of Christ, to be fruitful in every good work, and "to increase in the knowledge of God." They were careful to practise a liberal hospitality, to share their outward blessings with those in less favored circumstances, and kindly to remember the poor and afflicted as children of the same gracious Father.

In conversation they were especially guarded, not only to avoid speaking in a manner derogatory to others, but to discountenance every thing of the kind in their family; and while far from extenuating evil, to cultivate towards all the spirit of christian love and forbearance.

In the attendance of religious meetings she was diligent, not allowing the pressure of outward affairs or the desire of present ease to prevent her. Her reverent deportment and the deep introversion of her spirit in humble waiting upon the Lord, were instructive and edifying; showing that her mind was gathered into holy quietude, and enabled to worship her God and Saviour in spirit and in Truth.

Having passed through many deep and humbling baptisms, and experienced the work of preparation to be carried on in her soul, until the Lord's time was fully come, she was called to the ministry of the Gospel, and put forth by him in this solemn work, in the year 1831. Having now put her hand more publicly to the Gospel plough, strong were her desires that she might not only be preserved from looking back, but that in simple dependence upon the Lord Jesus, and by a close attention to his leading, she might know a growth and establishment in her gift. In a memorandum written some months later, she says: "The present desire of my soul is, that I may faithfully follow my dear and compassionate Lord whoso-

ever he may be pleased to lead; so that neither heights nor depths, principalities nor powers, things present nor things to come, shall ever be able to separate me from the love of God in Christ Jesus."

In the year 1835 her Monthly and Quarterly Meetings acknowledged her gift, and recorded her as a minister of the Gospel. In the succeeding seventeen years, with the unity of her friends, she attended all the Yearly Meetings of Friends then on this continent, and in Great Britain and Ireland, beside other religious services in places less distant from home, including some family visits, an engagement for which her deep indwelling with the Heavenly gift, and her tenderly sympathetic mind, peculiarly fitted her.

The visit to Great Britain and Ireland was preceded by much exercise and proving of soul; but He who called for the sacrifice was graciously pleased, not only to grant satisfactory evidence that it was in his ordering, but to give her strength to resign herself, and all that was dear to her, to his disposal.

Being liberated by the church for this weighty service, she embarked in the Sixth month, 1850, and was favored to accomplish what was required of her, so as to return to her family and friends in the Sixth month, 1851. In the course of this visit, she felt herself religiously restrained from going to meetings or places where the call of duty to her Lord did not lead her, although at times it was a trial to decline the solicitations to do so; but feeling that her safety and peace were concerned, she was helped to keep to the narrow path assigned her. She was much drawn into silence, both in and out of meetings and her gathered, reverential watchfulness and waiting on the Lord, often had a leavening influence upon others, tending far more than the mere utterance of words, to bring them into true inward exercise.

After her return home she wrote respecting the visit: "I often feel humbled and thankful in remembering what I passed through during my late visit, and how remarkably we were cared for, and how way was made where there appeared to be none: mountains of difficulty were removed, and in due season, a quiet and peaceful release was mercifully granted, and I feel nothing to retract in the retrospect of my movements in that land. What cause of gratitude to that Almighty Power that sustained me through many probations and trials, known only to Him who can make a way in the wilderness, and rivers in the desert." Again, "My mind was so entirely pervaded with peace, that I thought I could say; my soul is deeply anchored on the Rock of ages!"

Endued with a sound discriminating judgment, and her mind clothed with Gospel love, she was made useful in administering the discipline; tenderly seeking to restore and gather the erring, and to build up and strengthen the church in the upright support of our christian principles and testimonies. She was often baptized into exercise and suffering for the church's sake, and led to petition that the Lord would enlarge her borders, and satisfy her poor with bread.

Prepared to love all who loved the Lord Jesus

Christ in sincerity, she yet fervently desired the prosperity of our own religious Society, that it might stand firm on its ancient foundation, growing up into Christ the holy Head, and that its members, abiding in Him, and bringing forth the fruits of his Spirit, might be livingly united to one another.

She frequently expressed a concern that where individuals gave evidence of having passed through the necessary preparation and received gifts from the Head of the Church, their youth should not prevent those gifts from being rightly brought into service for the edification of the body, and their own advancement in spiritual strength and knowledge. At one time she remarked, "I think there is a dispensation approaching, in which there will be a greater outpouring of the Spirit than there is now, comparable to that spoken of by the prophet, 'Your sons and your daughters shall prophesy'; and other gifts, not only that of prophecy, shall be dispensed. I want you not to be dismayed, or too much discouraged."

Her ministry was clear and connected, free from unnecessary repetition, and in the exercise of it she was concerned to wait for the fresh anointing from on high. She was often led to unfold the doctrines of redeeming love and mercy; to exalt the Deity of Christ Jesus, as the Lord from heaven, the quickening Spirit, the only safe guide in the work of salvation; and his propitiatory sacrifice for the sins of the whole world, and as being our holy High Priest; pressing upon her hearers the acceptance of him in all his offices. This was particularly observable at funerals, where many were often present who seldom attended any place of worship, and whose views of christian doctrine were very imperfect.

For the riches of Divine love and grace freely bestowed upon man, and for our manifold temporal blessings, she was often constrained to invite others to gratitude and obedience, and to pour out with fervor, her own tribute of thanksgiving and praise. Being herself a witness of the unspeakable benefit of an interest in Christ, and a hope of eternal salvation through Him, her heart was much drawn toward the careless, with desire to improve every right opening for directing their attention to Him from whom they might receive the same blessed privileges.

In the first month, 1861, her faith and resignation were closely tested, in the removal by death after a short illness, of her beloved husband; but she was enabled to bow in reverent submission to the Lord's will. In a memorandum made some time after, respecting this afflictive dispensation, she says, "The loss we have sustained, my pen can never set forth. He was an example of uprightness and integrity in his intercourse among men, and of meekness and forbearance under the various provocations and trials incident to one actively engaged in business." * * *

"Having been in early life, brought under the sanctifying influences of Divine Grace in his own heart, and yielding obedience thereto, he advanced from stature to stature, until he became a strong man in Christ, and a pillar in his house, faithfully maintaining his allegiance to Him, the holy Head and High Priest, Jesus Christ, the same yesterday, to day and forever, both in relation to his outward appearance among men as the one great propitiatory Sacrifice for all mankind, and in his inward spiritual manifestations. Although the final summons was sudden, his mind appeared to be preserved in much sweetness, and in calm resignation to the will of His Lord; and as his redeemed spirit passed from its earthly tenement, the consoling language saluted my inward ear; The Lamb that is in the midst of the

throne has led him to living fountains of water, and God has wiped away all tears from his eyes."

From this time her health steadily declined, and it was instructive to observe with what patience and cheerful resignation her active, energetic spirit submitted to the privations and restraints of physical weakness and disease.

In reference to a proposed change of residence, she writes about this time: "I hope all things will work together for good, and that through the kindness and condescension of Him, who is the Judge of the widow, we shall be rightly directed and provided for, when the time arrives to leave this pleasant home, so long the scene of cherished hopes and affections. I have great cause to speak well of his excellent name, and to magnify the mercy vouchsafed through every portion of my life. May gratitude and praise for his unmerited favors, become more and more the clothing of my spirit, wherever my lot may be cast. If his presence is only with us, all will be well; without it, nothing in this world can give comfort."

Early in the autumn of 1862 she removed to Germantown, and although she felt keenly the separation from the home she had so long enjoyed, and from beloved friends to whom she was closely united in christian fellowship, yet she entered on her new abode with interest, and warmly reciprocated the kind welcome extended to her by Friends among whom she had come to cast her lot, in the evening of her day. With occasional exceptions she was mostly confined to the house during her residence there, but she enjoyed having her friends around her, both those of mature age, and those in younger life, in whose welfare she felt a lively interest.

She was subject to frequent and sudden attacks of hemorrhage from the lungs, by which she was brought face to face with death, and on such occasions the meek and quiet composure of her spirit instructively illustrated the reality of her religion, and the truth of the declaration: "Thou wilt keep him in perfect peace whose mind is stayed on thee, because he trusteth in thee."

During a severe attack of this kind in Eighth month, 1864, under great physical distress, she said, "Pray for me that I may be ready." A beloved relative present remarked that he felt an assurance she was ready, and would be accepted if taken. Shortly after, with her usual calmness she said, "I love the Lord because He hath heard the voice of my supplications. The Lord loveth them that fear him, those that hope in his mercy. I have nothing to boast of, but I trust in the mercy of God in Christ Jesus, our dear Redeemer." Then addressing some of her children who were present, she added: "That is what I want for you, humble faith in Christ; we have nothing to trust to but the mercy of God in Christ Jesus."

At a time of singular suffering in Seventh month, 1865, she raised her voice in a clear triumphant manner, and repeated these words, "The Lord on high is mightier than the noise of many waters, yea, than the mighty waves of the sea. Dear children, trust in the Lord." Thus, in humble trust, and unflinching faith in God her Saviour, she sweetly passed on from day to day, leaning upon her Beloved; redeeming love and mercy her theme of praise and thanksgiving; and the hopeful serenity of her spirit flowing forth to all around her. A few mornings before her close she said to a friend, "I have much peaceful quiet as I lie here—not that fullness of joy I experienced some months ago—but peace and quiet." It was remarked that what all we could ask. She rejoined, "It is written, 'if a man love me he will keep my words; and my Father will love him, and we will come unto him, and make our abode with him.'"

Her mind was preserved clear, and the exercise of her faculties unimpaired, to the last. With her loins girded, and her light burning, she stood as a servant in waiting, ready to meet her Lord at his coming; and in a few minutes after awaking from a peaceful slumber, she quietly put on mortality, the 21st of Eighth month, 1865; and we doubt not received the gracious welcome, "Come ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world."

To her we believe the language is applicable, "Blessed are the dead that die in the Lord: ye saith the Spirit, that they may rest from their labors; and their works do follow them."

A Part of the "Great Desert."—But a few years ago even intelligent Americans used to imagine the vast region between the Missouri and the Rocky Mountains an utter desert, irreclaimable for agricultural purposes. It was to this purpose that Benton used to bring before the Senate the significant fact that untold millions of buffaloes managed to get a hearty subsistence from this arid plain. The "desert" theory had been of the popular imagination, and has only been surrendered gradually. The opening of two three lines of railway across the Plains will, however, effectually dispel remaining illusions.

When travellers from the eastern States along the Platte, from Denver for sixty miles down the stream, a succession of fertile and productive estates, they will begin to believe in the possibility of reclaiming to agricultural purpose the whole length of the wide valley of that stream. Going down from Denver toward New Mexico along the base of the mountains, they will pass many charming valleys which are even now profitably cultivated for their outlets up to a height at which, in almost any other region, agriculture would be impossible.

About sixty miles south from Denver the traveler strikes the upper Arkansas, whose valleys, those of its tributaries are extremely fertile on the system of irrigation. A correspondent of *St. Louis Republican* has lately visited this region and describes some of the farms there. One has a thousand acres of corn under cultivation. Another has nearly as much, and immense herds of cattle besides, while he has all the comfort and many of the elegancies of civilized life around him.

All along this part of the Arkansas valley crop of forty bushels of shelled corn to the acre is considered an average yield. The Huerafano, of the most important tributaries, has some of the finest farms in Colorado, while another tributary the Purgatoire, is no less suited to agriculture grazing. In all of these valleys cattle and stock only require herding, for the grass is sufficient for their support the year round. All country is a part of the great "desert."—*E.*

A Fearful Fall.—The following incident recorded in a late English paper. Two young men, James Braund and John his brother, bled forth together on the mighty cliffs of Lundy, an island rearing its craggy side the centre of the Bristol Channel. They searching for gulls eggs, which abound on sides and summit of the rocks. Straying from each other for a few minutes, John perceived a voice indistinctly calling. He went the edge, and looking over saw his brother yards down the side of the cliff hanging by hands to a little jutting piece of rock, and sitting with his feet for the smallest foothold.

It was in vain; the rock was hard and per-

poth, and there he hung, a chasm full three hundred feet yawning below him. Help from above was impossible, a foothold below there was none, and certain death stared him in the face. With the iron grip of despair the young man hung on for a few minutes,—minutes that seemed like hours to his helpless brother watching him from above—and at last nature gave way, and with a wild scream James Braund released his hold, and plunged headlong down, his head being severed to fragments against the projecting crags in the descent. The mournful tale was told by the surviving brother at the coroner's inquest held recently on the remains of the unhappy path.

Selected for "The Friend."

At Paris we met with Abraham Barker, a friend from New Bedford in North America, and was opening for any religious meeting at this place, when First-day came, we sat down together on a hired room in silence, and a sweet time it was to me. It may not perhaps be amiss to mention how we were treated at the municipality, when we attended to present our passports. We were stopped by the guards, who had strict orders, seems, not to suffer any man to pass, unless he had what is called a cockade in his hat, but on our desiring our guide to step forward and inform the officers, that we were of the people called Quakers, and that our not observing those signs of the times was not in contempt of authority, or respect to any in office, but from a religious principle in our own minds, it being the same with us in our own country, they readily accepted our reasons, and one of the officers came and took us to the guards and so up into the chamber, where we were suffered to remain quietly with our hats until our passports were examined by two officers, and again endorsed under the seal of the public, permitting us to go to Calvisson, in Anguedoc. Thus it often appears to me that we make our way better in the minds of the people, when we keep strictly to our religious profession, in all countries and amongst all sorts of persons. From the Journal of Richard Jordan.

For "The Friend."

St. Paul and the Cataracts of the Northwest. The following is extracted from the correspondence of the New York Evening Post:

The city of St. Paul is first seen by the traveler ascending the river, over a low bit of marshy prairie, and with its bluffs, its spires and its distant suburbs, makes a goodly show. The curious effect, which forms an inclined plane from the bluff on which the city stands, to the low marshy prairie on the opposite side of the river, at once attracts attention by its unique appearance. There is a small levee, not worthy of the place, nor is the short street leading therefrom into the town calculated to give a very favorable impression of the city. Altogether, St. Paul does not put his foot forward to welcome the traveller.

The town occupies a very large space, but there are many vacant lots, and whole blocks of ground are unimproved. The main street presents some superb mercantile buildings, chiefly of a handsome blue stone, of which the bluff on which the city stands is composed. One such building was noted out as realizing almost the miracle of the wicker baskets of fragments, for the owner of the property in digging his cellar obtained enough of the stone not only to build the entire house but sold enough to erect three similar buildings, thus defraying all the expenses of excavation.

St. Paul has two daily papers: the *Press* and the *Pioneer*. A feature in each paper is the local

department, in which the river news forms a leading item, the Mississippi being to these river towns far more than the Hudson is to New York. The *Press* office is built on the edge of the bluff, and pressmen, compositors and editors all have windows looking up the river and over a scene of unusual beauty—quite different from the experience of their brethren in larger cities.

The general route for tourists who would visit Minnehaha Falls is by the railway up the river shore, past the noble cliff and fine fortifications of Fort Snelling—so well known from engravings, and a spot of celebrity before St. Paul was ever a village—to the Minnehaha station. The cars set visitors down within a few rods of the falls, and at a rural refreshment house near by, home-made dinners can be had at seventy-five cents a head. There is no charge of any kind for seeing the falls, and the place is much frequented by picnic parties.

The Minnehaha river is the outlet of some of the small lakes in this vicinity, and is a shallow, sparkling stream, dashing over its pebbly bed and around its little islands in the most gleeful manner. Without a warning, without even any preliminary rapids, it makes the leap which is called the Falls of Minnehaha. A graceful leap it is. The stream springs over in one sheet of sparkling foam, landing in a basin which for centuries it has been busily hollowing out for itself—a basin much like that into which the Kaaterskill Fall leaps, and like that, too, in presenting behind the sheet of water a smooth concave recess, around which it is possible for a man to pass, coming out at the opposite side of the cataract. The foliage in the vicinity is as gracefully disposed by nature as the artist could wish, and in itself and all its surroundings Minnehaha is a type of perfection of its class.

The region around about the Upper Mississippi is a land of plashing waterfalls. There is, by contrast to the Laughing Water, a Minne — something else, or Shady Water. There is a crystal cascade, also; but they are all modest, retired waterfalls, quite unlike the great St. Anthony's falls, which dash over the rocks at Minneapolis in a manner suggestive of strength rather than of beauty.

There has been, of late, a good deal of interest felt and expressed in regard to retrogression of Niagara Falls, and a change of a foot's space in a year is something unusual there. But in this spring, within the space of ten weeks, St. Anthony's Falls have receded no less than seventy-five feet; and this is something more than a point of mere geological interest, for if it continues it will impair or destroy this great water power and involve the material ruin of two flourishing towns. Few persons comprehend the extent of this water force. It is roughly estimated at one hundred thousand horse power, and its loss would deprive this country of its greatest available strength in this line.

The falls, to look at, are not so striking as one might expect from these facts. There is no prodigious height for the water to leap from, as at Niagara, but the rapids are grander and quite as extensive, while their power is shown by the large slabs of stone which lie in distorted piles along the shore, some standing up on end like giant tomb stones, others piled irregularly, as if trying to crowd away from the fearful force of the water. The retrogression of the falls has been very slow until this spring, when the great freshet, which proved so disastrous to log-owners and lumber merchants, told to an unprecedented extent on the cataract itself.

The reason of this clearly understood. For

a quarter of a mile above the main fall the bed of the river is composed of a thin stratum of limestone, supported by sandstone. This latter, being soft and crumbly, is worn away under the constant action of the water, thus forming a sort of cave, with the slab of limestone, from which the water falls, overhanging it. Of course, as this excavation grows deeper, the limestone having nothing to support it, and unable to bear the heavy mass of water, breaks away, and thus St. Anthony's falls recede. At the next low water efforts are to be made to prevent this retrocession, by means of 'aprons,' or platforms of wood in the nature of dams.

As a mere spectacle, St. Anthony's Fall is grander by moonlight than at any other time, for then the unpeopled and unsightly buildings around it do not obtrude themselves, while the noise and dash of the rapids are heard and seen to perfection. At such a time St. Anthony's waters present an overpowering idea of furious strength, and one worthy to be remembered along with the recollections of Niagara itself. A greater contrast to the gentle beauty of Minnehaha it would be impossible to find; and yet these two cataracts are within a short walking distance of each other, and to tourists both will be, for ages to come, among the greatest attractions of the Northwest."

A Good Physician.—A nobleman of the French Court, an infidel, had for some time exhibited great depression of spirits, and the emperor sent him to an English physician, well known for his treatment of mental disorders. The physician questioned him as to the cause of his depression. Had he lost reputation, or position, or fortune? No, he possessed all these, but for two years past one thought had taken possession of his mind, the thought of *eternity*, and he could not get rid of it. The doctor opened his Bible and read Isaiah liii., explaining to his patient who it was who "was wounded for our transgressions and bruised for our iniquities." Light broke into the mind of this poor rich man, and he said, "I have no need of your prescription now." He went away, and has since corresponded with the physician as a believer in Christ.

The Boor and Bushman.—There is a Boor in this neighborhood, between whom and his Bushman servant a mutual attachment subsists, which has been elicited and strengthened by peculiar circumstances. The Bushman was in the service of another Boor, and having received some provocation from his master, in a fit of desperation shot one of his horses and decamped. Being pursued by the Boor, he threw himself on the protection of his present employer, who hid him on his premises, and when the exasperated Boor insisted on the Bushman being brought out that he might be shot, he refused to give him up. Thus the Bushman escaped, and he eventually became a shepherd in the employ of his deliverer. Not long afterwards, his new master was out in the field, and was attacked by a lion which had got him down, when his perilous situation was observed by the Bushman, who, having no arms at hand, took off his kaross in an instant, and boldly going up to the lion, flapped it in his face, and so intimidated the creature by this unexpected salute, that it retreated, and the master's life was saved. Subsequently the Bushman was himself nearly being destroyed by a lion, when the sudden appearance of his master with a gun, who shot the lion, proved the means of rescuing the faithful servant in turn from the jaws of the devourer. The Bushman has been nearly thirty years in the farmer's

employ, and has been allowed to rear a flock of sheep on his own account, which have so increased that they are supposed to be worth £1000.—*G. W. Walker, when at Cotesburg, South Africa, in 1839.*

Real religion is a living principle. Any one may make a show, and be called a christian, and unite himself to a sect, and be admired; but for a man to enter into the sanctuary to hold secret communion with God; to retire into his closet, and transact all his affairs with an unseen Saviour; to walk with God, like Enoch, yet to smite upon his heart in the language of the publican, having no confidence in the flesh, and triumphing only in Christ Jesus; these are the life and acts of a new creature.—*Cecil.*

Selected for "The Friend"

THE GARDENER.

"Art thou working in my garden?"

Said my Master unto me

"And cherishing those nurslings

Which I committed thee?

Those precious priceless flowrets,

Bear thy witness of thy toil?

Or do they droop neglected

Upon the thirsty soil?"

"O Master I have labored—

I have wearied—I have wept—

And through the livelong hours

My lonely vigils kept.

I wish to be found faithful,—

Unto thy service true.

Yet will my flowrets wither

For all that I can do.

Sometimes one rears in beauty

It's blooming, blushing head,

But ere I triumph o'er it

It's loveliness hath fled;

Sometimes one grows too wildly

Or turns perchance awry,

And if I prune or trim it

It seems to droop and die.

Close clinging to earth's bosom

Some sweet exotic lies;

With anxious care I nurse it

And every petal prize;

But when its buds fresh bursting,

Give promise of much fruit,

A killing frost destroys them,

I stand in anguish mute.

Sometimes the fruit abundant

Is scattered on the ground;

In haste I go to gather

And find it all unsound;

I turn away and wonder

With disappointment sore,

How fruit so ripe and golden

Should rot within the core.

I have guarded well thy nurslings

I've watched them day and night,

That change of time or season

Their beauty should not blight;

I've plucked with care unceasing,

Each hurtful thing away,

And from my purest fountain

Have watered them each day.

My Master tell me wherefore

I ever thus complain,

O knowest thou the reason

My labor is in vain;

Why though I sow in sorrow,

And water with my tears,

And toil till I am weary,

No living fruit appears.

Far better had I never

Assumed the gardener's place,

If thus upon my labors

No blessing I can trace—

Far better should some other

This honored station fill,

And with a hand more skillful

Fulfill thy righteous will."

While thus I spoke, lamenting,

With heavy heart and sad,

In tones of loving kindness,

My Master made me glad.

Yet gently did He chide me—

Then bled the heart He broke,

Long, long will I remember

The gracious words He spoke.

Thou hast not labored vainly,

Nor wearied all for naught:

Some of those palest flowrets

Shall yet to me be brought,

Thou unbelieving servant

Hear what thy Master saith—

Thy work were more successful,

Hadst thou a livelier faith.

Again, thou should'st remember

What tools thy hand doth use,

Say, gardener dost thou always

From my collection choose?

And is my name engraven

Upon each piercing blade?

If so the plants thou prizest

Would never droop and fade.

Perhaps thou prun'st with rashness

Without the Spirit—sword—

Forgetting thy commission

Is in thy Master's word;

And when a storm is rising,

Thou prophesiest a calm,

Or plect untempered mortar

For Gilead's healing balm.

Thou sayest thou daily waterest

From out thy purest well;

Mine eye within that fountain

Each scanty drop can tell,

O, seek thou living waters

From my eternal spring,

And all thy drooping flowrets

Unto its bosom bring.

Thou tearest from thy enclosure,

Each noisome, hurtful weed;

But dost thou haste to fill it

With pure and living seed;

If not, with double power

Those weeds to life will spring

And where the soil is richest,

Will deeply, firmly cling.

The fallow ground is broken—

Thou hast mowed the soil,

Yet didst indeed sow seed—

No witness of thy toil!

Thou wonderest that thy garden

Should yield no perfect fruit;

Alas! didst thou not know it?

A worm is at the root!

Yes, deeply there imbedded

It works its vicious will;

Yet faint thou not: this demon

Is in my power still;

That sword of which I told thee,

Can pierce it through and through,

That ever-flowing fountain

Can hide its stains from view.

Go now into my garden,

Depending upon me,

And know that I am with thee—

Thy sure reward to be.

Go work by my direction

And as thou dost believe

And trust with faith prevailing

Even so shalt thou succeed."

Snails for Food.—A book on the "Edible Mollusks of Great Britain and Ireland," by M. S. Lovell, just published in London, contains these curious statements:

"In Burgundy, Champagne and Franche-Comte a great quantity of snails of all kinds are consumed, and also sent to Paris; and Professor Simoons mentions that there are now 50 restaurants, and more than 1,200 private tables in that city where snails are considered a delicacy by from 8,000 to 10,000 consumers; that the monthly consumption of this mollusk is estimated at half

a million; again, that the market price of the vineyard snail (apple or vine snail, *Helix pomatia*) is from 2s. to 3s. per hundred, while the of the hedge, woods and forests bring only 1s. 6d. to 2s. He further adds, that in the vicinity Dijon the proprietor of one snailery is said clear nearly £300 a year by his snails; and that there are exported from Crete annually about 20,000 oke (each nearly 3 pounds) of snail valued at 15,000 Turkish piastres.

"M. Renou (as quoted by M. Caillaud, Nantes), in a curious account read in 1864 before the Academical Society of Nantes, on the importance that the ancients attached to snails, observes that during 1862 and 1863 the *escargots* brought to the Marche de la Bourse, at Nantes, on Sundays and fete days, amounted in number 996,000, producing the sum of 2,490 francs.

"We read that formerly, in Paris, snails were only to be found in herbalists' shops and at chemists; but now there is a special place in the fish market, by the side of the crabs and other fresh-water fishes; and in nearly all the restaurants you may see dishes of *Helix pomatia* displayed in the windows. They are rarely cooked, and only require warming for a minutes on the gridiron. It is from Troyes the price of five francs the hundred, that the apple or vine snail is sent to Paris, boiled in shells, and seasoned with fresh butter mixed with parsley. When you wish to partake of the you place them before the fire till the butter melts and then they are fit to eat. I purchased so and succeeded in eating two, but with diffidence as the way they were dressed did not disguise slimy, soapy taste, and the want of salt, pepper, etc., made them most unpalatable. I felt that I could sympathize with Dr. Black and Dr. Hutton who also endeavored to eat a dish of snails; and after vainly attempting to swallow very small quantities the mess which each in daily loaded, Dr. Black at length 'showed white feather,' but in a very delicate manner if to sound the opinion of his mess-mate. 'Doctor,' he said, in his precise and quiet manner, 'Doctor, do you not think they taste a little very little—green?' 'Green! green, indeed! Take them awa! take them awa!' vociferated Dr. Hutton, starting from the table, and giving full vent to his feelings of abhorrence.

"In Paris snails are not considered in so still the first frost, about the end of October beginning of November, when they are clothed with their white epiphragm. The Parisians about fifteen or twenty for breakfast, and are also said to give a better flavor to wine."

Patrick and Peter.—An English paper has story: "A very curious incident occurred yesterday in the House of Lords during the progress of the Breadalbane Peerage case. Mr. Andrew Q. C., in alluding to one of the persons whose name had been mentioned, called him Captain Patrick Campbell. The Lord Chancellor the captain's name was not Patrick, but Peter M. Anderson said they were convertible to The Lord Chancellor: 'What are St. Patrick and St. Peter the same?' M. Anderson: 'The names are the same.' Lord Colonsay inquired the Lord Chancellor that the learned counsel right—in Scotland Patrick was Peter, and Peter was Patrick. The Lord Chancellor said it was information to him."

Admonish, exhort and encourage snail as young and tender, to keep and preserve the way of life; and watch over one another good.—*G. F.*

For "The Friend."

Sunrise after an Arctic Night.

The following description of the return of the sun, after the long darkness of an Arctic night—taken from Dr. Hayes' "Open Polar Sea." "Feb. 18th.—Heaven be praised! I have once more seen the sun.

Knowing that the sun would appear to-day, my body was filled with expectation, and hastened after breakfast to some favorite spot where it was thought that he might be seen. Some went the right direction, and were gratified; others went in the wrong direction, and were disappointed. Knorr and others of the officers climbed the hills above Etate. Harris and Heywood climbed to the top of the hill behind the harbor, and the former shook his Odd-Fellows' bag in the sun's very face. The cook was troubled that he did not have a look at "de blessed sun;" but could not gratify his wish without going upon the land, and this he could no more be induced to do, than the mountain could be persuaded to come to Mahomet. He will probably have to wait until the sun steals over the hills into the harbor, which will be at least twelve days.

My own share in the day's excitement has been equal to the rest of them. Accompanied by Dodge and Jensen, I set out at an early hour found a point on the north side of the bay, from which I could command a view of the southern region. We had much difficulty in reaching our destination. But we were at last successful, and reached our look-out station, (hereafter to be known as Sunrise Point,) with half an hour to spare.

The point of Cape Alexander lay directly south of us, and the sun would appear from behind it exactly the meridian hour,—rolling along the horizon, with only half its disk above the line of waters. We awaited the approaching moment with much eagerness. Presently a ray of light burst through the soft mist-clouds which lay off the right of us opposite the cape, blending in into a purple sea, and glistening upon the very summits of the tall icebergs, which covered the vapory cloak as if to catch the coming warmth. The ray approached us nearer and nearer, the purple sea widened, the glittering icebergs multiplied, as one after another they burst quick succession into the blaze of day; and as this marvellous change came over the face of the land, we felt that the shadow of the cape was the shadow of the night, and that the night was passing away. Soon the dark-red cliffs behind us glowed with a warm coloring, the hills and the mountains stood forth in their new robes of resplendent brightness, and the trembling waves melted away from their angry harshness, and lay smooth in the sunshine. And now the line of shadow was in sight. "There it is upon the point," cried Jensen. "There it is upon the ice-bergs," answered Dodge,—there at our feet lay a carpet of sparkling gems, and the sun burst broadly from his face, off went our caps with a simultaneous impulse, and we hailed this long-lost wanderer of the heavens with loud demonstrations of joy.

And now we were bathing in the atmosphere of another day. The friend of all hopeful associations had come back again to put a new glow into our hearts. He had returned after an absence of one hundred and twenty-six days, to revive a numbing world; and as I looked on his face again, after this long interval, I did not wonder that there should be men to bow the knee and worship him, and proclaim him "The eye of the Giver of Life." The parent of light and life everywhere, he is the same within these solitudes. The germ awaits him here as in the orient; but

there it rests only through the short hours of a summer night, while here it reposes for months under a sheet of snow. But after awhile the bright sun will tear this sheet asunder, and will tumble it in gushing fountains to the sea, and will kiss the cold earth, and give it warmth and life; and the flowers will bud and bloom, and will turn their tiny faces smilingly and gratefully up to him, as he wanders over these ancient hills in the joy of summer. The very glaciers will weep tears of joy at his coming. The ice will lose its grip upon the waters, and will let the wild waves play in freedom. The reindeer will skip gleefully over the mountains to welcome his return, and will look longingly to him for the green pastures. The sea-fowls, knowing that he will give them a resting-place for their feet on the rocky islands, will come to seek the moss-beds which he spreads for their nests; and the sparrows will come on his life-giving rays, and will sing their love songs through the endless day.

I have been making, all the winter through, a series of experiments which give me some interesting results. They show that evaporation takes place at the very lowest temperatures, and that precipitation often occurs when the air is apparently quite clear. To determine this latter, I have exposed a number of smooth and carefully measured ice-surfaces, and have collected from them the light deposit. These accumulations, after reducing them to the standard of freshly fallen snow, amount thus far to seven eighths of an inch. To determine the evaporation, I have suspended in the open air a number of thin ice-plates, made in a shallow dish, and some strips of wet flannel. The flannel becomes perfectly dry in a few days, and the ice-plates disappear slowly and steadily. I generally weigh them every second day, and it is curious to watch my little circular disks silently melting away and vanishing "into thin air," while the thermometer is down in the zeros.

This evaporation at low temperatures is constantly taking place before our eyes, to our advantage. On wash-days the clothes are hung on lines stretched across the ship's rigging, or upon poles across the ice, and before the week is over, the moisture has disappeared, no matter how cold it may be."—Dr. Hayes.

For "The Friend."

"Let Your Moderation be Known unto All Men."

It has often seemed to the writer, that the Lord's people are now no less than formerly, "an afflicted and poor people." That the feeling must ever be uppermost and abound with them, that this is not their home nor the place of their rest. That here they have no life-lease, neither continuing city. Does not every day's reflection and every day's report to the obedient spirit, and the quickened ear, but tend to illustrate this, and that a world, where their Lord and Master had not where to lay His head, but was hated, was mocked, was scourged, was crowned with thorns; and was crucified, cannot be the resting place for His faithful servants and followers—seeing "It is enough for the disciple that he be as his master; and," "as He is, so are we in this world"—to spend much time and toil to become rich, to build large and expensive houses, set off with splendid surroundings, and filled with rich furniture, together with every comfort, if not luxury, that wealth can purchase, and then, too much, seem at their own disposal to take their ease, and enjoy themselves to the extent of their capacity? Is not this virtually the "fullness of bread" which was in part the iniquity of Sodom, and also the character of the rich man in the parable, "who

fared sumptuously every day?" Is this the New Testament delineated-christian, "as strangers and pilgrims," abstaining from fleshly lusts that war against the soul? and seeking before and above all, another and a better country, that is an heavenly? Is this to let our "moderation be known unto all men," for the solemn reason assigned by the Apostle, "The Lord is at hand?" Is this the self-denial and the daily cross—the livery of our King—which He calls all His to, being part of the "straight and narrow way" which alone leadeth to His heavenly kingdom? Is this as faithful stewards to "occupy" with every talent committed till the Lord come, having the loins girt and the lights burning? William Penn speaking of himself and his contemporary christians says, "In that day we were an exercised people, our very countenances and deportment declared it. We treated one another as those that believed and felt God present. We did not think ourselves at our own disposal, to go where we list, or say or do what we list, or when we list. Our liberty stood in the liberty of the Spirit of Truth; and no pleasure, no profit, no fear, no favor could draw us from this retired, strict, and watchful frame." "It is the life of righteousness—it is the life of righteousness," said David Barclay, "That we bear testimony to, and not to an empty profession." Behold the picture! But where is the similitude now? We believe with joy that faithful standard-bearers remain; but are they not too much like to the "gleaning grapes," or as the shaking of an olive tree, "two or three berries in the top of the uppermost bough, four or five in the outmost fruitful branches thereof?" Nevertheless, it is good for us to have the pure mind stirred, and to seriously inquire how far we are the living witnesses, as well as faithful representatives of such a faith. And oh! that we might take heed to the pathetic, persuasive appeal, "Awake, awake—shake thyself from the dust: loose thyself from the bands of thy neck, O captive daughter of Zion." The true Church of God on earth, we reiterate, hath ever been an afflicted seed—she still in this day sits, indeed, "like a palkan of the wilderness;" or like "the sparrow alone upon the house-top," watching and longing for her Beloved.

It was the remark of a dear friend, now deceased, that she as much wished to be found walking in the way to heaven, as to get there at last. And can any expect to reach a goal or end without keeping to the prescribed way? If the only path to eternal life is through the straight gate and the narrow way, then can we walk in any other and presume to get there? These remarks are made, to encourage to perseverance and diligence in withstanding temptation and the aggressive spirit of this world; to invite from the example of a Demas who loved this present world, to the littleness, the lowliness, the self-denial and deep humility of a world-renouncing Lord. "His servants ye are to whom ye obey." The followers of a Lord "who wore the plaited thorns with bleeding brows," must not expect to be above their Lord. It is enough for the servant that he be like unto Him that ruleth him. Can any expect to, or will they ask to wear a crown of joy, of fullness, and of ease, where His, their Priest and King, wore a crown of thorns, of sorrow and of grief? No, no: let us remember what we are, even from the dust,—poor finite creatures, bought with a price and therefore not our own; being also professedly bound unto a heaven of rest and peace, that will be long enough to be happy in; where God will wipe all tears from all eyes, and which will abundantly make up for all. Here the poor in spirit

will receive their kingdom; which, through life's oftentimes sad and sorrowful journey, was "the recompense of the reward" their eye was fixed upon. Here the little, and hidden, and unknown, humble ones on earth, but ever watched over with tender regard by their all-seeing Father, will meet with that eternal rest and peace, which, through a sense of great unworthiness, they hardly dared to hope would, in unspeaking mercy, be granted them. Here, these that have ministered to their Lord in little things—handing the cup of cold water in His name; washing his feet it may be with their tears; or giving to the necessities of the least of His poor—shall receive their consolation. Here, those that hungered and thirsted after righteousness, aspiring but to the love of the Lord, and be found in Him, shall be filled with His soul-satisfying presence and love, and see Him as He is. Here, all who have suffered for Christ, who have borne His cross, despising the shame—not being ashamed to acknowledge Him in all their ways before men, though at the loss of all—shall, having passed through many tribulations, and been washed white in His blood, be numbered with those, before the throne of God, who serve him day and night in his temple. And here all these who are accounted worthy of that resurrection which is in and through the Lord Jesus, "shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto the living fountains of waters; and God shall wipe away all tears from their eyes."

The following from the memoirs of a Friend in England, penned near the beginning of the present century, are so in accordance with the feelings which prompted this essay, that they are subjoined; and are worthy of our serious consideration: "Can there be stronger delusion in judgment than to suppose the seeking riches and honor and the enjoyment of pleasure in this present world, compatible with the example of our holy Lord and Saviour Jesus Christ? Does it not seem as if the first great deceiver and foe of man had so spread his delusive influence in the human mind as to pervade all its powers? seeing the bulk of professors conclude they have taken him for their Law-giver and pattern, whilst they are not only *allowing* but *seeking* softness and elegance in their dwellings; fullness of bread, and in some instances "abundance of idleness" in their daily course; and in, most, such attentions and solitudes as turn to no more account God-ward, than contrivances and expense to have the fruits of the earth before the sun can put them forth! in nearly all, (not restricted by slender means) there is a stateliness in manner and deportment, with such tenacity respecting worldly distinctions, as reader to the view of infidels any real difference betwixt man and man very questionable. We may, though having eyes, be yet so blind as not to see the open glaring *contrariety exhibited in the allowed practice of the day, to the plain doctrines and uniform example of a world-renouncing Lord*; such blindness may (through our conformity to its manners) come upon us that are professors; but this, I think, we may be assured of, that the enemies of the Lord Jesus, Deists and Infidels of every class, are, and will continue to be more quick-sighted; the broad sneer of derision will be on their countenances; sarcastic strictures will be freely allowed and remain unrepelled. These pilgrims and strangers, say they, seem to get a little reconciled to this foreign clime, though so far from their native country and their father's house; this

howling wilderness, as they call it, appears, some how or other, to have received a measure that hath so enriched the soil as to render it capable of producing very pleasant fruits, even to their refined taste; and like us who know of no better portion than our good things in this life, they seem to sit down, each under his own vine, and under his own fig-tree; so that, though it seems we are to be forever separated at the end of the journey—they raised up to everlasting glory for having followed, as they phrase it, a crucified Lord, and we consigned to shame and everlasting contempt for having denied him, yet we really appear to be travelling in the same direction; at least we go in great harmony together, and walk through this vale of tears as friends.

Oh how long! how long! shall the enemies of the cross of Christ have cause thus to triumph? how long shall such speak grievous things, proudly and contemptuously against the Lord and his anointed, through the occasion given by those who profess adherence to doctrines which enjoin and demand the crucifixion of the flesh, yet are at the same time seen to be making full provision for the gratification of its desires?"

For "The Friend."

To the Friends of the Freedmen.

Before entering upon the labors of another school year, we feel it right to acquaint those who have so generously contributed to the work in past years, with our plans so far as decided upon for the next.

Friends are aware that the circumstances attending the freedmen's life in the South have greatly changed since the early years of our Association's existence and labor; that the communities which were then gathered along the war line between North and South, without shelter, food or clothing, dependent for very life upon the charity of the world, have since the war been broken up, and families have been again united in old homes, or have founded new ones throughout the States lately desolated by war, in such locations as have seemed to promise the most liberal support.

Peace reigns throughout the land—the work of "reconstruction" goes slowly but surely on—the freedmen are enfranchised, and in many districts will, by virtue of their number, control the elections of those who, so soon as military laws to civil government, must make and execute laws applicable alike to white and colored citizens.

We believe few, if any, of our readers will dissent from our view that the right exercise of the duties of citizenship demands education; and that the ignorance and degradation of the masses of the colored people of this country are sadly at variance with their growth in religion or practice of good morals.

We will also agree in the belief that one of the first duties of communities is the education of their members, and will join in the desire that at the very earliest possible day, every Southern State of our Union may be blessed with an educational system even more perfect in its practical working than the best yet adopted in the North. Let us lose no proper opportunity to hasten such day, and aid our brethren of the South in this important work.

But in the meantime, does not *our* duty to instruct these ignorant people continue with undiminished force?

Under this conviction, encouraged by the generosity of Friends in the past, as well as by their words of sympathy and interest at our last annual Meeting, we have decided to re-open nearly all the schools conducted by us last season, and some additional ones. Our beloved friend George

Dixon, who so acceptably performed the duties Superintendent of what is known as the North Carolina Circuit, embracing in addition to all the schools in that State, one at Danville in Virginia will resume the same duties for another year.

Teachers, of liberal acquirements and enlarged experience, have been appointed to the principalship of our largest schools, including those at Danville, Raleigh, Hillsboro, Charlotte, &c.; and it is designed that a class be organized in each for instruction in the theory and art of teaching.

The appointment of such teachers will add considerably to the expense of conducting our educational work, but we fully believe that the benefit to the colored people will be much more than proportionately increased.

First-day schools and adult evening schools will be comprised within our plan, wherever practicable.

On behalf of the Executive Board of Philadelphia Friends' Freedmen's Association.

(Signed)

JOHN B. GARRETT,
RICHARD CADBURY,
YARDLEY WARNER,
Committee

Philadelphia, Ninth month, 1867.

The Trade of Chicago.—The commerce of Chicago for the year ending March 31st, 1868, as reported to the Board of Trade of that city shows the growing importance of the great port of the West. It appears from comparative tables of the trade of a series of years that the increase has been steady and rapid. Reduce flour to wheat we find that in 1846, the quantity of all kinds of grain shipped from Chicago amounted to only 10,000 bushels. In 1850, quantity increased to 1,830,938 bushels; in 1851 to 3,108,759; and in 1866-67 to 66,763,763 bushels. This steady and remarkable increase illustrates something more than the mere growth of Chicago. It indicates the increasing development and progress of the great West, of which Chicago is the representative city. The city is now the granary and store house of western prairies, and everything relating to it is a matter of national and almost world-wide importance.

The elevator capacity of Chicago for store grain amounts to a total of 10,805,000 bushels in 1866-67 the total quantity of flour received was 2,479,583 barrels amounting to 234,000 barrels received in 1854. The large receipts of exports last year were augmented by the grain of the wheat crop, which rendered the grain-drawing business dependent upon Chicago for ordinary supplies. This demand gave a stimulus to the manufacture of flour in Chicago. Flour prices, being reduced to an average, range from \$10.19 to \$12.12 per barrel during a period of five years.

The statistics show that Chicago still retains its place as the greatest pork-packing point in the world. The number packed has increased to 22,136, in the winter of 1851-2, to 639,355 in the winter last past.

During the year a total of 12,113 vessels or classes cleared at this port. The number of men was 94,434, and the total tonnage 2,253,747. The railroad business of Chicago was on a corresponding scale of importance. From the steady and rapid growth of the city it is probable the increase during the next fifteen years will be in a corresponding ratio to the growth during same period in the past.—*Daily Commercial*.

A true christian living in the world, is like a ship sailing on the ocean; it is not the ship but

the water that will sink it, but the water gets into the ship. So, in like manner, the Christian is not ruined by living in the world, but by world living in him.

THE FRIEND.

NINTH MONTH 14, 1867.

Through the kindness of a Friend we have furnished with a copy of the printed minutes of the Canada Yearly Meeting of Friends, held at Pickering, Canada, 1867,* from which we take the following extracts:

At a meeting of the Representatives, and of the Friends, of the Quarterly Meetings of Pickering, Yonge Street and West Lake, the following Minutes from New York Yearly Meeting were read:

These minutes are in reference to the request made to New York Yearly Meeting in 1863, by the Quarterly Meetings in Canada, to be considered a Yearly Meeting, and the different steps taken by that meeting in that year, and in 1864 and 1865, when it was concluded to grant the request, and the necessary preliminary arrangements were authorized. The last minute, except that appointing the committee to attend the opening of the new Yearly Meeting, is as follows:—

In thus parting with our dear friends with whom we have been accustomed many years to meet in counsel in the cause of the church, we are thankfully to acknowledge that we have been enabled so long to labor together in love, and we earnestly desire that He who is God over all, blessed forever, will be with them in this responsible engagement, to guide them and comfort them with His holy presence.

In accordance therewith the Yearly Meeting in Canada is hereby established and opened at Pickering's Meeting-house in Pickering, Canada, West, on Sixth-day, the 28th of Sixth month, 1867. Adam Spencer was appointed Clerk for the day, and Levi Varney for assistant.

Committees from other Yearly Meetings were in attendance and presented Minutes of their appointment, as follows, thirty-four of whom are present, and whose company is very acceptable to us.

Reports are received from all our Quarterly Meetings, by which it appears that the following Friends have been appointed their Representatives in this Meeting. They are all present:—

Copies of Minutes in behalf of several Friends from other Yearly Meetings, who are now accepted in attendance, have been read.

We have received at this time Epistles from brethren in London, Dublin, New England, Baltimore, North Carolina, Ohio, Indiana, Western Iowa Yearly Meetings. The reading of these communications from distant brethren of the same household of faith have been cheering to us. The young Friends are appointed as way opens to prepare essays of replies to those several Epistles as also to our dear friends of New York and Philadelphia Yearly Meetings, viz:—

The Representatives are requested to confer together and propose to next sitting the name of a Friend to serve this Meeting as Clerk for the present year and one for assistant. Also, to nominate Friends as Messengers. They are further requested to propose the name of a Friend for pleasure to this Meeting; to propose the sum of money that is requisite for the use of the Meeting for the present year; and to revise the quota of Meetings.

Seventh-day morning, Sixth month the 29th.

—About the time adjourned to the Meeting convened.

Henry Sutton on behalf of the Representatives proposed Adam Spencer for Clerk and Levi Varney for assistant. The nominations being satisfactory to the Meeting the Friends proposed are appointed accordingly."

"In view of the necessity of having a Book of Discipline, this Meeting is united in adopting the Discipline of New York Yearly Meeting."

"The printed general Epistle from the Yearly Meeting held in London, 1867, has been read to our education and comfort. In order that our Friends generally may receive the benefit of the excellent practical advice it contains, we appoint * * * to procure the reprint of 1200 copies for distribution amongst our members, draw upon our Treasurer for the expense, and report next year.

"The subject of First-day Scripture Schools claiming the attention of the Meeting, it is concluded to appoint the following Friends, in conjunction with a like committee of women Friends, to take the subject into consideration, report to a future sitting the result of their deliberations, and if way opens, to propose the names of Friends as this Meeting's committee on the subject."

"Second-day morning, 1st of 7th month.—In view of the organization of a Representative Meeting, we appoint * * * to consider the subject and propose to a future sitting the names of suitable Friends for that service."

"The Meeting then entered upon a consideration of the state of Society as presented by the answers to queries, of which the following is a summary. The Clerks were instructed to prepare a minute to be transmitted to our subordinate meetings embodying as they may be enabled to do the counsel with which we have been favored."

"Third-day morning, the 2d of the month.—The Meeting assembled according to adjournment. The Clerks produced the following minute of advice to subordinate meetings, which was approved:—

* * * * *
"The Meeting was introduced into a religious concern for the welfare of our members, which resulted in the conclusion to appoint a committee, to unite with a like committee of women Friends, as way opens in the Truth to visit Friends in their meetings, in their families, and members individually, to labor in love to gather souls to God, to restore the wanderer, and for the building up and strengthening of this part of the heritage of God. * * * are appointed to join with a like committee of women Friends to consider of and propose to a future sitting the names of suitable Friends to be separated to that service."

"The committee appointed to propose the names of Friends for the Representative Meeting presented the following: * * * The nominations being satisfactory to the Meeting the Friends named were appointed accordingly. They are directed to meet and organize themselves into a Meeting—eight members to form a quorum."

"Fourth-day morning, the 3d of the month.—About the time adjourned to the Meeting convened.

"The Meeting was introduced into a concern to send an appropriate address to the Government of the Dominion of Canada. The subject is referred to the careful consideration and action of the Representative Meeting."

"The committee to propose the names of Friends to visit subordinate meetings, &c., present the following. The nominations were approved by the Meeting and those Friends appointed to

the service, and to report next year the result of their labors, viz:—

"The committee to consider the time of holding subordinate meetings report that the time is too limited to give the subject needful care. They, however, propose that West Lake Quarterly Meeting be allowed to make the proposed changes, viz: That instead of holding Quarterly Meetings, a meeting be held once in four months, to be called 'West Lake Four Months' Meeting,' and that it be held at Kingston the first 7th-day in 2d month; at Bloomfield the 7th-day preceding Yearly Meeting; and at Farmersville the first 7th-day in 10th month. The meeting of Ministers and Elders to be held on sixth-day previously, and public meeting on First-day following. The committee also propose that Yonge Street be allowed to hold that meeting as requested the present year, to wit: That the Quarterly Meeting be held in the Sixth month on the Seventh-day following the second First-day, the meeting for worship the day following at the usual hour. The meeting of Ministers and Elders the day preceding the Quarterly Meeting at 4 o'clock P. M. Those meetings are at liberty to make the changes as proposed by the committee; and the committee are continued to have the subject under further care, and report to next Yearly Meeting."

"Subordinate meetings are directed to report next year the number of families and parts of families, the number of members, the number of children of a suitable age to attend school, with a particular account of the character of schools the children attend, and also, the condition of schools under the care of Meetings."

"Essays of Epistles addressed to our brethren of London, Dublin, New England, New York, Philadelphia, Baltimore, North Carolina, Ohio, Indiana, Western and Iowa Yearly Meetings were presented by the committee appointed to that service, which were read and, with some slight alterations, approved. The Clerk is directed to transcribe them, sign them on behalf of this meeting, and forward them to the Meetings to which they are respectively addressed."

"Having been favored to finish the business of the Meeting, we may thankfully acknowledge the Great Head of the Church has condescended to be with us, enabling us to open the Meeting and to conduct the business in much harmony and brotherly condescension, so that we can say, 'The Lord hath done great things for us whereof we are glad.' With hearts filled with gratitude for His unmerited mercies we commend ourselves and one another to His keeping, and conclude the Meeting; to meet again next year at the appointed time and place if the Lord permit."

SUMMARY OF EVENTS.

FOREIGN.—The French Minister of Foreign Affairs has issued a circular in regard to the conference recently held at Salzburg. He states that the meeting of the sovereigns was merely one of condolence over the fate of the Archduke Maximilian. There was a general interchange of views on the situation of European Florence, but no alliance or combination was planned by the emperors, as has been stated.

A pacific note has been issued from the Prussian Foreign Office in which the foregoing note is alluded to as highly satisfactory to the Prussian government.

Garnibaldi, while on his way to Genoa to participate in the Radical Peace Congress, passed through Florence, and during his stay there, on invitation of the Minister of Prussia, dined with him at the palace of the Prussian legation.

The Alps no longer separate Italy and Germany. The first locomotive has crossed the mountains, and Venice is thirty-five hours from Frankfurt.

A Constantinople dispatch says: A mixed board of inquiry, composed of both Ottoman and Christian members, has been appointed by the Sublime Porte, and will

soon leave for Candia to investigate the cause of the discontent in that island, and obtain from the inhabitants statements of their grievances. They will make a report to the government here, and upon the result of their labors the future reforms in the government of Cuba will be based. A dispatch from Athens says that advice has been received from the island of Candia to the effect that the fighting there has been suspended for the present, an armistice having been agreed upon between the Turks and Cretans.

The report that the Danish government had sold St. Thomas and other islands in the West Indies to the United States is officially denied.

The returns of the recent elections from all parts of Prussia and from other States of the Confederation show that the Liberal candidates for the North German Parliament have generally been successful, and that the Liberal party will have a large and controlling majority during the coming session.

A Vienna dispatch of the 4th says: It is reported that Baron Von Beust is maturing a plan for the sale of the church property in Austria, and the payment of the accumulated indebtedness of the nation with the proceeds. The Spanish government has ordered the departure of the immediate return of the Spanish fleet to the Pacific.

Dispatches received in London from Alexandria, discredit the reports of the release of the English captives in Abyssinia. In the mean time the preparations for the expedition to Abyssinia are progressing.

The specie increase in the Bank of England has been so large that for the first time in fifteen years the specie now exceeds the circulation.

The soundings for the cable from Brest are completed, and it is to be laid from Brest to St. Pierre, Negeleon, thence along the coast of New Brunswick, Maine, New Hampshire, Massachusetts and Connecticut, to New York. The cable is now being laid in London, and will be ready for laying in the summer of 1867.

A London dispatch of the 7th says: Francis Morris, of New York, has recently concluded here an arrangement with Captain Pim, of the Royal Navy, looking to the establishment of a new interoceanic line across Nicaragua by railroad, connecting with steamers on the lake.

The English Income Tax for the last fiscal year, was paid on incomes amounting to \$54,255,795, by 347,110 persons. During the preceding year 332,431 persons paid income tax on \$527,118,935.

The Grand Duke of Baden made a speech at the opening of the Diet at Carlsruhe, in which he advocated alliance with the North German Confederation. A Paris dispatch expresses the fear that recent complications will be renewed, and questions arise which will again disturb the tranquillity of Europe.

A Geneva dispatch announces the arrival of Garibaldi in that city. He made a brief speech, in which he declared that purpose to remain in Switzerland, and a plan of action, though deferred, would soon be carried into effect. The following were the quotations on the 9th. Commodore, 94-16; U. S. 5-20's, 73 $\frac{1}{2}$. The cotton market was dull and prices slightly lower. Middling uplands, 8 $\frac{1}{4}$; Orleans, 10 $\frac{1}{4}$ d. Breadstuffs firm. Corn wheat, 34-42; per bushel, 34-42.

Vera Cruz dates to 9th mo. Let, have been received via Havana. Commander Roe, of the gun boat Tacony, by the request of the Austrian commander, had made an application for the remains of Maximilian, and his request has been listened to. The trial of Santa Anna was about to commence. All the generals condemned to death at Queretaro, including Castillo, have been pardoned. President Juarez has ordered a convocation of the Mexican people, for the purpose of electing a President, Congressmen, and Magistrates of the Supreme Court.

UNITED STATES.—The Public Debt.—On the first inst. of the month the United States had cash in the Treasury, and amounted to \$2,492,782,783, which is \$18,523,645 less than it was at the close of the preceding month. Since 9th mo. 1st, 1865, the debt has been reduced \$264,906,206. The debt bearing no interest amounts to \$410,019,717. It consists of U. S. notes, fractional currency and gold certificates deposited.

Amnesty to the Rebels.—The President, with the approval of his Cabinet, has issued a proclamation of pardon and amnesty to nearly all who were implicated in the late rebellion. The only persons exempted are the President and Vice-President of the Rebel Confederacy, representatives to foreign governments, officers of the army above the rank of major-general, naval officers above the rank of captain, those who misreated Union prisoners, and those who were in any way connected with the assassination of President Lincoln.

Philadelphia.—Mortality last week, 276. Of consumption, 30; cholera infantum, 30; old age, 15.

The South.—On the 5th inst., in obedience to the President's orders, General Sheridan relinquished the command of the Fifth Military District to General Griffin, who will occupy the post until General Hancock arrives. On the same day, General Canby, as directed by the President, relieved General Sikes from his command at Charleston.

The official registration returns for the State of Virginia have been received. The total number registered as voters is 216,647, and the whites have a majority of 13,667. It is said that General Schofield will order the election for delegates to the convention, 104 in number, between the 12th and 15th of next month.

The yellow fever prevails in New Orleans to a considerable extent. Mortality last week 281.

The army worm has appeared in Mississippi, but so far the cotton has suffered little injury. The corn crop is larger than ever before.

The Department of Education in South Carolina estimates that there are 25,000 blacks, men and women, in that State, who can read a newspaper with a good understanding of the contents, who, two years ago, did not understand the alphabet.

The President has issued a proclamation directing the military authorities in the South to sustain the processes and judgments of the Federal courts.

Miscellaneous.—On the 6th inst., a colored man named Howe, who had bought a first class car through ticket, north of Washington, was put off the cars near Richmond, he having refused to ride in "the negroes car."

He was about to sue the company, but they settled the matter, and he was allowed to ride on the car.

The Southern Relief Association of New York has closed its affairs. The amount received and expended exceeded \$250,000.

In New York State, the total valuation of real and personal estate, according to the equalization of the Board of assessors, has been announced at \$1,644,107,725, of which \$1,230,706,092 is real estate, and \$413,403 personal estate.

The total valuation of property of Wisconsin, as returned, is \$211,270,349, against \$154,220,620 in 1865. During the last fiscal year 35,325,151 pounds of wool and 668,187 pounds of shoddy were imported into the United States. Aggregate value of the imports \$6,286,563.

The revenue from tobacco and distilled spirits, for the last fiscal year, largely exceeds that of any previous year.

The new flax is announced as having been brought into use in the Southern States. It is a species of flax of better, which grows luxuriantly throughout the Mississippi valley, is employed in the manufacture of cord, rope, cloth, bagging and paper.

Nine surgeons in the United States service have died during the past month in the cholera and yellow fever localities of the west and southwest.

It is stated that a lot of ground in Chicago was sold recently at \$3000 per front foot, the highest price ever paid in that city.

The interments in New York last week numbered 562.

The Treasury.—The amount of gold in the U. States Treasury on the 9th inst. was \$247,541,210; coin certificates \$14,679,700; total \$97,635,910. Currency, \$46,303,900.

Presidential Pardon.—It is ascertained from official data, that since 4th mo. 1st, 1865, about 8000 pardons have been granted by the President. They include some of the rebel foreign ministers and agents, members of the rebel army, foreign agents, governors of Southern States, and many generals of arms.

The Markets.—The following were the quotations on the 9th inst. *New York.*—American gold 143 $\frac{1}{2}$. U. S. sixes, 1881, 111 $\frac{1}{2}$; ditto, 5-20, new, 108 $\frac{1}{2}$; ditto, 10-40, 5 per cents, 99 $\frac{1}{2}$. Superfine State bond, \$7.90 a \$9; new, 20-36 wheat, Ohio, 12 a \$13.40; St. Louis, 12 a \$13.70; new, 20-36 wheat, Ohio, 12 a \$13.70; St. Louis, 12 a \$13.70.

Philadelphia.—Superfine flour, \$7 a \$7.50; better brands from \$8 to \$14. Red wheat, \$2.20 a \$2.28; amber, \$2.25 a \$2.35. Rye, \$1.40 a \$1.45. Mixed western corn, \$1.25 a \$1.26; yellow, \$1.25 a \$1.27. Oats, 55 a 67 cts. Clover-seed, \$8.20 a \$9.25. Timothy, \$2.75 a \$3. Flax-seed, \$2.75.

The arrivals and sales of beef cattle at the Avenue Drive-yard reached about 2500. Prices were lower, extra selling at 15 a 16 cts., fair to good, 14 a 14 $\frac{1}{2}$ cts., and common from 9 to 12 cts. per lb. About 8000 sheep sold at 4 a 4 $\frac{1}{2}$ cts. per lb. gross. Hogs were

in demand at fairs prices, 3600 sold at \$10 a \$10.75 per 100 lbs. net.

RECEIPTS.

Received from Isaac Evans, Pa., \$2, vol. 41; from Am. Garrison, Agt. O., for Mary Child, \$2, No. 7, vol. 41; from Joseph Winder, O., \$2, vol. 41; from Wilson, Ed. Agt. O., for Edith Hall, \$2, vol. 41; and for Friends Boarding School, Mt. Pleasant, O., \$2 to No. 27, vol. 41 from Thomas Twining and Moses Huntington, N. Y., \$2 each, vol. 41; from Eliza Hollingsworth, Agt. O., for Mary Milburn, Agt. O., \$2 each, vol. 41; from John Brantingham, Agt. O., and for Samuel Carr, \$2 each, vol. 41; from Wm. D. Bell, Agt. O., \$4, vols. 40 and 41, James Embury, \$3.50 to No. 52, vol. 41, Eli Hodgins, \$2, vol. 41, William Pierpont, 92 cts., to No. 52, vol. 41, Jesse Bailey, \$2, vol. 41, Thomas D. Langstaff, \$2.24, to No. 52, vol. 41, Samuel W. Stanley, \$4, vols. 40 and 41, Parker Askew, \$4, vols. 40 and 41, Richard Smith, \$3, vols. 39, 40 and 41, Thomas Emmons, \$2, vol. 41, Wm. P. Dewees, \$2.70 to No. 52, vol. 41, Henry Williams, \$1, to No. 52, vol. 41, John Hodgins, 68 cts., to No. 52, vol. 41, and El Kennard, \$4, vols. 40 and 41; from J. E. Temple, for Jane E. Davis, \$2, vol. 41, Henry Wood, J. N., and for J. H. Wood, \$2 each, vol. 41; from T. Forsythe, Jr., \$2, vol. 41; from Henry Knowles, Agt. Y., for Joseph Collins, \$2, vol. 41; from David F. Knowles, Yt., \$1, vol. 41; from Joel Wilson, N. J., and for Mary Thro, \$1 each, vol. 41; from Abram Cowgill, Agt. I., for Natha. Satterthwait, \$6, vols. 39, 40 and 41, Michael King, \$1, vols. 37, 38 and 39, Richard Smith, \$2, vol. 41; from J. H. Middleton, N. J., \$2, vol. 41; from Jesse Hill, for Isaac Hustis, Agt. O., \$2, vol. 41, Amy John, \$3, vols. 39, 40, and 41, and James Edgerton, \$2, vol. 41 from Jonathan Chase, for Moses Buffington and Miff Chase, \$4 each, vols. 40 and 41; from Benjamin Stratton, for Daniel Stratton and Lewis B. Walker, \$1 each for vols. 40 and 41; from J. B. Foster, Jr. 1, \$1, vol. 41.

TEACHER WANTED.

Wanted, a well qualified Female Teacher, of energy and experience, to teach Grammar, History, &c. FRIENDS' SELECT SCHOOL FOR BOYS, in this city.

For further information apply to
Thomas Lippincott, No. 413 Walnut St.
Charles J. Allen, No. 304 Arch St.
Elizabeth Rhoads, No. 702 Race St.

NOTICE.

A suitable Friend and his wife are wanted to superintend and manage the farm and family under the care of the Committee for the gradual Civilization and Improvement of the Indian natives at Tanussassa, Cataraugus Co., New York. Friends who may feel their minds drawn to the service, will please apply to

Joseph Elkinton, No. 783 So. Second St.,
John M. Kaighn, Camden, N. J.
Aaron Sharpless, West Chester, Pa.
Richard B. Bailly, Marshalltown, Chester Co. Pa.
Joseph Scattergood, 415 Spruce Street, Philadelphia.

TO RENT AT A LOW PRICE.

A very nice country residence attached to Friends' South-western Rural Ground, 3 $\frac{1}{2}$ miles west of Mt. St. permanent bridge; it has a fine large garden, a superior out-buildings, with pasture and hay sufficient for a horse and cow.

Apply to S. F. Troth, 1019 Cherry St., Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.)

Physician and Superintendent, —JOSEPH H. WOODRUFF, M. D.
Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting-house at Germantown on the 5th inst., J. WISTAR EVANS to ELIZABETH daughter of John Stokes.

DIED, at her residence at Chester, on the 22d of 17th inst., in the 90th year of her age, ESTHER SMITH, member of Chester Monthly Meeting, Pa. "Blessed be the power in spirit for theirs is the kingdom of heaven."

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

Age, when paid quarterly in advance, five cents.

Journal of the Monthly Meeting of Friends of Philadelphia, for the Northern District, concerning our beloved friend Elizabeth Pitfield.

Our much esteemed friend Elizabeth Pitfield, long been a member of our Monthly Meeting about forty years, and many of us having part largely of the benefits of her religious labors, we feel constrained to bear testimony to her worth, and to the excellency of Divine Grace which she became what she was; desiring that she may be animated and encouraged thereby to follow her as she endeavored to follow Christ. She was the daughter of William and Rebecca Bell, and was born in Philadelphia in the month of the year 1788. In her youth she was subject to the temptations incident to that interesting period of life, but through the watchful care of her parents, and by yielding obedience to the Divine law written in the heart, she was in great measure preserved from surrounding evils, and experienced an advancement in the knowledge of the life and peace.

In the Fifth month, 1808, in the 21st year of age she was married to our late friend, Robert Pitfield, and became a member of this Meeting. Having been led more fully to see the emptiness of all worldly enjoyments, and yielding to Heavenly visitations, she was enabled to make full surrender of some things which became a burden to her, after which, great peace of mind and portion, and she was favored with an assurance, that, if faithful to the end, she should wear the crown of life, which the Lord hath promised to them that love Him.

In 1811 they removed and settled within the limits of Burlington Monthly Meeting where she appeared as a minister of the Gospel, and acknowledged by that meeting as such, in the year 1814.

Her ministry was sound and edifying and her communications lively and weighty, being attended with the baptizing power of the Head of the Church, by which the hearts of many were renewed and the heritage of God watered. She frequently led to magnify and exalt the name of Christ Jesus our Holy Redeemer, through her sanctifying grace she was made a living member of the Church, and qualified to proclaim the Gospel of life and salvation.

Her feelings were warm and sympathetic. The aged, the poor, and the sick, were objects of tender regard. She partook largely of the grief of suffering; but through all her trials she

was strengthened to lay hold of that blessed hope that was an anchor, both sure and steadfast; and thus she became qualified to encourage others to build on the alone sure foundation, "Christ Jesus, the Rock of Ages."

She highly valued the doctrines and testimonies of the Gospel as held by our religious Society, and was concerned that they might be faithfully supported by its members.

In the year 1815 she visited the families of Burlington Monthly Meeting, in company with George Dillwyn.

In the year 1821 she returned, with her family, to Philadelphia, and they were members of the Western District Monthly Meeting until the Eleventh month, 1826, when they settled within the limits of this Meeting.

She paid family visits to the members of the different Monthly Meetings within the limits of this city, in the year 1834, in which service we have cause to believe she was made an instrument of good to those whom she visited. In the course of her religious labors, at different periods, she attended all the Yearly Meetings on this continent, which were then established, except Indiana, and repeatedly attended many of the Quarterly and Monthly Meetings composing this Yearly Meeting, to the comfort and satisfaction of Friends; and in the retrospect thereof, she acknowledged she had the reward of peace.

In writing to a Friend on the state of Society, she remarks: "I sometimes feel so weak and feeble that I am ready to adopt the plaintive language, 'How shall Jacob arise for he is small?' I do desire to remember the many mercies and favors granted to us, a poor unworthy people as we are; and although our faith may be greatly reduced, still I trust we shall be strengthened to submit to every dispensation of Divine Providence, being brought into the state of mind in which we can breathe the language to our Heavenly Father, 'Thy will be done.'"

Again she writes, "The state of Society is very discouraging; many and various are the trials of the present time. Yet, still I trust, the dark and cloudy day will not always continue, but that the Sun of righteousness will arise, with healing in his wings."

She often expressed a tender and earnest concern for the welfare of the rising generation, and sometimes euphuistically ejaculated; "Although my house be not so with God; yet he hath made with me an everlasting covenant, ordered in all things, and sure." (2 Sam. xxiii. 5.)

To one of her children she writes, in the year 1836, "My mind is often turned towards thee, in anxious solicitude for thy preservation in the path that leads to an inheritance incorruptible, that fadeeth not away; remember that the fear of the Lord is the beginning of wisdom. Fear to offend thy Heavenly Father in any way; for He alone can bless or blast all our prospects of future happiness in this world. We are placed here for the blessed purpose of working out our soul's salvation with fear and trembling, before our great Judge. Time is short, and eternity is of unlimited duration. Mournful is the consideration,

that so few of the youth of the present day, are willing to become the followers of a meek and crucified Redeemer, who suffered for us, that we might inherit a mansion among the righteous of all generations. Oh! the serious responsibility of our having to give an account in the great day of final decision, of the occupancy of those gifts dispensed to us individually. Be sure frequently to read thy Bible: it will help to draw thy mind towards Him, who sees and knows every thought of the heart. Above all, I would have thee frequently engaged in mental supplication to thy blessed Lord. I know what I say. I esteem it one of my greatest privileges, thus to lift my heart up to Him, who has been with me through many deep conflicts, known only to the Searcher of hearts. What greater joy could I have, than to see my children walking in the Truth. Prayer is [as necessary] to the soul as bread is to the body. If we cease to pray, we must die (spiritually.) Seek first the kingdom of Heaven, and then the blessing annexed will be added."

Again she writes, "Do not forget to ask for preservation in this world of sorrow. I am fearful the cruel enemy will lay snares to weaken your faith in the doctrines and testimonies of the poor despised 'Quakers,' which never felt dearer to me than at the present time. To have an interest in the dear Redeemer, in his inward and spiritual appearance; faith in that Word which is high in the heart and in the mouth, and to submit our wills to His divine requirements; will do more for us than following the 'lo! heres and lo! theres,' which are drawing away many from our religious Society. I long to be ready for my final change—to be permitted to enter one of those mansions prepared for the just of all generations. I often think of eternity. The time is swiftly drawing near when I must put off mortality. I feel like a poor pilgrim who wants to reach the haven of everlasting rest. What a blessed thing it is that we have a Saviour to look to, who will be a Comforter when all things else fail. I feel much weaned from looking to mortal man for help, for I find more true enjoyment in retirement and endeavoring to look up to Him who invited the weary and heavy laden to come unto Him. Our rest is not to be found in the things of time, but in the riches of eternity. Oh! then, look up to Him who can say to the troubled waves, 'Peace, be still.' Our dear Redeemer said, 'But one thing is needful, and Mary hath chosen that good part, which shall not be taken away from her.' This 'one thing,' in my apprehension, is, to choose the Lord for our portion, and the God of Jacob for the lot of our inheritance. His grace is sufficient for us. If we keep near to this Seed of the kingdom in our hearts, I believe that all things will work together for our good; the bitter waters will be sweetened by His grace, and our light afflictions, which are but for a moment, (in comparison with eternity,) will work for us a far more exceeding and eternal weight of glory, if we will only submit, to let our dear Lord direct our steps. Let Him wash our feet: for He said, 'If I wash thee not, thou hast no part with me.'"

John xiii. 8.

In 1864, she writes: "I feel it very needful for me to 'watch and pray,' for it seems to me that the enemy of all good is seeking to lay waste the whole heritage of our Lord and Master."

The following extract from a letter to a friend, will portray the sympathetic feelings of a heart prepared to suffer with the afflicted: "Thou hast been so much the companion of my mind for some time past, in near unity and fellowship, that I thought I would attempt writing thee a few lines, greatly desiring thou mayest be strengthened and encouraged to put thy trust in thy Heavenly Father. He will uphold thee by the right hand of His righteousness, and thou wilt be enabled to adopt the language, 'Hitherto the Lord hath helped me:' for none ever trusted in Him and were forsaken. Do we not know, the trial of our faith is more precious than gold? Let us then cast all our anxious solicitude upon Him who careth for us, and will cause all things to work together for our good, if we let patience have its perfect work: then shall we be experimental witnesses of that blessed truth, 'The foundation of God standeth sure, having this sign, the Lord knoweth them that are His.' Thy Divine Master will, I believe, in His own time, make a way for thee, where at seasons there may appear none. Many now, as well as formerly, are the afflictions of the Lord's dear children, and from different causes; and though hid from our fellow beings, they are all known to Him who careth for us, and by whom the very hairs of our head are all numbered."

When in health, our beloved friend was a bright example in the attendance of all our religious meetings, and in reverent waiting on the Lord therein: but for the last few years of her life, she was much enfeebled by repeated attacks of sickness, and for nearly a year before her death she was unable to mingle with her friends in a collective capacity.

At times during her illness, through the infirmities of the body, she felt weary, yet she was enabled to cast all her burdens on Him, who emphatically said, "Come unto me all ye that labor and are heavy laden, and I will give you rest." In this faith she was sustained through many tribulations, and as her end drew near, whilst passing through the valley of the shadow of death, she expressed herself thus, "I believe I can say, O! death, where is thy sting, O! grave, where is thy victory." A short time previous to her close she supplicated, "Blessed Redeemer, have mercy on me. I am but a poor worm. Dear Heavenly Father, take me home." "Oh! holy Father, if consistent with thy will, take me to thyself." And then, with a sweet and heavenly serenity, she said: "Going in mercy—all is peace." Soon after, she passed quietly away, and we doubt not has entered through the gates, into that city, where none of the inhabitants can say, I am sick.

She peacefully departed, on the evening of the 4th of Seventh month, 1866, in the seventy-ninth year of her age.

Singular Promptness.—A boy borrowed a tool from a neighbour, promising to return it at night. Before evening he was away on an errand, and did not return until late. Before he went he was told that his brothers should see the tool returned. After he had returned, and gone to bed, he inquired, and found the tool was not returned. He was much distressed to think his promise was not fulfilled, and was finally persuaded to go to sleep, and rise early and carry it home. By daylight he was up, and nowhere was the tool to be found. After a long and fruitless search, he set off for his neighbour's, in great distress, to acknowledge

his fault. But how great was his surprise to find the tool at his neighbour's door. And it appeared from the prints of little bare feet on the mud, that the lad had got up in his sleep and carried the tool home, and went to bed again, and knew it not. Of course, a boy who was prompt in his sleep was prompt when awake. He lived respected, had the confidence of his neighbours, and was placed in many offices of trust. If you can form a careless habit in such matters, you will carry it into religion. It will be in the concerns of the soul, "by-and-by, to-morrow, in a short time," &c.; and if you do not get rid of it soon, it will rob you of your character, of your soul—of heaven. To-day—now. Let this be your motto. Be prompt for time and for eternity.—*Bible-Class Magazine.*

From the "North American and U. S. Gazette."

Review of the Weather. EIGHTH MONTH (AUGUST.)

Rain during some portion of the	1866.	1867.
twenty-four hours,	11 days.	14 days.

Mean do. do. do. do. do. 1867,	74.59 "
Average of the summer temperatures for the past seventy-eight years,	73.42 "
Highest summer mean occurring during that entire period, 1828, 1838,	77.66 "
Lowest summer mean occurring during that entire period,	66.00 "

COMPARISON OF RAIN.

The public has been so thoroughly posted up in reference to the *unprecedented* rains of the month under review, that the compiler hesitates to give anything more than a few figures without comment; and yet, as he knows some preserve these "*Reviews*" for future reference, he has decided to embody the following valuable statement.

The rain which fell on the 15th of the month was the heaviest that has visited this city for the last fifty years, the record kept at the Pennsylvania Hospital showing the *unprecedented* large amount of 6.680 inches. The next heaviest rain within the last half century was in September, 1838, when the gauge showed 6.011 inches to have fallen, which has not been exceeded until the present visitation.

The pluviometer at the Hospital is kept accurately and regularly, and its records date back every day to the year 1824.

In addition to this, they have the records for some twenty years preceding that date, kept by a Mr. Lagree, of Spring Mills, Montgomery county, who took an interest in meteorological and other metrometrical matters, and although his records are not vouched for as strictly authentic, yet much confidence is placed in and respect held for them.

The total amount of rain which fell during the

present month, up to the 17th instant, inclusive was 14.850, exceeding anything on record for corresponding period of time.

Of the entire month that far, there were on five days clear of rain, viz: the 4th, 5th, 11th, 12th and 13th instants. Some, in their desire exaggerate, charge the month of July with having been also unusually showery and dampening mortals; but this is a mistake, as, during the month there were only nine rainy days, averaging 2.387—quite a moderate return as compared with good Eighth month.

Of the rainy days we have had this month, a record shows the amount to have fallen, respectively, as follows:

1st,	1.964	9th,	1.12
2d,403	10th,115
3d,920	14th,326
6th,400	15th,	6.680
7th,	1.910	16th,100
8th,	1.735	17th,185

making, as we said, in all, 14.850.

For the information of our readers, who take interest in such comparative matters, we will state that the amount of average rain which fell each month, and year, since January 1, 1864, according to ombrometeral register, was as follows:

	1864.	1865.	1866.	1867.
January,	1.705	3.610	3.145	1.70
February,551	5.825	6.616	3.38
March,	5.170	4.710	2.150	5.44
April,	3.795	2.830	2.930	1.81
May,	8.685	7.210	4.680	7.73
June,	2.345	4.750	2.960	10.00
July,	3.770	2.970	2.520	2.31
August,	1.920	3.770	2.711	15.81
September,	7.165	7.960	8.805	—
October,	1.828	3.050	4.145	—
November,	3.930	3.960	1.760	—
December,	5.145	5.610	3.465	—

Total, 46.001 56.500 45.256
Total quantity for the first eight months of 1867,

1867, 49.4

while the average quantity for many years has been about 44 inches for the entire *twelve* month. It will be observed that the next greatest quantity to the present month, falling in any one month was last June, and the greatest quantity on a given day therein was on the 17th of that month the amount being 4.390 inches.

The following brief summary of *Temperature and Mortality* will give a bird's-eye view of the important subjects for the past three months.

The average temperature of June was 75 degrees; of July, 76.48 degrees; and of August 72.19 degrees, an average for the whole sum of 74.59 degrees. The hottest day of the season was July 4th, 92.50 degrees; and the coolest June 11th, 53 degrees. This low temperature and the clearness which has resulted from heavy rains, have been the chief agencies, and Providence, in preserving the health of the city. During the three summer months, the bills mortality in Philadelphia show an aggregate 3997 internments as against 5191 for the same period last year, a difference of 1194 deaths in favor of this season.

Last year about this time, and for some few previous, we had the cholera amongst us, which in some measure accounts for the favorable contrast in the deaths. For instance, in the statistics above we have 1674 recorded for the Eighth month of this year, counting *five* current weeks from which deduct *one fifth* for the extra week and we have only 1339 for 1867 against 1930 for 1866.

J. M. ELLIS.
Philadelphia, Ninth mo. 7, 1867.

Selected.

On Disgragement—Humility—Faults.

"Two things produce humility when combined: first is a sight of the abyss of wretchedness from which the all-powerful hand of God has rescued us, and over which he still holds us, as if we, suspended in the air, and the other is the sight of that God who is all.

Our faults, even those most difficult to bear, will all be of service to us, if we make use of them for our humiliation, without relaxing our efforts to correct them. *It does no good to be discouraged; it is the result of a disappointed and despairing soul.* The true method of profiting by the humiliation of our faults, is to behold them in all their deformity, without losing our hope in God, and without having any confidence in ourselves.

We must bear with ourselves without either flattery or discouragement, a mean seldom attained; for we either expect great things of ourselves and our good intentions, or wholly despair. We must hope nothing from self, but wait for every thing from God.

We must condemn our faults, mourn over them, repent of them, without seeking the slightest degree of consolation in any excuse, and behold ourselves covered with confusion in the presence of God; and all this without being bitter against ourselves or discouraged; but peacefully reaping the profit of our humiliation. Thus from the serpent itself we draw the antidote to his venom.

Carefully purify your conscience, then, from your faults; suffer no sin to dwell in your heart; all as it may seem, it obscures the light of grace, weighs down the soul, and hinders that constant communion with Jesus Christ which it should be your pleasure to cultivate; you will become lukewarm, forget God, and find yourself striving in attachment to the creature.

On the pure soul, on the other hand, which is humiliated, and rises promptly after its smallest faults, is always fervent and always upright. God never makes us sensible of our weakness except to give us of His strength.

The great point is never to act in opposition to inward light, and to be willing to go as far as it will would have us."—*From the Writings of Pelton.*

Mineral Wealth of Great Britain.

Official Statistics for 1866.

The London Times compiles from the annual report of the Mining Record Office the mineral statistics of Great Britain for the year 1866. In a "Notice" by Sir Roderick Murchison, the Director-General, especial attention is drawn to the continual increase in the production of coal, notwithstanding the depression which has been throughout the year in many manufactures, especially in that of iron." The quantity of coal produced in each of the last four years has been as follows:

Tons.	Tons.
88,292,515	
92,787,873	Increase, 4,495,358
98,150,587	" 5,127,145
101,630,543	" 3,479,956

The exportation of coals in 1866 was 782,631 tons in excess of that of 1865, and two millions and half tons have been consumed in England during a period of extreme manufacturing depression in excess of the consumption of the previous year.

There was a falling off in the manufacture of iron to the extent of more than 290,000 tons, the production of which would have consumed nearly a million tons of coal.

The large quantity of coal raised in 1866 was obtained from 3,188 collieries, and the great development of coal mining in this kingdom is shown by the fact that in 1856 there were but 2,815 collieries in active operation.

IRON.

The quantity of iron ore produced last year was 9,665,012 tons. This was smelted in 613 blast furnaces; and of pig iron there was produced:

In England,	tons	2,576,928
In Wales,	"	959,123
In Scotland,	"	994,000

Total of Great Britain, 4,530,051
Of this pig iron 497,138 tons were exported; reserving more than four million tons for conversion into merchant iron. There were 256 iron-works in activity in 1866, in which were 6,239 puddling furnaces, and 826 rolling mills.

TIN.

The year was so disastrously remarkable in connection with tin and copper mining, that a more than usually close examination of the mines of Devonshire and Cornwall was considered necessary. At the end of 1866 more than 300 mines had been suspended which had been within the few previous years in full work. This threw a large number of miners out of work, and it appears that more than 7,000 Cornish miners emigrated.

COPPER.

There were 174 mines producing copper ore in 1866. These produced of copper ore 180,378 tons, valued at £4750,118, from which was obtained metallic copper amounting to 11,153 tons, valued at £1,019,168. This shows a considerable falling off in the produce of copper mines. During the year there was an increase of more than 7,000 tons in the copper ore and regulus imported; of this Chili alone sent nearly 56,000 tons.

LEAD AND SILVER.

In 1866, 91,047 tons of lead ore were mined, producing 67,390 tons of lead, and 636,188 ounces of silver—a decrease in the silver.

GOLD.

The gold mines in North Wales produced 2,927 tons of auriferous quartz, from which 743 ounces of gold were obtained.

RECAPITULATION.

minerals raised.	Estimated value at place of production.
Coals,	£25,407,635
Iron ore,	3,119,098
Tin,	731,946
Copper,	759,118

The total value of the mineral productions for the year 1866 is as follows:	
Metals obtained from the ores raised from the mines of the United Kingdom,	£14,954,095
Coals—estimated price at the place of production,	25,407,635
Earthy minerals (not including building stones,)	1,350,000

For "The Friend."

John Fothergill having described what he passed through in his preparation for the ministry, goes on to say, upon page 358 vol. 13, Friends' Library, "But I am not without fear, that such a due attention for distinct certainty of the immediate call or requirements of the Word of life, hath not always been suitably practised; and for want hereof, some have appeared as ministers before ripe, and have brought forth fruit of very little service if not detrimental; because none can give what they themselves have not. Whereas if those had waited with proper diligence for the living Word to open and engage, in the entire subjection of self, they might have been great and good instruments, as clouds filled by the Lord with heavenly rain. And as the divine and certain requiring of Truth, is the only right entrance into the ministry, because the Lord said, Some run and I sent them not, therefore they shall not prosper the people; so it is only his fresh and renewed requiring, not only opening matter to speak, but engaging to speak it at this time, whereby the church or particulars are edified, as our Father would have his children edified. These observations respecting the entrance into and proceeding in the ministry of the Gospel, I could not be easy without leaving behind me, believing they will afford instruction and encouragement to some low and careful travellers; and likewise afford some necessary caution to such as may be in danger of being too active."

Health and Disease.—Fever and Fruits.—

Let's have a little talk about orchards and gardens as life-preservers. Many a farmer thinks he "can't fuss about a garden" with vegetables and small fruits in ample variety, hardly about an orchard, especially beyond apple trees. So he goes on to weightier matters of grain, or stock, or dairy, and eats potatoes, wheat bread, pork, and salt beef all summer long; no fine variety of vegetables, no grateful berries, no luscious peaches or juicy cherries. By October fever comes, or bowel complaints of some kind, or some congestive troubles, most likely. He is laid up, work stops a month, the doctor comes, and he "drags round" all winter, and the doctor's bill drags too. The poor wife, meanwhile, gets dyspeptic, constipated, has fever too, perhaps, and she "just crawls round." What's the matter? They don't know, poor souls. Would they build a hot fire in July and shut the doors? Of course not—in their rooms; but they have done just that in their poor stomachs. How so? They have been eating all summer the heat-producing food fit for a cold season, but not for a warm one. A Greenland can eat candles and whale fat, because they create heat. In January we are up toward Greenland—in climate. A Hindoo lives on rice, juicy fruits, and tropic vegetables, cooling and opening to the system. In July we move toward Hindostan, in a heat almost tropical. Diet must change too. Have apples, pears, cherries, &c., from the orchard every day, of early and late kinds. Let there be plenty of good vegetables, raspberries, strawberries, &c. It takes a little time and trouble, but it's the cheapest way to pry the doctor's bills. You study what feed is good for pigs and cattle. All right; but wife and children are of higher consequence; and it's a shame if, with all our great gifts of intellect and intuition, we do not obey the divine laws in our own physical being so well that the doctor shall visit the house less than the horse-doctor goes to the barn. Don't fail of vegetables, berries, and fruits. Try it, and you'll say we haven't told half the truth.—*Rural New Yorker.*

PRAISE AND PRAYER.

Selected.

"If any man be in Christ, he is a new creature; old things are passed away; behold all things are become new."—2 Cor. v. 17.

We praise and bless Thee, gracious Lord,
Our Saviour kind and true,
For all the old things passed away,
For all Thou hast made new.

The old security is gone,
In which so long we lay;
The sleep of death Thou hast dispelled,
The darkness rolled away.

New hopes, new purposes, desires,
And joys, Thy grace has given;
Old ties are broken from the earth,
New ones attach to heaven.

But yet how much must be destroyed,
How much renewed must be,
Ere we can fully stand complete
In likeness, Lord, to Thee!

Ere to Jerusalem above,
The holy place, we come,
Where nothing sinful or defiled
Shall ever find a home!

Thou, only Thou, must carry on
The work Thou hast begun;
Of Thine own strength Thou must impart,
In Thine own ways to run.

Ah! leave us not—from day to day
Revive, restore again;
Our feeble steps Thy Thou direct,
Our enemies restrain.

Whate'er would tempt the soul to stray,
Or separate from Thee,
That, Lord, remove, however dear
To the poor heart, he be!

When the flesh sinks, then strengthen Thou
The spirit from above;
Make us to feel Thy service sweet,
And light Thy yoke of love.

So shall we faultless stand at last
Before Thy Father's throne,
The blessedness forever ours,
The glory all Thine own!

UNCERTAINTY.

Spitta.
Selected.

O! Father, hear!
The way is dark, and I would fain discern
What steps to take, into which path to turn;
O! make it clear.

My faith is weak;
I long to hear Thee say, "This is the way;
Walk in it, fainting soul, I'll be thy stay!"
Speak, Lord, O speak!

Let Thy strong arm
Reach through the gloom for me to lean upon,
And with a willing heart I'll journey on,
And fear no harm.

I wait for Thee
As those who, watching, wait the coming dawn;
Pant, as for water pants the thirsty fawn;
O! come to me.

It is Thy child,
Who sits in dim uncertainty and doubt,
Waiting and longing till the light shine out
Upon the wild.

My Father! see,
I trust the faithfulness displayed of old,
I trust the love that never can grow cold—
I trust in Thee.

And Thou wilt guide;
For Thou hast promised never to forsake
The soul that Thine confident doth make;
I've none beside.

Thou knowest me;
Thou knowest how I sit in darkness grope;
And O! Thou knowest that my only hope
Is found in Thee.

—Chris. Intel.

The Silver Mint of Japan.

At the silver mint at Yeddo the following processes are continually going on.—A lump of silver of the necessary fineness, obtained either from the government mines or by melting down Mexican dollars, is placed in an iron ladle and reduced to a molten state by means of a charcoal fire and a pair of blacksmith's bellows. It is then poured into a mold, from which it is taken out in the shape of thin rectangular bars, which are immediately thrown into a tub of cold water. On being taken out a man seated on the ground shears off with a pair of large fixed scissors all jagged pieces adhering to the angles. They are now banded to another man who weighs them one by one, and a piece is cut off, if necessary, to reduce the bar to its proper weight. The next process is that of dividing the bar by a fixed pair of shears into eight equal portions of the size of an ichibu; this is done by a workman cutting it as accurately as his practised eye will enable him, and his work is tested by weighing—light pieces being rejected, and the heavy ones reduced to their proper weight by the scissors. The pieces are now heated white hot in a charcoal fire, plunged into water, boiled and washed in a kind of brine, from which they come out with a moderately bright surface. They are next very slightly milled on the two sides, and more deeply on the edges, by means of a milled hammer. They are now ready for stamping. A man places one of the pieces on a stationary die, and lays on the top the other die; a second man, armed with a huge hammer, gives one blow on the upper die, and the coin is struck. The blows are dealt in rapid succession, and the whole scene reminds one of a blacksmith's shop. Boys now punch small stars on the edges by means of chisels and hammers. The coins are weighed one by one for the last time, and the light ones rejected. The imperial stamp is added by means of another stamped chisel and mallet, and the coins are complete. They are rolled up in paper packets of one hundred; each packet is weighed and stamped with a seal, which serves as a guarantee of its contents, and gives it currency as 100 ichibus. While every operation is performed in this primitive manner, perfect order prevails in the establishment; every man goes through his portion of the work in silence and with the regularity of clockwork, and many evince considerable skill. There are about three hundred hands employed in the building. When the men enter in the morning they are made to divest themselves of their own clothes, and put on others belonging to the mint. At the end of the day's work a gong sounds, when the somewhat curious spectacle is presented of three hundred men springing from the ground on which they had been seated, throwing off their clothes, and rushing to one end of a yard. Here they pass through the following ordeal in order to prove they have no silver upon them: Their back hair is pulled down and examined, they wash their hands and hold them up to view, they drink water, and then halloo, and, lastly, they run to the other end of the yard, clearing two or three hurdles on their way; after which they are allowed to put on their own clothes and depart. Sidney Locock, her Majesty's Secretary of Legation, from whose report of this year these statements are taken by the *Times*, believes that the mint has been only twice entered by foreigners, and states that the apparent absence of all restrictions with regard to touching and handling the coins points to the probability that it is not often open to the public; but he remarks that even if it were, the manners and customs of the country are not such as would preclude a mixed assemblage of visitors from going over it,

and remaining to the end. The quantity of silver being coined daily at the beginning of this year was fifty thousand momme, which, at the rate of 2.3 momme to the ichibu, would give a daily total issue of over twenty-one thousand bus, or about £1,500. The whole of these are produced by the simplest manual labor, unaided by a single piece of machinery.—*Mech. Magazine.*

So Friends are not to meet like a company of people about town or parish business, neither in their men's or women's meetings; but to wait upon the Lord; and feeling his power and spirit to lead them, and order them to his glory; that so whatsoever they may do, they may do it to praise and glory of God, and in unity in the faith, and in the spirit, and in fellowship in the order of the gospel.—*George Fox.*

An Old English Custom.—We find in a London paper an account of an odd custom which has prevailed for more than a hundred years in the extensive range of moors in Derbyshire, Cheshire and Yorkshire—the annual summer meeting of the shepherds, bringing with them the sheep that have strayed into their flocks, and restoring them to their rightful owners. Every 20th of July the meetings are held, and as they are entirely different from any other gatherings, and have not hitherto been described, a notice of the last must not be out of place. The appointed place for a assembling was the Saltersbrook turnpike-road, distant rather more than two miles from the Dunford Bridge station on the Manchester, Sheffield and Lincolnshire Railway, and at a point near where the three counties above-named meet. On walking from the station across the moor the turnpike road was reached, and then, after a long march uphill, a sharp angle of the road brought the visitor into the midst of a colony of dogs, numbering from eighty to one hundred, nearly all specimens of the sheep-dog breed. They were quiet, quarrelling, and a few were having "quint round" to themselves. Not far from them were their owners, each with a long stick, by which the shepherd indicates to his dog in many instances what he is required to do. After partaking of a good dinner, the men, with their dogs proceeded to a large yard, in which there were about one hundred sheep which had strayed away. Each animal was examined and claimed by certain marks and indications, the dogs occasionally appearing to recognise some of the truntings. In the course of half an hour, with the exception of two or three, all the animals had found their way back to their lawful owners, and shortly after the shepherds, with their dogs and found sheep, departed for their respective stations, miles distant and apart, most of them not to meet again for months or until they once more assembled, bringing with them the lost ones and claiming their own truntings.—*Late Paper.*

Read an Hour a Day.—There was a lad who at fourteen, was apprenticed to a soap-boiler. One of his resolutions was to read an hour a day, at least at that rate, and he had an old silver watch, left him by his uncle, which he timed every reading by. He stayed seven years with his master, and said when he was twenty-one he knew how much time he had read in, in seven years at the rate of an hour each day. It would be 2,555 hours, which, at the rate of eight reading hours per day, would be equal to three hundred and ten days; equal to forty-five weeks; equal to twelve months; nearly a year's reading. The time spent in treasuring up useful knowledge

could pile up a very large store. I am sure it is worth trying for. Try what you can. Begin now. In after years you will look back upon the task as the most pleasant and profitable you ever performed.

For "The Friend."

In a recent issue of this journal, is an essay on the *British Friend*, of 8th month, in which I write, alluding to "the divisions of Reuben," indignantly prevalent amongst us as a people, with too lapsid and degenerate state, makes this remark: "I believe the root of all our difficulties—unconscious as some of us may be of it—is to be found in a departure from, or distrust in, the operations of the Holy Spirit as our guide, instructor and deliverer, in every possible contingency that may arise in the church and in the world, whereby we have lost the true spiritual discernment, and become more or less conformed to the world, its manners, fashions, and allurements." I very fully respond to this sentiment, inasmuch as it so points us to one of the fundamental principles of the Quaker faith; viz.: "God is light, and in him is no darkness at all." It was very early proclaimed in the history of the christian church, that "Through the tender mercy of our God, the day-spring from on high hath visited us to give light to them that sit in darkness and the shadow of death, to guide our feet in the way of peace." And the Lord Jesus himself declared, "I am the light of the world: he that followeth me shall not walk in darkness, but shall have the light of life." We believe that where there are individuals or churches, depart from this reliance on our great inward Teacher, Christ Jesus, and His all-sufficient grace and spirit manifested in the heart, they will—however unconscious they may be of it—experience weakness, and blindness to more and more abundant, in the judgment of Him, who holdeth the seven stars in His right hand, unto the Church of the thees, may be, in much sorrow and bitterness, as I said: "I have somewhat against thee, because thou hast left thy first love." Remember therefore from whence thou art fallen; and repent, and do thy first works (buckle thyself in the debt before thee) or else I will come unto thee quickly, and will remove thy candlestick out of his place, except thou repent."

We cannot perhaps dwell too much under a mistaken sense of our own nothingness and unworthiness, without that holy help and anointing, which comes through persevering watchfulness unto prayer, and patient waiting for Christ. The Quaker in humble dependence upon the Lord who writes: "Thou art my strength." "All our springs are in Thee." And our divine Lawgiver himself declares—how should it sink deep into our hearts—"Without me ye can do nothing." How careful and fearful this should make us of presuming, in our own strength, to take one step without our spiritual Moses, lest we provoke the sentence, "Thou hast done foolishly;" and lest we compass a mountain in the wilderness, from whence cometh blackness and darkness. In view of deviations on this hand, well may the apostle, before alluded to, write: "If each one of himself were to follow implicitly the course pointed out to him by the unerring finger of Omnipotence, we should become collectively (as well as individually) all that the great Head of the Church would have us to be." It is painfully apparent that too many of us, have gotten into a contrary region, above the Truth as it is in Jesus, and hence, above the littleness and simplicity of daily cross, and the teachings of Him, who hath the outward eye or to the natural man, "hath

no form nor comeliness, neither beauty that we should desire Him." To these, the restraints of Parental Wisdom, though it be Divine, become more and more galling and irksome. Like Moab, they have been too much at ease from their youth; neither have they been emptied from vessel to vessel; therefore have they gone into captivity; therefore are not greatly changed. These long for more fleshly liberty, and creaturely activity and exaltation; with less simple, continued, and whole-hearted dependence upon "The Arm of the Lord revealed," whose discipline ever crucifies to the world, and the world unto us. These, instead of gathering the manna daily, would store a supply. They would not wait always, be it longer or shorter, for the cloud to lift from the tabernacle ere they journeyed. With Saul, if the fear presented that the people would be scattered, they would unbidden, sacrifice and offer a burnt-offering. But oh, what desolation such a self-wise course must produce! and what wanderings, and even groping in the wilderness, having lost truly "The true spiritual discernment, and become more or less conformed to the world" and its spirit. Of too many now-a-days, perhaps both in Great Britain and America, it may be said in the language of Catharine Payton, "They were principally the offspring of faithful ancestors; but many have taken their flight on the wings of vanity and earthly riches, and slighted the only truly valuable eternal inheritance."

While we feelingly deplore these deviations, we nevertheless, in the spirit of christian forbearance and restoring love, would lift the warning voice; and with much tender entreaty, would plead with such who have been engaged in removing the ancient land-marks, which our fathers have set; who have in anywise, as the serpent beguiled Eve through his subtilty, been little, corrupted from the simplicity that is in Christ, to turn, repent, and "do the first works;" that so, in whatever it consist, "the accursed thing" may be found and wrested from the camp of our Israel; that with fresh animation, and new joy, and with putting on strength in the name of the God of hosts, we may be able to stand for the right and the true before the enemies of the Lord, and again join arm to arm in effectually turning the battle to the gate. As this is the case—as the Spirit of the Lord is not resisted, but suffered to move our hearts, as in the camp of Dan formerly—as we are engaged to turn with full purpose of heart unto Him who hath smitten us—we believe that He who remains to be the Repairer of breaches, the ever-present Helper and Sufficiency of His people, will, in loving kindness and tender mercy, again bind up our wounds; will heal our backslidings, and love us freely. The spirit of Elijah will again rest upon Elisha; the true, aggressive zeal of the early day will again be seen and felt amongst us; the Lord will again restore judges as at the first, and counsellors as at the beginning. And the prophetic declaration be fulfilled to us-ward: "Enlarge the place of thy tent, and let them stretch forth the curtains of thine habitations: spare not, lengthen thy cords, and strengthen thy stakes: for thou shalt break forth on the right hand and on the left." * * * For a small moment have I forsaken thee, but with great mercies will I gather thee. In a little wrath I hid my face from thee for a moment; but with everlasting kindness will I have mercy on thee, saith the Lord thy Redeemer."

It was the declaration of the prophet, "Not by might, nor by power, but by my Spirit saith the Lord of hosts." Concurrent therewith the Apostle writes: "I bow my knees unto the Father of

our Lord Jesus Christ, that he would grant you according to the riches of his glory, to be strengthened with might by his Spirit in the inner man." And again, "Finally my brethren, be strong in the Lord and in the power of his might," &c. We are assured that if there were a more fervent, humble, prayerful watching unto, waiting upon, and wrestling after the Lord of life and glory, in the might of His own Spirit, throughout the length and breadth of our Society—were there a more fervent exercise and travail of soul for the revelations of His holy will, and for that redemption which cometh but through judgment—more, as in the parable, of a sweeping diligently the house of the heart, for the lost piece of silver, with a more deep and inward hunger and thirst after that light which is the light of men there, fruits would soon appear, which would redound to the glory of God's "unspeakable gift" of saving grace, and to the precious growth and establishment of His heavenly kingdom in the hearts of the people. For this end, our careful, tender Shepherd hath not been wanting on His part. Have we not been planted wholly "a noble vine,"—"a vineyard in a very fruitful hill?" Moreover, He hath placed His witness in each one of our—in all hearts. "God who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ." It is turning from, or not duly heeding this light of Christ Jesus—this only safe and ever-present Teacher, and heaving to ourselves broken cisterns, which will hold no water, that has caused all the dimness, and weakness, and turning aside, that is manifest in our borders; as it hath ever done in the Jewish, and in every branch of the lapsed, professing christian church. The Lord will not give His honor to another, nor His praise to graven images. What is needed, is an humbling of ourselves in deep prostration of soul before the Lord God of Israel, and in chastened fear and contrition, watching unto His commandments, and keeping His statutes and precepts with all our hearts. And, after the call of Isaac Penington, wait to learn of the Spirit these things following:

"Know what it is that is to walk in the path of life, and indeed is alone capable of walking therein. It is that which groans, and which mourns; that which is begotten of God in thee. The path of life is for the seed of life. The true knowledge of the way, with the walking in the way, is reserved for God's child, for God's traveller. Therefore keep in the regeneration, keep in the birth; be no more than God hath made thee. Give over thine own willing; give over thine own running; give over thy own desiring to know or to be anything, and sink down to the seed which God sows in the heart, and let that grow in thee, and be in thee, and breathe in thee, and act in thee, and thou shalt find by sweet experience that the Lord knows that, and loves and owns that, and will lead it to the inheritance of life, which is its portion. * * * If any knowledge concerning the things of God be held out of the freshness of the Spirit, it presently proves dead and unprofitable. The spiritual Israel cannot travel without a spiritual light; which light is eternal and incomprehensible, and cannot be held by man's spirit, but shineth fresh in the renewed spirit every day, and so is daily gathering it more and more inward into itself, comprehending it in itself, and preserving it in its own purity, clearness, and brightness. Oh! this it is that hath undone many, even catching at light from the Spirit, transplanting the image of divine things into the earthly principle, and there holding of them in

the earthly part, growing wise by them there, and making use of them from thence as man sees good, and not seeing a necessity of depending on the Spirit for fresh light and life every day to every spiritual motion. Thus the traveller soon comes to lose the true path, and instead thereof, travels on in a road of his own wisdom's forming; and so, though he seems to himself to make a large progress, yet makes no true progress at all, but is exceedingly run out aside in a by-way; all which ground he must traverse back again, ere he can come to the truth of his former state, or proceed in the true travel."

A COUNTRYMAN.

The Effects of Tobacco upon the Memory.

A French Savan, F. Moigno, of Paris, communicates to the *Chemical News* the following observations upon the deleterious effects, which he had noticed to accompany the use of tobacco, upon himself, which are worthy of attention:

"The Abbi Migne has just addressed a letter to a very honorable director of one of the great seminaries of Paris, condemning the use of tobacco and snuff. This letter furnishes us with an opportunity of relating a fact that is personal to us. Several times in our youth and riper age we have taken up and discarded the use of the snuff-box. In 1861, when writing our mathematical treatises, during our labors with M. Liudolf, for the calculation of variations, and when we commenced the editing of our lectures on analytical mechanics, we used snuff to excess, taking twenty to twenty-five grammes per day, incessantly having recourse to the fatal box, and snuffing up the dangerous stimulant. The effect of this was, on the one hand, the stiffening of the nervous system, which we could not account for; on the other hand, a rapid loss of memory, not only of the present, but of the past. We had learned several languages by their roots, and our memory was often at a loss for a word. Frightened at this considerable loss, we resolved in September, 1861, to renounce the use of snuff and cigars forever. This resolution was the commencement of a veritable restoration to health and spirits, and our memory recovered all its sensibility and force. The same thing happened to M. Dubrunfaut, the celebrated chemist, in renouncing the use of tobacco. We do not hesitate in saying that for a moderate snuff-taker or smoker, there are ninety-nine who use tobacco to excess."

Kindness to Animals.—Professor Youatt gives the following interesting fact in one of his valuable works:—"A horse in the depot at Woolwich had proved so unmanageable to the rough-riders that at length no one among them durst even mount him. His mode of throwing or dismounting his rider consisted in lying down and rolling over him, or else crushing his leg against some wall, or post, or paling. All means to break him of these perilous tricks proving unavailing, the animal was brought before the commanding officer with the character of being 'incurably vicious,' and with a recommendation, on that account, that he should be sold. Colonel Quest, hearing of this, and knowing the horse to be thoroughly bred, and one of the best actioned and cleverest horses in the regiment, besought the commanding officer to permit him to be transferred into the riding troop. This was consented to, and the transfer was no sooner accomplished than Colonel Quest determined to pursue a system of management directly opposite to that which had been already attempted. He had him led daily into

the riding-school, suffered no whips even to be shown to him while there, but petted him, and tried to make him execute this and the other manœuvre, and as often as he proved obedient rewarded him with a handful of corn, or beans, or a piece of bread, with which bribes his pockets were invariably well supplied. In this manner, and in no great distance of time, was the rebel not only subdued and tamed, but rendered so perfectly quiet that a little child could ride him. He became, at length, taught to kneel down while his rider mounted, and to perform several evolutions and dances and tricks in the manege, which no other horse in the school could be brought to do. In fine, so great a favorite did he become, that his master gave him the appellation of 'The Darling.'"

Jewels.

For "The Friend."

In one of the religious papers of this city, I recently met with the following interesting narrative:—

"A lady of the Indian race lay on the couch of her sick-room reading a novel. She had been well known in her own country for her riches, and envied there as the possessor of the finest collection of jewels. She married an Englishman, and went to live in Britain. Her husband had been proud to take her to the gay parties of which they were both so fond; for all admired her, and the jewels she wore attracted wondering eyes. But after a few years in Britain, her cheek faded. The doctors now said it was consumption. She was prohibited from the gay parties, confined to her room, and her strength was fast giving way.

The lady was a Mohammedan; the faith she held gave her no comfort; for sole amusement was in reading the tales of that world outside where she could shine no more. The sick-nurse, who sat in her room, often raised her eyes from her work to watch her patient, so like a prisoner shut up in a cold country, far from her own sunny land. Nurse kept her Bible always near her, and every now and then would read a word to cheer herself, longing to put it into the lady's hand in place of the foolish tale she read. But "He that winneth souls is wise," not only wise in having chosen the highest kind of work, but wise in waiting till God shall open His way to do it.

"Nurse," the lady said at length, "I think you must find it very dull to be shut up in this room with me all day long, and to have nothing to amuse you." "Oh! no, ma'am," she said, "I don't find it dull at all; I am always cheerful, and I am not sorry for myself to be shut up in this room." The lady thought this very strange, and said, "Go and fetch the box that holds my jewels; it will help to amuse us to look at it this dull day." So the nurse fetched the box of jewels, and the lady unlocked it, and spread a quantity of them on the table. "Now, nurse, would you not like to have some of these jewels?" "No, ma'am, not at all. . . . for I have jewels much finer than yours." "How can that be, nurse? Mine are the finest jewels in the land. Where are yours? You never wear them!" So the nurse held up her Bible, saying, "My jewels are all in this book." The lady thought there were one or two jewels hidden about the book, and said, "Take them out and show them to me."

"Why, ma'am, my jewels are so precious I can only show you one at a time." Then she opened her Bible, and read the text, "I have learned in whatsoever state I am therewith to be content." She told her mistress that, though a poor woman, she had no wish to be a rich one, for God knew

what was best for her. She said also, that her treasure was in heaven, and that she did not so much mind the trials of this life, because she was looking for happiness in the kingdom of God and Christ Jesus.

It pleased God to open the lady's heart that she should attend to the things that the nurse spoke. Acts xvi, 14. "Why, nurse, I never heard anything like that. How happy you must be to feel as you do. I wish I could do the same!" And then the nurse told her she had not learned to feel thus of herself; that it was God who had put it into her heart, and that He would do the same with her also, if He pleased. "Well, nurse," said the lady, "I should like to see another of your jewels—that which you have shown me now is so beautiful." But the nurse saw that the poor lady was tired, and thought it was enough for one day; but promised she should see one jewel more to-morrow. So next day the lady said, "Show me another jewel." Nurse opened her Bible again, and read, "This is faithful saying, and worthy of all acceptance, that Christ Jesus came into the world to save sinners." The Holy Spirit had blessed His own words and had begun His regenerating and saving work in the lady's heart. She began to feel that she was a great sinner. She called upon the Lord Jesus to save her soul. She gave up reading the idle books. She did not care for her jewels now. She had found One that was priceless. Her body wasted day by day. But her soul was joyful in her Saviour. She was a wonder to many—a bright monument of God's power to save.

Various are the methods which Divine goodness uses to arrest the careless and unconcerned and awaken them to a sense of the importance of religion and of the necessity of their earnest seeking for the pearl of great price. Yet in every case, it is the convicting and persuasive energy and power of the Holy Spirit which is the reagent of conversion, though He is pleased to operate on the heart, sometimes, without instrumental means, sometimes through those who have been anointed and qualified to preach the gospel, and sometimes by what may seem as merely accidental occurrences. As an illustration of this I remember an incident related by a dear friend now gathered from works to rewards, who has heard it described by Jacob Lindly. A man who was living an irreligious life—a practical, if not a theoretical infidel—was endeavoring to save throns from an old broken cart-wheel. He built a fire for this purpose, on which he placed the wheel, and as he watched the flames curl around it, and consuming the dirt and grease, and removing from the iron all the other matter with which it had been associated, the impression fastened on his mind, that if he would permit the fire of Divine Grace to enter his heart, and consume the evils which had accumulated there, it would remove them, even as the flames destroyed the grease and dirt of the wheel-hub. It proved to him an awakening visitation, and he was enabled to change his course, and lead a religious life.

The Sparrows in the Parks.—The following interesting history of the English sparrow in the Park at Union Square, was prepared by J. J. Shaw, the attentive policeman of that park. He writes as follows:

In April, 1866, two pairs of sparrows came to Union Park, and claimed possession of the old bird-house there, (indeed, it was the only one of five parks,) which was occupied by two pairs of wrens. After a desperate fight of several hours the wrens had to yield to the heavier birds, and

the park. The sparrows took possession, and in five weeks had now added to their numbers, and out in the park. In June, the same year, one hundred bird-houses were erected there, and sparrows at once took to them, and produced early broods before the leaves fell from the trees. In seventy-five to eighty of these birds wintered there, to the delight and amusement of many persons of birds.

About 300 bird-houses were also erected in four other parks near, and many sparrows came in to Central Park and occupied them all winter, and have continued to occupy and breed in them, and also the blue bird and wren, until now are believed to be 1200 to 1500 sparrows in these five parks. They are very happy and tame, and seldom molested by the children, and have made a clean sweep of the worms and millers, and made the foliage of all the trees, so that, for the first time in seven years, at this season, we have perfect foliage in the New York Parks.

There is nothing like the sparrow for the destruction of the worms and insects generally. Hawks have been anchored in the fountains, from which the birds drink and bathe. Lately, one morning, I counted seventy-five of them on the bank at Union Park, bathing, in thirteen minutes. If the people will put up bird-houses on the roofs in our streets and yards, the city will be well supplied with the sparrow in a few years, and the tree-worm will disappear.—*Late Paper.*

For "The Friend."

It is a solemn privilege to be permitted to witness the close of life when it comes to those who, through submission to the sanctifying power of the Spirit of our blessed Saviour, have mercifully cleansed His precious blood to cleanse them from iniquity. These do indeed know that their Redeemer liveth, and they have the comforting and animating assurance granted unto them, that because He liveth, they shall live also. For them there is no sting, and the grave no victory, for the eternal God is their refuge, and underneath him the everlasting arms." Many such have been removed from our midst: with some the work has been a great mercy been "cut short in righteousness," and the others, who have long "borne the burden of the day," have been gathered into heavenly garner, as a shock of corn fully ripe. It matters little at what hour or how suddenly the summons may come to give an account of their stewardship, to those servants who are found faithful; but as these warnings of the nearness of life are received by us whose day is reheated unto a little longer, let us not turn away from the impressions made by them. The desire of such seasons is often felt by survivors, "Let me die the death of the righteous and let my last will be like his." But let us not rest satisfied in knowing this desire raised in the heart, but let us dwell under a solemn sense of the necessity of living such a life as will prepare through the mercy for such a close; always bearing in remembrance that it is "not by works of righteousness which we have done, but according to His mercy He saved us, by the washing of regeneration and renewing of the Holy Ghost." It is an interesting reflection that he who, while viewing the beauty and safety of that people upon whom the Divine blessing, ejaculated this wish, "his latter end should be that of the righteous, as he was as one of their enemies; for it is related of Balaam, the son of Beor, the soothsayer, that the children of Israel slay with the sword." These are instruction and warning; although his death had been thus opened, yet it is said, he "received to his place." He "loved the wages of

unrighteousness," and we may believe continued to seek these. There are many ways in which we may do the same, but all, if pursued, will bring spiritual death; for "the wages of sin is death," but how precious is the truth which is placed in contrast with this,—"the gift of God is eternal life through Jesus Christ our Lord." This inestimable gift is not granted unto us for any merit of our own, but it has been purchased for us by our Holy Redeemer, and it is only through faith in Him that we can receive it; "for there is none other name under heaven, given among men, whereby we must be saved," "but by the name of Jesus Christ of Nazareth," of Him who gave this command to his disciples, "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." "These three are one," and they who are thus baptized, do truly believe in the Son and do also experience that God is their Father, for such are made His "by the washing of regeneration and the renewing of the Holy Ghost." To these Christ is indeed precious; precious as their Mediator with the Father, and precious as "Christ in them, the hope of glory;" and those who have acknowledged Him in life as their Saviour from their sins, not in them, and been willing in their daily walk to bear His cross and despise the shame, will be permitted in the solemn hour of death, to feel a humble, sustaining hope that in His mercy He will acknowledge them before His Father and the holy angels. Let us then, as we contemplate the release from the conflicts and trials of time, of those who "have come out of great tribulation, and washed their robes and made them white in the blood of the Lamb," be animated to follow them in that path which will lead to the same peaceful close; that thus, too, we may know when "flesh and heart faileth," God to be "the strength of our heart and our portion forever." E. A.

Ninth month, 1867.

The Depths of the Sea.

Our investigations go to show that the roaring waves and the mightiest billows of the ocean repose, not upon hard and troubled beds, but upon cushions of still water; that everywhere at the bottom of the deep sea the solid ribs of the earth are protected, as with a garment, from the abraded action of its currents; that the cradle of its restless waves is lined by a stratum of water at rest, or so nearly at rest that it can neither wear nor move the lightest bit of drift that once lodges there. The uniform appearance of these microscopic shells, and the total absence among them of any sediment from the sea or foreign matter, suggests most forcibly the idea of perfect repose at the bottom of the deep sea. Some of the specimens are as pure and as free from sea-sand as the fresh fallen snow-flake is from the dust of the earth. Indeed, these soundings almost prove that the sea, like the snow-cloud with its flakes in a calm, is always letting fall upon its bed showers of these minute shells; and we may readily imagine that the wrecks which strew its bottom are, in the process of ages, hidden under this fleecy covering, presenting the rounded appearance which is seen over the body of the traveller who has perished in the snow-storm. The ocean, especially within and near the tropics, swarms with life. The remains of its myriads of moving things are conveyed by currents, and scattered and lodged in course of time all over its bottom. This process, continued for ages, has covered the depths of the ocean as with a mantle, consisting of organisms as delicate as hoar frost, and as light in the water as down in the air.

We may not inaptly supplement the above with a passage of a report made by Dr. L. Taylor, of a Bible Society mission to British Columbia: "We sailed for San Francisco at nine o'clock on the evening of the 23d day of April, and we had scarcely cleared the harbor when we saw the most wonderful exhibition of the inhabitants of the deep that can perhaps be witnessed in any part of the globe. They were about the ship in millions, of all shapes and sizes; and in their gambols, each, from the intense brightness of the phosphorus, seemed to leave behind it a track of fire. Myriads of the smaller fish moved together in shoals, which, from the cause just named, the phosphoric radiance, created a phenomenon never witnessed in northern latitudes, viz.: patches or spots unbroken, from a few square yards to several acres, resembling white fleecy clouds, and sometimes looking like a field covered with newly-fallen snow. Occasionally they assumed a narrow longitudinal form, and appeared like the Milky Way in the heavens; and as we gazed on their varied forms, wrapt in wonder and astonishment, the sublime language of the Book of Job was suggested: 'He maketh a path to shine after him; one would think the deep to be hoary.' 'They that go down to the sea in ships, that do business in great waters; these see the works of the Lord, and his wonders in the deep.'—*All the Year Round.*

The Honest Farmer.—A farmer once called on Earl FitzWilliam to represent that his crop of wheat had been seriously injured in a field adjoining a certain wood, where the earl's hounds had during the winter frequently met to hunt. He stated that the young wheat had been so cut up and destroyed, that in some parts he could not hope for any produce.

"Well, my friend," said the earl, "I am aware that we have done considerable injury; and if you can produce an estimate of the loss you have sustained, I will repay you."

The farmer replied, that anticipating the earl's consideration and kindness, he had requested a friend to assist him in estimating the damage, and they thought as the crop seemed quite destroyed, £50 would not more than repay him. The earl immediately gave him the money.

As the harvest however approached, the wheat grew, and in those parts of the field which were most trampled, the wheat was strongest and most luxuriant. The farmer went again to Earl FitzWilliam, and being introduced said,

"I am come, my lord, respecting the field of wheat adjoining such a wood." The earl immediately recollected the circumstance. "Well, my friend, did not I allow you sufficient to remunerate you for your loss?"

"Yes, my lord, I find that I have sustained no loss at all, for where the horses had most cut up the land the crop is the most promising, and I have, therefore, brought the £50 back again."

"Ah," exclaimed the venerable earl, "this is what I like, this is as it should be between man and man." He then entered into conversation with the farmer, asking him some questions about his family—how many children he had, &c. The earl then went into another room and returning, presented the farmer with a cheque for £100, saying, "Take care of this, and when your eldest son is of age, present it to him, and tell him the occasion that produced it."—*British Workman.*

Nothing but love to God can conquer love of the world. One grain of that divine principle would make the scale of self-indulgence kick the beam.

THE FRIEND.

From "Good Words."

A Personal Experience of Fire-damp.

Some years since I paid a visit to Staffordshire, one of the entertainments by which my host took to make my time pass pleasantly was a descent into a coal mine. I rather liked the idea, had never been down one, and at once agreed to. The mine that was to be honored with our descent was that of West B—. It was an mine, of considerable size and depth—the th of the shaft being, if I recollect rightly, at 960 feet. There were some six or eight in company, among whom were two young men, sons of the owner, and a superior workman—I do not know his proper technical designation—perhaps underground ballif; at any rate, some equivalent to what we above ground should the foreman.

I expected that we should go down in a bucket, box, but there was nothing of that sort; we did upon something like a small platform and to the chain by which we were lowered. I am repented of my readiness to join the party. I saw the means by which we were to descend, but I had not courage or time to dissent. What seemed the recognised mode of proceeding. No one else seemed to mind it, and two of those who were familiar with the ways of the place stuck out one of their legs at right angles to stave off from the sides of the shaft as descended. "All right," said one, and away we went. My first sensation was that sort of equilibrium or swimming in the head that the sailor may have experienced when he dreams that he is falling down a precipice. Fortunately it did relax the muscles, for as it passed away I found myself clinging to the chain like grim death; probably it was only momentary, as I had time to perceive the rapidity with which we passed into the darkness. The story about seeing stars at the bottom of a coal pit cannot be true at any rate if the pit is what is called an up-shaft. We went down the up-shaft—this, the shaft by which the air which has entered the pit by the down-cast shaft returns to the surface, after having circulated through the mine; and looking upwards through this air, we saw nothing of the opening of the pit almost immediately after beginning to descend. I suppose the air was so loaded with impurities, coal dust, vitiated vapours, &c., that, seen in quantity, it was muddy and impenetrable to light as the

river Thames at London Bridge, although on the small scale both appear transparent. Down, down, we went, and presently we became aware of a little drizzling rain. It was the water, which, pouring or trickling from the sides of the shaft, sparked off from every projection. As we went deeper this got worse, and by the time we reached the bottom we were in a heavy shower.

Suddenly we stopped; we had reached the foot of the shaft. We found ourselves in the midst of a group of horses, one of which, a blind old beast, I remember, came knocking up against me and nearly upset me.

Some of us were then furnished with lights. I was one of those that were not. When I say that the lights were all naked and without protection, the reader will see that my visit must have been made a good many years ago. Under the guidance of the foreman we then set off on our tour. The main passage, along which we went at first, was what I imagine would be considered a lofty and spacious gallery, laid with rails. It was comparatively broad, and seemed to my eye about nine or ten feet high. We proceeded along this for, I daresay, a quarter of a mile. By-and-by our leaders turned into an apparently unused side gallery, narrower than the main passage, in which the foreman had something about the ventilation to point out to the owners. Hitherto we had seen no men mining; we had met men with horses drawing trucks, and others going about their occupations, but no men working. We proceeded along this smaller gallery for about 150 yards or so. The place was dirty, sloppy, and wet, and, of course, dark; and feeling no particular interest in what the foreman was desirous of pointing out to the owners, I lagged behind a little. I might have been twenty paces behind the rest of the party, when a sudden light started up among them—I can compare it to nothing but the flash with which lightning is initiated in the theatre. The reader knows (or if he does not know, I shall tell him) that this is done by placing a lighted taper-end between the middle and ring finger of the hand, held out with the palm upwards. Into the palm a quantity of powdered resin is poured, not spread out but piled up around the taper. The resin is then chucked into the air, and is ignited in passing through the flame, which then spreads out like a large mushroom. The whole is over almost instantaneously, and the resemblance to sheet lightning, to those who do not see the operator or the mushroom, but merely the flash of light, is very perfect. Well, this was exactly what I saw—with a difference. The difference was, that when the light flashed up to the roof and assumed the mushroom shape, it did not disappear like the other. Instead of being extinguished as instantaneously as it arose, it continued extending and spreading out along the roof on every side. My first idea when I saw the light was, that this was some civility on the part of the owners to show off the mysteries of the place to their visitors, as I had seen the Blue-John Mine in Derbyshire, and other stalaetic caves, illuminated by Roman candles and other lights. That idea only lasted for a second. As the light ex-

tended, every one rushed panic-stricken from it as fast as they could run. I guessed the truth in a moment, and turned to fly. There was no difficulty in finding my way, the whole place being illuminated. After flying along for some time I looked back; the whole of the gallery where we had been was one body of fire—not a bright lambent blaze, but lurid, reddish, volumes of flame rolling on like billows of fiery mist. Their form was like that of the volumes of black smoke which we may see at times issuing out of large factory chimneys, than anything else I can compare it to. My notions of explosions of fire-damp were, that they took place with the rapidity of an explosion of gunpowder. But it was not so in this case, at any rate. I do not mean that it was slow, but that its speed was no greater than that of a man. All those who were at the end of the gallery where it took place did, in point of fact, outrun it. Neither was there any noise or sound of explosion; at least, I noticed none, and if there had been I think I must have observed it, for, all things considered, I was tolerably collected. The report must have taken place at the pit-mouth, as from the mouth of a gun. The fire rolled silently along in great billows of reddish flame, one wave tumbling over another, in quick succession. And a curious and very beautiful thing was the edges of these billows; they were fringed with sparks of blue flame, dashed off like sparks from a grindstone. Even at that dreadful moment I could not avoid being struck by their beauty.

All this I must have gathered at a glance—in an instant of time. In front of the billowy mass of fire rolling on towards me I saw the dark figures of my companions tearing along at headlong speed. Then turning, I again dashed on. When I came to the loftier main passage I heard a voice behind me cry out, "Down on your face!" and by-and-by one figure after another sprang past me and dashed themselves headlong on the ground. I can liken the reckless, frantic way in which it was done, to nothing but boys, when bathing, taking "headers" into a stream. Without reasoning about it I followed suit, and flung myself into a puddle, and then peering backwards under my arm, waited the approach of the sea of flame, the wall of fire, which was approaching. It had not yet come out of the side gallery, but the glare of its light preceded it. Presently it rolled into sight, filling the whole mouth of the side gallery, from top to bottom. Had it overtaken us in it, not a soul would have escaped alive; but when it entered the larger gallery it lifted, just as one sees a mist lifting on the mountains, and then rolled along the roof, passing over our heads. How much space there was between us and it, I cannot say; I imagine it filled the upper two-thirds, leaving a space of perhaps two or three feet free from flame. Nor can I well say how long we lay below this fiery furnace; it might have been five minutes or a quarter of an hour. Judging from our sensations it must have been hours, but we did not experience so great heat as I should have expected. We felt it more afterwards; probably the anxiety of the moment made us insensible to its intensity.

After the lapse of some time the volume of fire above began to diminish, the stratum got thinner and thinner; it eddied, and curled, and streamed about, leaving the more prominent parts of the roof exposed like islands; then it wandered about like fiery serpents and tongues, licking a corner here, or flickering about a stone there, but ever moving towards the shaft. As it thus abated, presently one head was raised from the ground, then another, until we all began to get up. We then gathered together, but there were no mutual congratulations, nor external acknowledgment of thanks to God, however much some may have felt. But I doubt if there was much feeling of that kind, the sense of peril was yet too strong; we had escaped one great danger, but we knew that we were still exposed to the risk of many others which often followed such explosions. The first danger was want of air; the fire had used what was in the mine almost wholly up, and we might perish from want of it. "Follow me," said the foreman, and he started off, not for the mouth of the mine, but for some part of it which, from its connections or position, he knew to be better, or more likely to be supplied with air, than any other part. The miners knew this too, doubtless, for on our arrival at the place in question, we found them trooping in from different quarters, until there might be above a hundred present; and I was much struck by one thing in them which was not according to my anticipations. I thought that men who were habitually exposed to any danger become callous to it, and faced it with indifference. It was not so with these miners; we, who scarcely understood the magnitude of the danger through which we had passed, were far cooler and more collected than they. Almost every one of them was thoroughly unannoyed, and shook in every fibre. I know the ague well (*experientia docet*), and the uncontrollable shaking which bids defiance to the strongest exercise of the will, but I never saw a worse tremor in ague than in these men. While gathered together in this part of the mine a loud crack ran through the roof above our heads, which so alarmed the already nerveless miners that some of them actually sunk upon the ground. The explanation of this anomaly in men's courage is, I think, that where they see their danger, and can exert themselves to ward it off or escape it, familiarity with it will produce contempt for it; but where they are utterly helpless, and know that they are so, familiarity with it only adds to its terrors. This is the case with earthquakes. No familiarity with them enables a man to meet them with composure; the more he has felt, the more frightened he becomes. I remember seeing another instance of the same kind on board the *Tyne*, when she was wrecked on the rocks at St. Alban's Head. The sailors on deck were as cool as cucumbers, but the stokers and firemen below were unannoyed exactly in the same way as the miners at West-B— . They could not see their death, and they could do nothing to save themselves if the ship had foundered.

After waiting a considerable time in this part of the mine—perhaps an hour—we again started, and made for the mouth of the pit. As we approached it we heard shouts, and presently came upon a body of men, who, having heard the explosion, had been sent down to see what mischief had been done. Although the explosion had travelled so deliberately when it passed over us, it had had sufficient violence when it reached the shaft to blow the roof of the building adjoining the pit-mouth clean off. Fortunately, it had not destroyed the gear there, and we were able to ascend without delay. Right glad was I to find

myself once more in the open air. The explosion had drawn a crowd of agitated men and women to the mouth of the mine. Alas! the meaning of the dull report, and the cloud of smoke, and the fragments of the building at the pit-mouth flying in the air, were too well known in the neighbourhood, and many an anxious heart found relief in a burst of tears when we were able to announce, on our appearance at the surface, that no lives had been lost. We escaped with almost miraculously slight injury for men who had gone through an explosion of fire-damp. I saw one man, who had got a lick from the flame, having his shoulder treated with oil, or some such application, but that was the only casualty that came under my notice.

I have never been down a coal pit since.

ANDREW MURRAY.

For "The Friend."

Edward Andrews.

It is related of Edward Andrews, a person who became an eminent instrument in the hand of God in gathering many to the fold of rest, that what seemed to be the turning point in his life was a comparatively simple incident, from which one would scarcely have expected such important results to follow. The account given of him says:

"His residence was at that time in the Jerseys, near the sea-shore, amongst a wild sort of people, Indians and others, vain and loose in their conversation, fond of frolicking, music and dancing; amongst these he acted the part of a fiddler.

In this situation, as he was one day working in his field, he came across a part of a human body, which he had seen before, which, as he now saw it, lying on the ground, a thought struck him, that it was not right to suffer a part of his fellow creature to be thus thrown up and down in the open field; but that he ought to do with it as he would desire to be done by in the like condition; after some reasoning in this sort, he decently buried it, and returned to his work again, with an answer of peace in his mind. From that time he grew pensive, the pure witness of Truth rose in him, by which he was made sensible he had spent many years in vanity, that it was high time for him to turn unto the Lord, and a desire was begot in him to experience an inward acquaintance with God, and be favored with power from him, to forsake his vanity and loose living, the iniquity of which was then opened to him; and he found a call in his mind to destroy that fiddle, which had been so much an instrument to lead himself, and others, to the mispending their precious time; this he concluded to do, when he went home; but delaying to perform this resolution, as he lay in his bed he felt the fire of God's wrath kindled on account of his disobedience, which induced him, the next day, to break the fiddle in pieces, which, when done his heart rejoiced, and he felt a strength of hope rising in him, that God would give him farther power over all his vanities. A sense was also given him, that if he was faithful to what the Lord would require of him, he should be made an instrument in God's hand, to gather a people to his praise, from those very loose people amongst whom he resided; which seemed strange to him. But as his heart became daily more and more exercised towards God, and in giving him thanks for his mercies, a lively concern and desire came upon him, that sinners might be brought, as he had been, to a sight of the error of their ways. He then found it to be his duty to speak to those same people, whom he had led on in folly and vanity, and to direct them to the service of God. This he at first found to be hard work; but being charged by the Spirit, to be faithful to what

was required of him; and made sensible that if he was so, God would be with him, but that if he refused, he should be left to himself, and fall into a worse condition than that he was in before, he was enabled to speak to them, though in great fear, and the Lord eased his admonition to be well received by his neighbours. And on the next day of worship, instead of spending their time in rioting and excess, as they were used to do, some of them sat with him to read the scriptures, and confer together upon the things which related to eternity; in which his understanding was opened to see, that the right worship of God was to be performed in silence, unless when moved by the Spirit to appear in vocal service, under which prospect he found himself moved to kneel down and pray; and, sometime after, to exhort his companions, which was accompanied with so much energy and power, that the people were much affected. Thus the Lord manifested his love and power amongst those people, by this mean instrument, till by degrees, a religious meeting was gathered to the praise of God, whose baptizing power was sensibly felt amongst them; in which service he continued during the whole course of his life."

Is not the reading of such narratives calculated to fill the heart with love and gratitude to our gracious Father in heaven, who looks with an eye of tender pity on his creatures wandering away from the only fold of rest, peace and happiness; and renews from time to time his offers of help and guidance to lead them back to the safe enclosure? Would that we could realize as we ought to, the unspeakable value of these Divine and merciful visitations; and fully appreciate the important truth, that it is only as we are favored with them, that we can take a step in the road that leads to eternal happiness. Our Saviour has said, "Without me, ye can do nothing;" and again, "No man can come to me, except the Father which hath sent me, draw him."

Oh, then, what dangerous trifling with divine goodness is it, to be disobedient and rebellious, or even careless and negligent, when we are mercifully favored with an impression of duty to perform some act, or to refrain from doing or speaking something which we are inclined to do or say. When a feeling of our own unworthiness and sinfulness is spread over the mind, and a sense that we are not prepared for admittance into that glorious city wherein nothing that is unholy or impure can ever enter; and from this sense of unfitness desire springs up to be made more nearly what we ought to be, how should we love and cherish these feelings and emotions; yes, even bless and praise the Lord for his stripes and chastisements, and earnestly seek to abide more and more constantly in his sensible presence and under his influence, knowing that if his Divine Love and merciful extension of care over us are withdrawn there is no other help or safety for us. Let us remember that it is altogether out of our power to change our own hearts—we cannot of ourselves think a good thought or form a good desire; and if we neglect those seasons when we feel the influence of good upon us, we do it at the risk of our salvation, for a time may come when the offer of Heavenly Grace may be withdrawn, and we left to follow the dreadful road we have chosen, and have persisted in pursuing.

I remember being much interested in the account given of his feelings at one period of his life, by a personal friend—a man of extensive information and cultivated mind. He had met (if others) with many trials, and on one occasion when far from home, met with a most bitter and unexpected disappointment, which seemed like

to entirely defeat his object in leaving home. Being plunged into great trouble, he became thoroughly discouraged, and reasoned with himself that he had been endeavoring for years to pursue that which was right, but all his exertions seemed unavailing, and that it was of no use to persist any longer in his efforts. Giving way to these insinuations and suggestions, he came to a deliberate conclusion no longer to strive after holiness. No sooner had he formed this conclusion than all sense of right or wrong seemed taken from him. He said his natural feelings of humanity would have prevented him from committing murder, but intimated that no feeling of conscience would have interfered. He was struck with the peculiarity of his sensations, but he could not think a good thought, or even form a desire for deliverance from his awful condition. Having seen thus experimentally taught his entire dependence on divine goodness for strength to take any step in the path that leads to salvation, his spiritual senses were, after a time, restored to him. J.

Trees as a Protection to the Crops.—The San Francisco Bulletin says: "Considerable attention has been given of late to the climatic changes consequent upon denuding forests. In a recent paper address delivered in this city, the speaker mentioned the noble red-woods which could be seen from this point a few years ago, covering the hills in the rear of Oakland. Not a tree is left, and the hills present an exceedingly bald and barren aspect. It is also certain that there is not so sufficient moisture concentrated on these hills to germinate a new red-wood forest. The Coast range is being rapidly stripped of redwood trees, and nature, baffled in its work of restoration by fire and drought, lets the verdure-clad hills go back to barrenness. It is a rare thing to find a redwood forest springing up anywhere. The provident axe man slashes away right and left—the annual fires follow, spreading over miles of territory, and thus the young redwoods are killed off. In fifty years we shall have finished up the redwood forests now confined to a narrow strip of the Coast Range.

"The effect of this wholesale destruction and waste of forests is already beginning to be seen in the climatic changes which follow. Less moisture is concentrated on the hills which have been stripped. The present summer has been a singularly dry one in the Coast Range. Years ago it was held that annual crops, such as wheat and barley, would mature in those localities even if it rained a drop of rain fell during the whole season. And during the driest winter we have yet known, the moisture in the spring and summer following that excellent crops were raised all along the coast range, while the same crops were a complete failure in the interior valleys. But the year, notwithstanding the heavy rains of the winter, the late sown crops in the Coast Range were pretty near a failure. The hills were singularly dry all the spring and early summer. Whoever has passed along one of these mountain ridges in midsummer, and has watched the drippings of the trees in the morning, could not fail to notice the important office they fulfil in saving a country from drought and consequent barrenness."

It might be well, if we felt more deeply than we do, how considerable a portion of the means provided for the edification of the church consists in the practical lessons of life, given by its least conspicuous members.

For "The Friend."

The following letter, written by Anthony Benezet, we apprehend has been seen by few in this part of our country, where he was best known and highly esteemed. We found it in "The Herald," a daily paper issued in Michigan. The person furnishing it for publication signs his communication as "D. C. Howard, Rector of St. Peter's Episcopal Church," and states that he is a grandson of Horton Howard, whom, we suppose many of our elderly readers will remember. It has been preserved among the family papers, and is now nearly a hundred years old.

For

PARMENAS HORTON.

at CURT FOOT CREEK.

To the care of Jno. GREEN,

at New Bern, North Carolina.

With a packet containing some books.

Philadelphia, 12th, 6th mo., 1767.

DEAR FRIEND, PARMENAS HORTON:

Thou' no occasion of correspondence has offered between us, for a considerable time past; yet I have several times thought of thee, I trust in a good degree of the best love I am capable of, and with sincere and affectionate desires for our mutual preservation and growth in the way of true peace. And indeed, when we consider the low state of religion in general, and how apt, even we, Quakers are to follow the general cry, and how frequently those who have made a good beginning, are allured from a steady pursuit of heavenly things, and gradually give way to that wretched inclination, so prevalent in nature to seek the care or the honours and profits of this world, a situation which our Saviour repeatedly declares and daily experience shows to be attended with the greatest danger, I say when we consider these things how can we but be concerned for, and desirous to hear of the preservation of those we love.

Having a good opportunity, by means of friend Peter Knight, I make use of it affectionately to salute thee, and herewith to send some books lately printed here, which may be of service in your parts; they are a collection of tracts likely to promote true piety in the well-minded of every religious denomination; be so kind as to take the trouble of handing them to such to whom thou may'st think they may be of service; and if thou apprehends a greater number would answer any good purpose in your parts let me know and I will endeavour to send them. I shall be glad to hear from them when occasion offers, and thy sentiments on the books, particularly with respect to the Africans, i. e. the poor negroes whose bondage becomes more and more an increasing concern amongst Friends, and indeed to some who have a tender sense of what religion and reason require, almost an intolerable burden. I need not repeat my sentiments thereon, as they are fully expressed in the piece called, "A Caution and Warning," &c., which is included in the collection; it was printed by direction of Friends, with the approbation of our last Yearly Meeting.

With sincere love to thyself and family, particularly such amongst them who are indeed desirous to see all follow Christ,

I remain thy friend,

ANTHONY BENEZET.

Has thou no inclination to visit the brethren in these parts. Our Yearly Meeting is the latter end of the 9th month. I have often wished to see thee there; perhaps it might afford thee a satisfaction equal, if not exceeding the trouble.

A packet directed to thee and twelve books goes with this letter.

The Value of Premonitions.

No one who has a large experience of life fails to know of incidents which bring the supernatural world very near, and draw from it apparently impressions and influences of extraordinary power. One cannot account for them by any known law. *The Home Monthly* gives a striking case of this kind:

"One of our railroad engineers, some years since, was running an express train of ten well-filled cars. It was in the night, and a very dark night too. His train was behind time, and he was putting the engine to the utmost speed of which it was capable, in order to reach a certain point at the proper hour. He was running on a straight and level track, and at this unusual velocity, when a conviction struck him that he must stop. 'A something seemed to tell me,' he said, 'that to go ahead was dangerous, and that I must stop if I would save life. I looked back at my train, and it was all right. I strained my eyes, and peered into the darkness, and could see no signal of danger, nor any thing betokening danger, and there in the day time I could have seen five miles. I listened to the working of my engine, tried the water, looked at the scales, and all was right. I tried to laugh myself out of what I then considered a childish fear; but, like Banquo's ghost, it would not down at my bidding, but grew stronger in its hold upon me. I thought of the ridicule I would have heaped upon me if I did stop; but it was all of no avail. The conviction—for by this time it had ripened into a conviction—that I must stop grew stronger, and I resolved to stop. I shut off, blew the whistles for brakes accordingly. I came to a dead halt, got off, and went ahead a little without saying any thing to any body what was the matter. I had a lamp in my hand, and had gone about sixty feet, when I saw what convinced me that premonitions are sometimes possible. I dropped the lantern from my nerveless grasp, and sat down on the track utterly unable to stand.' He goes on to tell us that there he found that some one had drawn a spike which had long fastened a switch rail, and opened a switch which had always been kept locked, which led on to a track—only about one hundred and fifty feet long—which terminated in a stone quarry! 'Here it was wide open, and had I not obeyed my premonitory warning—call it what you will—I should have run into it, and at the end of the track, only about ten rods long, my heavy engine and trains moving at the rate of forty-five miles an hour, would have come into collision with a solid wall of rock eighteen feet high! The consequences, had I done so, can neither be imagined or described, but they could by no possibility have been otherwise than fatally horrible.' No one can here doubt the fact of a special interposition of God, by which, from a calamity most terrific, hundreds of lives were wonderfully spared."

Courteousness.—Courteousness lies in a due regard to the feelings of others, and is a christian duty. Paul enforced it by his precepts, and illustrated it by his example. The whole tone and tenor of the Bible teaches us to be gentle; to be courteous as well as kind; to esteem men of low degree; to be kindly affectionate one towards another; and so to bear ourselves to our inferiors as to make them forget, rather than remember, their inferiority. The followers of Jesus are to be humble, not haughty—"clothed with humility," says the Apostle: a robe, next to the righteousness which, covering all our sin was woven on Calvary and dyed white in the blood of Christ, the fairest man can wear.—*Thomas Guthrie, D.D.*

The Mont Cenis Tunnel and the Mont Cenis Railway.—The French and Italian Commissioners made an official inspection of the works of the tunnel through Mont Cenis on the 24th and 25th of July. Of the total length of the 12,220 metres, equal to seven English miles and a half and 235 yards, there were excavated on the 31st of December last 3,900 metres on the Italian or Bardeneche side of the mountain, and 2,435 metres on the Modane or French side—total, 6,335 metres. Between the 1st of January and the 30th of June of the present year 774 metres were excavated, being the largest number, by nearly 200 metres, excavated in any one half-year since the commencement of the work in 1857. Of the 774 metres, 415 are on the Italian, and 318 on the French side, making the total excavated at that date 7,109 metres.

The progress made on the French side has been slower than on the Italian—thus, while on the 30th of June last the latter had only to execute 1,754 metres, or about an English mile and a tenth, to accomplish its half, on the French side there remained to be excavated 3,357 metres, or nearly two miles and a tenth. If three metres a day could be excavated on the French side, the perforation of the tunnel would be accomplished in three years and three weeks; but, as in all probability it will not be proceeded with more rapidly than two metres a day, it will require four years and thirty-one weeks to complete it.

The tunnel will be lined in its entire length with stone quarried in the immediate vicinity of the two entrances. At the present time, the excavations, or headings, are about 1,500 metres in advance of the amount lined. Each metre excavated and lined has hitherto cost, on an average, 11,000*fr.*, and various circumstances will tend to increase this expenditure as the works proceed further inwards. The approach on the French side, to connect its entrance at Modane with St. Michel (the present termination of the railway system of France in the direction of the Mont Cenis), will be 12 miles long, through an extremely difficult and mountainous country. On the Italian side the amount of railway to be constructed from Bardeneche to connect it, in the neighborhood of Sussa, with the railway system of Italy, will be 22½ miles.

The whole of these works will be of a very heavy and expensive character. They are now about to be let, and the time to be allowed by the contract for their completion is to be four years and a half. The length of the railway, by way of the tunnel from St. Michel to Sussa, will be 42 miles, or 6½ miles shorter than that now nearly finished on the outside of the Mont Cenis Pass, and known as the "Fell Railway," from its being constructed in accordance with the patents of a gentleman of that name. The only delay in the opening of this railway for traffic is the non-delivery of its rolling stock, but this difficulty will, it is expected, be overcome by the middle of September.

As regards transit through the tunnel, in consequence of the average gradient on the French half being one in forty-five and a half, and the steepest gradient on the line being one in twenty-eight, it will not be possible for a train to go through from the north to the south in less than from thirty-eight to forty minutes. Coming from the south to the north the ascent is much more gradual, but even in this case the transit will occupy from thirty to thirty-two minutes as a minimum. It has yet to be seen whether passengers would not prefer the outside line instead of being shut up in a tunnel so long as we have just stated. It is for this, among other reasons, that many

persons expect the Fell railway, which only possesses a concession for working until the tunnel line is opened for traffic, will have its privileges extended so as to make it practically a permanent concession.—*E. Post.*

SONG OF THE SOJOURNER.

"I am a stranger with thee, and a sojourner, as all my fathers were."—Psalm xcix. 12.

A pilgrim and a stranger,
I journey here below;
Far distant is my country,
The home to which I go.
Here I must toil and travel,
Oh weary and oppressed,
But there my God shall lead me
To everlasting rest.

I've met with storms and dangers,
Even from my early years,
With enemies and conflicts,
With fightings and with fears.
There's nothing here that tempts me
To wish a longer stay,
So I must hasten forwards,
No halting or delay.

It is a well-worn pathway—
Many have gone before:
The holy saints and prophets,
The patriarchs of yore.
They trod the toilsome journey
In patience and in faith;
And them I fain would follow,
Like them in life and death!

Who would share Abraham's blessing,
Must Abraham's path pursue,
A stranger and a pilgrim,
Like him, must journey through.
The foes must be encountered,
The dangers must be passed;
Only a faithful soldier
Receives the crown at last.

So I must hasten forwards—
Thank God, the end will come!
This land of my sojourning
Is not my destined home.
That ever more abideth,
Jerusalem above,
The everlasting city,
The land of light and love.

There still my thoughts are dwelling,
'Tis there I long to be;
Come, Lord, and call Thy servant
To blessedness with Thee!
Come, bid my toils be ended,
Let all my wanderings cease;
Call from the way-side lodging,
To the sweet home of peace!

There I shall dwell forever,
No more a stranger guest,
With all Thy blood-bought children
In everlasting rest.
The pilgrim toils forgotten,
The pilgrim conflicts o'er,
All earthly griefs behind us,
Eternal joys before!

—Paul Gerhardt.

THE SOUL'S FURNACE.

Not always like the gentle rain,
Nor like the dew of morn;
Nor like the sunshine on the plain
When flowers the plain adorn;
But often in a fiercer form,
As when the sultry air
Is freshened by a thunder storm,
Fall favors free and fair.

The furnace flames but to refine,
Not to destroy the gold;
The high wind makes the mountain pine,
Of earth take firmer hold;
The lapicide reveals to sight
The beauty of the stone,
And painful trials bring to light,
Virtues before unshown.

The early dew—the gentle rain,
From drop no gold may rise;
The sunshine on the peaceful plain
Not firmly roots the tree;
Nor is the heart yet free from pride,
Nor yet in patience strong,
That, as in fire hath not been tried,
And trained to stand it long.

—Swain.

Indian Corn.—One of the most interesting features of the recent report of the Agricultural Bureau is its statement with reference to the production of Indian corn in the various States.

By this report it is seen that while the general average of the whole crop is unusually large this year, there is a decrease in several of the northern and western States, and a counterbalancing increase in the southern. This increase ranges in the South from ninety to upwards of one hundred per cent. This is important, as showing the changes of production occasioned by the revolution in the system of labor at the South, owing to the war and the emancipation of the slaves. The slave cultivated cotton, rice and sugar, per force, for his master. The freedman cultivates corn for himself. The capitalist finds the cereal crop a quicker and more remunerative one under the present system, and though the former special staple may continue to be grown, there will be a vast and steady increase in the grain production of the South for the future, and we believe a corresponding increase in its commercial prosperity and enterprise.

When it is considered that the average crop of corn in this country is more than double the aggregate amount of all the other cereals put together, some estimate may be formed of the value of this staple to the districts capable of producing it. The variations in this production during the last twenty-five years, in the different States, furnish a suggestive theme for speculation to the economist. In 1840, for instance, Tennessee was the greatest corn-producing State in the Union. In 1850 Ohio gained the lead. In 1860 Illinois took it. Kentucky was second, and Virginia third in 1840. In 1850 Illinois stepped ahead of both and in 1860 Missouri advanced to the third rank leaving Virginia and Kentucky behind. Illinois now produces one-seventh of all the corn raised in the States and territories of the Union.

In New England there has been a decrease in production during the past ten years, averaging one bushel to each inhabitant; and, even before the war, the production of corn in the Southern States, in proportion to population, was ten times the amount of that grown in New England.

It is quite possible that cotton, rice and sugar may never again be the great staple products of the Southern States; but under free labor they will have a more varied industry, a more solid enduring prosperity; and in a few years we are convinced it will be generally acknowledged that southern men that the cultivation of cotton should be after all far less profitable to them than the diversified industry which is about to take its place, under the operation of sound natural law and by the removal of injurious restrictions. *Evening Post.*

Whatever you think proper to grant a child, it be granted at the first word, without entreaty, prayer; and, above all, without making any conditions. Grant with pleasure, refuse with reluctance, but let your refusal be irrevocable; let it be "impossible" shake your resolution; let the word "no," when once pronounced, be a wall of brass which a child, after he has tried his strength against it a few times, shall never more endeavor to shake.

Fatality of Numbers.

A Series of Curious Calculations.

The entertaining book called "Curious Myths of the Middle Ages," now in the press of Roberts Brothers in Boston, has a chapter on the "Fatality of Numbers," in which the following calculations are grouped:

The laws governing numbers (says the writer) so perplexing to the uncalculated mind, the results arrived at by calculation are astonishing, that it cannot be matter of course if superstition has attached itself to them. But even to those who are instructed in arithmetic there is much that is mysterious and unaccountable, much that only an advanced mathematician can explain to his own satisfaction. The neophyte sees the numbers obedient to laws; but why they obey these laws he cannot understand; and the fact of his not being able to do tends to give to numbers an atmospheric mystery which impresses him with awe.

THE NUMBER 9.

In instance, the property of the number 9, I believe, by W. Green, who died in 1811, is inexplicable to any one but a mathematician.

The property to which I allude is this, when 9 is multiplied by 2, by 3, by 4, by 5, by 6, &c., it will be found that the digits composing the product added together, give 9.

$$2 \times 9 = 18, \text{ and } 1+8=9$$

$$3 \times 9 = 27, \text{ " } 2+7=9$$

$$4 \times 9 = 36, \text{ " } 3+6=9$$

$$5 \times 9 = 45, \text{ " } 4+5=9$$

$$6 \times 9 = 54, \text{ " } 5+4=9$$

$$7 \times 9 = 63, \text{ " } 6+3=9$$

$$8 \times 9 = 72, \text{ " } 7+2=9$$

$$9 \times 9 = 81, \text{ " } 8+1=9$$

$$10 \times 9 = 90, \text{ " } 9+0=9$$

It will be noticed that 9×11 makes 99, the sum of the digits of which is 18 and not 9, but the digits 1+8 equals 9.

$$9 \times 12 = 108, \text{ and } 1+0+8=9$$

$$9 \times 13 = 117, \text{ and } 1+1+7=9$$

$$9 \times 14 = 126, \text{ and } 1+2+6=9$$

so on to any extent.

De Maivan discovered another singular property of the same number. If the order of the expressing a number be changed, and this number be subtracted from the former, the remainder will be 9 or a multiple of 9, and, being triple, the sum of its digits will be 9.

In instance, take the number 21, reverse the digits, and you have 12; subtract 12 from 21, the remainder is 9. Take 63, reverse the digits, and subtract 36 from 63; you have 27, a multiple of 9, and $2+7=9$. Once more, the number 31 is the reverse of 13; the difference between these numbers is 18, or twice 9.

ANOTHER ILLUSTRATION.

In the same property found in two numbers changed is discovered in the same number to any power.

Take 21 and 12 again. The square of 21 is 441, and the square of 12 is 144; subtract 144 from 441, and the remainder is 297, a multiple of 9. Besides, the digits expressing these powers together give 9. The cube of 21 is 9,261, and the cube of 12 is 1,728; their difference is 7,533, a multiple of 9.

The number 37 has also somewhat remarkable properties; when multiplied by 3 or a multiple of 3, it gives in the product three digits similar. From the knowledge of this the addition of 37 is greatly facilitated, and the subtraction of 37 is facilitated merely by the cypher of the multiplicand by the first

multiplier; it is then unnecessary to proceed with the multiplication, it being sufficient to write twice to the right hand the cipher obtained, so that the same digit will stand in the unit, tens, and hundreds places.

For instance, take the results of the following table:

37 multiplied by 3	gives 111,	and 3 times 111 = 333
37 " 6	" 222,	" 3 " 2 = 666
37 " 9	" 333,	" 3 " 3 = 999
37 " 12	" 444,	" 3 " 4 = 1212
37 " 15	" 555,	" 3 " 5 = 1515
37 " 18	" 666,	" 3 " 6 = 1818
37 " 21	" 777,	" 3 " 7 = 2121
37 " 24	" 888,	" 3 " 8 = 2424
37 " 27	" 999,	" 3 " 9 = 2727

MAGICAL SQUARES.

The singular property of numbers the most different, when added, to produce the same sum, originated the use of magical squares for talismans. Although the reason may be accounted for mathematically, yet numerous authors have written concerning them as though there were something "uncanny" about them.

I give three examples of magical squares:

2	7	6
9	5	1
4	3	8

These nine ciphers are disposed in three horizontal lines: add the three ciphers of each line, and the sum is fifteen; add the three ciphers in each column, the sum is fifteen; add the three ciphers forming diagonals, and the sum is fifteen.

The sum is 10.

The sum is 65.

For "The Friend."

Moderation in the Acquisition of Knowledge.

A recent essay in "The Friend," entitled, "Let your moderation be known unto all men," reminded me so much, though it be not exactly accordant, of the following from the pen of a learned christian writer in England of the last century, that it is herewith transmitted to the editor for publication, if thought suitable:

"A man is deemed wise in this world, who has considerable knowledge and curiosity about natural things, and all those subjects which usually bear the name of science; if he can talk of the magnitudes, distances, and motions of the heavenly bodies, can foretell an eclipse, has skill in mathematics, is well read in the history of ancient times, and can inform you what is found in books concerning the folly and wickedness of mankind who lived some thousands of years ago; or if he understands several languages, and can call a thing by twenty different names. It is true, when these attainments are sanctified by grace, they may, in some respects, have their use. But, in general, the best use a believer will or can make of them, is to lay them down at the foot of the cross. When a man, possessed of a great quantity of these pebbles, has his conscience awakened, and his understanding enlightened, he is glad to renounce them all for the pearl of great price, and to adopt the apostle's determination, 'to know nothing but Jesus Christ, and him crucified.' 1 Cor. ii. 2. This was the effect when the word of God mightily grew and prevailed, Acts xix. 19. We may at least say, that this kind of wisdom is for the most part dangerous and blinding to the soul.

1st. It tends to feed and exalt self, to make a person something in his own eyes. This we are

prone enough to by nature. An increase of unsanctified knowledge adds fuel to the fire.

2dly. It engrosses the time and thoughts. Our minds are narrow, capable of attending to but few things at once; and our span is short, and will hardly admit of many excursions from the main concern. If we were to live to the age of Methuselah, we might pursue some things which at present are highly improper and impertinent, from this consideration alone. A man that is upon an urgent affair of life and death, has no leisure for amusement. Such is our situation. We are creatures of a day. Time is vanishing, and eternity is at stake.

3dly. The delusion here is specious, and not easily discovered. A person with these accomplishments is not always enslaved to money or to sensual pleasures: he therefore pities those who are, and comparing himself with others, supposes he is well employed, because his favorite studies are a check upon his appetites, and prevent his selling himself for gold, or running into riot with the thoughtless. Yet an attachment of this sort equally blinds him with respect to his true interest. Will the knowledge of books, or men, or stars, or any worldly accomplishment, purify the conscience from dead works, to serve the living God? It is too plain that the truths of the gospel are hid from none more effectually than from many of this character. None cast a more daring or public slight upon the religion of Jesus than some who are admired and applauded on account of their knowledge and learning."

Immense Size of Pyramids.

The largest of the three now before us is Cheops, and, indeed, this is the king of all the pyramids in point of size. The figures are quickly given. The base, each side, 732 feet; perpendicular height, 456 feet. But this is not the original size. As we have said, the vandal hands of the old caliphs were laid upon it; they tore off the granite casement that constituted the smooth exterior, and then removed layer after layer of the huge limestone blocks to build their palaces and mosques in Grand Cairo! They seem to have quarried from it with as little reverence for its magnificence and antiquity, and with as little compunction of conscience, as though it had been only a bed of native rock on the hill-side. Its original base was 764 feet on each side, and its height a little over 480 feet. But more figures give us no just conception of its immense magnitude. It is only by comparison that we can appreciate this mountain mass of stone. That present base covers nearly thirteen acres. The original base was about thirteen and one-half acres. It is only when we begin to compare it with other structures that our astonishment is excited. If you are a farmer, imagine a large lot of thirteen acres; many a man who has got thirteen acres

only laid the foundation. Stone is lifted upon stone, layer upon layer; you have overtopped the Bunker Hill Monument, reached the height of the tallest church steeples of our cities; and yet our cloud-towering pile is not more than half completed. Take one of the churches with a spire of one hundred and fifty feet, and few church steeples are as tall as that, then lift another church of the same height, and balance it upon the top of that, then lift another high in the air, and set it upon the topmost point of that, and then the golden-tipped point of the last spire is not as high by more than thirty feet as the original apex of this enormous structure.—*D. A. Randall.*

The Vatican Testament.

[ABRIDGED FROM THE "LEISURE HOUR."]

The primitive Christians were zealous for the dissemination of their holy writings, and copies of its various books were very early multiplied. But many of the copyists were not altogether equal to the work they took in hand, and therefore many of the manuscripts sent forth contained frequent errors. So early as the beginning of the third century, Origen found it necessary to compare several different copies, to enable him to make a variety of corrections. But as the Church increased, many learned and worthy men were found among its members who desired for themselves copies of the scriptures. Constantine the Great ordered a number of finely executed copies of the Bible to be prepared for the use of different churches, and it is thought by some that the famous Sinaitic manuscript is one of them. But there is at Rome another manuscript which Dr. Tischendorf, the greatest living authority in such matters, thinks was written, at least in part, by the same hand that wrote the Sinaitic Bible. This is the Vatican manuscript, so called from the place in which it is preserved.

This manuscript is in the Greek language, and it contains the whole of the Old Testament, and nearly all of the New. What was its early history, or how and when it came to be at Rome, is not certainly ascertained, though it is believed that it was procured from some unascertained source by Pope Nicholas V. about four hundred years ago. The first public notice of it was made about the time that Erasmus brought out his Greek Testament. The existence and great value of this manuscript were known at the beginning of the Reformation, yet no printed edition of it was given to the public until within ten years. About the year 1857 the whole book was printed in good type, and upon fine and stout paper, and bound up in five large volumes—four of the Old Testament and one of the New. The Old Testament, as here given, is in the Septuagint version, and is valuable as showing the condition of the sacred text as it was used by the early Church—perhaps by the apostles and by our Lord himself. But it is the New Testament that gives the peculiar and transcendent value to the work. But as the Roman authorities so long withheld the work from the Christian public, so now its circulation is circumscribed by the great price at which it is sold.

The same jealousy and dread of all biblical learning which caused the Papal authorities so long to refuse to publish an edition of this manuscript, also rendered it often impossible, and always difficult, for scholars to examine it. It has been said, but upon at least doubtful authority, that Pope Leo X. lent this manuscript to be carried into Spain, and there used by the compilers of the Complutensian Polyglot. His successors were certainly never inclined to permit it to be used so freely. In 1533 a Spanish theological

writer, Sepulveda, who had spent much time at Rome, wrote to Erasmus that "there is in the Vatican library a most ancient Greek book, wherein are contained both Testaments, very carefully and accurately written, in capital letters, and very different from the common copies." Sepulveda supplied Erasmus with a number of various readings in support of his assertions, which for a long time were the sources of all the practical knowledge the world had of this manuscript. The eminent critic Wetstein reminds us that Erasmus knew something of this document as early as 1521, in which year he had it consulted for his own use respecting the famous passage on the three witnesses, (1 John v. 7, 8,) which is wanting in this copy.

After the time of Erasmus the Reformers greatly desired to procure a copy of this extraordinary book, or, at least, a correct copy of its reading of disputed passages; but though money was freely offered for the desired privilege, it could not be obtained. Somewhat later a Dutch student was permitted to make certain notes, which were afterward used. During the seventeenth century but little seems to have been said or done about it, though it is known that on two occasions it was more or less perfectly collated. Near the close of the eighteenth century the collations of Birch and of Bentley were published.

The policy of Rome for the past three quarters of a century has been to jealously exclude all strangers from the use of their sacred books, though at no former period was there so great a desire to examine them. Once the opportunity to make the most thorough examination of this manuscript, or to copy it, was given, but not improved. In 1809 it, with other of the treasures of the Vatican, was taken to Paris. It was there examined and minutely described by Dr. Hug, a German critic; but no copy of it was made, and at length it was taken back to Rome. In 1813 Tischendorf attempted to gain access to it, but was compelled to wait some months before the privilege was granted him, and then only for two days of three hours each. In 1841 another gentleman got the use of it for nine hours, and in 1845 Dr. Tregelles was permitted to see it, but not to copy any part of it, nor to make any notes of what he saw. Of late there has been some relaxation of this exclusiveness. Canon Wordsworth was permitted to see it in 1852, and before this Dean Alford also had access to it for five days, during which he examined some hundred or two of doubtful passages.

About the year 1828 Cardinal Mai was authorized by the authorities of Rome to bring out a printed edition of the famous manuscript. His edition was printed soon after 1840, but its publication was delayed partly on account of its many inaccuracies, and partly because it differed so widely from the standard Vulgate. Mai died in 1854, leaving his corrections incomplete, and in 1857 the work was published, still swarming with blunders, which have been reproduced in thousands of cheap copies, printed in nearly all countries. But by the liberality of the present pope and his conclaves this valuable treasure of biblical learning has at length been given to the Christian world. Only a few years since Dr. Tischendorf was allowed to thoroughly examine the famous document, and a rigidly correct edition of the Vatican New Testament has since been issued by him at Leipzig. It is in ordinary Greek types, but without punctuation and accents. A number of pages are printed in columns to show the structure of the manuscript, and the rest are so printed as to show the beginning and end of every column in the manuscript, and on each page are footnotes

to indicate the corrections or alterations that have been made.

Tischendorf describes the book as a square volume of vellum, with three columns of writing on each page. The letters are in the ancient bold uncial, or capitals, which are seldom joined together. The ink has faded till it is of a yellowish brown color; but some one has restored most of it by retouching the letters with a pen. There are very few stops, and the words usually run on without any division between them. Small number of ornaments have been introduced, and the initial letters of the paragraphs have been rewritten of a larger size. Numerous corrections have also been made at different times. It is the opinion of the learned critic that the manuscript was written not later than the middle of the fourth century. It is, therefore, one of the oldest books in existence, and an inestimably valuable witness of the readings and the form of the New Testament as it existed among the early Christians.

With regard to the contents of the Vatican Testament, and the order of the books, it may be observed that the Gospels and Acts occur as our ordinary Testaments. Next come the Catholic Epistles—James, 1st and 2d Peter, 1st, 2d, and 3d John, and Jude. Then come the Pauline Epistles, in the order we have them in our version. The last epistle (Hebrews) breaks off at chapter ix. 14, and Revelation is wholly wanting. But that fact proves nothing, as the copy is manifestly incomplete. There are various numbers in the margin showing the sections or divisions used by the ancients. Matthew has 170 of the Mark 62, Luke 152, John 80, Acts 36, James 40. St. Paul's epistles are treated as one with the sections numbering from beginning to end. By means of this circumstance an important and curious fact is revealed. Though the Epistle to the Hebrews stands at the end, the enumeration of its sections requires that it should be between Galatians and Ephesians. Galatians ends with section 58, and Ephesians, which immediately follows, begins with 70, showing a omission of twelve sections. When the Hebrew is reached, however, instead of going on with numbers, its first section is 59. This clearly proves that at that early date the Epistle to Hebrews was reckoned among St. Paul's Epistles though perhaps its removal to the end of the canon may have been the result of some suspicion respecting its Pauline origin.

Here, then, we have a copy of the New Testament more than 1,500 years old. So far as goes it contains the same books that we now read, and in almost every important particular it substantially agrees with our English Bible. It is nothing in the manuscript to indicate that change has been made in the canon of the New Testament, or that we have lost any part of primitive text. Its omissions, however, are proofs that the omitted passages are not genuine since most of them can be traced to a period prior to its date, and the manuscript is not probably somewhat defective. Probably the manuscript is of Egyptian origin, where it has repose untouched for ages. Thence it came to Rome, where it has been most jealously treasured. Its value is inestimable.

Care of Farming Tools.—The Wise Farmer admonishes careless farmers:

"Every teamster who is fit for his business when he puts up his team after a day's drive take care not only to see that they have a full supply of feed and water, but will rub them down clean and dry, and make them exten-

trable, because he knows it to be essential to his health, vigor and continued usefulness. When he stops his engine, will purchase the same course with the iron muscles machine. He will rub them dry and bright, preclude the mischievous tricks of old oxygen every part exposed to air or water. The carpenter does the same with the implements of art, and the mason never lays down his for a single hour without first wiping it dry and putting it in a dry place.

Of all the implements of human effort, none are so commonly and sadly neglected as those of the farmer, while none need more vigilant care to secure their durability and efficiency. Commonly the hoe is left with the blade and with damp earth for days and perhaps together, and the same with the spade and the plough.

The plough is left at the end of the last in the field, half beam deep in the ground, down outside the fence, or left out in the until it is next wanted. Scythes and pitchforks and mowers, drills and cultivators, and carts, too often fare the same, and metallic portions are left to oxidize and the parts to crack in the sun and rot by the use to which they are exposed, and when wanted are in a wretched condition for use. Let any one take a hoe or a spade, for instance, that is black and rust-eaten, and work it for an hour, and then try one that has been kept bright and clean, and he will see the difference. When an implement of this kind has become rusted over, it may be partially freed by scouring at a great expense of labor, but it will never be what it once was, or a trowel, when once badly rusted, is as ruined. You may scour it as long as you will, never again work smoothly and easily as it has been kept bright and free rust. It is just so with any metallic surface in farming. It is eaten full of little cavities, will secrete dirt and moisture, and keep up a vicious which defies all efforts at arresting or getting it out, and it is a heavy, dragging tool afterwards; no matter whether the surface of a hoe, a spade, a plough-share, or a trowel, and box, it will ever be a drag on man or as the case may be. Everything of this kind should be cleaned and wiped dry every night in use, and not left exposed even to the dew of a single night without being first rubbed with fresh grease, and when done with a cloth should be oiled and stored in a dry place.

It is especially so unpardonable to leave the expensive kinds of machinery exposed to the weather. They are liable enough to injury by avoidable exposure in use, but when they are left to stand out for months, exposed to sun and rain, it seems like a reckless waste of money. The wood and unpainted iron work of the machinery on the farm should be kept in good repair, receive a fresh coat of paint, as from the time of the service, every journal and box should be carefully cleaned and supplied with oil. An occasional coat of linseed oil upon the iron, and a good coat of paint upon the wood, will have the same preservative effect as paint, and will be to their agreeableness to the hand."

My friends, keep your meetings in the fear of the Lord, and have a care that your minds are kept down out to hear words outwardly; but stand across to that which desireth refreshment of the heart; and when at any time you feel that you are not refreshed, let it not enter into your hearts to be careless of the Lord is not mindful of you; but centre in yourselves, in the pure light, and stand

still therein: then it may be ye will find the cause why the presence of the Lord is departed from you for some time; and ye putting away the cause, shall enjoy the Lord again to your comfort."

The Lapplanders.

The following notions of some of the traits and habits of these people are given in a late book called a "Guide to Morning," by Robert Bowdler, late British Chaplain in Christiania:

"The Lapp is an inveterate smoker, and is quite a connoisseur in pipes. His tobacco-pouch is made of reindeer-skin, and attached to it is a pipe-cleaner, which is made of a bird's bill, and is as pliable as whalebone. The case in which the pipe-cleaner is kept is formed from the shank-bone of a wild swan. The drinking-cups, plates and dishes are made of the wood of the birch; the spoons and forks are made of the horn and bones of the reindeer. Very pretty bracelets, fancy baskets and other ornamental articles are made of the roots of the birch. Some of the Lapps do not roam about like their fellows, but have fixed places of residence on the seacoast or by the side of a fiord, where they earn an uncertain livelihood by fishing. The Norwegians of Finnmark hold them in great detestation, and have as little intercourse as possible with them. If a Lapp enters a Norwegian's dwelling, he apes great humility, declines to sit upon a chair, but squats on the ground, and pretends that he is unworthy of sitting down on an equality with such respectable people. There is a good deal of low cunning in this kind of behavior, for there is about as much real sympathy between a Lapp and a Norwegian as there is between a North American Indian and a Yankee. It may be mentioned also, that there is a considerable resemblance between this despised race and the Gypsies, with this difference, that the Lapps are honest in their dealings, while the other wanderers spoken of are just the reverse.

"One disagreeable characteristic of this singular race is their partiality for ardent spirits, and in this respect the women are as bad as the men. It may be stated, in addition, that the women are also inveterate smokers; but they are good mothers, and are extremely attentive to their children. It would be impossible to picture a prettier sight than a pigmy Lapp infant reposing in its tiny portable cradle, which is lined with warm fur, and is hung up by a string to a hook or branch of a tree, to keep it out of harm's way.

"So addicted are the Lapps to wandering and itinerant habits that it is almost impossible to cure them, let philanthropists do what they will. Some years ago an attempt was made by some kind-hearted people to bring up a youth of this strange race as a clergyman, who was to be sent as a missionary to his own people. The boy was trained and educated with this intention; he was even ordained and began to preach, but he was such an inveterate drunkard that his patrons were obliged to abandon him in despair, and he returned to his tribe as a watcher of tame reindeer on the mountains.

"This people are not without religious feelings. They observe the Sabbath, attend the Norwegian churches when they can, and are regularly taught by schoolmasters who are appointed for the purpose. Their religious sentiments are sometimes carried to excess, and they frequently create a disturbance in church by groaning deeply, and by shuffling their feet, when the officiating clergyman is disliked by them.

"The Lapps are extremely superstitious, and all outward signs are observed as portending good or evil fortune. The stars, the clouds, the moon,

the flight or appearance of birds in certain numbers, are regarded as omens. Although suspicious of strangers, they are hospitable enough to passing travellers, and are easily satisfied. A small present of tobacco or brandy is cheerfully accepted as a recompense for any act of civility to tourists.

"The food of this simple people is nearly always the same. Tea is unknown; sometimes, but not often, they drink a little coffee, and consider it as a great luxury; occasionally they get *flad brod*, or barley cakes. They drink a great deal of *finkel*, a horrible spirit, which is very strong, and almost takes away the breath of those who taste it for the first time. It is distilled from corn or potatoes, and is flavored with caraway seeds. They appear, however, to thrive well on their peculiar diet, and are singularly free from disease. They live to a good old age, and the patriarchs of the race are noted for their extreme ugliness. In choosing the parts of the reindeer they give the preference to the saddle, which has plenty of fat; they sell the other portions of the animal to their Norwegian neighbors.

"Some Lapps are rich, and possess from one to two thousand tame reindeer. One man in particular is said to have as many as ten thousand of these useful animals. This opulent individual differs in no respect from his brother Lapps, but leads the same life of toil, dresses in the same style, and bears no outward sign of wealth or importance. When he dines he stands, with his wife, children, and servants, round the large iron pot containing the reindeer renison and soup; the only deference paid to him is, that it is considered he has a right to help himself before the others, who wait eagerly his signal to begin the repast. This man has as many as forty dogs to guard his reindeer."

Fresh Meat.—Fresh meat is now being brought from the West to the great Atlantic markets, not on the hoof but after being killed and dressed. Peculiarly constructed refrigerator cars are to be used on the railroads for this purpose. In an exchange we find an account of one of the journeys of a car of this kind, from the interior of Ohio to New York. At Newark, Ohio, there were killed 16 head of beef cattle, and 122 sheep, which were packed into the car; all preparations completed, the car left Newark, Ohio, on the home trip, on Wednesday, August 14th, the thermometer being then at 97 degrees. Arriving at Easton, in Pennsylvania, it laid over on Sunday, and on Monday, the 19th, went through to Hoboken, N. J., where it arrived in the afternoon, having been five days on the journey. It is reported that on opening the car the meat was found perfectly dry and fresh, and its flavor was pronounced better than meat brought to market on the hoof. The greater economy of this method of transportation will recommend it as preferable to the former methods, if it can be put into general and successful operation.—*Late Paper.*

Our wants are daily, and the temptations which draw our hearts from heavenly things to the things of the world are daily; so ought our prayers to be daily also.

Our Conversation.

Only by your conversation be as *becometh the word of Christ*," was the language of the angel Apostle to the Philippians. And to the apostles he writes: "Let no corrupt communication proceed out of your mouth, but that which is good to the use of edifying, that it may minister grace unto the hearers." Here the noble faculty of speech, truly one of the Creator's invaluable gifts, appears to have reference, in the limitation of the Apostle, to the improvement both of those who exercise it, and of those who listen to it; after another precept of the same Apostle, simplicity and godly sincerity, not with fleshly wisdom, but by the grace of God, we have had fully our conversation in the world."

It cannot be denied, that in some circles we are often noticed with jealous fear, not only on account of, with the indefinitely prolonged conversation, but the almost unbridled license given by the "unruly" member on the topics that so often prevail; while perhaps not a word is said, nor a thought indulged, in reference to the relation of all these, with ourselves too, to that unseen, which as "strangers and pilgrims" with life's most uncertain scene before us, should earnestly strive to be prepared for. Too often, the pleasures, the treasures, the joys, the interests of the heavenly country unto us, as professing christians, we claim to be denied, are apparently overlooked or forgotten for perishable and unsatisfying enjoyments of a fading world. Well may we ponder over the great things which our Father in heaven has done for us—the unspeakable obligations we are under to Him, the sustaining comfort of His grace, with reflections upon the daily display of His mercy, and wisdom, and goodness, whether these are the blessings we dwell upon with thanksgiving? or whether we do not too much lay stress upon the imputation of the poet in exclaiming "The God that made them an inheritance on their joy," so as too often in the excitement of social, if not frivolous conversation, to stray from Him who speaketh, or would have us to us from heaven.

It would by no means commend formal religious converse, least of all, what may be called religious cant; but instead thereof, that heartfelt devotion and allegiance to God, which in all we do would manifest whom we professed to

serve, as well as where our affections were placed; and either more or less proximately—being "good to the use of edifying"—would tend to His praise and glory. How much better would be a restrained and imposing silence, which tends so much to our own preservation, as well as to lighten others into something of the gentleness and heavenly-mindedness of the true christian. "Either be silent," said Pythagoras, "or say something that is better than silence." And we remember the testimony of a worthy man, now deceased, to the effect that it was good to have frequent intervals of silence in conversation; in order that the mind might turn inward, and feel after the quickening power of that anointing, which alone can preserve and lead safely. Our own Discipline, on this subject, has the following lively exhortation: "Frequent waiting in stillness on the Lord for the renewal of strength, keeps the mind at home in its proper place and duty, and out of all unprofitable association and converse, whether amongst those of our own or other professions. Much hurt may accrue to the religious mind by long and frequent conversation on temporal matters, especially by interesting ourselves unnecessarily in them; for there is a leaven in that propensity, which being suffered to prevail, indisposes and burdens the soul, and prevents its frequent ascendings in loving aspirations towards the fountain of eternal life."

If we will but reflect how much we ourselves have been influenced in earlier life, as well as later, by the remarks and conversation of others, we cannot but have forcibly presented our corresponding influence on those with whom we more or less intimately associate. This very responsible talent of influence over others—perhaps greater, and adding to our accountability in every particular, more than we appreciate—is, it may be, in no respect more so than in the exercise of the gift of speech. Then when those around us perceive—for out of the abundance of the heart the mouth speaketh—and especially the dear children, that our affections are most set upon the things below,—upon the things of this life hold tenement of clay, not properly our own but lent for a season—will it not be, in effect, so far as our influence extends, to "offend one of the little ones" that Christ alluded to, or to cast a stumbling-block before all? The fleshly mind loves words. But how desirable to uphold on every occasion the standard of the cross—to keep to the restrictions, and under the banner of the Truth. As well as, in consideration of the shortness, with the great uncertainty of this fearfully responsible life, to heed the poet's lines—

"Let all our meetings now be made
Subservient to each other's good;
For earthly joys must quickly fade,
Nor can they yield substantial good."

Perhaps in no way can our falling short in respect to the fruit of the lips be more forcibly presented than by the conscious reflection of what would be our feelings, if through some sudden arrest or unexpected prostration by disease, the mind alone being free, we should have to scrutinize, in retrospect, our many words, with that

helping or hindering effect—that heaven-inviting or earthly leaving influence—which we have been instrumental in leading to. Feeling, at the same time, the full force of the precept of the Saviour, whose eyes are as a flame of fire: "By thy words thou shalt be justified, and by thy words thou shalt be condemned." May it be that when the Lord's "book of remembrance" is opened, and we judged according to what is written therein, the law of love may be so engraven in the heart, as to have kept it near to Him, the Fountain of love; and who alone can cause words of christian love and kindness, though in the way of caution or reproof, to flow towards all those with whom we have to do.

For "The Friend."

The Pacific Railways.

The "Pacific Railroad" conveys the idea of one long road reaching, or to reach, from the Mississippi to the Pacific coast; but in reality Congress has authorized the construction of several roads, all involving important interests, and all destined to aid the development of the country.

The "Central Pacific," starting in California, has been already built for more than 150 miles eastward, including the most difficult and costly portion of the work. It was necessary to cross the great mountain range on the eastern boundary of California, and to make a long tunnel through solid rock. Every obstacle, however, has been successfully overcome, and the progress of the work will probably be comparatively rapid hereafter. It is supposed that the expense of making the next 600 miles, reaching towards Salt Lake, will not be greater than that of the 150 miles now built.

Three roads have been authorized, commencing at several points on the Mississippi or Missouri river. The most northerly starting at St. Pauls, Minn., has not yet been commenced, and is probably in the distant future. The Union Pacific Railroad, commencing at Omaha, Nebraska, had recently been finished for a distance of 465 miles, and was progressing at a rate which would bring it to the foot of the Rocky Mountains in the course of another month or two. About 200 miles to the south of this, passing through the State of Kansas, is another road with the awkward title of the "Union Pacific Railway, Eastern Division." A correspondent of the *N. Y. Evening Post* remarks: "This is a clumsy nomenclature, and through it the road is easily confounded with the Pacific Railroad, or the Omaha route. Indeed, it was originally intended that this Kansas road should unite with the more northern route, but later explorations have suggested its diversion in a southerly direction, and its continuance through some of the fairest districts and most temperate climes in our vast country, until it reaches California, and opens a permanent way of communication, out of the reach of those wintry severities which must inevitably seriously affect the travel on the more northern routes."

"There is something grand and even presumptuous in the idea of building a railway through a vast district inhabited by Indians, buffaloes, ante-

lopes and prairie dogs. Hitherto railroads have resulted from the needs of populous communities, and have either traversed well-peopled countries, or connected large towns and cities. The Pacific railroads reverse the usual order of things. Instead of passing amid scenes of human life and industry, they push out into what at first appears to be a trackless desert, and towns spring up magically along the route. West of the Missouri there are no great rivers to bear commerce or provide a highway for the people. Had the locomotive never been invented, our country this side of Kansas would probably have been nearly as well populated as under present circumstances; but there is no doubt that the vast fertile plains of the *far West* would remain deserts for centuries to come but for the railroad system.

"To the mere tourist these western districts are monotonous and unattractive. A ride of a hundred miles or more displays only a tedious repetition of rolling prairie, less grand to the eye than the perfectly flat prairie district of Illinois, and unvaried by trees, excepting along the banks of the muddy Kansas river. Indeed, this district is not much unlike Central Russia in its general appearance, and the rivers, slow and soiled in their waters and passing between their precipitous walls of muddy clay, strikingly resemble the Russian streams. But this dull, uninteresting country is capable of vast changes. The Russian soil is sterile. The Kansas soil is fertile. Trees will grow on these prairies if once planted, while for agriculture and tillage they are all that can be desired. Comparing the Kansas farms and their rich virgin soil with the stony, stumpy acres through which the New England farmer has to toil for years and years, it seems wonderful that New England is not wholly deserted for the West. Already, indeed, the comparison is having its natural effect, and the best young blood of our oldest States is the vitalizing force of our newest territories.

"These Kansas farms can, moreover, be had for the asking. The government will give a farm to any man who will settle upon it, the legal formalities for receiving the land costing about fifteen dollars. Other lands can be purchased for five and six dollars an acre, though on the line of the railway it costs more. Lots in the towns which have so plentifully sprung up along this railroad cost in proportion to the size of the town, or the advantages of their location."

It is a remarkable and most encouraging circumstance, that each of these unfinished roads has a large and profitable business already. As quickly as the successive sections are finished, locomotives and cars are needed to send forward the passengers or freight awaiting transportation. On the "Central Pacific," the "Union Pacific," and the "Union Pacific Railway, Eastern Division," the rails have probably been laid for about 900 miles.

As the roads are thrown forward westward, towns grow up and settlements are formed with marvellous rapidity. One named Ellsworth, about two hundred miles west of the Missouri river, built upon a hitherto uninhabited plain, had, it is stated, in two months a population of 1500 persons. The buffalo, antelopes and wolves, retreated into the yet undisturbed wilderness, keeping out of the way of the strange intruders upon their accustomed haunts.

Health, peace, content, and domestic tenderness are the sweets of life; and they often smile more brightly on the humble roof of virtuous industry, than on the mansions of the rich.

Ritualism.

For "The Friend."

The attention of the religious world, especially of the members of the Episcopal Church, has of latter years been much drawn to the attempts to introduce into that society a variety of rites and ceremonies similar to those practised by the Roman Catholic Church, which were supposed to have been laid aside at the time of the Reformation. The following criticism on a recent work entitled "Directorium Anglicanum," taken from an English periodical called "The Leisure Hour," may give to the readers of "The Friend," some idea of how rapidly a portion of the Church of England seem to be sliding back into those things which their forefathers were led to bear testimony against. If the Christian church could fully and feelingly unite in the belief and practice of the great truth—that Divine worship consists in communion between the soul and its Creator, that where this inward and spiritual communion does not exist, all outward actions are of no avail—the axe would indeed be laid to the root of the tree of ritualism. So strong is the tendency of the human mind to substitute the means for the end, that where symbols are used to represent spiritual ideas, the ideas themselves are wholly or partially lost sight of, and the sacredness is attached to the symbol. This is the origin of all idolatry, and to us there seems to be an idolatrous tendency in attaching so much importance and sacredness to vestments and ceremonies, attitudes and gestures.

Strange and grotesque objects have been brought forth from ancient hiding-places, absurd gestures and postures are practised, and priestly pretensions are made, which our fathers never dreamed would be revived outside the Church of Rome. As a handbook or guide to this new worship, or attempted restoration of mediæval worship, the "Directorium Anglicanum" has been published. It contains over four hundred pages, and sundry pictures, to show our clergy what they ought to wear; and dramatic will be the effect if they are obedient pupils. The whole system is intensely Romish, and wants very little but an acknowledgment of the Pope to be altogether so.

"According to Dr. Lee and his party, the Eucharist is the one central act of Christian worship. Hence the communion service is put first in the 'Directorium'; and because they view the Lord's Supper as a sacrifice, the book gives ample details concerning the 'altar.' The 'altar' is to be of certain dimensions, its top is to be of one slab, without fracture or blemish, &c. Behind it is to be a 'dossal-cloth, reredos, painting, or triptych,' with a cross in front. Cerecloth is to be laid on the altar slab, over it a super-frontal, before it a frontal or an antependium. Along the back is the super-altar, altar-grading, or retablo, bearing two lights with a metal cross between, and flower vases. Three linen cloths are to lie upon the super-frontal, one of them with five crosses worked upon it corresponding with the five crosses on the altar-stone; indeed, all altar linen and priestly vestments should be marked with a

* "The Directorium Anglicanum; being a Manual of Directions for the right celebration of the Holy Communion, for the saying of Matins and Evensong, and for the performance of other rites and ceremonies of the Church, according to the ancient use of the Church of England. With plan of chancel, and illustrations of such ornaments of the Church, and of the ministers thereof, at all times of their ministration, (as) shall be retained, and be in use, as were in this Church of England, by the authority of Parliament, in the second year of the reign of King Edward the Sixth." Third edition. Edited by the Rev. Frederick George Lee, D.C.L.

cross. A curtain may hang at each end of altar, and the crucifixion carved in the reredos.

"Description of all the objects is impossible but the character and novelty of many will be evident by the names they bear: credence, piceal, aumbry, sedilia, chalice, paten, bursæ, cansticks, incense, cassock, amice, alb, stole, maniple, girdle, chasuble, dalmatic, tunic, mitre, gloves, sandals, pastoral staff, crozier, pall, tippet, biretta, amys, and many others equally strange. Vestments and ornaments are to be of certain raised patterns, materials, and colors, and the clerics are to observe exactly divers forms and ceremonies from the moment they put their apparel on to the moment they take it off. Bowing, kneeling, crossing and genuflection, and all attitudes and gestures, are carefully prescribed. The entire system is most elaborate, and requires small study and practice before it can be learned and carried out. The lighted candles noon-day, and the smoking incense, are among the simplest incidents in this dramatic exhibition.

"At p. 330 we find a list of 'ornaments of Church,' including a far larger array than will meet with in any ordinary Popish place of worship. As an example, we copy the portion relating what is called the 'credence,' a small side-table placed near the communion-table:—'The crucifix, one cruet or flagon for the wine; one or two for the water of mixture; a canister for wafers, breads; a spoon; a perforated spoon; one offertory basin or alms-dish; offertory bags; a chalice-ornament of linen and lace for veiling the blessed sacrament; a metal basin; ciborium and a metal plate; sun-mantles or napkins; ampulla (only used in consecration of churches and in anointing the sick in which latter case it is called the Holy Oil St.—the ampulla is also used in the coronation service.)' Equally abundant provision is required for the sacarium, the piscina, the chancel, nave, the sacristy, &c."

Eggs by Weight.—A dozen of eggs is a more definite quantity than a dozen of potatoes but still a very indefinite quantity. A dozen eggs from little, scrawny, ill-kept chickens, for the same price as a dozen from large, kept fowls, while the difference between the two is as great as the disparity between the hens laid them. Purchasers in the market take chances for big and little, and each gets a average. But it is not so with producers, here is where the injustice occurs. The man raises choice fowls and keeps them in good condition, sells large, rich eggs for the same price dozen that is paid for others one-third small. This operates as a discouragement to raising hens, and as a premium on poor ones.

A writer in the Canada Farmer insists eggs should be sold by the pound, as well as butter, and gives the difference in the average weight of a dozen of eggs from different breeds, as follows:

Common fowls, . . .	1 lb 6 oz
Spanish, . . .	1 lb 9 1/2 oz
Gray Dorking, . . .	1 lb 10 oz
Gray Dorking and Brama . . .	1 lb 14 oz
Gray Dorking and Cochins . . .	1 lb 15 1/2 oz

These are the differences in the average weight from different breeds. Should we compare poorest specimens of the poorest breeds, with best specimens of the best, we would find a difference of fully one half, and yet all are sold at the same price. We buy and sell nothing at so an adjustment of quantity to price as eggs, when we buy wood by the load. Even apples and peaches, when sold by number, have the

sted to the size. But big or little, an egg is egg.—*Wisconsin Farmer.*

We give the following communication for the good sentiments it contains, though the author has evidently misunderstood the meaning of the essay to which allusion is made. That I people may be greatly tried with drowsiness meeting there can be no doubt, but there was intention to convey any other idea than that, earnest wrestling and seeking Divine help it did be overcome.—**EDITOR.]**

For "The Friend."

Whilst I wish to be tender of the feelings of my one, I also feel that I must not be altogether at when in my view, anything is thrown before the public that has a tendency to encourage practices so inconsistent as drowsiness or sleep in our meetings for worship. If I have taken a view of the matter contained in "The Friend" a few weeks back relative to the "thorn in the flesh," the idea is there put forth that the unbecoming behaviour of sleeping in meetings, or at least of being worried with sleep, is anything permitted for our good. Oh! no. I may unhesitatingly say that He whom we thus assembled to worship, will arise for the wrestlers, and enable them to know a father as under his canopy, and be made to feel that our in his presence is better than a thousand others.

As such as these tried I would say, He, if left unto, will change the dull, drowsy, lifeless, at least at times, into a feast of fat things; instead of dreading the hard struggle you go to keep awake, you will greet the returning day and hours for meeting with joy: being led to cast every drowsy feeling under foot. Some this may seem a hard task, but let me tell thee, my brother, or my sister, have we a harder? or doth He require that of us which He cannot enable us to perform? Surely none will it being mockery to go to meeting and to sleep.

I am aware that we may have our minds occupied with vain thoughts, altogether displeasing to Him whom we are professing to worship, and be far other than true worshippers, though strangers to a feeling of drowsiness. Let each of us, then, wrestle for ability to overcome to perform that worship which is acceptable to the Divine sight: not indulging in vain or trifling thoughts, one meeting-day after another, drinking the snares of the enemy with the petitions of patient sufferers who may have long to the pains of the body; many of whom are set on a hill which cannot be hid, diffusing light to all around; choice vessels in the Father's house, sounding forth his praise in the voice of a meek and quiet spirit. To these I say, Go on patient sufferers, keep your eyes to Him whom you can release you when He meet, and will support you through every tribulation scene, and in his own time say, "It is enough." But to those who sleep in our meetings I would say, Arise! shake yourselves from the slumber's grasp, apply unto the Fountain of all power and strength, and you will find Him to be a deliverer from the evil one in every temptation, and will permit the true, unceasing wrestler to stand instead of worshipping Him when assembled at purpose.

That is more discouraging to the young when they are called for divine worship, than to see those who they look up to as examples, striving with the same? Surely it may be fair for such to invite the young to come away from the vanities of

life. Ah! my dear friends, were we enough concerned to show to the world that we are walking in the footsteps of our worthy predecessors; many of whom sealed their allegiance to the testimonies of the gospel with their blood; but which testimonies, not a few among us are trampling on, or esteeming them of but little importance, preferring to be considered a man amongst men rather than be counted a fool for Christ's sake; I say were we enough concerned to support these testimonies uncompromisingly, in the face of the worldly wise, how inviting would our meetings for Divine worship be: a people gathered under the holy canopy of the Almighty, partaking of his life-giving presence, and whose every day walk spoke in stronger language than words, that their treasures were not on earth. From such the invitation would go forth, Come and follow us as we are following Christ.

Oh! that all Friends would be persuaded to lay these things to heart before some of us who might be prepared to fill the vacant places of these faithful ones who have been gathered to their eternal rest, may be cast out and others be called in who will stand for the law and the testimony; not sleepers but true worshippers, seeking to possess the life of Christ, which is the soul of christianity, and without which the highest professions are unavailing and unacceptable. Oh! that we may come to know that because He liveth we live also.

Religious Persecution in England.—A dissenter named Forster is in jail at Tanten, Somersetshire, for the crime of having refused to pay a church rate of a few shillings. He was sued in the Bishop's Court, and condemned to pay costs amounting to something more than £147. As he was too poor to pay this sum, his property, at last accounts, was soon to be sold. He will be left without a penny, a warning to all other dissenters to let the Establishment pick their pockets without making any resistance.

The second case is that of Job Smeeton, tenant farmer at Sibbertoft, Northamptonshire. He voted against the imposition, in a double sense, of a church rate, refused to pay his quota, and was notified by the agent of his landlord, the honorable F. W. C. Villiers, to vacate his farm. In a manly letter to Villiers, J. Smeeton says:

"I am the oldest tenant upon your estate in this neighborhood, myself and my father having occupied some part of it for upwards of sixty years. We have also, although nonconformists, been recently solicited to contribute towards the restoration of the parish church, and have cheerfully complied. I should, therefore, have thought that an English gentleman, especially one bearing the name of Villiers, would have hesitated before adopting so extreme and peremptory a proceeding. Similar acts on the part of churchmen, both clerical and lay, in this neighborhood have already attracted some public attention; so I confess to no special surprise at the course you have thought fit to pursue. Your neighbor, Captain Ashby, of Naseby Woolleys, refused a farm to the late Henry Smeeton simply, solely and avowedly because he was a nonconformist. Even in this village we have seen a little girl turned out of the national school—though the school had been partly built by public money—because the parents of the child, being members of a Baptist church, had not had her christened." * * * "I will not trouble you with the reasons why, as a nonconformist, I object to be compelled to pay for the support of another man's religion. With those reasons every intelligent Englishman is already familiar; and large majorities of the House of Commons have resolved that such an anomaly

shall no longer exist, and that church rates shall be abolished. And am thankful to know that the reformed Parliament will amend some other matters that at present are at issue between churchmen and ourselves. In conclusion, I thank you for the explicitness of your agent's note. You will have the satisfaction of being one of the last of English landlords who turned out of his farm a tenant because he refused to pay church rates."—*E. Post.*

Selected for "The Friend."

Oh! that children and all people would be careful in their very early years, and as they grow up and advance in life, to mind the "reproofs of instruction" in their own breasts; they are known to be "the way of life," divine life to the soul. This something, though they know not what it is, that checks them in secret for evil, both before and after they yield to the temptation, warning them beforehand not to touch or taste, and afterwards condemning them if they do so; and inwardly inclining them to a life of religion and virtue—this is the very thing, dear young people, whereby God worketh in you, to will and to do; and by which he will if you cleave to it, and work with it, enable you to work out your own salvation with fear and trembling before him. Despire it not, do no violence to its motions; love it, cherish it, reverence it; hearken to its pleadings with you; give up without delay to its requirements, and obey its teachings. It is God's messenger for good to thy immortal soul: its voice in thy streets is truly the voice of the living God: its call is a kind invitation to thee from the throne of grace. Hear it, and it will lead thee; obey it, and it will save thee: it will save thee from the power of sin and Satan; it will finally lead thee to an inheritance incorruptible in the mansions of rest, the house not made with hands, eternal in the heavens.—*From the Journal of Jacob Scott.*

The Earth Eaten by the People of Borneo.—The London Chemical News gives the composition of the clay which is eaten so extensively by the natives of Borneo. It states that some years ago the manager of the Orange-Nassau colliery, near Zandjermasin, in the island of Borneo, found that many of his workpeople (natives) consumed large quantities of a kind of clay; a sample of this material was forwarded to Batavia for analysis, and the following is the result in 100 parts:

Pitcoal resin (organic matter volatile at red heat)	15.4
Pure Carbon	" "
Silica	" "
Alumina	" "
Iron pyrites	" "

The Distance of the Sun from the Earth.—At the recent meeting of the American Association for the advancement of science, Prof. Newcomb read a paper, on a "new determination of the distance of the sun," the calculations having been made at the Washington Observatory. Ten years since astronomers began to suspect that the value of the sun's distance found by Encke from the transits of Venus, observed in 1761 and 1769, was largely in error. This distance, 95,800,000 miles, had long been received as the standard. But all the modern tests which could be applied to it indicated that it was about three millions of miles too great. In the year 1862 circulars were issued independently from the observatories of Washington and Pulkowa, (the Russian national observatory situated near St. Petersburg,) inviting the co-operation of astronomers everywhere in a general attempt to determine the parallax of Ma s

at apposition of that year. The plan was generally adopted, and nearly every active observatory in the world engaged in the observations, which occupied ten weeks. It was the most extended coöperate effort on the part of astronomers which had been made during the century.

Through the pressure of other duties and the illness of the astronomer who had proposed the work, the Pulkowa observatory had not been able to undertake the discussion of this great mass of observations, so that for five years their result remained unknown. Last winter an arrangement was made between the observatories at Washington and Pulkowa, by which this discussion was placed in possession of the speaker, to be executed and published by authority of the Naval Observatory. It is now complete, and the sun's distance is determined to be 92,540,000 miles, and the velocity of light is thus reduced to 185,500 miles per second.—*Sci. Amer.*

THE YOUNG CHRISTIAN.

Original.

"Wisdom is the grey hair to man, and unspotted life, old age." Prov.

She 'thou'gh her years scarce numbered a decade,
Was in experience old, and truly wise
Above earth's wisdom. In the school of Christ
She had received instruction, and had learn'd
To overcome all self, which is indeed
High knowledge, seldom taught, but of much worth.
To other minds, in unobscured love,
She sacrificed superior judgment;
And, unto those she better far might teach,
Would patient listen. She has gone from Earth!
Her daily ministrations closed to all
With whom she had companionship;—no more
Her voice instructively shall speak—no more
Her bright example in another world;
She breathes a purer ether, and her lips
Now sing Hosannas unto Him who holds
The key of Heaven's gate; who has declared,
"Except ye be converted, and become
Like children, teachable, obedient,
Ye shall in no wise enter."
Ninth mo. 1857.

CHRIST'S SYMPATHY.

Selected.

If Jesus came on earth again,
And walked and talked in field and street,
Who would not lay his human pain
Low at those heavenly feet?

And leave the loom, and leave the loom,
And leave the volume on the shelf,
To follow Him, unquestioning mute,
If 'twere the Lord himself!

How many a brow with care o'erclouded,
How many a heart with grief o'erladen,
How many a man with woes forlorn,
How many a mourning maiden,

Would leave the baffling earthly prize,
Which fails the earthly weak endeavour,
To gaze into those holy eyes,
And drink content for ever!

His sheep along the cool, the shade,
By the still watercourse He leads;
His arms upon His breast are laid;
His hungry ones He feeds.

And I, where'er He went would go,
Nor question where the path might lead,
Enough to know that here below
I walked with God, indeed!

If it be thus, O Lord of mine,
In absence is Thy love forgot;
And must I, when I walk repine,
Because I see Thee not?

If this be thus, if this be thus,
Since our poor prayers yet reach Thee, Lord;
Since we are weak, once more to us
Reveal the living Word!

O nearer to me, in the dark
Of life's low hours, one moment stand,
And give me keener eyes to mark
The moving of Thy hand.

LIGHT.

Selected.

Hark! through the dense and misty air
There is rising slowly a startled prayer,
A piercing cry through the gathering night,
A wild entreaty—"O, give us light!"
And straining eyes through the darkness peer,
Earnestly asking if day be near.

Light! Light! For we cannot see
Things as they are and ought to be!
Dangers are round us—and O, for light
To read the directions of God aright!
His "hand-writing" is clear and wise;
O! that the darkness would leave our eyes!

Light for the rich, for they do not know
The duties that from their station grow!
Light for the scorned and trodden poor,
To help them to suffer and still endure!
Light for the nations that groaning lie
'Neath the weight of darkness and misery!

Light to live in this troublous time,
When terror gathers in every clime;
Light to die, to dispel the gloom
That curtains grimly the opening tomb,
O Thou who dwellest where there is no night,
Hear us in heaven—O, give us light!

Marianne Farnham.

American School Books for Japan.—A singular evidence of the rapid extension of the English language is shown in the fact that in future it is to be the basis of study in the public schools of Japan, and that American school books are to be used without any attempt to translate them into the native language. The Japanese Commissioners, who recently visited this country, after official consultation, gave G. P. Putnam & Co. an order for supplying their government with the books heretofore to be used. The first shipment of these books was made recently, by way of the Isthmus and San Francisco. It consists of sixty cases, weighing about ten tons, including the following:

13,000 copies of Elementary Arithmetics,
Readers, Grammars and Geographies—Colton's,
Guyot's, Cornell's, Felt's, Saunders's, Sheldon's,
Quackenbush's.

1,000 copies of works of Wells, Youmans,
Cummings, Hitchcock, St. John, Kiddle, and
others on Natural Philosophy, Chemistry, Geology,
Physiology and Astronomy.

2,500 Webster's Dictionaries, of different kinds.
600 Goodrich's School Histories.

200 Tenney's Natural History.
100 German and French Dictionaries.

400 Military Books, assorted.
100 works on Practical Science, assorted.

100 Guyon's Wall Maps.
10,000 Specimen Writing Books.

30 Wheaton and Woolsey's Works on International Law.

Putnam's Dictionary of Dates.
Price's Magnetic Globes.

Sheldon's Reading Charts.
Medical Books, &c.

—N. American.

Harvesting in Japan.

By the middle of May the rape, wheat, and barley fields begin to turn, and under the warm sun this ripening is rapidly perfected. Harvesting begins about May 25, and lasts through June. These dates are particularly for the country about Yeddo Bay. And now, in whatever direction we may look, is seen smoke rising from every hillside and valley. The farmers are pulling the rape. The dry stalks are gathered in heaps, the seed is trodden out, the refuse is burned, and the ashes carefully saved for manure. The few days that are required for the rape harvest bring forward the barley to its ripening. The barley harvest is

still going on when the wheat and later rape come in, making the month of June a busy harvest month. The wheat and barley are cut with grain knives, a rude kind of sickle. The morning work is laid in the sun to dry, and in the afternoon the heads are whipped or cut off by a hatch of bamboo, or sometimes of iron, resembling a rake with close-set, short pointed teeth. Men are spread on the ground to catch the falling heads, and then the grain is beaten out with clumsy flail. The threshed grain is winnowed in baskets and taken to the farmyard, where stands a farm mill, exact counterpart of those found in every New England farmyard quarter of a century ago. Each day's work is cleared up as it goes along. But oftentimes the harvest season is interrupted by frequent rain when the Japanese employ a process peculiar to themselves. The grain is gathered in the sheaf and carried to some convenient spot, where a fire is lighted. The farmer holds a handful of the sheaf in one hand, and with a lighted wisp of straw in the other sings the heaped heads till they fall from their stalks in a heap at their feet. This process is repeated till all the grain has been treated in like manner, and the fire, though sufficient to singe the awns and burn off the straw, appears to do no injury to the berry. The still warm heap is gathered up and taken to the farm house, where the grain is beaten out on the granary floor of hard earth or oystershell lime, and after this scorching separates readily from the remaining chaff. When the winnowing is done in the open fields, as it more commonly is, this generally falls to the women's share. There is a fine breeze blowing, the winnowing is done by the simple process nature indicates. The breeze is wanting, a fan made of the outspread fibers of the palm-leaf, covered with paper, supplies it. "Whose fan is in his hand," says the ancient record; and the old custom still holds from Judea's hills across the steppes of Asia to these isles of the sea.

The Malay's Test of Honesty.—A New England sea captain, who visited "India beyond the Ganges," was boarded by a Malay merchant, a man of considerable property, and asked if he had any tracts which he could part with.

The American, at a loss how to account for such a singular request from such a man, inquired "What do you want of tracts? you cannot read a word of them." True, but I have a use for them, nevertheless. Whenever one of your countrymen, or an Englishman, calls on me to trace a tract in his way, and watch him. If reads it soberly, and with interest, I infer that he will cheat me; if he throws it aside with contempt, or a profane oath, I have nothing more to do with him—I cannot trust him.

The Human Hand.—From the shoulder the tips of the fingers there are thirty-two distinct bones, curiously articulated one with another, which could not be initiated with any expectation of success, viz.: one shoulder-blade, one collar bone, one arm-bone, two in the fore-arm, eight the carpus or wrist, five in the palm of the hand, two in the thumb, and twelve in the fingers. Next to move those thirty-two bones in all directions they are designed to act, there is a perfect labyrinth of delicate cordage, which when separated and distinctly displayed, shows that there are forty-six muscles—and some anatomists make more—to extend, bend, turn, clench, unclench, up, squeeze, and make all the movements which we can give the arm and hand simply willing to do so.

But in order that the mind may hold positive control over those thirty differently formed bones the forty-six muscles, of which no two are alike, there are long nerves running like telephonic wires from the arm-pit to the smallest fibre of every muscle. From the plexus in the axilla, arm-pit, the nerves hold communication, though the intervention of other nerve-threads, to the brain. One set of nerves, or rather graph cords, convey messages to the fingers, another set send back word to the brain of reception of the order, and how business is prospering.

Besides all these complications, to nourish and up the several parts vitalized, there are arteries, veins, lymphatics, absorbents, exhalant tubes and was almost beyond enumeration, to keep the whole in working order. And when in good condition what power it exerts! It conveys an inflexible language, which even brute animals understand. It menaces, invites, repels, or gives tractor and grandeur to the expressions of an orator. It is a hammer, a vice, a punch, wrench, lever, a pry, a force, and a mighty power by which the pyramids were reared, cathedrals called into being from the hardest quarries; and all that amazing, surprising, delicate or culminated to advance civilization in art, literature and science, accomplished by those wonderful instruments—man hands.

Sponges.—Mr. Newton's *Travels and Discoveries* in the *Levant* contains the following reference to the sponge-divers of the Isle of Rhodes, who sail in a fleet of caïques for the coast of Asia Minor and Syria during May, and up annually \$80,000 worth of sponge:—The diver descends, holding a flat stone in both hands, to assist him in sinking, to which stone he is fastened. When he gets to the bottom he holds this flat stone under his arm and walks about the beach of sponges, putting them in a net hung at his neck as fast as he uproots them; he then pulls the cord as a signal, and is drawn up. It is said that the divers can descend to a depth of thirty fathoms, and that they can remain under water for as long a period as three weeks. From inquiries which I have made, it does not appear that they are often cut off by sharks, though these monsters are not unfrequently seen in the southern part of the Archipelago. It is probable that the rapid descent of the diver may wear away this fish, who generally seizes him on the surface. A Calymniote told me that most terrible sensation he had ever experienced was finding himself close to an immense shark at the bottom of the sea. Under the roof of a sponge is a parasitical substance of a caustic nature. This often bursts when the sponge is removed from the diver's neck, and the liquid contains causes deep ulcers in his flesh." Before exportation the sponges are cleansed and laid out in fields to dry. Acres of them may be seen exposed in fine weather. Sponges are sold by weight, and formerly the weight used was increased by introducing a little sand. To prevent this fraud, the merchants insist upon their sponges being filled with as much sand as they can hold, and this amount can be accurately calculated, by deducting from the gross weight. Hence the deposit of sand which a new sponge contains at the bottom of the basin.

What a pity it is that this earth, which is so full of God's goodness, should be so empty of his mercies; and that of the multitudes that live upon bounty, there are so few that live to His glory!

A Great Bridge.—The bridging of the British Channel is still thought feasible by scientific men, both in England and France, and is preferred to the project of constructing a tunnel under the sea. A French engineer has made a plan for a bridge, which is greatly praised by the Paris Moniteur. According to that journal, the bridge would be broad enough to hold a double line of railway, a carriage-road and path for foot-passengers. There would also be space for a row of shops along this Dover and Calais road which, once established, would, no doubt, become a very popular thoroughfare; and half way across there would be a restaurant. The bridge would rest on a series of thirty-two vertical, rectangular iron piles, each pile to be about 670 feet high and 335 feet broad. The depth of the channel between the two points named is found to be not over 135 feet, so that the bridge would be about 535 feet above the sea level. The journal quoted continues that in building the bridge the first step taken would be to connect the iron piles by means of sixteen cables of plaited wire, stretched in parallel lines from Shakspeare's Cliff, on the English side of the channel, to Cape Blanc Nez, on the French side, a distance of about twenty miles. The body of the bridge would thus be formed of iron tresses stretched from pile to pile. The French engineer believes that he could hang a suspension bridge across the channel from cliff to cliff. In his eyes it is only a question of proportion, and he argues that if a wire of a certain strength and thickness will hang extended between two given points, then if the strength and thickness of the wire be increased, the distance between the points may be increased proportionately. The proposed bridge may be looked upon as a succession of bridges from pile to pile. Several objections to the monster bridge are anticipated by the inventor and provided against. The iron piles, for instance, would not be nice things for a vessel to run against; but they would be of great value as lighthouses, and accordingly each pile would be fitted with a signal light. The cost of this Anglo-French bridge is estimated at \$80,000,000, and so sanguine is the Frenchman that it can be built, that he has deposited his plans with the Board of Public Works, and actually proposed to form a bridge-building company with \$80,000,000 capital.

The Secret.—"I noticed," said Franklin, "a mechanic, among a number of others, at work on a house erecting but a little way from my office, who always appeared to be in a merry humor; who had a kind and cheerful smile for every one he met. Let the day be ever so cold, gloomy, or sunless, a happy smile danced like a sunbeam on his cheerful countenance. Meeting him one morning, I asked him to tell me the secret of his constant happy flow of spirits. 'No secret, Doctor,' he replied. 'I have got one of the best of wives, and when I go to work she always has a kind word of encouragement for me; and when I go home she meets me with a smile and a kiss; and then tea is sure to be ready; and she has done so many little things through the day to please me, that I cannot find it in my heart to speak an unkind word to any body.' "What influence, then, has woman over the heart of man, to soften it, and make it the foundation of cheerful and pure emotions? Speak gently, then, greeting, after the toils of the day are over, costly nothing, and goes far toward making home happy and peaceful.

There is no complete reformation in the conduct effected without a revolution in the heart.

A Tame Lion.—When visiting the French officer in command at Medeah, General Marey, we were introduced to a household favorite, of its kind as peculiar as Prince Puckler Muskau's Abyssinian:—"In a few minutes the door opened, and the lion entered the room, the man only leading him by a tuft of the mane. He was a magnificent animal, two years old, and full grown, all but his mane, which, although but a foot long, made a respectable appearance. He did not seem to care about our being strangers, but walking about the room like a large dog, permitted us to take liberties with him, such as patting him, shaking a paw, and making him exhibit his teeth and claws. He showed, however, a marked predilection in favor of his old acquaintances, and lying down before them, turned on his back to be scratched. After a scratch or two he began to yawn, and was fairly settling himself for a nap, when a cigar was puffed into his face,—a proceeding he evidently did not approve of. Rising in a hurry, curling up his lips, and wrinkling his nose, he exposed to view a splendid set of teeth,—a sure sign he was not pleased; a hearty sneeze seemed to restore him to good temper; and bearing no malice, he returned a friendly pat, bestowed upon him by Captain Martenot, who had been the aggressor, by rubbing his head earnestly against his knees."—*Kennedy's Algeria and Tunis.*

Selected for "The Friend."

John Bowron, after having preached the gospel for fifty-one years, finding his strength decay, desired his son Henry to go to a meeting and acquaint Friends, that his days were almost spent, which he having done, many Friends came to see him. Two days after, he arose without help, and came cheerfully forth of his chamber, took his grandchildren by the hand, saying, "Stay with me, do not go away, for I am taking my journey to a city, New Jerusalem, that needs not the light of the sun, nor the light of the moon, for the Lord God and the Lamb is the light thereof." He adds, "Zion is a precious habitation: is he that dwelleth within the gates of Zion shall never want." Again, "What can be expected? I have seen the wonders of God, both by sea and land. The sea saw the wonders of God, and fled, and Jordan was driven back." He died the 5th day of the Eighth month, 1704. Aged seventy-seven years.

Telegraph Fac-similes.—Mr. Field has brought out to this country a number of very interesting specimens of the system of telegraphing now in operation between Paris and Lyons, and Paris and Bordeaux, by which exact copies of the message are produced at either extremity of the lines solely by mechanical means. The message is written on prepared paper, covered with a lead-colored surface, which is a non-conductor of the electric fluid. The writing, or drawing, in the ink furnished for the purpose, changes the points touched by it to the opposite electrical character. The pendulum is swinging at each end of the circuit in unison. Its upper end is divided into points—say, like a fine-toothed comb. The message being passed over these at one end, sends a current to correspond with the writing or lines, and produces an exact copy of the original upon the prepared paper held to the vibrating pendulum in the distant city. Thus a fac-simile of writing and signature is furnished without any skill of the operator. A drawing of the likeness of a thief or absconding clerk is reproduced with minute faithfulness. Patterns of machinery, patterns for bonnets, hieroglyphics, messages in

Chinese, or in an unknown tongue, are copied with as little trouble as the simplest letters of a familiar alphabet. Some notice of this has been given in foreign journals, but no mere verbal description can convey a full idea of the wonderful process.

Extract from William Dewsbury's remarks to some friends, a few days before his decease:—

"Therefore, friends, be faithful, and trust in the Lord your God; for this I can say, I never played the oward, but as joyfully entered prisons as palaces, bidding my enemies to keep me there as long as they could; and in the prison-house I sung praises to my God, and esteemed the bolts and locks put upon me as jewels; and in the name of the eternal God, I always got the victory: for they could not keep me any longer than the determined time of God."

And this (he adds) I have further to signify that my departure draws nigh. Blessed be my God, I am prepared. I have nothing to do but die, and put off this corruptible and mortal tabernacle, this flesh that hath so many infirmities; but the life that dwells in it, ascends out of the reach of death, hell and the grave; and immortality, eternal life, is my crown forever and ever.

Health and Longevity of Brain-Workers.

The following interesting statements in regard to the effects of mental toil, upon the average duration of life, are abridged from a recent article in *Hours at Home*:

"Casting theory aside and applying the test of statistics, we shall see the falsity of the commonly received opinion, that the activity of the mind is unfavorable to health and longevity. And the object of this essay is to establish the opposite doctrine, that our brain-workers are as healthy and long-lived a class as we have among us. We shall first glance at the influences which conspire to produce this result, and then give some statistics which confirm the theory.

No one occupation combines all the conditions conducive to health and longevity. The laws of health demand at least four cardinal conditions: the occupation must admit of a healthful and symmetrical development of man's whole nature—it must admit of system—it must be congenial—it must be one that can be prosecuted without undue anxiety and weariness. But taking the world as we find it, no such ideal occupation exists. No profession meets all these conditions. No work, of brain or muscle, entirely escapes conflict with the known laws of hygiene. But some kinds of work approximate these conditions more nearly than others; and brain-workers, as we shall attempt to show, conform more closely to these laws than the mechanical or laboring classes, and consequently enjoy firmer health and greater length of days.

The true doctrine is, that while mental activity is injurious, both to mind and body, mental activity is pre-eminently healthful.

Let us now look at the special callings which require the largest exercise of the intellectual nature.

Clergymen, in many respects, are the most prominent of our professional men, and are always cited as illustrations of the destructive effects of intellectual toil.

Of 417 clergymen whose names are recorded in Allen's Biographical Dictionary, the average age was 65.7, and of these 13 lived to be over 90; 66 over 80; 23 over 70, and 84 over 60. In Massachusetts the average age of clergymen, as appears by the Registrative Report, is 56.75, and in Rhode Island 59.25. Of 840 clerical graduates of Harvard College the average age was 63.62.

From statistics gathered at the same time and place as above, it appears that mechanics and laboring men of all classes die before they are 50, while those engaged in printing, painting, and those who labor in unnatural positions, in over-heated rooms, do not attain an average of forty-five. A vast difference surely, and that can be explained on no theory but that of the pre-eminence of healthfulness of intellectual toil.

The profession of Law is also to an eminent degree favorable to health and longevity. Of lawyers it has been said that they "need a bad heart and a good digestion." If this be true, then our pleaders and counsellors are certainly well supplied with these conditions, for they stand high on the tables of longevity. Unlike clergymen, lawyers are not always able to command their time or systematize their labor, and they are even more liable to exhausting crises. The advocate must spend hours and days in the horrible air of court-rooms, and the counsellor, in his office-chair, leads the most sedentary life conceivable.

On the other hand, law presents a wide field for the exercise of the largest powers of reason and judgment; as a science it is intimately connected with statesmanship and diplomacy. If mental activity be healthful, then surely ought lawyers to enjoy a goodly length of life, notwithstanding the violations of hygienic laws that are incidental to their calling.

Their average age in Massachusetts was found to be 56.11; in Rhode Island 43.75. They do not stand as high on the list as clergymen, and yet they are healthier as well as longer lived than most of the mechanics and laborers.

According to ordinary impression Physicians are less able to cure themselves than others, and are hurried away by diseases from which their patients might be rescued. Medicine is, indeed, in some particulars, the most inconsistent and unequal of the professions. In one aspect it is peculiarly conducive to health, in another it would appear to be exceedingly prejudicial. It calls into action the best faculties of the mind and heart; its study embraces in its totality the whole range of human thought and feeling. Not only is it his province to prescribe for merely physical maladies; it is his solemn, responsible privilege to

"Minister to a mind diseased,
Pluck out from memory a rooted sorrow;
Raze out the written troubles of the brain."

a task that demands his moral as well as intellectual sympathy and inspiration. So far, then, as the practice of medicine gives scope for the exertion of man's best faculties and quickens the moral nature, so far does it approximate the ideal type of a profession.

But there is another side to the picture. The physician, especially the country practitioner, cannot adjust his hours of labor according to hygienic rules. He earns his bread out of human accidents that recognize no times or seasons. The life of a conscientious and successful practitioner must necessarily be one of exposure, anxiety, and irregular toil.

Of 490 physicians of Massachusetts who died before 1840, the average age was 57, and 35 in each 100 attained the age of seventy. In Thatcher's Medical Biography 145 physicians are mentioned whose average age was 62, and of these 25 lived to be over 90. Of 32 physicians and surgeons whose lives are sketched in Gross' Medical Biography, (including several who died before their prime) the average age was 59. Comparing the three professions, then, we find that the expectation of life for clergymen is 60 years, for lawyers, 54, and for physicians, 52 years.

(To be concluded.)

Working Under High Pressure.—It is an important element of success in life to acquire the habit of being beforehand with whatever you undertake. I can, perhaps, best illustrate what I mean by an example taken from another branch of the subject. There are two friends, gentlemen of large means, whose estates and whose annual incomes are about equal. One of these is always short of money, buys everything on credit, and on the longest credit that he can command; often when travelling has to borrow money to take him home, and really has to make as many turns and shifts to get along as if he were poor. All simply because he lives just twelve months on the wrong side of his income. The other man whose annual income and expenses are about the same as those of his neighbor, never has an open account, buys everything for cash, always has a plenty of money in his pocket, and a plenty more in bank, and is apparently without a care in the world, so far as money is concerned. All simply because he lives just twelve months on the right side of his income. The two men have equal resources. In the course of their lives they spend about equal amounts. Yet the one is always poor and harassed and the other is always rich and at his ease.

The picture has its counterpart in the history of professional men. Some men in their intellectual disbursements are always beforehand and at their ease, while others of equal resources live habitually from hand to mouth. You will see an editor scratching and scrambling for copy at the very latest moment, and living, it is to be feared in greater dread of the office devil than the other personage of the same name. You will see the professor quaking over his incomplete experiments or his half-finished manuscript, anxiously dreading the summons to lecture. You will see the clergyman locking himself up on Saturday to push through under high pressure the sermon that must be delivered on the morrow. These all, and others like these, simply in consequence of a bad habit of mental action, pass through life in a perpetual state of discomfort and professional poverty. Brainwork so done is generally bad done, besides being done at a ruinous waste of the life force.—Prof. Hart's "Mistakes of Educated Men."

It is a delightful and animating reflection that the sincere christian, that every occurrence of his life is under the immediate notice, and subject to the control of his heavenly Father. He contemplates him as an ever present and almighty Friend whom no difficulties can baffle, nor unforeseen accidents surprise, whose counsel is proffered to guide him safely through all the intricate and perplexing ways of life, to sanctify his affliction to moderate his joy in prosperity, and so to control the course of his personal concerns as "th all things shall work together for his good." He great are the privileges of the christian.

THE FRIEND.

TENTH MONTH 5, 1867.

Among the items of news transmitted to Europe through the Atlantic cable are two announcements that are of some interest to all professing christians, inasmuch as they relate to proceedings that may, more or less, affect the religious views and feelings of the members of two different denominations, including a large portion of professing christian church. We allude to voluntary assembling at the invitation of the mate of England, at Lambeth, of a considerable number of those who in the Episcopal Society

station and title of bishops, for the purpose of consulting together on the affairs of their agitated communion; and to the convocation by the Pope of an ecumenical or general council, to be held at Rome, and to embrace a large portion of the dignities connected with the papacy in all parts of the world. This, we believe, will be the first general Council of the Romish hierarchs that has been assembled since the famous one convened at Trent in 1545, in order to put a stop to the progress of the reformation set in motion by Martin Luther.

Time was when bodies similar to the last mentioned exercised absolute power over the majority of the professing church, determining at it should accept as its faith, prescribing the means of salvation, and obliging the secular powers to execute their cruel decrees respecting those whom they denounced as heretics, or who refused to submit implicitly to their behests.

It is natural that the present announcement should awaken reflection on some of the historical points connected with those councils held in times long past, and the mind revert to the almost incredible pretensions to divine authority and infallibility that were put forth by and accorded to those people. It is interesting to contrast it with the present, when the darkness of general ignorance and superstition that for so many ages had the nations of Christendom subservient to Popes and Councils, has been greatly dispersed by the gradual diffusion of the light of the gospel, and the closing the accumulated corruption of the papacy and its subordinate clergy, awakening inquiry and leading men to exercise their common sense, and still the despotism of Rome, and the dominion of custom, have been effectually shaken. The discussions and doings, therefore, of the two councils to which we have referred, will awaken more interest, though it is probable they will excite more curiosity than reverence or fear. That composed of Episcopal priests, being but an image of the other, and making less pretension, must play a subordinate part; not venturing to claim universal supremacy, though its whole structure rests on the same assumption of authority that characterizes its elder and more imposing competitor.

to believe there are eighteen acknowledged general Councils mentioned in ecclesiastical history, though the Roman Catholics enumerating in their list, the coming together of the Apostles and Elders at Jerusalem, to decide on the disputed point of circumcision, as the first, make the number nineteen. Protestants count from that summoned by Constantine A. D. 325, at Nice, in Phrygia. This is generally considered to have been the most important and perhaps as little influenced by any influence as any convened. It was convened in order to determine what were the doctrines accepted by what claimed to be the true Christian church; to take steps for removing the defections therefrom, and to provide for the future tranquility of the flock and family of believers. The imperial summons is said to have brought together more than two thousand ecclesiastics, of whom no less than three hundred and fifteen ranked as bishops. The Emperor presided in person, and appears to have been anxious to the healing of dissensions by the labours of an august assembly. But such was the vanity and sordid ambition of most of the prelates, such the accusations one against another, such the numerous and bitter quarrels, in the efforts to promote their self-aggrandisement, that while it seemed probable the whole time and attention would be devoted to settling private disputes rather than to ascertaining and enforcing

the catholic faith. The Emperor, however, interposed his sovereign authority, and after reproving the worldly minded priests for the scandal they were bringing on the religion they professed to teach, commanded them to proceed with the business for which they had been convened. With unexpected unanimity they condemned and denounced the heresy of Arius, who was present; drafted and approved a creed which, after being modified by a subsequent Council held at Constantinople A. D. 381, has been known as the "Nicene Creed," and been almost universally accepted by the "orthodox churches." In both these Councils the attempt to define by language dictated by the finite intellect of man, and inscribed in Holy Scripture, the incomprehensible nature of the substance of the Three that bear record in heaven, gave rise to protracted debate, altogether unbecoming the awful character of the subject; the difficulties being multiplied, and the incongruities made more gross by the introduction of the word person applied to Father, Son, and Holy Spirit.

Horne states that it was at a Council held at Laodicea, in the fourth century, that it was decided which writings should be accepted as the canonical scriptures, and those now called the Apocrypha were declared to be compositions of uninspired authors, and not to be ranked with the products of holy men of God who wrote as they were moved by the Holy Ghost. This decision was attempted to be repealed by the Council of Trent in 1545.

In this crucial notice we cannot undertake to specify the time, place of meeting or acts of the eighteen ecumenical Councils, but we may briefly refer to the last mentioned, and the last convoked by Papal authority until that which is now about to be summoned. It was resorted to in the hope that it might be able to silence Luther and his coadjutors, or at least effect a reconciliation between the powerful Protestant chiefs and the Romish church. It commenced its sessions at Trent, then removed to Boulogne, and again returned to the former place. At first it was small in number, being chiefly made up of Spanish and Italian prelates, but afterwards was more generally attended by those from other parts of Europe. The decrees promulgated by this Council give ample evidence of the height to which sacerdotal presumption had arrived, and the arrogant determination to secure the ecclesiastical orders from all interference on the part of the secular powers. The Pope was declared infallible, and his authority confirmed in all its former latitude. The property of the church was pronounced sacred. No clergyman could be tried in the civil courts unless the consent of the bishop was first obtained; nor could he be obliged to pay taxes or fines. Every mandate of an ecclesiastical judge must be executed without question or delay; while all secular power was held to be subordinate to the "church."

of course, a new revolt and the revolt from the holy Sepulchre were announced. In consequence of the Apocrypha being thought to sanction certain rites of the Romish church, those writings—previously condemned—were now declared to be of equal authority with those received by the primitive Christians as composing the “sacred canon;” as also that the traditions handed down and preserved in “the church,” entitled to as much regard, as a rule of faith, as what was recorded in the scriptures, and that the Latin translation of the scriptures—the Vulgate as it is called—should be held as authentic, and be used in the “churches” and schools. These celebrated Council continued its sessions for nearly eighteen years, and its conclusions have given rise to much

dispute within the Romish "church," it being long before they were accepted by all the Catholic nations of Europe.

In forming our opinion respecting the spirit that animated and the results obtained by these ecclesiastical legislatures, we must keep in mind the gross darkness that covered the people, and that the Bible was carefully withheld from them. No doubt there were some good men in the different convocations, and some of the measures taken by them were calculated to prevent the more general prevalence of certain fatal errors, industriously promulgated by schematics, and blindly adopted by the ignorant and easily-led people. But under the management of unscrupulous Popes, they were engines for the propagation of evil. They were at once the result of and the promoters of priestcraft; many of them being principally composed of men whose whole lives and bearing gave unmistakable evidence that they were altogether unfit to have anything to do with regulating the affairs of the *true* Church, though they showed themselves well adapted to support the priority and extend the power of the See of Rome. By their direct appointment, or under the shadow of their authority, false opinions, elaborate folly, the most abominable falsehood, and the most cruel persecution were inaugurated and persisted in. Image-worship, Mariolatry, canonization, "holy relics," transubstantiation, auricular confession and absolution, penance and purgatory, the sale of indulgences, and monastic institutions, are all direct fruits of their legislation, or the legitimate consequences of the principles they sanctioned.

Happily the power of these imposing conventions has been broken, and though we may fear some mischievous effects from those now about to assemble, yet no commanding attitude assumed by either, no stratagem of priestly dexterity, can again introduce former abuses, nor curtail the religious liberty which includes an open Bible to the professing christian Church, and the right to each one to seek from it instruction in righteousness, under the guidance of that measure of the Grace of God which bringeth salvation, and has appeared unto all men.

TO SUBSCRIBERS.

When the notice to our subscribers respecting the terms of payment was inserted in No. 2 of this volume, it was the intention of the Contributors to "The Friend" that bills should be sent to all whose subscriptions were then unpaid. Having lately ascertained, that owing to the sickness of the person on whom this duty devolved, these bills have not been sent, it has been concluded for the present year to extend the time for payment at the old rates, to the 1st of Eleventh month. All those who pay their subscriptions before the 1st of Eleventh month, will be entitled to receive the paper at \$2.00 per annum.

It has been gratifying to notice the general promptness of Friends in paying their subscriptions, and we hope those yet in arrears will be encouraged to follow their example.

SUMMARY OF EVENTS.

FOREIGN.—A Constantinople dispatch of the 29th, says: "The Sultan has at length sent out a commission of inquiry, consisting of three Turks and three Greeks, to investigate the affairs of Candia. The Turkish members are Riza Pacha, Karel Pacha and the Vizier."

The Russian demands for a session of Crete to Greece, and for the equality of the Christians being refused by the Porte, the Czar has declined to see the Sultan, there being nothing agreeable to say. The Porte has proclaimed a full amnesty to the insurgents, and a suspension of hostilities throughout Crete, and allows a month

and a half for the insurgents to lay down their arms or leave the island.

There was much commotion in Italy upon the arrest of Garibaldi, and serious disturbances in many places, which were suppressed by the military. In some cities the mobs were fired and shot, and the troops were ordered to use their bayonets, and sometimes fire upon the people, many of whom were killed and a large number wounded. Garibaldi, from his prison, has written a letter in which he says, the Romans have the right of slaves to rise against oppression, and the fellow of the Italians to help them. He hopes his fellow patriots will not be discouraged, but will march on to the liberation of Rome, and concludes by declaring that the eyes of the world are upon them. The Pope has sent a message to Napoleon thanking him for the arrest of Garibaldi. It is reported that King Victor Emmanuel is about to issue a proclamation, declaring extraordinary session of the Italian Parliament. In another paragraph the King says, that the faith of the government pledged in its treaties with foreign Powers, exacted of it the painful duty of arresting Garibaldi. A later report states that Garibaldi has been released on parole, and has retired to Capri.

The French official journals praise the decision and action of the King of Italy, and say that the conduct of the Italian government is another guarantee of peace.

A dispute has arisen between the King of Belgium and the Emperor of Austria in regard to the estate of Maximilian.

The report that the Spanish government had recalled its fleet from the Pacific is positively denied. The outbreak in Catalonia has been suppressed, but the country about Barcelona was still disturbed by the insurgents.

In the North German Parliament, on the 24th ult., Bismarck made a patriotic and significant speech, declaring in the most emphatic manner that if the German nation wished to unite, there was no power stronger than the hands of the union, nor was there any paltry enough to make the attempt. The North German Gazette, the organ of Bismarck, says the South German States are now free to join the confederation of the North, and make Germany one nation.

Fenian movements are feared in both England and Ireland. The government has sent gunboats to guard the southern and western coasts of Ireland. A Fenian cruiser has been seen on the Irish coast.

Late dispatches from Japan state that the Christians in various parts of the island are maltreated by the natives. This is especially the case at Nagasaki and its vicinity.

The Pan-Africanist, now in session in England, has condemned the writings of Bishop Colenso.

The Peace Congress at Geneva declared its principles to be democracy, political, economical, and philosophical liberty, abolition of standing armies, and sympathy with oppressed nationalities. The next Congress will be held at Mannheim.

The statement that Austria intends to confiscate church property to meet her financial deficiencies, is officially denied.

The Liverpool quotations for cotton show no material change. Breadstuffs are firmer. California wheat, 14s. 1d. per 100 lbs. San Francisco, 7s. 7.16. U. S. 25.20, 72.13.16.

INDIAN STATES.—The Indian Peace Commission has adjourned to meet at Fort Harker, in Kansas, on the 8th inst., for the purpose of making arrangements to meet the Cheyennes, Arapahoes, Apaches, Sioux and Comanches at Medicine Lodge Creek, the chief of the Brule and other tribes, was successful. They agreed to meet the Commission at Fort Laramie on the first of next month, and in the mean time they will send out runners among their people to bring into the council at that place those who have not yet been met with. A telegram from one of the Commissioners states that the prospect of peace with all the Indians is encouraging than it has been at any time. Superintendent Head writes to the Indian Bureau from Great Salt Lake, that the Indian chief Black Hawk, had pledged himself to use all his influence to stop further depredations. Black Hawk engages to visit his own band and cease, and stop all hostilities, and immediately thereafter see the other hostile Utes and induce them to do likewise, and hold a council with the Superintendent within six or eight weeks.

The North Pacific Railroad.—A communication from the Governor of Minnesota, received at the Land Office, announces the completion of the first section of the St. Paul and Pacific road, extending twenty miles westward from St. Paul.

Philadelphia.—Mortality last week, 238. In the corresponding week last year the interments numbered 311.

New Orleans.—This city still suffers from yellow fever. From the 24th to the 28th ult. inclusive, the deaths from this disease numbered 351.

Moscow.—The U. S. Secretary of the Treasury has received a letter from the executors of Ralph S. Fretz, of San Francisco, notifying him of a bequest of \$20,000 to the Secretary of the Treasury to be applied towards paying the national debt.

The receipts of wheat at Milwaukee last week were 756,640 bushels. Number one wheat sold at \$1.87 a bushel.

The Judges of the Supreme Court of Georgia have published a letter favoring reconstruction under the military bills, on the ground of necessity and expedience.

A remarkable hail storm passed over Philadelphia, and portions of the adjacent country, on the afternoon of the 25th ult. It lasted only a few minutes, but the hail stones were unusually large and caused the destruction of a great quantity of window-glass. The same storm passed over Reading before reaching Philadelphia. A Reading dispatch says "The stones were more noted for their size than number, many of them being as large as a hen's egg, and some were picked up which measured eight inches in circumference and weighed three ounces." In Philadelphia there was a pretty copious fall of hail, but few of the pieces exceeded the half of a walnut, and they were generally much smaller.

A sudden change in the weather throughout the northern States was experienced about the close of the Ninth month. On the 30th three inches of snow fell in New Hampshire.

The Central Pacific Railroad Company are preparing for winter by roofing in the most exposed portion of the road, such as the deep cuts through the snow belt. A large quantity of freight is now crossing the mountains.

Alaska.—Dates from the new territory to 8th mo. 20th have been received. Business was active in New Archangel, and town lots have largely advanced in value. There is some coin in circulation, but the Copper river country is most commonly in use. The Copper river country is coveted by the Indians and Russians to be rich in gold, copper and coal, but the natives are very hostile and warlike. The weather at New Archangel was pleasant. All kinds of common vegetables are raised; salmon and other fish are abundant, and deer sell at 80 cts. each. The Russians, Finns and Germans, it is stated, are very glad that the country has been annexed to the United States.

New York.—Mortality last week, 437.

The Markets.—The following were the quotations on the 30th ult. **New York.**—American gold 118 1/2. U. S. sixes, 181, 110 1/2; ditto, 20s, 107 1/2; ditto, 10-40, 50 cents, 99 1/2. **Superfine State flour,** \$8.50 to \$9.40. **Shipping Oils,** \$9.90 a \$11; **finer brands,** \$11.20 a \$14. **St. Louis extra,** \$16. **Amber State wheat,** \$2.62 a \$2.63; **white Michigan,** \$2.81; **No. 1 Milwaukee,** \$2.30. **Oats,** 75 a 76 cts. **Hay,** \$1.50 a \$1.60. **Western mixed corn,** \$1.30; **southern white corn,** \$1.30. **Cincinnati.**—No. 1 red wheat, \$1.34. **Middling uplands cotton,** 23 cts. **Superfine flour,** \$7.50 a \$8.25; **extra family and fancy,** from \$8.50 to \$14. **Red wheat,** \$2.25 a \$2.45; **amber,** \$2.50. **Hay,** \$1.50 a \$1.60. **Yellow corn,** \$1.44; **western mixed,** \$1.20 a \$1.42. **Oats,** 70 a 80 cts. **Clover seed,** \$9 a \$9.25. **Timothy,** \$3. The arrivals and sales of beef were estimated at about 2400 head. **Extra sold at 14 a 15 cts., fair to good,** 12 a 13 head. **Cattle,** common 9 a 11 cts. **At about 10,000 sheep sold at 5 a 6 cts. per lb. gross. Hogs,** \$10 a \$11.50 per 100 lbs. net. **Chicago.**—No. 1 white, \$1.91; **No. 2 \$1.86.** **No. 1 corn,** \$1.02. **Oats,** 53 1/2 cts. **Milwaukee.**—No. 1 wheat, \$1.92; **No. 2, \$1.86.** **Oats,** 53 cts. **No. 1 corn,** \$1.03; **No. 2, \$1.02.** **Cincinnati.**—No. 1 red wheat, \$1.34. **Extra sold at 14 a 15 cts., fair to good,** 12 a 13 head. **Cattle,** common 9 a 11 cts. **At about 10,000 sheep sold at 5 a 6 cts. per lb. gross. Hogs,** \$10 a \$11.50 per 100 lbs. net. **Chicago.**—No. 1 white, \$1.91; **No. 2 \$1.86.** **No. 1 corn,** \$1.02. **Oats,** 53 1/2 cts. **Milwaukee.**—No. 1 wheat, \$1.92; **No. 2, \$1.86.** **Oats,** 53 cts. **No. 1 corn,** \$1.03; **No. 2, \$1.02.** **Cincinnati.**—No. 1 red wheat, \$1.34. **Extra sold at 14 a 15 cts., fair to good,** 12 a 13 head. **Cattle,** common 9 a 11 cts. **At about 10,000 sheep sold at 5 a 6 cts. per lb. gross. THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLI.

SEVENTH-DAY, TENTH MONTH 12, 1867.

NO. 7.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

Health and Longevity of Brain-Workers.

(Concluded from page 46.)

Authors, as a distinct registered class, are not numerous; and yet the number of those who write and publish books is not small. We have authors scattered through all the professions—clergymen write for the press almost as much as for the poet—lawyers who love to escape, at times, from the tangled jungles of litigation to the flowery d of letters—physicians who snatch odd hours to hard toil to work still harder with the pen. Now, then, that whatever hygienic laws apply to professional men must also apply with equal force to authors as such.

Those who have not investigated the subject will be surprised at the statement, that the average of the poets, essayists, historians, and novelists of England, whose names have been handed down with various degrees of fame, is nearly sixty years.

If we go back to classic times, we find that Homer died at 64, Demosthenes at 60, Socrates at 70, Sophocles at 90, Virgil at 51, Tacitus at 60, Plato at 80, Aristotle at 63, Aeschylus at 69, Ovid at 80, Livy at 76, Anaxagoras at 58, Zeno at 98, Xenophon at 90; and if the list be extended to include all the immortal authors of antiquity, (average longevity is found to be very high.) As a rule, philosophers and men of science are healthier and longer lived than poets or romancers, probably because their temperaments are less susceptible and their habits more regular.

It is a fact generally known that the average longevity of farmers is very high. But this green age is not due to their muscular exercise alone. Mechanics and laborers, who work even harder than farmers, do not live as long by many years; not due to the pure air they breathe, for many of the door laborers are much lower in the scale of longevity than they; nor, lastly, is it due to the hardness of rural life, for the farmer, if freholder, is burdened with grave responsibilities and oppressed by weightier cares than the butcher in the market, the teamster on the highway, or the workman he employs by the day, all of whom die much younger than he. Farmers are long-lived not because of pure air, moderate exercise, and quiet life, but more especially because they counteract the injurious effects of merely manual labor by varied activity of the mind. Of 20,000 of this class who died in Massachusetts, the average age was over sixty.

Merchants and manufacturers live much longer than artisans and laborers, but not as long as professional men. The head of any large business firm must needs be a man of intellectual activity, and the myriad complications of mercantile life make heavy drafts on the will and nerve of the ablest. But the tendency of trade is to develop the faculties singly rather than in their entirety, consequently the man of business is apt to become sordid and narrow. Financial crises invite cerebral disease much more than do the anxieties of professional life. And yet, as a rule, our merchants in active business, are a sturdy class; but clerks and those who fill subordinate positions, when the duties are purely mechanical, are apt to suffer from the various phases of nervous disorders.

The fact that the expectation of human life increases with the progress of civilization confirms the position we have taken. From accurately prepared tables it appears that the expectation of life in Geneva in 1600, was nine years, in 1800, thirty-one, and in 1835, forty-five years. A most wonderful increase, and one that cannot be wholly accounted for by the progress of social science and sanitary knowledge. Statistics of London and Paris, so far as they go, agree in the main with those of Geneva. In our large cities, at the present day, we observe the best physical development among the better classes. Even our fashionable ladies, who loiter on soft cushions in darkened, over-heated apartments, who ride in closed carriages, and who each season worry through a dreary round of luxurious dissipation, are healthier, and as a class, handsomer than their milliners and servant girls, or even the daughters and wives of farmers in the country.

Reasoning from analogy and from the facts of biography, it would seem that those who are endowed with unusual intellectual powers, can work harder and longer, all things being equal, than the rank and file of humanity. The law is that great intellects are incased in sturdy, powerful frames, and the occasional existence of monstrosities serves but to establish the rule. The number of really great men of history is comparatively so small that it is impossible to fully substantiate this theory by statistical facts, but if we take the record of biography from the earliest time to the present, as our guide, it would seem to be very clear that intellectual giants are capable of undergoing a severer brain labor, with far better prospects of longevity, than men of mere ordinary ability. I have taken the pains to go through the cyclopaedia, and to note down the ages of one hundred of the greatest men of history, those who have created epochs, and have been the leaders of the world's thought in literature, art, science, and statesmanship, and I have found that the average age of these was much higher than that of literary and professional men generally; nay, even much higher than that of clergymen, the longest lived of all. This list, which covers a period of many centuries, contains such names as Goethe, Coleridge, Lessing, Beranger, Wordsworth, Voltaire, Hume, Milton, Shakespeare, Dante, and Irving among men of letters; Raphael, Michael Angelo, and

Reynolds among painters; Malebranche, Locke, Leibnitz, Kant, Hobbes, and Hamilton among modern philosophers; and Socrates, Aristotle, Plato, Cicero, among the ancients; Harvey, Cuvier, Buffon, Galileo, Humboldt, Newton, Jenner, and Faraday among men of science; Napoleon, Marlborough, Washington, Metternich, Richelieu, Burke, Webster, Calhoun, and Clay among warriors and statesmen; and Calvin, Luther, Knox, Butler, Paley, and Edwards among theologians. No one will deny that these and similar names fairly represent the giants of history.

Now, the aggregate ages of the one hundred men on this list was not far from 7,500, giving the astonishing average of nearly *seventy-five years*! which is twelve to fifteen years higher than that of the most favored of ordinary professional men. Whoever will make the effort to fill out any list of names that thoroughly represent the leaders of the world's thought and activity will, I am sure, arrive at results not essentially different from mine.

Selected for "The Friend."

Of the Declined and Fallen State of the Church.

When antichrist (or that spirit which wrought against that spiritual appearance of Christ, and power of his truth) was revealed, and got into the temple, appearing and being acknowledged there as God, then (without controversy) was the declined state. He had been a long while working under ground by his agents and ministers, appearing as ministers of righteousness, in a form therefore, of out, and against the power; but the power in the true apostles and ministers, stood in his way, and wrought against him, so as he could not for a long time get up. Yet he prevailed more and more in the corrupt part in man, till at length he drew many of the very stars from heaven after him; and then fighting an open battle, gets rid of the true church, vomits out a flood after her (as if she were an harlot, and not worthy of the name of Christ's spouse) and so gets into the temple, and is owned there, as Christ, in the stead of Christ.

Objection. Will any man own antichrist, worship antichrist, and acknowledge antichrist (instead of Christ) to be God?

Answer. Read 2 Thessa. ii. 4, and see if it be not so. See if he do not get into the temple, and sit ruling and governing in the temple (that which was once so) till the very coming and appearing of Christ in his Spirit and brightness, 8th v.

Ques. But how could this possibly ever be, or how can it be?

Ans. He doth not directly get up, nor show himself directly as he is; but in a mystery of deceit. He doth not appear as antichrist (crying up all manner of filthiness, abomination, and contrariety to Christ, in direct words,) but as Christ, preaching righteousness, crying up scriptures, ordinances, church-ministry, holiness, &c. Yet, for all these words and fair pretences, he is not the true spirit, but the false, the antichristian; and those that receive him, or bow to him in any of these, they bow not to Christ, but to him. He hath a mark, he hath a name, he hath a worship,

he hath a church, he hath a ministry, he hath laws and ordinances of worship, which whoever receives worship not the Lord Jesus Christ, but that spirit which under a disguise thus appeareth, which hath horns as it were of a lamb, or like a lamb; but not the Lamb's horns, nor the Lamb's nature; nor the Lamb's spirit, nor the Lamb's meekness; but the old nature of the dragon, who gives him both subtlety and power.

Now mark: when Christ brought forth his Church, it was a pure, holy, spiritual build; built up of renewed spirits; such as were new born, such as were washed, such as were sanctified, such as were justified in the name of the Lord Jesus, and by the Spirit of our God. Christ's Church was Sion, even the holy seed, built upon the holy hill of God, into an holy city or temple. But antichrist's church is Babylon, which hath the wisdom and order of man in it, such as man's eye judgeth right, but is foolishness and confusion in the eye of God. Now the Lord hath most terrible plagues to pour out upon this antichrist, and upon his Babylon; yea, upon every one that hath his mark or name, or that which amounts to his name, though it be not directly so called. Therefore, oh! fear the Lord God! and ye that love the peace of your souls, pray to be delivered from that which his wrath is to; for the dregs of the cup of trembling are to be poured out on antichrist inward and outward, and on Babylon inward and outward. Let him that readeth understand the tender warnings, which are given forth in the tender nature and spirit of the Lord; for the day of mercy spreads apace, and the night of anguish and tribulation hastens. The true Church of Christ was gathered by his Spirit into his name and power, and was a spiritual building, or building of spirits therein; wherein the Spirit of the Lord was as present spiritually, as ever he appeared in the outward temple or ark outwardly. And the ministers of the New Testament were made by the Spirit, and sent forth by the Spirit, and in the power of the Spirit; and if any man taught in the church, he was to speak as an oracle of God. Flesh is to be silent there, and only the Spirit's voice to be heard in the spiritual building. But now in the apostasy, the ministers there are as wells without water, clouds without rain, who have only the show of the thing after the flesh, but not the truth of the thing after the Spirit; and so being not in the thing, nor in the Spirit, they despise the dominion and speak evil of the dignities which are of the Spirit, and for advantage sake cry up the dominions and dignities which are of the earth. In the apostles days the ministers of the church were not of man, nor set over the flock by man; but made by God, and set over the flock as overseers by him. Acts xx. 28. For the same Lord who gave apostles, prophets, and evangelists, gave also pastors and teachers. Ephes. iv. 11. And though the hands of the presbytery were laid on those that were made ministers; yet that was not done suddenly, or lightly, but by the guidance of God's Spirit; and there went a gift and power of the Spirit along with it, according as Paul said to Timothy, neglect not the gift that is in thee, which was given thee by prophecy, with the laying on of the hands of the presbytery. 1 Tim. iv. 14. But now, in the declined fallen estate, there is no such thing; but an empty form, a form of worship, a form of godliness, a form of ministry, a form of doctrine, a form of discipline; without the life, without the spirit, without the power, from which the true form came, and whereby alone it could be preserved. The declined state hath been a very sink of iniquity, wherein the christian love hath not

only grown cold, but hath been quite dead, and plucked up by the very roots; yea, wherein all that filthiness which was sprouting forth and getting up in the declining state had reigned in power, defiling the very name of christianity, oppressing the good seed, and corrupting the earth, 2 Tim. iii. 2, &c., and see what a generation of christian professors were to grow up (and did grow up) in the time of the apostasy.

ISAAC PENINGTON.

Of the state of the Church in its recovery; or what state the Church shall be in after it is recovered out of the apostasy.

The state of the church after the apostasy, is to be like the state it was in before the apostasy for purity, power, brightness, and glory, &c.; yea, shall it not be more glorious, after its coming through all this darkness, and shining over it, than it was before? The New Jerusalem is to come down from God out of heaven; the bribe is to be clothed and adorned as the Lamb's wife, meet for the delight of her husband. The power and spirit of the Lord, which cleanse away all this rubbish, will make his truth shine, his church shine, his suffering lambs (that come out of the great tribulation) shine more than ever before. The Lord God Omnipotent will take his great power unto him to reign, and will reign according to his power in the hearts of his children, and over the earth. He will break that which stands in his way with a rod of iron; and will embrace and exalt that which boweth to and kisseth the scepter of his Son, who is to appear upon the holy hill of Sion; and the law is to go forth out of Sion, and the Word of the Lord from Jerusalem; the power whereof shall break down the power of iniquity, and bring up the suffering seed into the dominion and glory of life. In this restored state antichrist shall be worshipped no more, nor the beast, nor the dragon, who gave his power to the beast; but the Lord God shall be worshipped and magnified over all. It shall be said no more, Who can make war with the beast? after the Lamb hath overcome him. But, who is like to thee, O Lord, O King of saints, who hast taken to thee thy great power, and hast reigned, and dost reign; who hast brought down this lofty city, and trod it under the feet of the poor, and made the steps of the needy to pass over it; who hast made it a heap (the city fenced by all the might, wisdom, and power of man) a ruinous heap, a place no more for thy dear children to be captived in and oppressed; but an habitation of dragons, and a cage of every unclean and noisome bird for ever? Who shall not fear thee, O Lord, and glorify thy name? For thou only art holy; for thy nations shall come and worship before thee; for thy judgments are made manifest. Rev. xv. 4. Thou hast judged down Babylon, which was exalted; thou hast pitied Sion, which lay in the dust for many ages and generations, and hast raised up thy holy building again, and wilt give to thy children to be clothed, and to walk before thee in pure white linen (which is the righteous nature and Spirit of thy Son) for evermore; the darkness shall never come over them again, but the beast, dragon, and false prophet shall be cast into, and bound down in the lake; and the springs of life shall open, and whosoever will may come freely, and drink of the water of life. And the people in heaven shall say, Hallelujah, salvation, and glory, and honor, and power unto the Lord our God. And the voice of great multitudes, and the voice of many waters, and the voice of mighty thunders shall say Hallelujah! And shall be glad, and rejoice, and shall give honour to the Lord, for the bride's marriage with the Lamb, and for her rich adorning for her

bridegroom. Yea, the earth shall rejoice, the multitudes of the isles be glad. Why? Because the Lord reigns, who is tender over the earth, and hates the oppressing not only his seed, but also of his creatures: for he reign and judge in righteousness, and tenderness, and much mercy, to all that is of him; and no shall feel his judgment and severity but which is contrary to him, and joineth to his enemy. For the Lord will make war with that spirit which is contrary to his life and nature, for evil and end. And he that joineth to that spirit shall find woe, misery, and tribulation (tribulation anguish shall light upon every soul that continueth in the evil doing); but he that comes from out that spirit by the leadings of God's Spirit, bow to and kissing the Son, shall taste of the Father's love to the Son, and partake of the mercy, peace, and reconciliation which is treasured up in his Amen. ISAAC PENINGTON.

Lost Children.—An English paper has a story from Australia. Three tiny boys, colored, of Daylesford, Victoria, started into the bush to look for some runaway goats. The eldest was only seven; but Australian children have a continent for a playground, and nothing was feared. When, however, the little ones missed the dinner, and then supper, their parents grew anxious and searched the neighbourhood, but in vain. Night fell, and with the aid of the local police the search was extended, and though it lasted the morning the children were still missing. A storekeeper came in who had seen a little wanderer on the road overnight; and a boy who had given them the right direction towards their home as he passed. This was all that could be learned throughout the second day; but the scattered community had heard of the loss, and was on the alert. The quartz miners put their tools and went into the bush; so did the sawyers at the steam-mill, and so did the outlanders; and the third day was thus passed in vigorous search. Still no trace or tidings, except a faint footmark going in the wrong direction towards the Warrabee river, and therefore parents and their sympathizing neighbours were growing alarmed and very anxious, and it settled at a public meeting that all hands should strike work and go to look for the lost children. Accordingly next day—the fourth—every man was shut, every tool and implement was left behind, six or seven hundred men, women and children turned out in all directions into the densest bush to hunt the strayed ones up. Seventy ponies were collected as a reward for the finder; but no one wanted that incentive, and the man at the steam-mill kept the whistle going all day to guide the little feet home if they were still able to go. For several days the people persevered in search, but all in vain; at the end of the week the shops had to be re-opened and the work more fully resumed, for the children could not be recovered. And so the melancholy narrative of the children, it was evident, were hopelessly lost. The probability is, that worn out with hunger and fatigue, they had finally laid down to rest in the recesses of some thicket. The service dogs of quick scent would have been invaluable in such a search, but as they are not mentioned, it is presumed there were none such in the settlement.

It is not often in great things that we are able to show that we love our neighbor as ourselves. It is in the daily, hourly exercise of domestic virtues, that they who truly love may be distinguished from those who love not.

For "The Friend."

Agricultural Laborers in England.

The following account, extracted from a recent number of *The Leisure Hour*, gives a deplorable picture of the depressed condition of a portion of agricultural laborers in England. One of the chief objects to which a statesman can devote attention is to determine the causes which lead to such results, and the best means to avert and remove them. The recent reform passed by the British Parliament, will tend to increase the power of the lower classes of government, and it is to be hoped will pave the way for such further reforms and changes as may ameliorate the condition of the working population.

In one of my walks last summer, while rustling in a southern county, I fell in accidentally with a labourer returning from his day's work. According to my wont, responded to his civil greeting, and entered into talk. The man, a honest fellow enough, was several years of age, but he walked in a hobbling way. He said, 'being stiff with the rheumatics,' and he had the stoop, the languid motion, the slow, hesitating speech of old age. I asked him for his replies to my queries that he received eight shillings a week from his employer, of which he had to pay him two for rent—he had a wife and five children, the eldest alone being able to maintain himself, and therefore, six persons, one of them being the twinner and head of the family, had to be supported at a cost of a shilling a head per week. I did not ask him how he solved this terrific evil; he could but have told me the old story of hard work and hardest living, and of getting on and hand in spite of both, and then doing his best to fetch up again by means of extra pay and at hay-time and wheat-harvest. But I did not wish he and his fellows did not demand wages: to which question his reply was, 'the farmers in that neighbourhood would be they were going to be ruined if wages rose one shilling—he could remember the time when they were only six. He showed me his cot for the fee simple of which no man in his would have offered thirty pounds, and to his landlord and employer would do no more than it was falling fast to ruin. It had no accommodation for a family—was damp draughty, unsound in walls and roof, picturesque with mildew within and without, and so of room that the five children, boys and girls, had to be thrust to sleep into a kind of closet with lean-to walls, under the eaves.'

It happened about a month later that, in visit relative in a midland county, he introduced a farming friend of his, who, renting near hundred acres, brought up a large family on moderate wages, while he paid his labourers twelve shillings a week, and housed them in cottages at the rate of two shillings paid by the poor as mentioned above. I found the men on the farm as healthy as the average of workers anywhere, in good condition and good spirits, in all respects equal to the work they had to do, and it with a will. The farmer took me over the cottages he had built for them; these were on a rank on elevated ground, were perfectly sound and in repair, and, in addition to a kitchen and living-room on the ground-floor, had three snug bed-rooms above. They were of stone in solid style, with shingle roofs, at about one hundred pounds each; and the proprietor reckoned that allowing for rent of each cottage had a long strip of garden (in the rear) and for repairs, the money he

had invested in them would yield him a good four per cent., with which he professed himself satisfied.

I have given these two cases as contrasts—not as the extremes of the labourer's condition, which they by no means represent.

Whatever may be the causes which have degraded the tiller of the soil to the level of our poor rheumatic friend in the south—and I shall advert to some of them presently—it is worth while to look a little closely at the facts of his condition before we go any farther. Imagine a man who is the head of a family living by his labours, and looking up to him for example, and who, after paying rent, has but six shillings a week, or ten and two-pence a day, to provide their food, clothing, education, and all their other wants. *What does that mean?* It means starvation, famine, 'leanness of teeth,' in the first place. Six people, two of them adults, cannot be fed, in this country and at the present time, as human beings should be fed, on less than twopence a head per day—that cannot be done by any stretch of ingenuity whatever; they must suffer the pangs of hunger and inanition, and under such suffering must fall the ready victims to disease. It means poor and insufficient clothing in the second place; for what funds can be saved for clothing out of a wages too small to buy food? The mystery is, how families so situated contrived to procure clothing at all. We know that private charity supplies this want in innumerable instances; but why the able-bodied British labourer should be compelled to accept of charitable aid to clothe his children, we really do not know. It means ignorance in the third place; for, though there may be available schools in the neighbourhood, hunger and rags will virtually shut the school-room door against the labourer's child. 'When you have nothing but what comes out of your fingers,' says a labourer's wife, 'you must send the children into the fields'; and so, when they should be learning, they are scaring crows, picking up stones, weeding the corn, or thinning the turnips, poor little wretches! because, as mother says, 'they want more victuals than I got to give 'em.' Thus education and moral training go to the wall; they grow up in ignorance, not learning even to read intelligently; they arrive at puberty often without any sense of modesty, decency, or self-respect; and if they fall into vice and crime, as many of them do fall, where is the wonder? and on whose shoulders sits the blame? Of all philanthropic endeavours, that is one of the most hopeless which seeks to reclaim in after-life a class so degraded in childhood."

For "The Friend."

"Endeavoring to keep the unity of the Spirit in the bond of peace." This is an injunction to which all have need to give heed, who have in any degree witnessed a being brought into that precious unity of which the members of the living Church are made partakers, and which proceeds from Him who is the Head thereof. How often has the springing up of a root of bitterness broken this, when had the watch been faithfully maintained, this would have been perceived and rooted out. The church has sustained much loss from this source; many have thus been defiled, and those, whose eyes had been resting upon these as waymarks, have been discouraged when they have witnessed the fruit which this root has produced, and some have turned away sorrowful, doubting the faith of these, while with others it has given room for the enemy to vaunt himself. Sometimes little personal feelings in religious and other matters, have estranged those of the same faith;

hardness of feeling and jealousy have found place, and sad has been the result; when if the importance of "endeavoring to keep the unity of the Spirit in the bond of peace" had been sufficiently considered, this would have been prevented: these personal feelings would have been felt to be of little moment in comparison with this, and they would not have been cherished, but turned away from as something which if permitted to take root, would produce bitter fruit. The following remarks of a beloved and valued elder in our religious Society, who was a bright example, both in his private life and in the church, of "the meekness and gentleness of Christ," contain instruction on this point. "We are all subject to infirmities, hence the necessity of bearing and forbearing; we are, I think, told to pray one for another; the humble, contrite heart is not easily disturbed, but bears with patience whatever may befall; knowing its own weakness and sympathizing with others, it can pray for and forgive. This is an attainment very useful to be sought for and abode in. If we were all rightly concerned to seek for that which would bind us together in the bond of christian fellowship, we would be careful not unnecessarily to wound the feelings of others, and being humble would not be ready to take offence."

E. A.

Ninth month 25th, 1867.

India—Its Present Condition.

The most trustworthy estimate of the present population of India is as follows: British India, 144,674,615; native states, 47,909,199; French and Portuguese settlements, 517,149—total, 193,100,963.

According to official reports, the revenue of British India in 1865-6 was £18,935,220—an increase over the previous year of £2,282,323. The expenditure was £46,169,152, an increase from the previous year of £322,734. The surplus was £2,766,068. The previous year there was a deficit. Various reforms have been effected in the revenue system. There are now currency notes to the value of £10,000,000 in circulation. The money order system is becoming popular. The new excise regulations have sensibly improved the morals of some sections. There is talk of introducing postal savings banks.

The bridge over the Jumna at Delhi is finished, and trains now run from Howrah to Delhi, a distance of one thousand and nineteen miles. The time is fifty hours. Both the Great Indian Peninsula and the East India Railroads have an immense business. The work of planting trees for fuel will be resumed, as, after two years' experimenting, the coal of the Salt Range has been given up. The telegraphic system is to be extended and improved. It is proposed to remodel the Ganges Canal. A loan for the rapid completion of the irrigation system has been sanctioned. The Calcutta Park has been drained and lighted with gas. A great many new roads have been built in Madras and Bombay. The coal fields of Assam will soon be opened to private enterprise. Coal has been found at eleven different points in the Pench Valley.

A curious law has been passed to legalize, under certain conditions, the dissolutions of the marriages of native converts to christianity, who have been repudiated or deserted on religious grounds.

The prevalent distress has largely increased the number of thieves and robbers in Bengal and the Northwest. The courts of Oude are overrun with vexatious civil cases. Trial by jury works well at Lucknow, as do the "Small Cause Courts." In the Central Provinces the number of heinous

crimes is steadily decreasing. In Madras the worst evil is the open and universal gambling of the natives.

In Bengal, 290 new schools were reported, and the increase in the number of scholars was 10,734. The salaries of teachers have been raised, in the hope of attracting university men from England. The experiment of girls' schools in the North-west has not, as yet, proved entirely unsuccessful. There is talk among the natives of founding a university at Lahore. The censorship of the native press has been abolished, and several new papers and periodicals were reported. Vigorous efforts have been made to bring about a sanitary reform in the towns and districts ravaged by cholera and smallpox.

The preceding items of information, taken from a late journal, throw a little light upon the state of India at this time, and encourage the hope that some improvement is gradually taking place in that great and populous country. Although the British rule is far from being all that it ought to be in the judgment of the philanthropist and christian, it still has its redeeming features. The aspect of beneficence is not wholly wanting certainly, but what a boon it would be to a large portion of the human family, if it were more strongly marked in the measures and policy of the government of British India.

A Tender Conscience.—An old author has the following remarks on this subject: "Oh! for the high blessings of a tender conscience, such as shrinks from the approach, and abstains from all appearance of evil, not venturing to tamper with any self-pleasing way, but hating it as false, defiling, destructive. I have marked the apple of my eye, that tenderest particle of our frame, that it is not only offended by a blow or a wound; if so much as an atom of dust find entrance, it would smart until it had wept out. Now, may such be my conscience, sensitive of the slightest touch of sin, not only fearful of resisting, rebelling, or 'quenching the Spirit,' but grieving for every thought of sin, that grieves that blessed Comforter—that tender Friend."

Land Slide in Ireland.—Patrick Malone, parish priest of Belmullet, writes to a Dublin paper about an extraordinary convulsion of nature which occurred within eleven miles of that town a few nights ago. The "side of a mountain was raised from its bed, and suddenly breaking up into huge fragments, proceeded down the inclined surface, carrying destruction in its course, until it spent its fury in the waters of the Atlantic." The portion of mountain which broke up contained an area of about forty acres, and though the elevation was not more than one foot in fifteen, the great altitude from which the subterranean current descended accounts, he thinks, for the irresistible force which attended it. Hundreds of large fragments, some of them measuring two thousand cubic feet, are now, P. Malone says, to be seen thrown in on either side and strewn upon the undisturbed plain, without the appearance of water having accompanied them there. His explanation of the phenomenon is that the great drought of the preceding two months created a vacuum between the peat surface and its gravely substratum. The heavy fall of rain being pressed into the cavity produced the eruption. Several families had a narrow escape of their lives, some persons having been carried forward a distance on the moving and breaking ground. The bog debris is scattered over the crops of several poor men, a road is blocked by the fragments, a dale

closed up, and a valley created "where nothing but a mountain appeared before."—*Evening Post.*

"ONLY WAITING."

Selected.

A very aged man in an almshouse was asked what he was doing now? He replied, "Only waiting."

Only waiting till the shadows

Are a little longer gone;

Only waiting till the glimmer

Of the day's last beam has flown;

Till the night of earth is faded

From the heart once full of day;

Till the stars of heaven are breaking

Through the twilight soft and grey.

Only waiting till the reapers

Have the last sheaf gathered home,

For the summer time is faded,

And the autumn winds have come;

Quickly, reapers! gather, quickly,

The last ripe hours of my heart,

For the bloom of life is withered,

And I hasten to depart.

Only waiting till the angels

Open wide the mystic gate,

By whose side I long have lingered,

Weary, poor, and desolate,

Even now I hear the footsteps

And their voices far away;

If they call me, I am waiting,

Only waiting to obey.

Only waiting till the shadows

Are a little longer gone;

Only waiting till the glimmer

Of the day's last beam is flown;

Then from out the gathering darkness,

Holy, deathless stars shall rise,

By whose light my soul shall gladly

Tread the pathway to the skies.

KNOCKING AT THE HEART.

Selected.

One bid me turn aside,

Saying, He had a message I could bear

Best in some quiet place; but as I went

I heard the busy voices of the world,

And, listening to them, answered in my pride

I had no care for being interrupted

On keeping all my old companions near.

He called me once again,

Pleading that He had precious things to say,

Which he desired that I should understand;

Things which he would not tell to other men.

I said, that if I were too long away,

I could not join my company, and then

Should lose my place of honor in the band.

He told me I was ill;

That He saw time had chosen for His call

Because He saw my labor was too much,

And that I greatly needed to be still.

I answered, I was strong enough for all

That I had planned that morning to fulfil;

And so again shook off His gentle touch.

And yet I suffered sore:

My eyes were dim with weeping all the night;

A heavy burden preyed upon my mind;

I dared not look on the long way before;

I dared not look on the dark way behind;

Glad morning could not bring my spirit light;

The way of hope and peace I could not find.

I am grown wiser now,

And sadder with the knowledge of my loss

Of all the holy words I might have learned,

Of counsels whose sweet comfort would not cease.

Oh, if, alone with Him, I had but turned,

Had bowed in meekness 'neath the bitter Cross,

And found it change to blessing and to peace!

He is not far away;

For still, at intervals, I hear His voice;

I hear His footsteps coming to my door

And whisper that the music is the day.

Enter, O Lord! Oh! speak to me once more,

And I will list each word that Thou dost say

As humbly as a child,—and will rejoice.

—*Sunday Magazine.*

Lake Superior Iron.—The iron product of the mines adjacent to Lake Superior is one of the most interesting industrial subjects of the day. Three years ago it was stated that one-eighth of all the iron made in this country was dug in Marquette county. Ten years ago Lake Superior iron was mineralogical marvel. The Sault St. Mary Canal was opened in 1855, and iron shipments were then made for the first time. They have grown in this way:

	Tons.		Tons.
In 1855,	1,445	In 1861,	45,000
" 1856,	11,594	" 1862,	115,721
" 1857,	26,184	" 1863,	185,271
" 1858,	31,135	" 1864,	235,121
" 1859,	65,679	" 1865,	178,701
" 1860,	116,984	" 1866,	235,221

The product of the last year was really 396,261 tons, but a large quantity was sold to blast furnaces near at hand. The deposits in this region are great, and easily worked. All of the iron have easy access to water carriage, none being more than thirty-five miles from such transportation, while most are within thirteen. Freight Detroit or Cleveland is from two and a half three dollars per ton. Coal is abundant at the places, and these facilities sufficiently account for the rapid development referred to. Other localities have shared with Cleveland and Detroit the profits of this business. If the ratio of increase continues—and the increase of population and consumption warrants that expectation—it seems to be no good reason why ten years hence these cities may not have an iron business which will compare favorably with that of shipping some of the most important shipping ports of lakes.—*N. American.*

For "The Friend"

Will the editor of "The Friend" please insert the following appeal for the dumb, from *Country Gentleman*, an agricultural paper published in Albany? A gentleman suggests, in regard to meat brought from the West, that placing it in a close box, and surrounding it with cloths saturated with a constant stream of water, the quick motion of the car, with the air play upon nearly the whole of the surface, it would keep at a low temperature by evaporation,—thus bring to an end the cruelties practised the present mode of transporting cattle to East.

HUMANITARIAN.

"CRUELTY TO ANIMALS IN TRANSIT."

"Three ladies, now on a western tour, wrote to the *Country Gentleman*, begging its investigation of a subject that ought long ago to have received the attention of men,—namely, cruelty practised upon animals sent eastward by the railroads. They are informed that stock closely packed in the cars, frequently remain without food or water, or opportunity for change of posture, in the insufferably hot weather of dog-days, as at other periods of the year, for twenty-four to sixty hours on the stretch!"

"We have alluded to the subject before, and the result of the movement has been the passage of a law in this State, compelling it to be stopped at the necessary intervals, or stock, if necessary, to be unshipped, to give them food, water and rest from the constant jarring when in motion. The legislative authority of Ohio, Indiana and Illinois should imitate, as promptly as possible, as well as Pennsylvania and Maryland, through whose other leading lines are largely engaged in transportation of animals. On the Baltimore and Ohio Railroad, we saw, this season, a train loaded closely with hogs, for which the only refresh-

owed was a very imperfect deluge of water, at way station, occasionally, from the spout used replenishing the engines. There were no conveniences for accomplishing even this, in a satisfactory way; the water poured out about as fast as it went in, and so that very few of the crowded animals could get at it at all. It was really pitiful to see them thrusting their pouting snouts out, between the bars of their enclosure, in the vain hope of catching a few drops of the welcome water; and one of the attendants remarked, "they would be pretty much all *lard*, by the time they got to Philadelphia,"—a statement not over true, as any spectator would confess.

It is not alone humanity which should lead to greater regard for the comfort and health of the stock coming forward to the eastern markets; but, slaughtered as it generally is, without affording the animals any time to recover from the harsh and unwholesome internal condition and external bruises, to which they have been subjected, they cannot make proper food for human consumption. No one knows how much disease might be prevented, with greater care to ensure all articles of diet in fit condition; but we frequently hear of complaints about bad stale vegetables, much less is said with reference to the no less important subject of *hats*,—except when they become notoriously *unsuited*.

The Free Schools of Illinois.—The sixth biennial report of the Superintendent of Public Instruction of the State of Illinois, for the year 1865-6, 1866, has been issued. It is, in some respects, one of the most interesting documents that have been published by that State. We learn from it that 614,659 scholars were reported in all of the common schools of the State for the year ending September 30, 1866. These were under the tuition of 6,825 male and 10,454 female teachers. The number of school houses reported is 9,753, an increase of 589 over the previous year.

The two-mill school tax yielded \$750,000. This for the past eleven years has amounted to \$493,794.51; in addition to which upwards of \$5,000,000 has been raised for school purposes by local taxation.

The Congressional land grant for the promotion of agricultural and scientific education gives to the State of Illinois about five hundred thousand acres of land.—*E. Post.*

Selected for "The Friend."

Short Lesson for Teachers, and for Teachers of Teachers.

Moral and religious instruction derives its efficacy, not so much from what men are taught to know, as from what they are brought to feel." Y. W.

enth mo. 6th, 1867.

A Dog Story.—A surgeon at Netley, England, lately took a long walk in the neighborhood of Southampton, accompanied by his dog, a fine Newfoundland. In the evening he missed some papers from his coat pocket and his dog. The owner did not surprise him, as his dog often wandered from him in his walks. The next day, annoyed and puzzled at the loss of his letters, he thought it possible he might have drawn them from his pocket with his handkerchief during the previous day's walk. He resolved, therefore, to repeat the walk, for he might have dropped his letters in an unfrequented path. About four miles from the hospital he came suddenly upon his dog lying on the ground, with the letters close by. The dog had laid by the side of the letters sixteen hours.

For "The Friend."

One Session in Schools.

The one session system, as now existing in many of our schools, demands the serious attention of parents, teachers, and all concerned in the welfare of these schools. As now carried out it is injurious to the health of both teachers and pupils; injurious to the advancement of the latter; and interferes with the domestic arrangements of many homes. I believe all will admit that the health of our children is a matter of the first importance, and that all the arrangements of the school-room should be made with a due regard to the preservation of health; and yet I can conceive of no plan more calculated to destroy it than that of keeping young and active children confined in a close room from 9 o'clock in the morning till 2 in the afternoon,—five hours, poring over, or rather vainly endeavoring to pore over Webster, Brown, Greenleaf and Cicero, till their heads ache and their brains reel over the task. Let any one of mature years apply themselves, as children are expected to, in this way, and I am greatly mistaken if they will not soon discover that they are wholly unequal to do, even for a few days, what is required of their children year after year. It is true that five consecutive hours are not spent in the school-room—there are short intervals for recreation which are a great alleviation—but so far from curing the evil, they only prove the value of two sessions per day. For if a few minutes relaxation are so beneficial, how much more so would be the total suspension of all study for two or three hours?

I have had considerable experience in the school-room—often with a large school composed of pupils of various ages and abilities. A rainy day, good skating, or some unusual occurrence, would suggest to the pupils an excuse to have one session, and accordingly a deputation would come forward, to ask that the exercises might go on without the interruption of a "noon." The request was often granted, but I invariably found that when the usual hour for adjournment arrived, the spirit of the school began to flag, the pupils became restless and uneasy, and though anxious to push through, it was all up hill work, and mostly to so little profit, that I generally looked upon the time spent in school after the usual hour for adjournment as lost; and now upon looking back believe it would have been better to have dismissed my school at the usual hour, and drop the afternoon exercises entirely. To undertake to do the whole work of a day in the first half thereof, is about as rational as it would be for a farmer or a merchant to do the work of a week in the first four days, that he might have the remaining portion for rest. The farmer, the merchant and the mechanic, have to employ themselves all the day, and why should not the teacher and his pupil do likewise? By being employed all the day, I do not mean to spend more time in the school-room, but to spread it over the day from 9 o'clock in the morning to 4 or 5 o'clock in the evening, giving a couple of hours in the middle of the day to dinner and play, and suitable recesses besides. This would give ample time for calisthenic exercises, now so sadly neglected in most schools, though admitted by all to be of great importance; not only in a purely physical point of view, but as an antidote for that listlessness and want of energy so prevalent in many schools. I have heard some teachers say they have no trouble in keeping up the spirit of their schools; that all that is necessary is a proper rotation of exercises and a wide awake teacher. True, much can be done in this way, but it is at best a hot house system of forcing—the mental battery is excited

to renewed and constant effort when it needs rest—the medicine employed—but aggravates the disease, and the child returns from school completely worn out with his long confinement, his nervous system exhausted and no appetite for dinner, or else such an unnatural one that he is liable to injury by its indulgence. The balance of the afternoon the mother's utmost ingenuity and patience are taxed to find suitable employment or amusement for the child, for he is remembered they are heartily tired of books for that day, and in the city at least there are few out door sports to interest them, while to allow them the liberty of the streets would be moral poison. The next day it is the same thing over again, and so day after day, year after year, the poor child drags along, listless at school, enfeebled in health, pale and sickly, lacking that mental vigor which a proper and judicious mingling of study and recreation would give, but for which there is no time under the present one-session plan.

Fathers and mothers, look to it before it is too late! Depend upon it, your children will advance more rapidly in their classes and grow up more vigorous both in mind and body under the old regime than the new. Aye, if I mistake not, some of our schools would be more prosperous than they now are if they would return to the two session plan.

I have carefully observed the different effects of the two plans upon the same pupils, and the preceding remarks are the result of my experience both as a teacher and parent, and I offer them to the readers of "The Friend" hoping they will examine the subject carefully for themselves.

A.

What is Jute?

After such an event as a great and devastating fire, during which the public journals announce that a great many bales of jute were totally destroyed, we hear in many directions the inquiry, "What is Jute?" A remote notion seems to be entertained by some, that it is a kind of vegetable fibre resembling hemp, which is used as a substitute for that valuable material in the manufacture of ropes and cordage. Others possess an idea that it is fraudulently mixed with silk in the manufacture of silken fabrics; and not a few, that its sole use is in the manufacture of paper.

Jute is a name given first in India to a fibre comprising the inner bark, or liber, of two species of plants, called respectively *corchorus olitorius* and *corchorus capsularis*, belonging to the same natural family as the lime tree, from the inner bark of which the bast is derived, so well known to horticulturists as the material of "bast matting." The fibre, as prepared for the market, might easily be mistaken by the novice for hemp, but it is softer, more glossy, weaker, and under the microscope, more transparent, more slender, and apparently with thinner cell-walls.

The jute plant is an annual, varying in height from four to twelve feet, the stems being from three-quarters to an inch, and a half in circumference. Its leaves are alternate, elongated, and serrated at the edges, the two lower serratures being lengthened out into a slender thread. The flowers are small, and have five yellow petals. Jute is largely cultivated, especially throughout the Bengal Presidency, where its domestic manufacture occupies almost all classes of Hindoos. It has been estimated that the annual weight of jute manufactured in India is not less than 118,000 tons. Not less than 50,000 or 60,000 tons of jute fibre are annually exported to Great Britain, and the total production in India is estimated by Dr. Forbes Watson at not less than 300,000 tons.

That is, therefore, a very important staple in the commerce of India.

The great trade and principal employ of jute in India is for the manufacture of gunny chuts, or chuttees, for making bags. These gunny bags are the common coarse bags in which Indian produce is brought to the English market. This industry pervades all classes in Lower Bengal, and penetrates into every household. Men, women, and children find occupation therein. Boatmen in their spare moments, husbandmen, palankeen-carriers and domestic servants; everybody, in fact, being Hindoos—for Mussulmans spin cotton only—pass their leisure moments, distaff in hand, spinning gunny twist. Its preparation, together with the weaving into lengths, forms the never failing resource of that humble, patient, and despised of created beings—the Hindoo widow—saved by law from the pile, but condemned by opinion and custom for the remainder of her days literally to sackcloth and ashes, and the lowest domestic drudgery, in the very household where once, perhaps, her will was law. This manufacture spares her from being a charge on her family—she can always earn her bread.

There is scarcely any other article so universally diffused over the globe as the Indian gunny-bag. All the finer and long stapled jute is reserved for the export trade, in which it bears a comparatively high price. The short staple serves for the local manufactures, and, it may be remarked, that a given weight of gunny bags may be purchased at about the same price as the raw material, leaving no apparent margin for spinning and weaving—*Science-Gossip.*

For "The Friend."

Believing the following description of Thomas Elwood's ride in 1660, a few weeks prior to the restoration of Charles II., given by himself, may interest some of the readers of "The Friend," it is sent for insertion. He says: "I had been at Reading, and set out from thence on the first day of the week, in the morning, intending to reach (as in point of time I well might) where a meeting was to be that day. When I came to Maiden Head I was stopped by the watchman laying hold on the horse's bridle, and telling me I must go with him to the constable's, for travelling on Sunday. Accordingly, I suffered him to lead my horse to the constable's door. When we got there, the constable told me I must go before the warden, who was the chief officer of the town; and he bid the watchman bring me on, himself walking before. Being come to the warden's door, the constable knocked, and desired to speak with the warden. He thereon quickly coming to the door, the constable said: 'Sir, I have brought a man here to you, whom the watch took riding through the town.' The warden began to examine me, asking, 'whence I came and whither I was going.' I told him I came from Reading, and was going to Chalfont.

He asked me why I travelled on that day. I told him I did not know that it would give offence to ride or to walk on that day, so long as I did not drive any carriage or horses laden with burthens.

'Why,' said he, 'if your business was urgent, did you not take a pass from the mayor of Reading?'

Because, I replied, I did not know or think I should need one.

'Well,' said he, 'I will not talk with you now, it is time to go to church—but I will examine you further anon,' and turning to the constable.

'Have him to the inn, and bring him before me after dinner.'

The naming of an inn, put me in mind that such public houses were places of expense, and I knew I had no money to defray it, wherefore, I said to the warden: Before thou sendest me to an inn which may occasion some expense, I think it needful to acquaint thee that I have no money. At that the warden stared, and turning quickly upon me, said,

'How! no money? How can that be? You do not look like a man that has no money.'

However I look, I tell thee the truth, that I have no money, and I tell it to forewarn thee, that thou mayest bring no charge upon the town.

'I wonder,' said he, 'what art you have got, that you can travel without money, you can do more, I assure you, than I can.'

I making no answer, he went on and said: 'Well, well, but if you have no money, you have a good horse under you, and we can distraint him for the charge.'

But, said I, the horse is not mine.

'Ho! but you have a good coat on your back, and I hope that is your own.'

But it is not, said I, for I borrowed both the horse and great-coat. With that the warden, holding up his hands, smiling, said,

'Bless me! I never met with such a man as you before! What! are you sent out by the parish?' Then turning to the constable, he said, 'Have him to the Greyhound, and bid the people be civil to him.'

Accordingly, to the Greyhound I was led, my horse put up, and I put into a large room, and some account given of me, I suppose, to the people of the house.

This was new work for me; and what the issue would be, I could not foresee; but being left there alone, I sat down and retired in spirit to the Lord, in whom alone was my strength and safety; and of him I begged support, even that He would be pleased to give me wisdom and right words to answer the warden, when I should come to be examined before him again.

After some time, having pen, ink, and paper about me, I set myself to write what I thought would be proper if the occasion required, to give to the warden. While I was writing, the master of the house being come home from worship, sent the reporter to me to invite me to dine with him. I bid him tell his master that I had no money to pay for dinner. He sent the man again to tell me I should be welcome to dine with him, though I had no money. I desired him to tell his master that I was very sensible of his civility and kindness, in so courteously inviting me to his table, but I had not the freedom to eat of his meat, unless I could pay for it; so he went on with his dinner, and I with my writing. But before I had finished what I had on my mind to write, the constable came again, bringing with him his fellow constable. This was a brisk genteel young man, a shop-keeper in the town, whose name was Cherry. They saluted me very civilly, and told me they came to take me before the warden. This put an end to my writing, which I put into my pocket, and went along with them.

Being come to the warden, he asked me the same questions he had asked before, to which I gave him the like answers. Then he told me the penalty I had incurred; which he said was either to pay so much money or lie so many hours in the stocks, and asked me which I would choose. I replied, I shall not choose either, and I have already told thee I had no money; though if I had money, I could not so far acknowledge myself an offender as to pay any. But as to lying in the stocks, I am in thy power to do unto me what it shall please the Lord to suffer thee.

When he heard that, he paused awhile, and then told me he considered I was but a young man, and might not perhaps understand the danger I had brought myself into, and therefore he would not exercise the severity the law awarded me. It hopes that I would be wiser hereafter, he would pass by this offence and discharge me. Then putting on a countenance of the greatest gravity, he said: 'But young man, I would have you to know, that you have not only broken the law of the land, but also the law of God, and therefore you ought to ask Him forgiveness, for you have high offended Him.'

That, said I, I would most willingly do, if I were sensible I had offended Him by breaking any law of His.

'Why!' said he, 'do you question that?' Yes, truly, said I, for I do not know of any law of God, that doth forbid me to ride on this day.

'No, that is strange! Where, I wonder, were you bred? You can read can't you?'

Yes, said I, that I can.

'Don't you thus read,' said he, 'the commandment; Remember the Sabbath day to keep it holy, &c.'

Yes, I replied, I have read it often and remember it well. But that command was given to the Jews, not to the Christians, and this is not the day, their Sabbath was the seventh day, but this is the first day of the week.

'How is it,' said he, 'you know the days of the week no better. You need to be better taught.'

Here the young constable, whose name was Cherry, interposed, and said: 'Mr. Warden, the gentleman is right as to that, for this is the first day of the week, and not the seventh.'

This the old warden took in dudgeon, and looking severely on the constable, said: 'What! do you take upon you to teach me? I'll have you know, I'll not be taught by you.'

'As you please, for that, sir,' said the constable, 'but I am sure you are mistaken on that point for Saturday was the seventh day, and you know yesterday was Saturday.' This made the warden hot and testy, and put him so out of patience that I feared it would have come to a downright quarrel betwixt them, for both were confident, and neither would yield. And so earnest were they engaged in the contest, that there was no room for me to put in a word betwixt them. At length, the old man having talked himself out of wind, stood still awhile, as it were to take breath, and then bethinking of me, I turned, and said: 'You are discharged, and me take your liberty.'

But, said I, I desire my horse may be discharged too, else I know not how to go.

'Aye,' said he, 'you shall have your horse and turning to the other constable, who had offended him, he said, 'Go see that his horse be delivered to him.'

A way thereupon, went I with the constable leaving the old warden and the young constable to compose their difference as they could. But come to the inn, the constable called for my horse to be brought, which done, I immediately mounted and began to set forward. But the hostler, knowing the condition of my pocket, modestly said to me, 'Sir, don't forget to pay for your horse's standing.' No, truly, said I, I don't forget it, but I have no money to pay it with, so I told the warden before I sent him. 'I've held your tongue,' said the constable, 'I see you're paid.' Then opening the gate, he let me out, the constable wishing me a good journey, and through the town I rode without fail.

estation, though it was as much the Sabbath joy, when I came out as when I went in. I never thought arose in me as I rode away, that I had been preserved from doing or saying anything which might have given the adversaries of Truth offence against it, and against the Friends, and as I sprang up in my thankful heart, to the Lord my Preserver. It added not a little to my joy that I felt the Lord near unto me by his presence in my heart to check and warn me, and that my spirit was so far subjected to him as to be able to take warning."

With joy and thankful congratulations his friends at Chalfont, welcomed his return. They were anxious about him, knowing that he intended to be with them at meeting.

California Silk.

From the earliest settlements in this country up to the present time, public attention has at great periods been directed to the subject of raising. Indeed, this appears to have been one of the earliest and most successful industries introduced in this country, for it is related that it was made from material grown in Virginia was introduced by Charles II. at his coronation in 1551. Raising mulberry trees for rearing silk-worms was a useful industry in the early history of the colonies, and it was incumbent upon property holders by legislative action, and prior to the Revolution it was considered quite fashionable for ladies to devote their leisure moments to tending silk-worms. The non silk being sent to England to be manufactured. The State of Georgia was settled chiefly because its climate was deemed peculiarly suitable for raising silk, and liberal appropriations were made to the colony by parliament for its encouragement. A rich brochure woven from Georgia was worn by Queen Caroline as a court dress. In the Southern States the only ones insisted, for each of the older States have at various times been extensive silk raisers, but from various causes the industry has finally fallen into disre-

pute, although practically a failure in the Eastern States, this employment seems destined at no distant day to assume importance in the Pacific States, particularly in California. The climate of this western region is dry, warm, and equable, having all the requisites for success. Our exchanges with the State speak quite favorably of the new culture, and anticipate its development in time as an important industry. A pioneer in this enterprise is M. Louis Prevost, of San Jose, who, having had some previous experience in this line, and who, in his system of treatment has deviated somewhat from the usual manner of raising the worms, introducing improvements whereby time and labor are saved, and consequently increasing the prospects of making the business a paying

one of the most marked innovations on the old methods, is feeding with branches of the mulberry trees instead of leaves, a change which is to work admirably. Sufficient food can be gathered and distributed to 80,000 hungry worms by only three hours labor per acre; then the trees prosper better by cutting away a portion of the shoots entire instead of partially stripping all the twigs, while the leaves themselves retain their freshness much longer in that climate, by remaining attached to the stalk. It is the air in San Jose that remnants of the old and other offal are soon completely destroyed, so that in a room where 80,000 worms are reared on trays which are never removed for cleaning, the air is at all times entirely free from

The demand for the worm eggs, both for home use and exportation, is so great that M. Prevost decided this year to save no cocoons for silk, but has allowed all the larvae to undergo the full metamorphosis and pass through the crystal into the moth state. He estimates his crop at from 12,000,000 to 15,000,000 eggs, and three crops may be raised a season. The French and Italian silk masters do not preserve any larvae that are not hatched by the fourth day of incubation. M. Prevost hatched out all his eggs this year and kept each production separate. The first day's crop of worms and the twelfth day's as shown by the results, are equally valuable, the worms last hatched growing to as large a size, and the cocoons being as fine as from those that first left the shell. All these experiments go to show the superior vitality and the healthy condition of California worms over European.

William Garton "Being asked by a young man, that watched with him, how he did, he replied, 'I am the better to see young men come up in the truth.'"

A friendly person coming to see him, on his sick-bed, he put out his hand to him, saying, "Ah! thou lackest something: there be serious times."

Frugality is good if liberality be joined with it. The first is leaving off superfluous expenses; the last is bestowing them to the benefit of others that need. The first without the last begets covetousness; the last without the first begets prodigality. Both make an excellent temper. Happy is the place where they are found.—William Penn.

THE FRIEND.

TENTH MONTH 12, 1867.

OHIO YEARLY MEETING.

By accounts received of Ohio Yearly Meeting, we learn that it convened at Mount Pleasant last week; its first sitting being on the 30th ultimo. The Meeting of Ministers and Elders was held on the 28th.

The meetings for Divine worship on First day, the 29th, were unusually large, both morning and afternoon. They are reported to have been quiet and very satisfactory, a good degree of solemnity attending, both while silently waiting on the Most High, and while ministers were engaged in the exercise of their gifts.

The meeting for business was quite as large as heretofore, perhaps rather larger than last year. All the representatives from the Quarterly Meetings were in attendance except two, detained away by indisposition.

Samuel Cope and Ebenezer Worth, of Philadelphia Yearly Meeting, were present with minutes.

It was concluded to form a new Quarterly Meeting, in Iowa, composed of the three Monthly Meetings which have been established there for some time, and have become quite large. It is to be called Hickory Grove Quarterly Meeting.

We hope to receive a copy of the minutes before long, when we will furnish our readers with fuller information of the proceedings.

We take this opportunity to state, that the accounts spread abroad, that Ohio Yearly Meeting had divided and subdivided since the separation from it, that took place in 1854, are misrepresentations. As was the case within Philadelphia Yearly Meeting, so a few members withdrew from

Ohio Yearly Meeting, we think about three years ago, but we understand those thus leaving it have not held any meeting they call a Yearly Meeting, nor claimed to be Ohio Yearly Meeting, nor professed to disown any of those they were formerly associated with, as has been reported. Their number was quite small: what divisions may have taken place among them—if any—we do not know: their actions have nothing more to do with the standing and integrity of Ohio Yearly Meeting, than have those of the body that separated from it in 1854.

These separations, both in this and in other Yearly Meetings have given, and we apprehend, must continue to give the Society much trouble; and deep religious concern to all who are sincerely desirous to see Friends laboring together in the gospel as one body. It will be a time of rejecting to many a weary traveller, when the healing waters shall rise so as to cover the desert places, and that everything that moveth, wherever they come, shall live. If we would be instrumental in hastening the coming of that day, we must know every root of bitterness that may be secretly buried in our hearts, plucked up, and a willingness wrought to endure hardness, as good soldiers of Jesus Christ, and to suffer with his suffering seed.

Did Friends everywhere labor earnestly to experience the transforming power of Divine Grace, so as to have their natural propensities and will crucified, their spiritual ear acquainted with the insuasive voice of the Shepherd of the sheep, and their hearts given up to follow him, we cannot doubt that He would lead them safely out of the difficulties and defections of the present time, and restore paths of peace and holiness for them to dwell in. But the faith that is overcome by the world cannot effect this. Then let all who long to see the Society brought back to its primitive purity and dignity, strive and pray that they may receive or retain that faith by which the elders obtained a good report, subdued kingdoms, and wrought righteousness, and which is the gift of God.

In the present number will be found a communication on the existing fashion of one session of school in a day. We know not whence it comes, but we heartily endorse the sentiment contained in it, that children suffer from being too long confined at the desk. Young children should not be expected to remain in school more than from two to three hours in a day; after they are twelve years old, they will generally bear an hour more. In both cases, the time should be divided by at least sixty minutes for bodily exercise. We do not think it a matter of great importance, whether the school hours are before or after the common dining time, provided the pupils have the full sixty minutes, either consecutive or divided, to take nourishment and exercise.

From our own experience and recollections of our school-days and school-fellows, we apprehend there was quite as much evil resulted from keeping the scholars in the school-room from half-past eight to twelve in the morning, and from two to five in the afternoon, as there is now from the one session. The immature physical system of a child, especially the brain, cannot bear being long taxed, with attention to either study or work, without some penalty. Nature prompts the young to mobility and diversified application, and they should not be too long restrained from obeying her.

The idea of keeping a child in school merely to save parents or caretakers the trouble of watch-

ing over, and finding fitting amusement or employment for it, is hardly consonant with the best interests of either.

SUMMARY OF EVENTS.

FOREIGN.—Information has been received by the U. S. Treasury Department from an official source, that the wheat crop of Great Britain and Ireland in short in quality as well as in quantity. Competent judges estimate that it will fall about twenty per cent. below an average crop.

Garibaldi has issued an address urging all his followers to go to Rome. It is said the Papal troops have been beaten at Bagnara. Garibaldi refused to give his parole not to engage in hostilities against the Papal government, and consequently is detained under guard in Rome. The Pope's soldiers have asked the aid of the Italian government, but the latter refuses any troops. It is said that if a revolt breaks out in Rome the Pope will fly to Civita Vecchia.

In Paris, as well as throughout Europe, the political situation causes much distrust and uneasiness. A visit from the Emperor of Austria was expected at Paris during the present month.

It is rumored that there will be an immediate change in the Italian Cabinet, and Cialdini will take the place of Rattazzi at the head of the government.

It is reported on the continent that Napoleon has placed a note in the hands of the Emperor of the south German States, in which, after calmly discussing the last circular of the Prussian Cabinet urging German unity, he asks them to pledge themselves not to pass the Rhine and merge their countries in the new confederation of the north.

The Roman Catholic Bishops of the Austrian Empire have met in Congress and declared their opposition to any change in the Concordat.

Hungary will contribute from 1869, 33,000,000 florins annually towards paying the interest on the debt of the Austrian Empire.

Gen. Priu, the leader of the Spanish insurrection, has been banished from Belgium. General Luzaudi has received the nomination as Captain General of Cuba, and sails immediately for Havana.

The cession of the island of Caudia to Greece is still urged by Russia.

The latest advices from South America give no definite intelligence as to the result of the recent bombardment of the Paraguayan fortifications, but state that the Brazilian and Argentine fleet was lying inactive off Humaita, and that the land forces were making no preparations for any further movements.

Fenian disturbances continue, and rumors were prevalent in England of a new and wide-spread conspiracy. The London dispatch of the 5th says, there were apprehensions last night of a Fenian attack on one of the armories, and the proper measures were taken to guard against it. The Pan-Anglican Synod has issued an address condemning Rationalism, Popery, and Mariolatry, and seeking to promote unity in the Church.

The reciprocal treaty between the United States and the Hawaiian Legislature on the 2d of Ninth month, and was ratified by the king.

A Florence, Italy, dispatch of the 7th states, that the revolutionary volunteers were invading the Papal territory on all sides. On the sixth a detachment of troops sent out from Rome to the coast of Anagnina, was defeated by them and compelled to fall back towards the city.

A report is current in Paris that Prussia is disposed to support the demands of Italy in regard to Rome.

A dispatch from Aden, at the mouth of the Red Sea, announces that the pioneer steamers of the expedition for the release of the British captives in Abyssinia, have sailed from that port for the coast of Abyssinia.

A violent and most destructive typhoon has visited the harbor of Hong Kong, causing great loss and damage to the shipping.

On the 7th consols were quoted at 94½. U. S. 5-20's 71-76. Middling uplands cotton, 8½d. Orleans, 8½d. California wheat, 14s. 3d. per 100 lbs. Red wheat, 13s. 12d.

UNITED STATES.—*The Public Debt.*—The monthly statement of the Secretary of the Treasury shows the debt on the first inst. to be as follows: Debt bearing coin interest, \$1,745,196,141; debt bearing currency interest, \$461,074,681; matured debt not presented for payment, \$18,221,257; debt bearing no interest, \$405,497,377. Total debt, \$2,630,389,456; amount in the Treasury, \$135,112,009.24 deducted, leaves the debt, less cash in the Treasury, \$2,495,277,446.76, which is \$10,178,648.29 less than at the first of Ninth month last. During the month the debt bearing coin interest

increased \$29,508,400, and the debt bearing currency interest was reduced \$47,570,175.

The Currency.—On the first inst. the amount of United States legal tender notes outstanding was \$361,164,844; of fractional currency, \$29,864,713, and of national bank notes, \$299,064,655—total, \$690,134,223.

Philadelphia.—Mortality last week, 237; that of the week ending 10th mo. 6th, 1866, was 367. The mean temperature of the Ninth month, according to the record kept at the Penna. Hospital, was 68.21 deg., the highest being 86°, and the lowest 45°. The amount of rain during the month was 1.74 inch. The rain fall of nine months has been as follows: during the first six months of this year, 30.20 inches, in the Seventh month, 2.38 inches, in the Eighth month, 15.81 inches, in the Ninth month, 1.72—total 50.11. In the corresponding portion of 1866 the rain fall was 35.87 inches.

Reports from the military and naval forces reported yellow fever last week was 405. General Grant has issued an order authorizing those officers who are absent from their post in the Fifth Military District, to remain absent until further orders, in order to avoid the epidemic.

South.—It is stated that heavy rains have seriously damaged the crops in Florida and southwestern Georgia. Thirty thousand head of cattle, from Texas and New Mexico, were recently at Abilene on the Union Pacific Railway, one hundred and sixty-five miles from the Kansas State line. Gov. Swann has proclaimed the establishment of a new constitution of Maryland. He states the "verified" vote at 41,152 for the constitution, and 13,036 against it. The counsel for Henry Smith, charged with perjury in New Orleans, took exceptions to the case being tried before Assistant Recorder Dunn, on the ground "that he is a negro, is unrecognized by the laws of Louisiana as a citizen, and is, therefore, not legally an officer of justice." The Recorder overruled the exception, tried the case, and discharged the prisoner, as the prosecutor declined to testify while a "negro" was acting as Recorder. The prosecutor was then fined \$25 for insulting the court. General Ord has appointed a former slave and business manager of Jefferson Davis a major.

Mexico.—During the Eighth month 3,295,622 cwt. of wheat were imported into Great Britain, of which Russia supplied about 40 per cent., Prussia 19 per cent. and the United States 10 per cent., Egypt 5½ per cent., and Turkey 5 per cent.; the residue coming from France, Denmark, and other countries. The total shipment from San Francisco during the quarter ending 9th mo. 30th, were 1,492,441 sacks. The gold value of wheat and flour exported from San Francisco the present year is about \$2,950,000.

The steamer *Only Chance*, from Port Benton, Montana, arrived at Omaha on the 4th inst. with \$3,000,000 in treasure.

Sixty-eight thousand three hundred and ten acres of the public lands were entered at the Denver Land office in the Ninth month. Preparations were making for holding an agricultural fair at Denver this week. A fast freight line is to be established between the terminus of the Pacific Railroad at Denver and the West.

It is said that one-eighth of the iron and steel now made in the United States is from the iron ores of Lake Superior.

In Russian America a seam of pure anthracite coal over thirty feet deep has been discovered, and has been traced for a mile, near a glacier harbor, where there is an abundance of ice.

The Penobscot river, in Maine, which has recently been subjected to a survey by a body of United States engineers, it is reported by them, has its bed so full of sawdust and slabs from the lumber mills on the banks, as to exterminate the bass and salmon.

A hunter in Maine killed a hog 4½ feet long, weighing six feet in length, and weighing nearly four hundred pounds.

A tremendous gale occurred at Galveston, Texas, on the 3d inst., causing immense damage to shipping, houses and goods.

The branch cut at Charlotte, N. C., is soon to be put in operation for assaying purposes only. It is represented that working operations have been recommenced in the mines which were neglected during the war, and that the receipts of gold at this mine are on the increase, not only from localities in North Carolina, but from the contiguous States.

The Indians.—The head Chief of the Osage Indians writes from the Osage Nation, south of Kansas, to the officer in Indian Affairs that the tribe desires to remain on friendly terms with the United States government.

It is stated that the Crow Indians refuse to meet the Indian Commissioners at Fort Laramie next month.

Jefferson Davis.—A Richmond dispatch of the 7th

states, that the trial of the rebel ex-President will begin at that city on the 25th of next month. The accusation is stated, will admit the fact of leaving war upon United States, and will rest his defence upon the ground that being a citizen of a State his allegiance was due provisionally to that State, and not to the United States.

The Markets.—*New York.*—The following were the quotations on the 7th inst. *The York.*—American gold 1 U. S. sizes, 1881, 110½; ditto, 5-20, new, 107½; ditto, 10-40, 5 per cents, 100½. *Superfine State flour*, \$9.90. *Shipping Oil*, \$10.50 a \$11.50. *Michigan and Indiana*, \$3.20 a \$3.50; family and family extra, \$14 a \$16. *No. 1 Chicago spring wheat*, \$23.23; *wheat Michigan*, \$3; *California*, \$3.15. *On*, 7½ cts. *State rye*, \$1.70. *Western mixed corn*, \$1.13. *Cotton*, 20 cts. *Cuba sugar*, 12½ a 12½ cts. *hard refined*, 16½ cts. *Philadelphia*—*Superfine flour*, \$7.50 a \$8.50; extra, \$8.50 a \$10.50; family and family extra, \$14 a \$14. *Red wheat*, \$2.40 a \$2.70; *On*, 7½ cts. *Rye*, \$1.65 a \$1.68. *Yellow corn*, \$1.05, 70 a 77 cts. *Clover-seed*, \$9.25. *Timothy*, \$2.83. *The arrivals and sales of beef cattle* read about 2800 head. Prices were unsettled and rather lower, closing selling at 14 15 cts. for fair to good, and common 9 a 10 cts. per lb. About 8,000 sh. sold at 5½ a 6 cts. per lb. gross. *Hogs*, \$9.50 a \$11. *lbs. net*. *Baltimore*.—*Red wheat*, \$2.75 a \$2.85. *Low corn*, \$1.40; *white*, \$1.30 a \$1.32. *On*, 70 a 75 cts. *Chicago*.—*No. 1 spring wheat*, \$1.93. *Corn*, \$1.07. *On*, 54½ cts. *Chicaneau*.—*No. 1 wheat*, \$2.00. *On*, \$1.04. *On*, \$1.50. *St. Louis*.—*Wheat*, \$2.40 a \$2.65; *red*, \$2.25; *spring wheat*, \$1.97. *Yellow corn*, \$1.01. *On*, 56 a 60 cts.

RECEIPTS.

Received from I. Steer, O. P. per P. Hall, Agt., \$2, 41; from A. Boone, C. W., \$2 to No. 27, vol. 42; J. E. Forsythe, \$2; from J. H. Smith, \$2; from J. E. Forsythe, \$2; from J. Straton, O. P., \$4; from W. Wood, \$2.50, vol. 41; from E. J. Morris, for J. Coppo, O. P., \$2, vol. 41, and for W. G. Coppeck, \$4, vols. 39 and 40; from A. Cowgill, Agt., Io., for J. Thomas, \$2, 41, and for J. Hall, \$4, vols. 40 and 41; from J. Bates, per A. Garretson, Agt., \$3, vol. 41, from J. P. Garretson, Boarding School, O., per W. Hall, \$1, to 52, vol. 41.

WANTED,

A person to take charge of the Girls' nursery at W. town Boarding School. Apply to Elizabeth R. Evans, No. 322 Union St., Elizabeth, N. J., or to J. B. R. 702 Race St., Sarah A. Richie, No. 444 North Fifth St.

NOTICE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the of the Committee for the gradual Civilization and improvement of the Indian natives at Tusnessa, O. rangus Co., New York. Any person who is intelligent and mind drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., P. John M. Kaighn, Camden, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co., Pa. Joseph Scattergood, 413 Spruce Street, Phila.

TEACHER WANTED.

Wanted, a well qualified Female Teacher, of e and experience, to teach Grammar, History, & FRIENDS' SELECT SCHOOL FOR BOYS, in this City. For further information apply to

Thomas Lippincott, No. 413 Walnut Street, Philadelphia, or to 304 Arch St. Rebecca S. Allen, No. 325 South Fifth Elizabeth Rhoads, No. 702 Race St.

FRIENDS' ASYLUM FOR THE INSANE

NEAR PHILADELPHIA, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSHUA H. WATSON, M. D.

Notice is given for the Admission of Patients to be made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

Died, in this city on the 19th ult., ANS ON, wife of John Comfort, an excellent and amiable member of Buckingham Monthly Meeting, Bucks county, 93d year of her age.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

A RELIGIOUS AND LITERARY JOURNAL.

NO. 8.

'There has been much excitement for a few days past in this place, and many fears have been entertained, not by trading people only but by those who are out of business as to the result; but there certainly is a place of quietude under every storm, to be attained by the devoted christian, whose confidence is firm in this overlasting truth, The Lord reigneth.' By his overruling providence he can cause even the wrath of man to praise him, and it is promised the remainder of

wrath he will restrain. May my dear —, with myself, be increasingly engaged to love and serve him in our generation, and count nothing too dear to be parted with to evidence our gratitude to Him who loved us before we loved him. And if the impression is made upon the mind at times, that a full and entire surrender of our own wills yet remains to be effected in us, may we seek unto him who hath all power for ability to be faithful unto death, the death of the first nature, knowing the old man with his deeds to be crucified and slain, that thus we may be prepared to partake of that spiritual resurrection which those witnesses who have been planted with their dear Redeemer in the likeness of his suffering and death."

Chester Co., 9th month, 1867.

The Red Fox—The White Whale.

One day, in the snow time, as I was roaming the woods close by a Canadian river, after wild turkeys, I noticed a flock of mergansers,—thereabouts usually called saw-billed ducks, or sheldrakes,—swimming in a small air-hole that had remained open in the frozen surface of the river. There were four or five ducks, and the pool might have been about ten feet by six in size. I watched them for some time, as they kept stemming the current, but without any intention of wasting ammunition upon them. My attention was attracted elsewhere for a moment, and I was surprised on again looking towards them, to see a splendid red fox sitting at the upper edge of the little pool, where he could not have been more than a couple of yards from the nearest of the ducks. Presently he jumped up, and running to the other end of the pool, stretched out a paw, as if to seize one of them; but they were too quick for him, placing themselves well beyond his reach with a few strokes of their paddles. He was far too cunning to plunge into the water and risk being carried under the ice by the current; and the ducks appeared to be quite aware of this, for they did not make any attempt to rise, nor indeed did they seem to be at all uneasy at the proximity of their natural enemy. It was exceedingly interesting, not to say amusing, to watch the many stratagems of the fox to get at them. Sometimes he would lie down upon the snow and lash about him with his bushy tail, whimpering in a querulous and imbecile manner at being thus outwitted by simple water-fowl. Then a new idea would take possession of him, and he would start up and run round and round the pool at a tremendous pace, probably to try and get a chance at the ducks by flurrying them; but they knew too much for Master Reynard, and always edged away from him at the right moment. Tired at last of watching these manoeuvres, I "drew a bead" upon the fox; but my hands were numbed from keeping still so long, so that instead of hitting him in a vital spot, as I had intended, I only broke one of his forelegs, and away he went into the woods on three paws with amazing speed, while the ducks rose into the air at the report of the rifle, and flew up the course of the river in search of lonelier water. I followed the track of the fox for a mile or more, but had to give up the chase at last. The snow was flecked with spots of blood where he ran; and although the fox is not usually an object of sympathy around Canadian borders, yet I regretted much that I had not missed this one altogether, instead of maiming him, after all the amusement he had just afforded me by his curious pranks.

Among the creatures that visit the lower St. Lawrence is the white whale—*Beluga* of the naturalists. On a fine summer's day, when the water is blue and calm, these curious rovers of the deep may be seen basking with their backs just

above the surface, looking so like small icebergs that they convey an agreeable sense of coolness to the observer. At other times, and especially just about nightfall, they are very active, tumbling and splashing and spouting in every direction, as if in play. Often have I been startled by one as it rose, suddenly, and with a loud snort, close by the little yacht, while we lay at anchor for the night. I was told here that the calf, or young, of this whale utters a kind of bleating cry, and that the mother whales frequently carry their young ones upon their backs. Some few years ago I had an opportunity of verifying the truth of these statements by observing the habits of a white whale and her calf that were exhibited by M. Cutler, of Boston, at Jones' wharves, near New York. The calf used to throw itself upon the back of its dam, with a peculiar squeal, and remain there till carried several times round the tank. Brush wears are built by the inhabitants of these coasts for the capture of this kind of whale, which is generally called the white porpoise here. These wears are merely hedges of stiff brushwood, arranged so as to enclose a wedge-like space, with its wide end open to the river. The whales wander up into them, where they soon become embarrassed by the obstacles on either side, losing their reckoning at last, and "coming to grief" by being stranded up on the beach when the tide ebbs. They are not uncommonly from sixteen to twenty feet in length, and specimens have occasionally been captured which had attained the great length of forty feet—one of average size will yield about a hundred gallons of oil. A soft and excellent leather, well adapted for shoemaker's and other work, is now manufactured from their skins.—*Atlantic Monthly*.

For "The Friend."

Rule 26th in Comly's Grammar reads, "An adverb should not be placed between a verb of the infinitive mood and the preposition to which governs it." This rule is very harshly violated by many newspaper correspondents now, and I was sorry to see two violations of it in "The Friend" of 9th mo. 28th, in the extract from the *Leisure Hour* on the Vatican Testament. "To jealously exclude" for "jealously to exclude," and "to thoroughly examine" for "to examine thoroughly."

A SUBSCRIBER TO "THE FRIEND."

Phila., 10th mo. 8th, 1867.

Children's Feet.—Life-long discomfort, disease, and sudden death, often come to children through the inattention or carelessness of the parents. A child should never be allowed to go to sleep with cold feet; the thing to be last attended to, see that the feet are dry and warm: neglect of this has often resulted in a dangerous attack of croup, diphtheria, or a fatal sore throat.

Always on coming from school, on entering the house from a visit or errand, in rainy, muddy, or thawing weather, the child's shoes should be removed, and the mother should herself ascertain if the stockings are the least damp, and if so they should be taken off, the feet held before the fire and rubbed with the hand till perfectly dry, and another pair of shoes be put on, and the other shoes and stockings should be placed where they can be dried, so as to be ready for future use at a moment's notice.—*Late Paper*.

There is but one thing that deserves our highest care and most ardent desires, and that is, that we may answer the great end for which we were made, viz., to glorify that God who has given us our being, and to do all the good we possibly can to our fellow men, while we live in the world.—*Brainerd*.

The Awakening of the Birds.

Some birds rise much earlier than others. As a rule, those that live in the fields are much earlier, than those dwelling in the woods; and *pro contra*, the field birds go to bed earlier than the wood birds.

The robin is our earliest songster. While the stars still twinkle, and the first gray streaks of dawn have but just appeared, the robin wakes from his sleep, and pours forth his matin hymn. From all sides the songs proceed,—from the orchard and garden, from the edge of the neighbouring woods, and from the trees that fringe the brooks and ponds, you hear the joyous, ringing strains of this delightful songster. After singing for about ten minutes or so, the robin descends from his perch, and seeks his breakfast with an appetite sharpened by the morning air; yet you hear him throughout the morning, but not so often as in the early dawn. Then he puts forth his finest effort; and if you would fully appreciate his song, you must listen to his *matine* which he gives in the earliest light.

While the robin is yet singing, the two pewees awake, and mingle their mournful notes with the robin-concert. These notes, though so sad and plaintive, have, nevertheless, a pleasing effect, and the common pewee especially is welcome long after you have ceased to hear him in the broad glow of day, or even in the quiet evening you may listen to him in the early morning, the fresh air of which seems to have an electric effect not only upon him, but upon all the other birds besides.

Shortly after the robin has finished his song, rather while he is still singing, the bluebird heard saluting the morn with his soft notes. You seldom hear him during the hot summer days of June and July; but here, in the early morning he is the same gallant and musical fellow that was in March and April. Simultaneously with the bluebird the chipping sparrow awakes, and is so heard chanting his simple cricket-like song from the garden and lawn.

But now, as the light increases, and the dawn in the east gives evidence by their crimson hue that the sun is nearing the horizon, birds of sorts begin to awake. The sharp "speak" of the least flycatcher coming from the orchards; the king-birds make the fields noisy with their notes and the songs come so thick and fast that it is next to impossible to tell which was the earliest. The song-sparrows and the indigo-birds sweetly from their accustomed haunts, while the vesper sparrow delivers his delightful strains from the broad open pasture lands. This latter seems to take a fancy to singing in the dusk, although one may hear him at all hours, still preferring the dim morn or the quiet twilight. The bobolink is an early riser too, and his jolly jingling notes add much to the chorus of bird-voice that now chant so sweet a concert on every side.

The forest birds are now awake, and from dark, distant woods come the faint bell-like note of the wood thrush, our prince of songsters. The veery, and the rose-breasted grosbeak join in with him, and the woods soon ring with the notes of these three birds, who are unquestionably the finest songsters. The vireos, who have I awake some time, lend their sweet voices to the choir; and as the sun rises in the sky, concert each moment grows louder and louder. The golden-crowned thrush begins his bucolic song; the wrens, catbirds, orioles, warblers and sparrows all add their notes to the concert; and by the time the sun has lifted itself well above the horizon, all the birds are awake and in full song.—*American Naturalist*.

For "The Friend."

often hear the expression—we have had a meeting to-day—after having heard one of our favorite ministers address an attentive audience; but let us consider in what a good meeting consists; is it in much speaking? 'Tis true there are reasons when the overshadowing presence of the Holy Spirit is so sensibly felt amongst us, and our spoken is so powerful, as to arouse the careless and cause them to exclaim, "How low is this place! this is none other but the will of God, and this is the gate of heaven." Truly are highly favored meetings, but they are so rare, and if those in our small country who witness such perhaps not once a year, feel that these alone are good, how tried and discouraged they must often be as they journey to and from our silent assemblies where, perhaps, "two or three" only are gathered. But I fail to believe that to every sincere-hearted worshiper who thus assembles, the promise is fulfilled that He will be in the midst, and though we may have to wrestle long perhaps about the whole meeting, without feeling the presence of His presence, yet we must still believe He is faithful who hath promised, and that which has been fed with food convenient for us, we are strengthened to press on in the way of acquiring. But oh! how often to the rightly ordered mind at such seasons does He show himself by the breaking of bread, so that though no is spoken, we feel it is good to have been so. Let us then, my dear friends, be concerned for our part, and by watching unto prayer, we have learned in whatsoever state we are, there to be content, let us confidently believe that our gracious Father in heaven will not forsake us; do not first forsake Him; then may we feel that our assembling together has been, and that in the highest sense of the word—have had a good meeting.

10th month, 1867.

Farming in Minnesota.

correspondent of the St. Paul Pioneer gives following interesting account of a visit to an extensive farm in that vicinity:

After a pleasant drive of a few hours we arrived at the ground, and were cordially received, and taken into the midst of the harvesters. Joining at the most elevated part of the field, we looked long enough to take a view of the scene before us. The land owned by M. Dalrymple comprised 2,000 acres, of which 1,700 are in wheat, divided into three farms—a farm of a thousand acres, seven hundred and twenty acres of which are in one field, inclosed with a neat board fence. On the several farms the proprietor has had full sets of substantial buildings of sufficient capacity for one hundred men and about the number of horses. It is sufficient to say they are model farms, and all operated on the policy of wheat raising. It was only last May the 12th ult., that the machines were put into action, and the calculation is to have the whole seven hundred acres cut by the middle of the next week, which will be at the rate of 150 bushels per acre. By the 22d, five threshing machines and cleaners will be put to work in the field where wagons will load for the river depot, and in ten more days from that time this immense harvest will be offered at market.

To land upon which this crop was grown is a rolling prairie, and was broken up last year. The seed sown this spring from the first to the 1st of May. The crop was put in by the implement known as the broad cast steel sower, a

half dozen of which I saw under cover upon the premises.

This crop has been visited by the neighbors and their judgment is that there will be from twenty-five to thirty bushels to the acre. Take the lowest estimate and we have, on seventeen hundred acres of land, 42,500 bushels of wheat, which at present prices delivered at market, say one dollar and fifty cents per bushel, will amount to *sixty-three thousand seven hundred and fifty dollars.*

We take the above from an Iowa paper, the *McGregor Times*, and presuming the statement to be correct, it certainly gives a very favorable view of Minnesota wheat raising, and exhibits farming under very different aspects from that we are accustomed to in Pennsylvania and the eastern States generally.

It must however be borne in mind that by the operation referred to the virgin soil of the prairie is being robbed of the fertility of many years accumulation, and the process cannot be safely often repeated. In Minnesota and almost every where else judicious agriculture includes manuring and rotation of crops.

According to the newspaper statement, Dalrymple's first wheat crop more than repays the first cost of the land, buildings, fencing and improvements of all kinds, together with agricultural implements, farm stock, wages and all the expenses of tillage.

For "The Friend."

The following letter from Samuel Fothergill to the widow and children of Peter Andrews, who died while on a religious visit to Friends in Great Britain, has been sent to us by one of the descendants of the latter. It has never before been in print.

DEAR FRIENDS—The widow and children of Peter Andrews. With a heart affected with tender sympathy allow me to mingle my tears and sorrows with yours, on the mournful occasion of the loss you have sustained by the removal of so tender a relation. It is allowable to mourn for the beloved relations, for the most perfect example, even Jesus Christ, wept for his friend Lazarus—an example we are to follow with patience and resignation.

To be removed out of life, when far separated from his tender relations, that none of you could have the opportunity of paying the latest acts of love and friendship to him, is doubtless an addition to the sorrow such an awful dispensation justifies. But, dear friends, when we consider on the other hand, we are but strangers in this vale of tears, and eternity our final home and fixed habitation, to which we are all hastening; we must allow no new thing hath happened, though it may be new to you, being never before so tried. Yet the lot of all flesh is dissolution, and its time uncertain, far above our reach and comprehension, and the ways of Infinite wisdom and his judgments past finding out. If he gather a flower out of his own garden, while it is in bloom, who shall say to him, what doest thou? What may greatly tend to ease this humble trust, he is released from pain and sorrow, and admitted to rest in that city, none of whose inhabitants can say, I am sick. He hath left behind him a sweet sorrow, being dearly beloved by those who knew him. His conduct and ministry loudly proclaiming whose servant he was—even of the Prince of Peace. Happy, unutterably happy, is the lot of such as are gathered, whilst clothed with the white linen of saints, and their warfare accomplished and they victorious.

I trust many have stained their robes with advance of life, their sun set in a cloud of darkness. Herein may you find consolation and relief; he labored according to the will of God, and accord-

ing to his high pleasure, is fallen asleep. Let not, therefore, an unbounded grief for his removal be given way to. The tender connections are broke, but by one whose wisdom and truth go hand in hand forever; and inasmuch as it was your happy lot to bear so near a relation to so worthy a man, regard his memory; let him, though dead, be heard to speak; let your conduct be squared agreeable to what you knew to be his will and mind for you when living; beware lest any part of your conduct should contradict that reverence you ought to bear to his memory: that instead of the father there may be the son, and the God of the righteous generations bless you beyond your progenitors. I am particularly near in my spirit to you, and the more so as I am led awfully to reflect, what am I, O Lord, to be preserved to return to my beloved relations in peace and safety, when thy more precious servants are taken away; no more to those, nor to be seen by those to whom they are tenderly united. But we may remember it is a fixed truth respecting all visible things, however near and dear, they shall perish. But in this hath true comfort often arose, thou remainest, O Lord, through the years of all generations, an everlasting father to thy own children. Let therefore, dear friends, your hearts be established in quiet hope: pursue the footsteps of so worthy a husband and father: remember and fear his God; and may the stay and everlasting succor of his people be with you, a husband to the widow, and a father to the fatherless, and for you all a merciful Judge from his holy habitation.

I have in my hand several letters I brought for dear Peter, which I intend to return by the next vessel, and desire my near and true love, with well wishing, may be accepted by you.

From your sincere friend,

SAMUEL FOTHERGILL.

Important Discovery.—An invention has recently been patented for making glass from native ore, the silicate of iron, which exists in great abundance in different parts of the world. The columnar basaltic rock of the Palisades, Hudson river, and the famous Giant's Causeway, in Ireland, are formations of this ore in a crystallized and hence opaque condition. A factory at Newburg, N. Y., has been started to utilize this ore by the newly discovered process, and it is turning out ware of unequalled cheapness and toughness. Nails may be driven into solid timber with quart bottles of this manufacture, without risk of breaking. The cheapness with which glass may be made in this way will cause it to be introduced into a variety of new uses. Common window glass can be produced at prices below present cost; but whether the finer qualities of glass can be made in this way remains to be determined. The discovery is one of great importance, and is the work of American genius.—*Late Paper.*

Brevity.—Dr. Abernethy, the celebrated physician, was never more displeased than by having a patient detail a long account of troubles. A woman knowing Abernethy's love of the laconic, having burnt her hand, called at his house, showing him her hand, she said: "a burn."

"A poultice," quietly answered the learned doctor.

The next day she returned and said: "Better."

"Continue the poultice," replied Dr. A.

In a week she made her last call, and her speech was lengthened to three words: "Well,—your fee?"

"Nothing," said the gratified physician, "you are the most sensible woman I ever saw."—*British Workman.*

Humility.

For "The Friend."

He that shines with this noble grace, is a person whose high imaginations have been cast down; not by the force of moral precepts, but by the mighty weapons of the christian warfare; and who can say with the Psalmist, "Mine heart is not haughty, neither are mine eyes lofty"—"I have behaved and quieted myself as a child weaned of his mother: my soul is even as a weaned child." He thinks more meanly of himself than of others, and never abhors himself more than when he is most highly applauded—if you reprove him, he esteems it a kindness, and is not ashamed to own his fault or error—speak before him to another's praise, and he does not feel himself rivalled or eclipsed—tell him of some one that has fallen and become a scandal to religion, he mourns, and adores the freedom of restraining grace towards himself—inform him of some who calumniate him, you find him beforehand with his reproachers, for he has more ill to lay to his own charge than those you mention. His rest is not disturbed—the contempt of bad men does not deter him from, nor the applause of good men incite him to, the discharge of his religious duties—he loves his neighbor, not in proportion as his neighbor loves and speaks well of him, but in proportion to his worth, and as an immortal being—if he is obliged at any time to vindicate his character from unjust aspersions, it is with great reluctance, afraid lest he be talking like a fool—if he compares himself with sinners, he is ready to think himself the chiefest of them; if with saints, he apprehends himself the least of them—all he sees some excellency about the meanest of his fellow christians, in which himself is surpassed—his eyes are full of his own wants, and the perfections of other men.

In relation to God, how does he behave himself; He thinks that the blessings he receives from God, are above, and the trials which God lays upon him are beneath, his deserts—"I am not worthy of the least of all thy mercies," he cries. Instructed by this noble grace, he willingly submits his proud reason to divine revelation—persuaded of the great imperfection of his own righteousness, that he is but an unprofitable servant, he flies to the mercy, and submits to the righteousness of God, as the sole ground of his pardon and acceptance. He cannot dig, he cannot work, but to beg he is not ashamed.

Damascus.—This is the oldest city in the world. Tyre and Sidon have crumbled on the shore; Baalbec is a ruin; Palmyra lies buried in the sands of the desert; Nineveh and Babylon have disappeared from the shores of the Tigris and Euphrates. Damascus remains where it was in the days of Abraham—a centre of trade and travel, an island of verdure in a desert, "a predestined capital," with martial and sacred associations extending beyond thirty centuries. It was near Damascus, that Saul of Tarsus saw the light from heaven, above the brightness of the sun; the street which is called Strait, in which it is said, "he prayeth," still runs through the city; the caravan comes and goes as it did one thousand years ago; there is still the sheik, the ass and the waterwheel; the merchants of the Euphrates still occupy these "with the multitude of their wares." The city which Mohammed surveyed but was afraid to enter, "because it is given to man to have but one paradise, and, for his part, he resolved not to have it in this world," is to this day what it was of old.

A PINE TREE.

Selected.

A bandful of moss from the wood-side,
Dappled with gold and brown,
I borrowed to gladden my chamber
In the heart of the dusty town;
And there in the flickering shadow
Traced by my wine vine,
It aurs to life and freshness
The germ of a giant pine.

I turn from the cold-hosomed lilies,
Dewy the whole day through;
From the fluting torches of tulips,
Flame-like in form and hue;
From the gorgeous geraniums' glory—
From the trellis where roses twine,
To welcome this stately stranger—
This poor little exiled pine.

Out of this feeble seedling
What wonders the years may bring!
Its stem may defy the tempests,
Its limbs in the whirlwind sing;
For age, which to men come laden
With weakness and sure decline,
Will add only strength and beauty
And growth to this tiny pine.

Hark! is it an airy fancy?
The roar of its storm-wrung limbs—
Then the sigh of the tender tassels
To the twilight's zephyr-hymns—
The rain on its thick soft greenness,
When the spring skies weep and shine—
Oh, may and mighty the voices,
Haunting this tiny pine!

Shops, and the jar of machinery;
Mills, and the clatter of wheels;
Wharves, and the bustle of commerce;
Ships, and the rushing of keels;
Towns, and the hurry of living,
The murmur which none may define—
I see and hear as I listen
Watching this tiny pine.

I will take it again to the wood-side,
That, safe with its kindred there,
Its evergreen branches may broaden
Yearly more strong and fair;
And long after weeds and brambles
Grow over this head of mine,
The wild birds will build and warble
In the boughs of my grateful pine.

—Harper's Monthly.

MORNING HYMN.

Selected.

Jesus, Sun of Righteousness,
Brightest beam of Love Divine,
Wipe the early morning rays
Do thou on our darkness shine,
And dispel with purest light,
All our night!

As on drooping herb and flower,
Falls the soft refreshing dew,
Let Thy Spirit's grace and power
All our weary souls renew,
Showers of blessing over all
Softly fall.

Like the sun's reviving ray,
May Thy love, with tender glow,
All our coldness melt away,
Warm and cheer us forth to go,
Gladly serve Thee and obey
All the day!

O our only Hope and Guide,
Never leave us, nor forsake;
Keep us ever at Thy side,
Till the eternal morning break
Moving on to Zion's hill
Homeward still!

Lead us all our days and years
In Thy straight and narrow way;
Lead us through the vale of tears
To the land of perfect day,
Where Thy people, fully blest,
Safely rest!

Velocity of Electricity.—The sixteenth annual meeting of the American Association for the advancement of science was held recently. At of the session Dr. Gould read a paper on "Velocity of transmission of signals by the telegraph," which is thus noticed by the *Scientific American*: "Previous to the year 1849, it was supposed that the velocity of electricity through wires was too great to be measured. In that year, Sears C. Walker discovered, while measuring longitude, a perceptible retardation. Between Washington and St. Louis the velocity was found to be only 15,000 miles per second. On the marine cable between Greenwich and Brussels the velocity was only 8,000 or 9,000 miles. On the Atlantic cable, Prof. Gould found the velocity to be between 7,000 and 8,000 miles per second, being greatest when the circuit was made by two cables. Incidentally it was shown that the usual practice of telegraphers to increase the power of their batteries is entirely unnecessary and unwise. A single element is sufficient to produce the signal through 4,100 miles of the cable. The speaker mentioned the fact that he had transmitted signals from Valentin to Newfoundland with a battery composed of a percussion cap, a drop acid, and a morsel of zinc, and had also transmitted signals on wires from which the battery had been removed, by the previous charge alone. The insulation of the cables improved by time, and signals were sent most rapidly by alternating positive and negative currents.

One Drop at a Time.—Have you ever watched an icicle as it formed? You noticed how it one drop at a time, until it was a foot long more. If the water was clean, the icicle remained clear, and sparkled brightly in the sun; but if the water was but slightly muddy, the icicle looked foul, and its beauty was spoiled. Just so characters are forming: one little thought orling at a time, adds its influence. If each thought be pure and right, the soul will be lovely sparkle with happiness; but if impure and wrong there will be filial deformity and wretchedness. *British Workman.*

The Bower Bird.—We are all more or familiar with the industrious habits, method forecast of different animals—the ant, the bee, and the badger, &c.—by which they construct lodgings and lay up stores for future use. We had yet to learn that the creative and constructive talent of an animal could be carried far as to build for itself a play-ground or field more sport. Such a being is found in the bird of Australia, as described by M. Gould, his hand-book of the birds of that country. The traveller discovered several of these bower playing places on the ground, under the shade of the branches of overhanging trees, in the retired part of the forest; they differed considerably in size, some being a third larger than the rest. The base consists of an extensive and rather vext platform of sticks, firmly interwoven, a centre of which the bower is built; this, like platform on which it is placed and with which it is interwoven, is formed of sticks and twigs of a more slender and flexible description, the tips of the twigs being so arranged as to point inwards and nearly meet at the top. Inside the materials are so placed that the forks of the sticks are always presented outwards, by which argument not the slightest obstruction is offered to the passage of the bird. The interest of the curious bower is much enhanced by the variety in which it is decorated with the most colored articles that can be collected, such as

tail feathers of the Roseshell and Pennantian crabs, bleached bones, the shells of snails.

Some of the feathers are inserted among twigs, while others, with the bones and shells, are strewn about near the entrance. The propensity of these birds to fly off with any attractive object is so well known to the natives, that they always search the runs for any small missing articles that may have been accidentally dropped in a bush.

It has now been clearly ascertained that these iron bowers are merely sporting-places, in which the sexes meet and the males display their strength, and exhibit many remarkable actions. So recent is this habit, that the living examples, which have from time to time been sent to England, continue it even in captivity. Those belonging to the Zoological Society have constructed iron bowers, decorated and kept them in repair, several successive years.

For "The Friend."

A meeting of "Friends' Association of Philadelphia and its vicinity for the Relief of Colored edmen," was held at Arch St. Meeting-house, Philadelphia, the 10th of Tenth month, 1867, by appointment of the Executive Board—on whose behalf statements were made of the present condition of their work, and the engagements under which they have placed the Association for the support of schools during the current year.

From these it appears that about \$25,000 will be required for this purpose, should the schools remain open as now projected. An additional sum will be required for the continuance of their education of religious reading. It was also stated that no funds are now in the treasury applicable to these purposes. Much sympathy was expressed and encouragement given to the Board to continue their labors without relaxation; and the following Friends were appointed to give public expression to the sentiments of this meeting, and to aid the Executive Board in providing means required to carry on their work, and in securing the attendance of Friends generally at an ensuing meeting—to wit:

Thomas Williamson, Henry Hartshorne, Charles Adams, Edw'd Richie, Horatio C. Wood, Jonathan Rhoads, Charles Ellis, John S. Hilles, Geo. Scattergood, Richard F. Mott, John C. Allen, Geo. Balderston, John M. Sharpless, David Hill, John C. Tatam, George S. Garrett, Richard Acton, Samuel Emmon, Edw'd Bettle, Clarkson Appard, Aaron Sharpless, Benjamin Passmore, Geo. Knight, and Thomas Chase.

The Association then adjourned to meet at the same place at 7 1/2 o'clock on the evening of Thursday, the 5th of Eleventh month next.

JOHN B. GARRETT, Secretary.

The Friends named above, and the members of the Executive Board, are requested to meet at the committee-room of Arch street Meeting-house, on Friday afternoon, the 17th of 10th mo., at 4 o'clock.

From the "Christian Advocate."

Letter from Rome.

The eternal city bears the marks of age and of many transformations through which she has passed. The ancient city has disappeared, and only a few ruined monuments of her greatness and grandeur are to be seen. The Rome of the middle ages has left still fewer mementoes of her questionable splendor; and the modern city, dating back about three hundred years, surrounded by domy walls, and filled with churches, palaces, streets, and filth, owes all its grandeur to one

man, and lives under the shadow of his glory. As in France all its excellences reflect Napoleon, so in modern Rome all that is grand, and finished, and permanent, and perfect in architecture and arts, proclaim the name of their master, Michael Angelo, and it would not be very much out of place to confer upon this city the name of Angelo.

More books have been written on Rome than on any two or twenty cities that have ever been built, and hence, since so much can be said, the difficulty of writing a single letter that will convey any idea of its topography, ruins, churches, palaces, public institutions, works of art, catacombs, climate, and customs of the priests and people.

The Campagna, in the centre of which Rome is situated, is an extensive tract of undulating land, running in a direct line nearly thirty miles, from the Mediterranean on the west to the Sabine Apennines and the Cimbrin hills on the east. The city is unequally divided by the Tiber into two parts, and is built on the slopes of the seven famed hills of the ancient metropolis. It is entirely surrounded by high strong walls, irregular in form, and of many varieties of masonry, without any ditch, but crested with two or three hundred dilapidated towers, and entered by a dozen gates, which are closed at ten o'clock at night. The seven bridges which unite the two portions of the city are old structures. The most ancient of these is the Sublucian bridge, which was built by Ancus Martius in 114 A.U.C., and is the celebrated spot where Horatius Cocles withstood the army of Porsena until the Romans broke it down behind him, which heroic act made the bridge so sacred that it was unlawful to repair it without the express sanction of the pontiff. The ages of the other bridges run from 708 A.U.C. to A.D. 1863, the last date being a suspension bridge thrown over the Tiber a little below where the Triumphal, erected by Nero, stood.

The seven proud hills on which the eternal city once stood are distinguished by the ruins that crown their summits, rather than by any marked elevation. The extensive ruins of the palace of the Cæsars, in the midst of gardens, mark the Palatine, the seat of the earliest settlement of Rome. The Capitoline, on which stood the temple of Jupiter Capitolinus, is now occupied by the church of Ara Cœli. Between these two hills may be seen a portion of the Tarpeian rock, diminished in height to about thirty feet by the accumulation of soil at its base. The Esquiline is marked by the mouldering walls of the baths of Titus. On the Viminal is a portion of the ruins of the baths of Diocletian. The Quirinal is covered with buildings, including the pope's palace, which the present pontiff has meagerly furnished but does not occupy. The Aventine boasts of three churches, and the Cælian is surrounded by the magnificent basilica of St. John Lateran. These are the original hills which mark the limits of the city inclosed within the walls of Servius Tullius. The present city takes in as many more hills, and these are again surrounded by an amphitheater of hills of still greater pretensions to height and verdure.

The ruins of Rome are numerous and extensive, and belong almost exclusively to the imperial era. The sites of the early settlements, palaces, and temples of the period of the kings are identified chiefly by history, and the only remains to be seen now are the cloaca Maxima, built in 616 B.C., to drain the marshes of the ancient city. Part of it is in a good state of preservation, and is a monument of the massive architectural structure of that early day. The Mamertine prisons evidently belong to the same period, and were erected between

640 and 578 B.C. Their inner dungeons are immensely strong and fearfully gloomy. The priests claim that Peter was imprisoned here, and even point out the stone post, inclosed with iron bars, to which this "prince of the apostles" was chained. There is also still visible a part of the celebrated rampart and walls erected by Servius Tullius, B.C. 578.

Scarcely a fragment of the ephemeral works of the republic now stand. Its palaces and temples of brick have washed away, or are buried beneath the greater structures of the empire, and the solid military roads constructed by Appius Claudius, and called the via Appia, and a few ruins of tombs and temples, are the only monuments of the republic. The boast of Augustus that he found Rome of brick and left it of marble, indicates the architectural inferiority of the republic and the splendor of the imperial structures. The tombs, arches, columns, temples, aqueducts, theatres, and palaces of the later Cæsars are now the grand monumental ruins of modern Rome, and display the Latin taste for colossal architecture, as well as the influence of Greek art, which was introduced into Rome after the fall of Corinth and Carthage, and which was exhibited in the decoration of the palaces and temples and all the public edifices of Rome after this time. Augustus alone began the palace of the Cæsars on the Palatine, and filled the campus Martius, which is now the business heart of the city, with temples, porticoes, theatres, columns, and other public structures. On this spot are the massive walls which once inclosed the forum, in the centre of which was the temple of Mars Ultor, the columns of which are still standing, and indicate the splendor of that great edifice. Here, too, are three beautiful columns which belonged to the temple of Castor and Pollux or of Minerva Chalcidica; and all around are extensive ruins of the theatre of Marcellus, the portico of Octavia, the mausoleums of Augustus and of Caius Cestius. Here, too, is the master-work of Agrippa—the pantheon—erected 26 B.C., and is the best preserved of all the monuments of ancient Rome. It is more dilapidated than the pictures which we see of it indicate, but no one requires to ask what it is. Not very distant from this are the grandest ruins in existence—the coliseum—begun by Flavian in A.D. 70, and dedicated by Titus ten years afterward. It would occupy the space of several letters to merely catalogue the immense ruins of imperial Rome. It is most astonishing that one stone stands upon another, or that any trace of even the most splendid and enduring structure can be found, since for thirteen centuries they have been exposed to the storms and decay of time, to the harsher treatment instigated by the intolerance of bigoted christians, by the ignorance of the northern invaders, and by the extremities of war. During some reigns these magnificent monuments of Rome's greatness were treated as convenient stone quarries; then they were exposed to successive earthquakes and inundations of the Tiber, which swept away large portions of the city, and then they were wrapped in flames and left to the wanton destruction of princes and popes. They have withstood all these tempests of nations and nature, and still stand in silent grandeur to proclaim the glory of imperial Rome.

(To be concluded.)

The Great Tunnel of the Central Pacific Railroad, which has just been completed, is said to have been the last, the longest and by far the most costly of the excavations along the line of the road. It is one thousand six hundred and sixty feet in length, and was begun at the east portal on the 16th of

September and on the west portal on the 20th of September last, and the work upon it has therefore occupied about a year. The material which had to be drilled and blasted was granite of the hardest grain. As but a limited surface could be presented to the workmen, advantage was taken of a depression in the centre, and a working shaft of one hundred and fifty-nine feet was sunk so as to present four working faces. The average rate of progress with powder was about one foot per day to each face, or from twenty to thirty feet per week in all. In March last the company accepted the services of an experimenter in nitro-glycerine, which article was manufactured on the spot, wherever it could be used with advantage, and the average was increased to nearly fifty feet per week. The workmen, principally Chinamen, labored in three gangs for eight hours each, and proved very serviceable in this kind of work. At times the consumption of powder reached four hundred kegs per day. The Pacific Railroad is thus making rapid strides to a successful completion.—*Ledger.*

For "The Friend."

Yacht Excursion to Norway in the Summer of 1866.

From the *Friend's Quarterly Examiner*, of 4th mo., 1867, the following sketch is compiled. The excursionists appear to have had a pleasant time among the bays, mountains, glaciers, and waterfalls of Norway; and the incidental notices they give of our Norwegian Friends at Stavanger and other points, are interesting:

"We sailed from Sunderland direct for Stavanger in the yacht *Nereid*, (150 tons), on the 2nd of the Seventh Month. We were six in number, with a crew, &c., of fifteen persons; twenty-one in all. On the afternoon of the 4th we cast anchor in the harbor of Stavanger, in a small bay surrounded on three sides by the town; having been only fifty-two hours from England.

"Reier Reiersen, one of our kind Norwegian Friends, quickly discovered us, and afforded us much assistance both then and afterwards.

"The town has nearly doubled in size during the last fifteen years, and now possesses more than 17,000 inhabitants. Like all other places in Norway, Stavanger is built almost entirely of wood, the houses being neatly painted, usually white or buff color. The effect is pretty and clean.

"We at this time remained but two or three days at Stavanger, paying social visits, and attending their Fifth-day Meeting, at which about fifty were present, and on the following morning were preparing to continue our northward voyage, when our friends Joseph Buckley, William E. Turner, and Endre J. Dahl arrived from their religious visit to the Friends at Kvinesdal, who are, we believe, about fifty in number, and among them one or more who are ministers.

"Finding that J. Buckley and W. E. Turner were very desirous to prosecute their religious service, and that no opportunity was likely to offer which would enable them to cross the fjord, a distance of forty English miles, for several days to come, we waited a few hours for them, and taking them, with Endre J. and Maria Dahl, on board, we weighed anchor and skirted the eastern shores of the bay. The whole region to the east and north was one confused mass of tumbled mountains, excessively craggy and wild in their character, and from two to four or five thousand feet in height. The fjord was studded with a hundred islands, upon one or two of which were hills rising five hundred to a thousand feet above the water.

"As we sped over the calm waters with a delightful breeze, enjoying the picturesque scenery

and the interesting company of our friends, Endre J. Dahl related anecdotes of the bears and wolves which are still met with, though not often so near to Stavanger as formerly. One or two of these accounts may amuse our readers.

"A bear in that neighborhood, having at different times slain nearly forty head of cattle, it was determined to have a 'scall,' and for that purpose the people of the district were assembled to the number of many hundreds, who, forming themselves into an immense encircled, (each man being at first perhaps one or two hundred yards distant from his neighbor), inclosed a wide extent of country in front of the almost inaccessible buttresses of the mountain chain. The hunters gradually advancing towards a common centre, at length found themselves face to face with an immense bear, their long-sought enemy. Savage with his wounds caused by the bullets of his assailants, he could not break through the cordon of his enemies drawn every moment more closely around him; when, driven to extremity, he betook himself to the precipitous crags at the foot of which he was thus brought to bay. From ledge to ledge, higher and higher still climbed the bear, until at length a hunter, fearing he would escape, essayed to follow him up the precipice. It may well be supposed that the people below watched his course with breathless anxiety. His eagerness, however, led him incautiously to approach too near; the enraged animal suddenly turned and clutched him in his roving embrace; both lost their foot-hold, and fell sheer over the perpendicular wall of rock. Locked in the arms of the monstrous beast, as they fell through the air, the great weight of the bear of course caused it to be the undermost; and being dashed upon a pointed rock, it was killed on the spot, while the hunter, though roughly handled, escaped with life and ultimately recovered. It is understood that one of our Norwegian friends was present at this 'scall.'

"Another adventure was that of a young woman, who, while sitting on a 'boulder,' knitting and watching her cattle as they fed on the scanty herbage upon the rock-covered space between the mountains and the shore of the bay, had her attention arrested by a violent commotion among the animals under her care, and looking up perceived that a bear had fastened his fangs in the flesh of one of her cows. Seizing a stout stick which lay by her side, she immediately flew to the rescue; and, hitting Bruin a vigorous blow upon his snout, the savage brute forsook his prey, rushed at the girl, and felled her to the earth with a stroke from his powerful paw. Happily she was only stunned, and in a few moments recovering her faculties, she had the presence of mind to remain perfectly motionless as if dead. Bruin imagined that she was so in reality, and (as is often the practice with these animals) he resolved to bury her in a neighboring peat bog, and come at night to devour the savory food. For a time he stood watching her intently; and at length, pretty well assured that she was dead, he trotted off towards the bog, but after every few steps, stopped, looked earnestly at the prostrate form, and then, appearing to be satisfied, proceeded. He now began to scratch a great hole, in effect a grave, anything but agreeable-looking to her who it was designed should be its occupant. Still the animal was suspicious, and at intervals paused and looked round, and did not again continue his operations until he had satisfied himself that all was right. Meanwhile the girl gradually unfasted her dress in the intervals when the bear was busily engaged about his own arrangements. If he looked up she lay perfectly still.

But when all was ready, she seized her opportunity, slipped off her outer garment, and leaving it as her representative, darted behind a rock. Again the bear looked up, but seeing the dress apparently laid as when he left her, was content and again applied himself to his work. Then the girl ran for shelter from rock to rock, never moving from one hiding place to another until she was sure the bear was preoccupied by his grave-digging; and ultimately gaining the farmstead where she lived, roused the inmates, who arming themselves with guns and pitchforks, rushed to the scene of action; but the bear was gone; he found out how he had been cheated, and such was his fury at the discovery, that he tore the girl's clothes to shreds, so that, as the narrator said, 'not one single piece was left of the size of a hand.'

"In the evening we anchored under a bay, isolated arch, probably a thousand feet in height which divides Stangfjord into two portions, and is situated a few miles from Slodvig, the residence of our friends of that name. After breakfast all proceeded in two boats to Slodvig, and partook of lunch, including delicious 'sour milk.' We dined in the same dish, as in the times of old Anders Slodvig's farm is in a delightful situation in a region not very unlike the Troscachs, a number of butterflies were fitting in the meadow; among them Pearl-bordered Frillaries, Blues and others. We here parted with our friend J. Buckley, W. E. Turner, and the Dahls, an returning to the ship, left Stangfjord with spangling breeze."

After passing through a deep and narrow channel, so close to the houses on the rocks that border it, that the sailing master thought he could have leapt in at the window of one of them, we entered Hardanger fjord, on the right of which a mountain range crowned with perpetual ice and snow, stretched in unbroken sweeps of dazzling whiteness for thirty miles in length and twice in breadth, at a height of more than five thousand feet above the sea. From the upper snows this range descended a glacier with an icefall probably three thousand feet in perpendicular height; its tumbled and contorted surface quietly pure and spotless, with crevasses of a lovely blue. They navigated the fjord to the village of Odde, at its extreme southern end.

"While we remained at Odde, the Lutheran priest, who only comes there 'once in a while' to hold a 'service' in the church building, to which the people of the whole region for ten or twelve miles round appeared to come. As we watched from our vessel, which was moored in front of the village, it was interesting to observe one boat after another glide from out the numerous little bays of the fjord, and in quick succession ground up to the beach and discharge their living freight, until scores of them were ranged side by side front of the 'church.' Probably five hundred people were thus assembled; but as only a couple of hundreds could find accommodation within the building at once, the succession of 'services' continued for several hours. After holding a usual meeting on board, at which during the voyage the whole of the officers and crew were disengaged usually assembled at eleven. First-day mornings, we were rowed ashore, and distributed several hundreds of Friends' tracts to the people. They were accepted with pleasant smiles; the recipients extending their hands in expressing their acknowledgments by saying, 'in the language of the country, 'thanks.'"

"We are told that, a few years ago, at the time of the service in the church of Roldal, a young man, whose heart the Lord had opened to us,

the scriptures, entered into conversation the Lutheran priest, which ended in a discussion upon the subject of 'ordinances,' the expressing his belief that they were not in any with the spirituality of the gospel distinction. The people gathered round much in the argument; and at length the hard pressed by his youthful opponent, 'You are a Quaker!' The young man not heard of the Quakers, but at once took point, obtained Friends' tracts and books, and the instrumentality of a colporteur who specially visited the valley, and the result was twelve out of the twenty families in Roldal are Friends. They have now a good meeting house."

It is encouraging to find that earnest persons in the secluded valleys of Norway are thus from time to time induced to separate from the State, and assemble in silence before the Lord. Other's houses, not knowing that any else should hold the same religious views. An instance is occurred at Sand, about fifty English from Stavanger."

Wherever we anchored, men and women came aside in boats, offering sheep, or milk, or venison or other fish, for sale. The men especially seemed much to admire the schooner, which in an unwonted manner thus invaded the quiet of their grand fjord a hundred miles from sea; for during the voyage we several times rated further than any English yacht had previously done. * * * We had supplied ourselves with dance of Norwegian tracts and books, a stock which our Stavanger Friends always have on hand, and as almost every one can read and write, seemed to be appreciated; for it is a curious situation, and not a bad one either, that by the gift of the land "no man may marry unless he read!"

At Bergen we attended the meetings of Friends the First-day. About twenty five were present one of them are in actual membership. A young Friend from Roldal was undergoing fifteen solitary confinement in the fort at the time of our visit for refusing to bear arms; but only a few days were thus unexpired, when he would be fitted to return to his home. Bergen is a town of forty thousand inhabitants, beautifully situated upon its land-locked fjord, and fringed by craggy mountains two thousand feet high. As we lay at anchor near the Custom-house, however, a lively aroma of dried herrings and stock-fish at times pervaded the atmosphere, the result of the very numerous warehouses filled with these commodities which line the shores of the harbor on all sides, and which are thence sent to Spain and Portugal, and to South America. After a few days' stay we proceeded towards the great Sogne fjord, the longest in Norway, penetrating inland to a distance of a hundred and thirty English miles. Small flocks of elder-ducks, an occasional great northern diver, besides black guillemots and red-throated loons, were swimming in the narrow channels of the rocky islands which everywhere abound. Sogne fjord is in latitude 61°20' north, and in summer the sun does not descend far below the horizon. For a whole month it was comparatively light at midnight, and we never needed candles. When about fifty miles from sea we entered into a narrow branch called Fjerdalsfjord, in which we sailed for about ten English miles, and were obliged as usual to anchor at its mouth close to the shore, on account of the great depth of these waters, which is understood to be almost everywhere six hundred feet. Our commanding a view of five glaciers descend-

ing from an extensive region of immense mountains, estimated to contain four hundred square miles of perpetual snow and ice. We are not aware that these glaciers have been examined by any scientific person; the Supelle glacier excepted, which Professor Forbes has described, and which he tells us is the largest and most remarkable glacier remaining in Europe. It descends, according to Forbes, to within a hundred and fifty feet of the sea level; and it was curious to observe many sea gulfs flying around and over it when we ascended it. It is called a 'glacier remanie' because the whole mass of ice of which its lower portion is composed is first precipitated in avalanches over a crag eight hundred or a thousand feet in height, and is then re-formed into a vast glacier (like that of the Rhone) sweeping down into the bottom of the valley. Our sailing-master measured the altitude of the upper icefall, and by his calculations, estimated it at three thousand eight hundred feet. The portion of glacier above the central precipice is excessively disrupted, and stood out against the bright blue sky in shattered snowy pinnacles and towers, while its 'crevasses' rivalled the sky itself in blueness. We ascended for many hundreds of feet upon the ice, and stood in front of the walls of rock over which the avalanches successively plunged. One of these was remarkably grand. Its roar reverberated through the glen like thunder, as pouring in a cataract of ice ground almost to powder it looked like a feeble cascade of water; the last great leap it gave being perhaps four hundred feet in height by two hundred in width. The mountains of this district appeared to be chiefly composed of gneiss and mica schist."

On a former visit, when in the neighborhood of Høeg, "a pair of golden eagles sailed slowly off a rock about twenty feet above the road, and within ten to twenty yards' distance. Nothing could have been easier than to have shot them both with a couple of barrels. So deliberate were their proceedings, that we could perfectly see the coloring of each feather, and had time minutely to examine their mode of flight. This was accomplished, not by frequently flapping their wings, but by keeping them outstretched and rowing themselves forward, using each of the secondary quill feathers as an oar in the most regular succession. It was a beautiful and instructive sight; and thus they sailed with even flight over the valley, only giving a flap with their wings at long intervals; and gradually rising, they soared round a conical snow-covered peak, at each gyration increasing their elevation until at length they were lost in the sky."

Flexible Stone.—A great geological curiosity has just been deposited in the museum of the Hartley Institution at Southampton, England, consisting of a piece of flexible stone about two feet long, seven inches wide and more than one inch in thickness, having the appearance of rough sandstone, which bends with a slight pressure like a piece of India rubber or gutta serena of the same size. This interesting specimen of geology has been placed in a glass case constructed for it, fitted with a lever, by touching the key of which on the outside of the case the flexibility of the stone is shown. It was presented to the Hartley Institution by Edward Cusden, from his relative, R. S. Munden, who obtained it from Delhi, India. In its natural position the stone is said to run in thin layers in the soil in which it is found, but it is so rare in India that it finds a place in the museums at Calcutta. There is a similar stone, but not so wide as the one under notice, in the British Museum, and another in

the museum of the School of Mines, but specimens are very rarely to be met with. Although the stone has a gritty appearance, no grit or dust is thrown off by the motion given to it when under pressure.—*Evening Post.*

THE FRIEND.

TENTH MONTH 19, 1867.

We are glad to learn, by the different published accounts from the peace commissioners appointed by the general Government to treat with the hostile Indians, there is reason to believe that a general pacification may be effected. A general council is about to be held near Fort Larned, to which the various tribes have sent representatives, there being, it is said, about five thousand lodges at the place of rendezvous. The runners dispatched some weeks since to invite those who had commenced hostilities to meet the commissioners, are reported to have been generally received favorably, nearly all expressing a willingness, if not desire, to stop fighting and try once more to enter into treaty with their "great Father."

The great evil and injustice of which they make bitter complaint,—beside the cruel murders committed on their women and children—are the infraction of former treaties, and the extension of the Pacific railroad, with its different branches, across the far western plains, where the buffalo roam and feeds. They allege, as is no doubt true, that the laying of the railroad track, the running of the cars, and the necessary accommodations of this mode of travel, must inevitably drive away the herds of these animals that now pass from one section of those plains to another, and thus the Indians be deprived of the food on which they mainly depend for life.

It is not to be wondered at that these poor children of the wilderness, who have never learned to subdue the earth and raise their food from it by the sweat of the brow, should regard with anger and dismay the encroachments of a superior, because civilized race upon their loved and long possessed domain; especially as past experience has taught them that with the onward march of the more powerful and dominating "pale face," the degradation and destruction of the savage, roving, improvident red-man keeps equal pace.

Too often a slave to his natural propensities and passions, the ignorant, indolent Indian lives for himself alone, striving to satisfy the necessities of the present hour with as little labour as possible, and when he has obtained enough for that, making little or no provision for the future. Thus dependent almost wholly on the spontaneous gratuity of nature, he takes what she may bestow, revelling amid her abundance, but from sluggishness or want of thrift, left to starve when she withholds her bounty.

When we reflect that the remnant of the numerous tribes that once occupied this vast country in which we dwell, have been pushed further and further west, as wave after wave of immigrants rolled on and wrenched from them, by fraud or force, millions of broad acres inherited as their patrimony; and that they now see the last reserve of a continent, once possessed by their forefathers, invaded by the insatiable whites and likely to be fleeced or torn from them; we may readily understand the fierce anger it must kindle in their sensitive and unlightened hearts, and the murderous raids by which they have sought to glut their revenge. We should not forget that the Indian is an untutored child of nature, with no outward teaching how to overcome and govern himself, or

to subjugate the material world around him so as to make it contribute to his support and enjoyment. He knows but little of the blessing of well directed labour, or the refining enjoyment of social intercourse. Above all, a knowledge of the glorious truths of the gospel as declared in Holy Scripture, have, in the providence of the Almighty, been withheld from him; and though he has not been left without the gift of divine grace sufficient, if obeyed, to bring him salvation, and he is susceptible of noble impulses producing actions that rise to the dignity of virtue, yet his mind is cramped, his reasoning power undeveloped, and his code of morals debased by ignorance and superstition.

It is the duty, then, of the Government and its agents, as they claim to be his superiors, profess to be the possessors of a divine religion, and examples of civilized education, in dealing with the poor, heathen Indian, to show their superiority by conduct consistent with the christian civilization which produces it, and commend the loving, saving gospel of Christ through its fruits manifested in themselves. There is ample evidence afforded in the changes produced by the kindly labours of christian people among some of the tribes that once had their habitations on the Atlantic slopes of the Alleghenies, that the aborigines of our country are keenly alive to the influence of disinterested friendship, and susceptible to religious culture and the refinement of civilization. Again and again the savage heart has been subdued by christian love and kindness, and though snarling under wrong, has consented to deny its natural promptings to revenge and cruelty. Whole tribes have consented to give up their nomadic habits, to cultivate the soil, and live in law-abiding communities. But too generally they have been repelled from christianity and more firmly attached to their barbarism, by the wickedness and perfidy of most of the whites with whom they have been brought into contact, and by the determination manifested by officers of Government to deprive them of their homes and hunting grounds. Now is an opportunity to convince them that as christians we are not only willing to confess they have been wronged, but to make ample amends for the wrongdoing; that the Government is not only strong but generous, will ask nothing for which it will not make ample remuneration, and will employ its power and its resources to do justice to them and secure peace, safety, and the enjoyment of comfortable homes. If they should be thus treated, we have not a doubt that hostilities will be stopped, and the right of way for the railroad be peaceably granted. The hitherto implacable warriors and braves, touched by the humanizing principles displayed, will consent to bury the tomahawk forever, and the moral and financial disgrace that now rests upon the course of our country towards these poor people may be removed; forgotten, indeed, if a christian policy is persevered in, and the remaining children of the forest made to feel the superiority of the white man and of his religion, by the strict justice dispensed and the other benefits bestowed.

SUMMARY OF EVENTS.

FOREIGN.—The North German Gazette says, in its issue of the 12th inst., that Bismarck is firmly convinced of the French Emperor's desire for peace.

Prince Hohenzollern, chief minister of the Bavarian Cabinet, has made a speech in the diet, in which he discussed the question of German unity, and indicated the position of the government. He declared the true policy of the Bavarians was to seek a union with the North German States under the presidency of the King of Prussia, and at the same time to establish a firm and enduring alliance with Austria.

The arrangements are completed for a meeting between the King of Prussia and Napoleon, at an early day, in Baden. The competition between the English and American safe manufacturers, has resulted in the success of the latter, the jury having decided in favor of the safe made by S. E. Herring, of New York.

Affairs in Italy are very grave. The Italian government is bound by treaty with France to respect the temporal rights of the Pope, but almost the whole nation, it is stated, seems disposed to follow the lead of Garibaldi, the latter, the jury having decided in favor of the safe made by S. E. Herring, of New York. A Florence dispatch reports the arrest of Menotti while engaged in carrying out his father's plans for the invasion of the Roman territory. Cardinal Antonelli has addressed a note to the European Powers expressing the Italian government's disapproval of the continuance in the revolutionary movements against Rome. The Roman territory has been invaded at a number of points by the revolutionists, whose plan, it is supposed, was to draw the soldiers away from Rome, and give their friends in that city an opportunity to rise.

The Vienna city government has presented a petition to the Austrian Emperor, praying for a revision of the Concordat with the Pope. A bill for abolishing the Concordat has been introduced in the Austrian Reichsrath. This movement is earnestly opposed by the Roman Catholic Bishops, and is also objected to by the government on the ground that it would be unconstitutional and not a law, and hence is not a proper subject for the cognizance of the Reichsrath. The emperor refuses to change the Concordat.

A London dispatch says, it is the general belief that the government will call Parliament together on the 19th of next month. The Fenians are restless and cause some anxiety in the north of England as well as in Ireland. The apprehensions of another Fenian landing have subsided, and the war vessels which have been guarding the Irish coast for some time past will, it is stated, be withdrawn, with the exception of two ironclads. The Times officially declare that Lord Derby has received a commission as deputy of the Ministry, or that he contemplates doing so. On the 12th the quotations were as follows: Consols 94½. U. S. 5-20's 71½. Midling uplands cotton, 8 3-16d. Orleans, 8½d. Breadstuffs firm, white California wheat, 16s. 9d.; western red, 14s. 8d. per 100 lbs. The Manchester advices were unfavorable for cotton, and the quotations for goods and prices have a declining tendency. Much fault is found with the selection of Edward Thornton, Minister to Brazil, to represent Great Britain at Washington. The opinion is generally expressed that none but a diplomatist of the highest rank should be sent to the United States.

A London dispatch says, that the Chinese rebels are making progress and seriously threaten Peking.

UNITED STATES.—Pennsylvania.—At the recent election in this State, Judge Sharswood, the Democratic candidate for the office of Judge of the Supreme Court was elected by a small majority, probably less than 1000. The next Legislature will be composed of 20 Republicans and 13 Democrats, in the House of Representatives of 54 Republicans and 46 Democrats.

Ohio.—At the late election a majority voted against conferring the right of suffrage on colored persons.

Philadelphia.—Mortality last week, 205. In the week ending 10th inst., 156. At the late election 101,698 voters were polled. The number of registered voters is about 144,000.

Miscellaneous.—The New Orleans Commercial Bulletin says that persons capable of judging estimate this year's crop of sugar in Louisiana at one hundred and ten thousand hogsheads. This is about one-fourth an ante bellum crop.

The colored juries in North Carolina, empaneled under the orders of General Canby, are giving satisfaction to the bar generally. Ex-rebel Governor Vance of that State was the first prominent lawyer to address them as "Gentlemen of the jury."

The Tennessee House of Representatives organized on the 8th, and James Sumner, colored, was elected assistant doorkeeper over white competitors.

The yellow fever in New Orleans appears to be abating. The deaths from that disease during the last week ranged usually from about 40 to 50 per day.

The population of the Sandwich Islands is estimated at 25,000,000 persons.

The mental capacity of the native African is shown in a very favorable light by a recent case in England. James Solomon, a pure African from the Gold Coast, went to England some years ago to be educated, having received no teaching save what he obtained from a native school. This young man has just taken a first-class

certificate in the Oxford middle-class examination, and is about to matriculate at the London University.

Large quantities of seven-thirty bonds, sent to Washington to be exchanged for five-thirty bonds, have been discovered to be counterfeit. The bonds are said to be the best counterfeits ever executed. The brokers and bankers of New York and Washington have suffered heavily by purchasing the spurious bonds.

The King of the Fijee Islands has ceded to the United States three small islands in a group, one of which passes a fine line between the United States and the United Kingdom. The protectorate of the Fijees was offered the United States, but Capt. Stanley, of the United States steamer Tuscarora, to whom the offer was made, declined to accept it, not having sufficient authority.

The King of the Sandwich Islands has ratified the treaty with the United States, and it has been forwarded to Washington.

The Markets, &c.—The following were the quotations on the 12th inst. New York.—American gold 14 U. S. sizes, 1881, 112; 1042, 5-20, new, 107; 107, 10-40, 5 per cents, 100½. Superfine Sugar, 19¢, 19-85. Shipping Oil, \$10.50 a \$11.50. Ind. Indiana and Michigan, \$12.30 a \$13.50; finer brn \$14 a \$16.80. No. 1 Chicago spring wheat, \$2.31; \$2.42; No. 2, \$2.28 a \$2.36; amber Michigan, \$2.15 white Tennessee, \$3. Western oats, 82 a 83 cts. Br \$1.70. Western mixed corn, \$1.40 a \$1.42. Middling cotton, 18 a 19½ cts. Cuba sugar, 11 a 12½ cts. Philadelphia, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. Chicago.—Spring wheat, \$1.98 a \$2. Corn, \$1.09 a \$1.11. O. 58 cts. Cincinnati.—No. 1 red wheat, \$2.65. No. 1 a \$1.08 a \$1.10. Oats, 68 cts. Rye, \$1.48 a \$1.51. Cotton, 16 a 16½ cts. St. Louis.—Red wheat, \$2.42; white, \$2.55 a \$2.62; extra, \$2.65. Superfine wheat, \$1.10. Philadelphia.—Cotton, 15 a 16 cts. Superfine flour, \$7.50; extra, \$8 a \$12; family and fancy brands, \$13 a \$15. Red wheat, \$4.50 a \$2.75; California, \$3. Rye, \$1.70 a \$1.73. Yellow corn, \$1.50 a \$1.53. O. 72 a 79 cts. Clover-seed, \$9 a \$9.25. Timothy, \$1 a \$3. Flaxseed, \$2.85. Baltimore.—Prime white \$2.80 a \$2.85. Yellow corn, \$1.48 a \$1.50. \$1.50. Oats, 70 a 73 cts. Rye, \$1.70. THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLI.

SEVENTH-DAY, TENTH MONTH 26, 1867.

NO. 9.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

For "The Friend."

La Ciotat.

This is the name of a small maritime town in the south of France, containing about 10,000 inhabitants, and situated on a bay of the Mediterranean sea, 14 miles south-east of Marseilles. It is nothing specially noteworthy in the town, which is one of the many little walled towns built in France centuries ago. The chief interest which now attaches to the locality is derived by the operations of a French mercantile company called Les Messageries Impériales, whose building yards and engineering establishments are located there. What this company does, and the lightened regard for the welfare of the large station dependent upon its business at that place, is thus described by the *Pall Mall Gazette*: "The company is the proprietor of a large fleet of Mediterranean steamships. Much of the Mediterranean steam trade that used to be carried on by English steamships with English engines is done with French engines and French steamships built at La Ciotat. It is not more than fifteen years since that company obtained possession of the place and made contracts for the French Government in the Mediterranean, and it has now succeeded in driving most of the English ships, and the companies who used them, out of the Mediterranean trade. Of these French engines and companies there are some excellent models in the marine department of the French Exhibition; they are obviously the work of high education and perfect organization. Perhaps, however, the best proof of the fact of La Ciotat's having become the highest testimony that can be borne to the excellence of the administration there."

But the company has done another thing still worthy of notice. This company is the great impetus to the English steam navigation company, the Peninsular and Oriental. A few years ago the Messageries Impériales established a rival line of steamers, to carry European mails by Marseilles, Alexandria, Suez, and the Red Sea to India and China. The English at first disregarded, and despised, this daring attempt to place steamships and engines of French manufacture on a sea-going line which had always been deemed exclusively English. But it turned out that the English company had so well thought out their ships and engines, and so well proportioned their ships and engines to work to be done, and so fitly organized

their executive, that from the moment they started till now their line has been distinguished above the English by greater punctuality and fewer accidents.

"The details of the education which this company provides for its people are remarkable. Its chief superintendents are engineers and naval architects who have received the highest professional education that France provides. Its ships are designed by men who have first passed through the Ecole Polytechnique, and afterwards graduated at the Imperial School of Naval Architecture. Its chief-engineers have in like manner graduated in science at the Ecole Polytechnique, and completed their studies in the school of marine engineering or are pupils of the central school of manufactures at Paris. The next class under these have also been educated at the central school of arts and manufactures. It is no wonder that with such men as these at the head of the workshops the want of educated workmen should speedily have been felt. The company employs 2,500 workmen, and apprentices, who with their families, form a population of 6,000 out of the 10,000 inhabitants of the town; and they provide wholly, or contribute largely, to the funds for the schools for the education of these people."

"There are, first, the infant schools, which contain two hundred and sixty children, under the superintendence of nuns, who give them religious instruction and teach them elementary grammar, reading, arithmetic and geography, and to the girls sewing and other kinds of women's work. The next schools provided are the elementary schools, which contain three hundred and fifty boys; they remain until the age of thirteen or fourteen, and receive the ordinary elements of a boy's education. At the age of fourteen their technical education and the special duties of the company commence. An apprenticeship in the works of La Ciotat is from beginning to end a course of technical instruction. The superintendents remark with pride that all the foremen and workmen delight in teaching the youth. The company has done away with the system of obligatory apprenticeships for a fixed period. The children not only receive wages from the moment they enter the establishment, but those wages are increased as soon as greater knowledge and skill enable them to do better work."

"But their apprenticeship is not merely a school for mechanical dexterity. The company has a schoolroom, in which all the apprentices are educated gratuitously during one hour of the day, and that hour counts as one of the ten hours of their day's work. Attendance at this school is compulsory on all the apprentices; but they have in addition the evening school, which those may attend who will. Three evenings a week planning, drawing, designing of machinery, designs of ships and ornamental drawing are taught gratuitously. Two hundred apprentices and workmen regularly attend this class. The superintendents say they do not know which to admire most, 'the anxiety of workmen and apprentices to obtain admission to this course, the diligence with which they apply themselves to its work, or the order and silence

which pervades the school-room.' This is really the highest sort of technical education, and there is a strong inducement to take advantage of it in the circumstance that the company selects men for the responsible duty of engineers of steamships from those who have distinguished themselves in this course and take the highest places in an annual examination at which gold and silver medals are distributed as prizes."

"The company also provide a library, which is open to their people from eight till ten in the evening and ten till four on Sundays. Workmen's houses have been erected, with all modern appliances for pure air, cleanliness and domestic economy: there are gardens attached to each; each contains a kitchen, a large room with two windows and an alcove, and another chamber with one window; and they are let to the workmen at from sixty-five to one hundred francs a year. With a further view to economy, the company has also organized a market for butcher's meats. It has founded hospitals and savings banks; provided funds for sickness and death, and pays persons to attend to the moral and religious education of the people."

"Such is the moral and intellectual apparatus provided by this mercantile company for training the workpeople. The next point is whether all this training really produces the improvement aimed at. We have an official judgment on this subject. 'The commissary of police, the justice of peace, the gendarmierie and the public prosecutor, all state that they are surprised at the small number of misdemeanors and crimes to be met with in the population of La Ciotat. Three facts are adduced as a proof of the high moral tone of the workmen. 1. In 1858 there was an almost total cessation of work in the establishment. Instead of dismissing men, the company decided to employ and pay them only a third of each day, and the workmen accepted this sacrifice without a murmur. 2. In 1851 the mechanics of Marseilles struck for higher wages, and sent their emissaries to La Ciotat in order to obtain their co-operation: the attempt utterly failed. 3. Those apprentices who have been some time in school differ from those who have just entered, not merely in intelligence and age, but in a higher moral tone and conduct, the result of their education. In a money point of view the managers say that the company reaps an ample reward in the superior intelligence and steady conduct of their workmen."

A Watchword.

For "The Friend."

"Let the words of my mouth and the meditations of my heart be acceptable in thy sight, O Lord, my strength and my Redeemer." A few weeks since, in conversation with a friend, this prayer of the Psalmist was alluded to, and it has, since that time, so frequently revived as a salutary watchword, that I hope it may prove helpful in the same way to others.

It is a good thing to know our "words" to be savory, "seasoned with salt," to be preserved not only from those expressions which are positively wrong, but also from those which are trifling and

useless; but it is a much deeper work to have "the meditations of our heart" of such a character as to be acceptable in the sight of a pure and holy God. As we walk the streets or pursue in various ways our ordinary avocations, let us test our thoughts by this standard. Has any one insulted our sense of dignity by a personal affront, wronged us in a business transaction, or, in any other way, so treated us as to arouse feelings of resentment which may be unprofitably indulged—let us ask whether this is an "acceptable meditation." Are we tempted to increase the profits of our business by taking advantage of favoring circumstances so as to depress the wages we are paying our employees—consider, is this an "acceptable meditation." We do find our mind habitually reverting to schemes for adding to our riches, when our situation in business is such as to render it unnecessary—then remember the Psalmist's prayer, and we may feel an inward check, which will lead us to desire more earnestly those durable riches which moth and rust do not corrupt, and which thieves cannot steal from us. If in the conversation or actions of those we meet with, aught occurs calculated to excite in the mind improper trains of thought, do not delay promptly to bring them to the test, "are they acceptable in the sight of the Lord our strength and our Redeemer."

While the watchful care over our words and thoughts, which the habitual exercise of this practice would produce, is always necessary and valuable, yet it is especially important when gathered with our brethren to wait in solemn silence upon an ever-present God, who will be worshipped in Spirit and in Truth. Alas! how many of us there are, who, at the close of a religious meeting, in looking back at what has been passing through the mind, have been compelled to acknowledge to ourselves that the meditations of our hearts have not been such as to be acceptable in the sight of the Lord. The Psalmist declares Him to be his "strength" and his "redeemer," and to Him let us look for "strength" to redeem us from all that is not well-pleasing in His sight. J.

For "The Friend."

Meteorological Apparatus.

The importance which is now attached to the preservation of accurate records of the various phenomena of the weather, has led to the construction of many ingenious contrivances to lighten the labor of observing them. The following interesting account of a very complete registering machine for this purpose is extracted from a recent periodical:

"The meteorograph which Father Secchi has had constructed represents in itself alone a meteorological observatory, performing its duties almost without interruption, and, without any need of being attended to, inscribes automatically on a moveable tablet the pressure of the atmosphere, the temperature, the atmospheric moisture, the velocity and the direction of the winds, the hour of the rain-fall and the quantity of water fallen during the day. In it are to be seen a multitude of little steel arms supplied with pencils, going and coming upon a tablet which an invisible mechanism causes to descend with a uniform rapidity. You would say that they were goones performing their work with a silent zeal. One is charged to watch the degree of heat of the temperature outside; it draws incessantly odd-looking signs on the place which has been given it; when the temperature is stationary, it scarcely moves; when the sun sets and the air grows cold, the little draughtsman retires to the side where the cold is indicated; when the sun returns and warms the

earth again, the thermograph runs to the opposite side to scrupulously record the waves of heat with which the air is inundated. The zigzags of these apparently capricious drawings speak a language clearer than that of figures; they preserve forever the faithful image of the atmospheric circumstances which have characterized the weather during the day, they allow one day to be compared with another, and that which is constant and invariable to be distinguished in this general vortex.

The balancing barometer which Father Secchi has chosen for his meteorograph, is an invention of Sir Samuel Morland, which this last presented to Charles the Second towards the end of the seventeenth century. It is an iron tube which is suspended on the beam of a balance, and which plunges into a basin filled with mercury; the oscillations of the balance indicate the variations of the atmospheric pressure. The thermograph of Father Secchi is that which has been invented by Kreil, and which was used formerly at Vienna and at Kreunmuer. It is a long and thick copper wire suspended in the air, and attached by one end to a bent lever, which transmits every contraction and every expansion of this wire to the registering apparatus. The *anemograph*, which writes down the force of the wind, is a windmill of Robinson's. It is formed of a horizontal cross, the four arms of which carry four hollow cups, into which the wind blows, as into the sails of a ship. This apparatus is placed in an elevated and exposed position; its motion is transmitted by an electric wire to a wheel, which causes the pencil to move intended to register the velocity of the wind. During an hour, the pencil advances always one step at each turn of the windmill; the length of the line which it traces during this time represents, on a reduced scale, the road travelled over by the wind. At the moment the clock strikes the hour, the pencil releases itself, and returns hastily to its first place, to commence its journey over again. It thus traces twenty-four lines a day; the sum total rarely amounts to more than three hundred marine miles (five hundred and fifty kilometres) for the twenty-four hours, which represents a mean velocity of six or seven metres a second. A fresh wind travels over ten metres a second; a hurricane, fifty metres and more.

To register the direction of the wind, a simple weathercock is used, which is connected alternately with a system of four electric magnets, corresponding with the four cardinal points. Each of these magnets directs a particular pencil; when the vane turns to the north, it communicates with the first pencil; when it turns to the east, with the second, and so on; the pencil then traces a series of black strokes on the paper, as long as the wind blows in the same direction. This is the registering anemometer of M. Du Moncel.

This is how the rain fall is measured. The water that falls is collected by a funnel from which it flows into a little cistern. When the level in this reservoir ascends, it raises a float which acts on a pencil. Another pencil marks on the great meteorographical tablet the hour at which the rain has fallen; it is put in motion by a wire which connects with a little hydraulic wheel placed under a spout. A last pencil is charged with noting the state of humidity or dryness of the air. It is carried on a chariot, which goes or comes before a special tablet, on which it traces a series of black parallel lines, the explanation of which would lead us too far.

The chief idea which influenced Father Secchi, and which appears to us truly prolific, was to combine the different registers in such a manner that all the pencils should march abreast on the same

tablet. The curves which they trace thus find themselves continually drawn near to each other and a single glance can discover the agreement or disagreement which exists between the simultaneous variations of the different meteorological elements. The comparisons of these curves permit us to see, for example, what influence different winds exercise on the barometric pressure, in what manner the state of the barometer announces rain, how the temperature varies before, during and after a shower, and a thousand other connections of this kind can be perceived without making the slightest calculation and glance. It is truly seeing the natural forces work, and surprising their most secret combinations by obliging them to keep their own journal. On the tablet of the meteorograph a special count is opened for the heat, another for the moisture, another for each of the four principal winds they come to dictate their *debts* and *credits*, and one to his own book-keeper, who hastens to write everything down on the registers. At the end of a few days the meteorograph is opened, the tablet which has been filed up is taken away and a new one is put in its place, on which will be recorded the atmospheric circumstances of the ensuing days. Thus, without trouble and without fatiguing the archives of the weather are made, and if the same process was followed in a great number of observatories distributed over the surface of the globe, we would soon have the picturesque history of the atmosphere in thick volumes which could be placed in some central establishment.

The meteorograph of the College of Rome has already revealed several curious facts, among which we will content ourselves with citing a few. During rains and storms, the barometer frequently undergoes oscillations of very short duration; it falls all at once five or six millimetres, then ascends at the end of a few minutes. We might believe that these momentary depressions were only an illusion produced by a accidental fluctuation of the balancing barometer, the barograph at Oxford, which registers the atmospheric pressure by means of photograp, indicates them also, there is no room, then, to doubt that they have a real existence."

For "The Friend."

Thirty-sixth Annual Report of the Board of Managers of the Association of Friends for Free Instruction of Adult Colored Persons.

To the Association of Friends for the Free Instruction of Adult Colored Persons.

The Managers Report—That the schools in their care have been continued during the past months in the building at the corner of Rasp and Aurora Streets. They were opened on evening of Tenth month 1st, under the efficient charge of John S. Stokes as Principal in the m school, and Sarah J. Cooper as Principal in women's school, with three assistant teachers each school. The number of scholars admitted became quite large, and by the end of Tenth month nearly 400 men and women were registered. Additional teachers were found necessary, and two other teachers were cordingly engaged for the men's and women's school respectively, making in all twelve teachers, nearly all of whom were employed during the remainder of the season. A number of scholars were entered later in the session, and it appears that 193 men and 260 women have partaken or less of the opportunity for instruction at these schools afforded. From circumstances dependent to their condition in life, and other causes, most of the scholars were prevented from attending constantly, and the numbers present at

ently over 100 in one of the schools in the part of the session, have averaged for the months 67 men and 72 women. A number died diligently under adverse circumstances, some at considerable personal sacrifice.

These schools continue to be very useful to the colored portion of the colored population of this in affording them an opportunity in adult acquiring the elementary knowledge necessary for conducting ordinary business, and also, a part of some of them, of accomplishing a cherished desire of becoming able to read the Scriptures. At the commencement of their of study about 50 of the men were learning alphabet, or spelling short words; 90 were read with more or less fluency; and about 100 were performing simple exercises in arithmetic. The women's school about 70 were learning to read, and 110 were reading without much assistance; 100 were engaged in cyphering. As the ladies attendant upon an introduction to learning are frequently discouraging to persons of this class, it was deemed best to provide assistance in the early part of the session, there has been gratifying evidence of improvement on the part of all who have regularly attended in many instances rapid progress has been in the studies mentioned, as also in writing geography, which have been regularly taught in the schools.

Among the more interesting cases observed of appreciation in which these schools are held in this class, was that of John Chadman, was alluded to in the report of 1864-65, as a laborer, residing in Pittsburgh, who had saved weekly wages for some time, to enable him to go to Philadelphia to attend school. During the session he again came to this city for the same purpose, and at an expense of more than eighty dollars, spent four months here diligently attending school as well as that taught in the same thing in the day time. Several other colored men, who, like the one above mentioned, were formerly slaves, have been very earnest in endeavoring to obtain learning during the past winter, as the dormant faculties of some of these have been awakened, they have given evidence of possessing qualifications for usefulness which we hope have been advanced by the course of instruction closed. One young man, who though not fully ignorant, appeared remarkably dull upon entering the school, afterwards improved rapidly to the close of the session was one of the most scholars attending. Another colored man attained unusual proficiency in arithmetic this year, on first coming to the school three winters from the South, was unable to read. The opinion of freedmen in the men's school during the term is believed to be about one third; in the women's school the number of this class was proportioned so large.

The progress which many of the scholars had was shown at the time of closing the women's schools on the 27th and 28th ult., removing, when some creditable exercises were performed in both departments.

In the women's school a recitation of some parts of the New Testament were made, and a number of letters written by the scholars were showing that they had profited by the opportunity enjoyed. In the men's school an exhibition on a collection of useful facts and short pieces of a religious and moral character, which were committed to memory, showed the interest with which many of them had applied themselves to study.

The Scriptures have been daily read at the meetings of the schools, and Friends' Tracts and

the Moral Almanac have been distributed among those attending.

The Managers have paid frequent visits to the schools, and they have also been visited at times by other Friends interested in the improvement of this portion of the community.

The Managers would be glad if these and other Friends, whose contributions aid in supporting these schools, would more frequently visit them, believing that a personal inspection of them would increase their interest in maintaining these helps to the intellectual advancement of the colored people.

To defray the expenses incurred in carrying on these schools, the Association is mainly dependent upon the annual voluntary contributions of Friends, and it is satisfactory to be able to assure them that at no former period have the advantages which they offer appeared to have been more appreciated than during the past two years. The great desire for instruction apparent throughout a large portion of the colored people in the country, is an encouragement for all interested in their welfare to continue to labor for their improvement, and in assisting them to qualify themselves for occupying the higher position in the community which appears to be rapidly opening before them.

On behalf of the Board of Managers,

Geo. J. SCATTERGOOD, Clerk.

Philad., 3d mo. 7th, 1867.

OFFICERS OF THE ASSOCIATION.

Secretary,—Ephraim Smith.

Treasurer,—Elton B. Gifford.

Managers.—Elton B. Gifford, Samuel Woolman, J. Wistar Evans, Geo. J. Scattergood, Isaac Morgan, Jr., Joel Cadbury, Jr., John W. Cadbury, Thos. Elkinton, Ephraim Smith, Jacob Smedley, Jr.

From the "Christian Advocate," Letter from Rome.

(Concluded from page 61.)

There are upward of three hundred churches in Rome, besides thirteen basilicas. The churches are comparatively uninteresting in structure or adornments to the stranger, and I will pass them by, and glance at a few of the most interesting of the basilicas, called the patriarchals. These are five in number—the Vatican or St. Peter's, St. John's, Santa Maria Maggiore, St. Lorenzo, and St. Paul's. The basilica is the style of architecture introduced immediately after the popularization of christianity under Constantine, and was probably designed after the forums and courts of justice of the Pagans. Their form is oblong, and consists of a nave and one aisle on either side, separated by a line of columns from which arise the arches which support the roof. The present patriarchal edifices are not pure basilicas, but have some of the characteristics, and retain the name. The original St. Peter's was entirely a basilica, and this is the chief claim of the present gorgeous temple to that name. The St. John's Lateran bears the inscription on each side of its entrance that she is the mother and mistress of all churches in the city and in the world. Her chapter has the precedence over St. Peter's. Five general councils have been held in it, and here all popes are crowned. The interior has two aisles on each side of the nave, separated by four rows of massive columns. Its roof and walls are covered with medallions and stucco ornaments. On each side of the nave are niches which contain colossal statues of the apostles in marble. Its high altar stands beneath a magnificent tabernacle, and was erected, at an immense expense, to contain the heads of Saints Peter and Paul. These relics are

highly prized, and were on exhibition on the day I happened to be present. It also lays claim to the possession of the table on which the last supper was laid. It has several very fine paintings, and includes two of the richest and most costly chapels that have ever been erected. The rarest marbles, the most chaste and rich ornaments and gildings, bas reliefs and columns of precious marble, and even gems, are lavished upon their decorations. In its cloisters are two columns of Pilate's house, a column said to have been split in two when the veil of the temple was rent in twain, a slab on which the soldiers cast lots for the Saviour's garments, four columns the exact height of the Saviour, and a miraculous altar table, with a hole made through it by a wafer which fell upon it from the hands of a priest who doubted the real presence. Under a portico is the holy stairs, on which penitents and devotees are daily seen in crowds, as in the days of Luther, ascending on their knees, and kissing each step, and touching it with their foreheads. These stairs are of marble, and are said to be those on which Christ descended when he left Pilate's judgment hall. They have been covered with thick boards, and several coverings have already been worn out. At the head of the stairs is a small chapel, in which lights are kept burning constantly, called the holy of holies, in which no one is permitted to enter. Nor is any person allowed to mount the scala santa, except on his knees. They have proved a great blessing to the world, and Protestants can renew their faith as they look with commiseration upon the rich and poor devotees ascending these twenty-four planks laid on as many marble steps, in token of their piety, or humility, or as an evidence of the senseless superstitions which are still taught by the Roman Church.

The church of St. Peter is erected on the site of the circus of Nero, which was doubtless the scene of many christian martyrdoms. On the approach to Rome by any conveyance, all the passengers are on the look-out for some glimpse of St. Peter's or its lofty dome. The first inquiry of the stranger on reaching Rome is, Where is St. Peter's? And the first place visited is St. Peter's. The first exclamation as you stand in the presence of St. Peter's, looking upon its plain facade is, Can this be St. Peter's? And the first expression of wonder, amazement, and grandeur when you enter her doors and gaze upon her splendors is, this is St. Peter's. This stupendous edifice is approached through colonnades, arranged in semicircular forms, which greatly ornament the plain front of the church, and at the same time hide the irregular and more lofty and shabby looking buildings which are in the immediate vicinity. The porticoes of these colonnades are supported by two hundred and eighty-four columns, four rows deep, and on their entablature are one hundred and ninety-two marble statues of saints. The interior view disappoints even those prepared for it by its contracted dimensions. There is such an admirable arrangement of the openings for light that you seem to see the entire of the interior at the first glance, and it is difficult to divest yourself of this idea of the moderate proportions of this stupendous edifice, even after walking around her bulwarks, and mounting her dome, and studying her exact dimensions. The dome is of course the great object of admiration, and it is difficult to conceive of anything in architecture that can surpass the magnificence of this stupendous vault, resting on four colossal piers. Some writer says of the cupola, "that it is glorious, viewed in its design, altitude, or decorations. As a whole, or as a part, it pleases the eye, and

satisfies the taste. The very air seems to eat up all that is harsh or colossal, and leaves us nothing but the sublime to feast on—a sublime peculiar as the genius of the immortal architect, and comprehensible only on the spot."

I had the good fortune to see St. Peter's illuminated, first on the outside and then on the interior; but my pages notify me that I have already exceeded my usual space, or I would notice some of the sensations awakened by these brilliant displays of lamps and lights. I can almost say that I have been passing through a succession of the most gorgeous flames of fire ever since I landed in Europe. First, England was lit up in commemoration of the queen's birthday; then France for several days, in gratulation at the escape of the emperor of Russia from assassination; then Versailles, for a welcome to royal visitors; then the coliseum and St. Peter's, and the square of the Populi at Rome, to swell the rejoicings of the eighteenth centenary anniversary of the death of St. Peter. The illuminations and the display of fireworks in Rome exceeded everything of the kind I ever saw or conceived. I start to-day for Naples, and thence to Alexandria, Egypt.—*Lyon.*

Follow Christ.—Some men will follow Christ on certain conditions: if he will not lead them through rough roads—if he will not enjoin upon them any painful tasks—if the sun and wind do not annoy them—if he will remit a part of his plan and order. But the true christian, who has the spirit of Jesus, will say, as Ruth said to Naomi, *whither thou goest I will go*, whatever difficulties and dangers may be in the way.—*British Workman.*

A Volcanic Bore.—This is certainly the era of engineering marvels. The Pacific Railway, the Hoosac tunnel, the East River bridge, the lake tunnel at Chicago, the pneumatic railways, the projected tunnel across the channel from England to France—these, and others like these, are a few of the works by which engineering genius means to celebrate itself and the nineteenth century.

The latest, and one of the most extraordinary works of this kind has just been completed in New Zealand. This is nothing less than the running of a tunnel through a volcano, which has been accomplished by a corps of English engineers after six years of hard labor. The tunnel in question occurs on the railway from the port of Lyttelton to Christchurch, in the settlement of Canterbury; it is two thousand eight hundred and thirty-eight yards long, and cost nearly two hundred thousand pounds, or a million dollars.

"This tunnel affords the first instance where a complete section of an extinct volcano has been opened out. The rock in the tunnel is a series of lava streams and beds of tufa, intersected by vertical dykes of phonolite.

"Wherever difficulties have been met they have been quickly and successfully overcome. A siphon six hundred yards long was employed for the drainage of the upper half of the tunnel. The system of ventilation has proved perfectly adapted to the requirements of the case, and has been not only effective, but simple and comparatively inexpensive.

"In the first instance air was driven in by fans worked by horse-power; but this soon proved insufficient; and when the works extended some distance, much time was lost owing to the difficulty of getting rid of the smoke. To obviate this on the Lyttelton side, the upper portion of the tunnel was partitioned off by a floor or brattice, about nine feet above the rail level, forming a smoke flue connected with one of the shafts, at

the bottom of which was placed a furnace, which, by rarefying the air caused a steady current up the shaft, and drew the smoke away from the face of the workings.

"The system employed to secure the correctness of the alignment of the two ends of the tunnel was very simple. A permanent mark was fixed in the outer line of the tunnel, on a tower built on the dividing range, nearly midway between the two ends. A transit instrument being placed on the meridian of the tunnel, as well as of the tower on the hill, it could be seen at once whether the flame of a candle in the centre line of the work inside the tunnel was in a vertical plane with the mark on the tower."

Although the work was prosecuted under disadvantages of climate, and numerous other difficulties, it has been concluded without extraordinary sacrifice of life or extravagant outlay of money, and may be regarded as an eminent triumph of engineering skill and perseverance.—*Evening Post.*

HERE AND THERE.

Selected.

"Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for those that love him."—1 Cor. ii. 9.

What no human eye hath seen,
What no mortal ear hath heard,
What on thought hath never been
In its noblest flights conferred—
This hath God prepared in store
For His people evermore.

When the shagred pilgrim-land
Pades before my closing eye,
Then revealed on either hand
Heaven's own scenery shall lie;
Then the veil of flesh shall fall,
Now concealing, darkening all.

Heavenly landscapes calmly bright,
Life's pure river murmuring long,
Forms of loveliness and light,
Lost to earth long time ago;
Yes, mine own, I lamented long,
Shine amid the angel throng!

Many a joyful sight was given,
Many a lovely vision here,
Hill and vale, and starry even,
Friendship's smile, affection's tear;
These were shadows, sent in love,
Of realities above!

When upon my wearied ear
Earth's last echoes faintly died,
Then shall angel-harps draw near—
All the chorus of the sky;
Long-hushed voices blend again,
Sweetly, in that welcome strain.

Here were sweet and varied tones,
Bird, and breeze, and fountain's fall,
Yet creation's travail-groans
Ever admid sighed through all.
There no discord jars the air—
Harmony is perfect there!

When this aching heart shall rest,
All its busy pulses o'er,
From her mortal robes undrest
Shall my spirit upward soar.
Then shall unimagined joy
All my thoughts and powers employ.

Here devotion's healing balm
Often came to soothe my breast—
Hours of deep and holy calm,
Earnests of eternal rest.
But the bliss was here unknown,
Which shall there be all my own!

Jesus reigns, the Life, the Sun
Of that wondrous world above;
All the clouds and storms are gone,
All is light, and all is love.
All the shadows melt away,
In the blaze of perfect day!

Lange.

ONE BY ONE.

Selected.

One by one the sands are flowing,
One by one the moments fall;
Some are coming, some are going;
Do not strive to grasp them all.

One by one thy duties wait thee;
Let thy whole strength go to each;
Let no future dreams elate thee;
Learn thou first what these can teach.

One by one—bright gifts from heaven—
Joys are sent thee here below;
Take them readily when given,
Ready too to let them go.

One by one thy griefs shall meet thee;
Do not fear an armed band;
One will fade as others greet thee—
Shadows passing through the land.

Do not look at life's long sorrow;
See how small each moment's pain;
God will help thee for to-morrow;
Every day begin again.

Every hour that fits so slowly,
Has its task to do or bear;
Luminous the crown, and holy,
If thou set each gem with care.

Do not linger with regretting,
Or for passing hours despond;
Nor the daily toil forgetting,
Look too eagerly beyond,

Hours are golden links, God's token,
Reaching heaven; but one by one
Take them, lest the chain be broken
Ere thy pilgrimage be done.

For "The Friend."

The Introduction of European Sciences in China.

Many occurrences of late years have shown that the exclusiveness which has hitherto characterized the policy of the Chinese, in their intercourse with foreign nations, is now rapidly giving way before the introduction of the arts and habits of more civilized countries. The opening of several new ports to general commerce, the establishment of lines of steamships with Europe and America, and the extension of the telegraphic system of Russia along the northern frontier of China, have all taken place within a very few years; and, influenced by the example of Japanese rulers now appear willing to make still further change in their ancient usages, and to encourage the settlement of Europeans among them, to teach them those branches of knowledge in which they now find themselves deficient. The following is an extract from a memorial lately presented to the Emperor upon the desirability of establishing a new college in Peking, for the education of Chinese students in the arts and sciences of Europe, under the tuition of foreign professors versed in their language. It will be observed that the writer of it has ingeniously sought to allay the popular prejudices against receiving the teachings of those who have been called "outside barbarians," by stating that the origin of their present superiority is due to knowledge first derived from the orientals. The period from which it is extracted, states that:

"As an indication of the effects which recent foreign intercourse has had upon the old exclusive policy of the Chinese, it is the most important document that probably ever appeared in the 'Peking Gazette,' and as there is every probability of its being acted upon by the government, it will be the turning point in the annals of the empire as recorded in its pages, which may let us hope, to the regeneration of China.

The extract as translated is as follows:—
"In proposing to your Majesty to favor study of the mathematical sciences, the Com-

the School of Languages is not impelled by a sentiment of blind admiration for knowledge of a kind possessed by the Europeans, nor by an extravagant love of novelty. The reason is that the prevalent construction of machines for warlike and industrial purposes, so important in our age, is based entirely upon the sciences. China has refused to construct her steamboats for herself; but enable her to do so European masters must inure her in the principles of the mathematical sciences, and point out the course to pursue. It would be a mistake and a fruitless expenditure of labor and money to hope that the Chinese could gain such a result by their imagination alone.

Up to the present time China has failed to be powerful by her own resources; it is clear now that Chinese genius has produced all that it is able to produce, and that intelligent persons do not conceal from themselves, in order to walk alone in future, it must first be able to receive from Europeans those arts and sciences in which it is deficient. . . . It would also be a serious mistake to imagine that China abandons her ancient knowledge for that of foreigners. The Europeans admit that they have borrowed from China—or at any rate from the East—the notions upon which their science is now based. With their spirit of research constant application they have increased these notions, drawn from them all the possible profit, and have finally discarded antiquated theories in favor of those more modern or exact. . . . To those who may say that China humiliates herself by seeking instruction from foreigners, we shall reply that, if one thing in particular can make a man blush, it is to be ignorant of that which others know. What immense progress have not Europeans made during the last fifty years in the construction of steamships—to cite only a single instance—incessantly seeking after better combinations, and rying with each other in labor and contest. Even Japan has sent to Europe officers to seek instruction in the various sciences taught. Thus, without speaking of European nations, each of which seeks to raise itself above others by knowledge and civilization, Japan does not wish to remain in the rear. That country also desires to take her place amongst the nations, while China alone, continuing obstinate in her indifference and her ancient customs, would seem herself to stand aloof from the general family. This is a true reason of disgrace. If we do not feel the humiliation in being inferior to others, but only in taking others as our instructors, without considering that by desire of surpassing them we may perhaps attain the glory of surpassing them, it naturally results that we shall not know anything, and shall have the eternal humiliation of inferiority. . . .

The remarkable memorial, of which the above only extracts, proceeds to point out how the object in view may be accomplished, to which a set of regulations is appended. Underneath the memorial, as published in the "Peking Gazette," the emperor's signature is given, *Toong-tai*, signifying "Union in the Cause of Law and Order," and dated Peking, January 28th, 1860, with the imperial remark, "The preceding is approved: Respect this!" We may add, that the pursuance of the contemplated college, the European agents in the service of the Chinese Government, sent to Europe for competent professors and others.

than the tale-bearer. Whoever entertains you with the faults of others, will entertain others with

For "The Friend."

First-Day Schools.

The following article, condensed from a recent number of the *British Friend*, contains suggestions and statements deserving of serious consideration in this land as well as in Great Britain. I would especially call attention to what is therein said respecting "parental responsibility"—for which I believe no adequate substitute can be thought to be devised:—

"In reading the Report of the Conference of Friends' First-day School Association I have been struck with the various and conflicting opinions of the several Friends who spoke on that occasion, and with the acknowledgment of the difficulties in the progress of the work. In one of the addresses I find these words, 'Let it not be supposed that I do not think it important that we should teach all that we consider that Christ has taught us, but let us be careful of calling it Quakerism.' If it is truth we have learned, let it be regarded as coming from Christ, and not as the teaching of Fox or of Friends, but the teaching of our Saviour." To which another Friend responded, with the injunction—"Don't be too anxious to teach Quakerism." Now this advice to keep our distinctive principles in abeyance, hiding our light under a bushel, is singular doctrine. Why do we exist as a distinct community if only to follow in the path of others, and modify our principles when they clash with the prevailing sentiment? In whose will and power did we originate as a church but in Christ, 'the wisdom of God and the power of God'? If we are duly impressed with the value of our religious principles we shall be ever ready to advocate them in a christian spirit, and feel jealous for the true reputation of the body in our intercourse with the world around us. When William Savery was travelling in the service of the gospel, and going on board a vessel overboard a woman say, 'she hoped there were no Quakers on board'; he remarks, 'I told her I had the honor to be a Quaker, and David Sands united with me in the same acknowledgment.' Here was the true honor that cometh from God only, and these faithful servants in thus seeking it were blessed and prospered in all their undertakings. There is nothing exclusive in genuine Quakerism. The strongest religious convictions may co-exist with the most diffusive charity towards those not of our communion; nor is there any need, if our enterprise be in the right line, to bend our principles to meet particular emergencies, for they are always equal to the occasion which calls for their exercise. Furthermore we find it pleaded by another speaker, in defence of neglecting some of our Meetings for Worship to attend to the school, that she had not physical strength to attend both, and so a choice must be made between the two. This looks like leaving the service of the Creator to serve the creature, neglecting a primary duty to engage in a secondary one. As to the plea of physical weakness, none are required to exert themselves beyond their natural strength. 'I will have mercy and not sacrifice,' is still the gracious declaration of our heavenly Father, 'whose compassions fail not'; and hence it appears to me in the attendance upon both services, the less should give way to the greater, and the school be sacrificed to the meeting, especially when we find the latter so thinly attended. These are some of the items for consideration which have impressed me in reading this report. I am now about to quote from a writer I have alluded to before, whose experience in these matters entitles him to our attention, though we may not fully accord with all that he says:—"If we only start with a living belief that

all spiritual life is of God—a truth which everybody professes to hold; that its existence in any man is not bound up with human agency; that we can do nothing to create it; that we can only develop and strengthen what God has already given,—we shall come to the conclusion that a great deal of the aggressive action which is now so much valued can do little good, and may do much harm; that our work in relation to the sinner is but that of the physician to his patient, and that it can extend no further.' He, if worthy of his name, always tells us that he can only 'assist nature,' watch symptoms, and avoid doing too much; and it will be well for the church when her healers of men learn the same lesson and follow the same rule. Hitherto our course has been different. We have acted, and are still acting, under the persuasion that God has committed to us the conversion of the world, and that by his grace and help we can effect it. Indifferent, therefore, to consequences,—feeling, indeed, that we have nothing to do with them, we have rushed on, crying, 'Effort is ours; results rest with God. The need for action presses: we cannot stop to ask whether or no we ourselves are under any moral obligation to do this or that particular thing. Souls are perishing; why should we delay in order to recognize those minute distinctions which some would have us perpetually to regard? All alike are bound, in one form or other, to work in the vineyard; the question, What is my particular duty? must give way to obligations which are common to all christians.'

"All this, of course, proceeds in forgetfulness of the fact that whilst our responsibility for exercising a right temper of mind as to the condition of men is unlimited and universal, our responsibility in relation to any given outward act is limited and special; that it by no means follows that because every one is bound to desire the instruction of the ignorant, any given young person is necessarily required to teach in a Sunday-school; or that because a man truly longs to see the extension of Christ's kingdom, it is his duty to distribute tracts, or to become a visitor of the sick. These obligations, so far as they really rest either on man or woman, must obviously be limited by circumstances, by fitness for a particular work, and by its consistency with other duties. Each agent ought to have evidence that he is called of God to work in the vineyard before he ventures to undertake what is asked of him by man; and that evidence must be found in something far more substantial than in the wisdom of ardent and perhaps enthusiastic supporters of a particular undertaking."

"Then we have the Bishop of Oxford telling us that the youngest scholars are kept too long at these schools. That the endeavor to tame the natural activity of children, and drill them into silence, is the way to render the Sabbath anything but a delight—to associate that day of the week in their minds with ideas of undue restraint and task-work. But a member of the same religious denomination as the bishop has raised a more important question, in a pamphlet with the somewhat startling title of *The Failure of the Present Sunday-school System*, which is thus epitomized by the editor of *Christian Work*:—

"Wherever the Sunday-school has been longest in operation, most carefully organized, and most largely filled, there the church and the meeting-house—for it is remarkable that these figures, including as they do churchmen and dissenters in one common average, show that the latter fare no better than the former in this respect—are the most deserted. So strange and unexpected a result demands an explanation. It is, 'he thinks,'

in the ignoring of parental responsibility which is at the root of the whole system. We relieve the parents of the religious superintendence of their children. We encourage the children to come to us early on Sunday morning; we drill them and teach them in school; we assign them a separate place in church; we take upon ourselves the whole trouble of keeping them quiet, and teaching them to behave, and instilling into them, if we can—though, we fear, that is a thing too often neglected—habits of practical devotion. What is the consequence? The parents cease to feel themselves responsible for the religious training of their children: they lose the incentive which the motive might afford to quicken their own religious instincts, and secure their own attendance at church, in order that they might bring their children with them; they feel that it is not their business, but that of the Sunday-school superintendent, to see that their children go to church, and behave properly when they are there; and so it happens that the Sunday-school is made a convenient excuse for the idleness, apathy, and irreligion of the parents."

For "The Friend."

Our Testimony against War.

Now that peace and quietude are measurably restored to our beloved country, it may be of use for the members of our religious Society to review the position they have occupied in relation to this important subject. Some of our young men have in the hour of excitement enlisted as soldiers in what is called the public service; many of these have forfeited their right of membership; some others have contributed to a bounty fund got up to induce enlistments for the army, in order to ward off the draft ordered by the President of the United States, to fill the places of such as fell on the battle field or who died of camp sickness, &c. And others have paid a tax levied to refund the bounty contributions; and a few have dealt in government bonds, used to replenish the public treasury, exhausted by the expense of the war. It may therefore be needful for us all to examine our position, and in the light of Christ, laying aside all selfish considerations, endeavour to see how far we are clear of the blood of all men; and where any have fallen short in a faithful testimony for the Prince of Peace; that the required restitution to the church be made; for a strong responsibility rests upon this generation to transmit to our successors in religious profession, a good example, and an unabated testimony as we have received from our forefathers.

From the Discipline of Philadelphia Yearly Meeting, adopted in 1776, we quote: "It is the judgment of this meeting that a tax levied for the purchasing of drums, colors, or for other warlike uses cannot be paid consistently with our christian profession."

From the Book of Extracts of London Yearly Meeting of 1762: "It is our sense and judgment that we cannot, consistently with our well known principles, actively pay the rate or assessment, which by virtue of any militia act, may be imposed in lieu of personal service; or any rates or assessments made for advancing the hire, or enlisting-money of volunteers; or the money to be raised to militia men. * * * And Friends are desired to be careful to guard against paying the said rates mixed with some other rate."

Anecdote of Two Dogs.—In the life of that remarkable man, Samuel Drew, of Cornwall, an amusing account is given of two dogs belonging to his family. He states: "Our dairy was under a room which was used as a barn, into which the

fowls found their way, and, in scratching among the chaff, scattered dust on the pans below, to the great annoyance of my mother-in-law. In this a favorite cock of hers was the chief transgressor. One day, in harvest, she went into the dairy, followed by our little dog; and finding dust again on the milk pans, she exclaimed, 'I wish that cock was dead.' Not long after, she being with us in the harvest field, we observed the little dog dragging along the cock just killed, which, with an air of triumph, he laid at my mother-in-law's feet. She was dreadfully exasperated at the literal fulfilment of her hastily uttered wish, and snatching a stick from the hedge, attempted to give the dog a beating. The dog seeing the reception he was likely to meet with, where he evidently expected marks of approbation, left the bird and ran off; she brandishing the stick, and saying in a loud and angry tone, 'I'll pay thee for this by and by!' In the evening she was about to put her threat in execution, when she found the little dog established in a corner of the room, and the large dog standing over it. Endeavoring to fulfil her intention by first driving off the large dog, he gave her plainly to understand that he was not at all disposed to relinquish his post. She then sought to get at the small dog behind the other; but the threatening gestures and fierce growl of the large one apparently proclaimed, 'Touch him if you dare,' and sufficiently indicated that the attempt would be not a little perilous. The result was that she abandoned her design."—*British Workman.*

The Rings on the Oak.—A correspondent of the *London Daily News*, in the course of a letter with reference to an historical and legendary tree known as "Herne's Oak," gives not only some interesting facts about the tree itself, but also an explanation of a natural phenomenon in connection with it. He says:

"While working up a portion of this memorable tree into covers for the book I have written on its identity, looking on the end, I observed a great peculiarity, namely: The annual rings accumulated in a healthy and vigorous manner up to a certain point, when they suddenly ceased, became almost imperceptible, then increased again in size till they attained nearly their former width, afterwards gradually diminished towards the outer edge of the tree, where they finally became undistinguishable.

"Upon mentioning this phenomenon to an intelligent gardener of fifty years' experience—without informing him in what wood I had observed it—he said the tree must have been struck by lightning or blighted in some way, so as to have stopped its growth, otherwise such an appearance would not have been presented. It was in the nature of trees, as it was with us, when they arrived at maturity they began to decline, the same as we did, but it was generally a gradual process, the rings in the trunk would become smaller and smaller by degrees, as the sap flowed less and less up the tree.

"I have since examined the wood more closely, and from the healthy part of the tree to the outside of the piece I have counted one hundred and sixty-four annual rings. If to these are added twenty for the sap which was wasted away from it, and forty-four years, which time at least it is known to have been dead, we are carried back as far as 1639 as the latest time when the tree would have been seared or blighted. How much earlier than this it may have been I am not in a position at present to prove; but, considering that the rings are so small as to be scarcely discernible, and that some of the outer portion of the tree has

been wasted away, I submit that it is not a very preposterous idea to assume it not improbable that the blighting of it happened during Shakespeare's time."—*Evening Post.*

For "The Friend."

Daniel Wheeler in his Family.

In the concluding remarks to the Memoir of Daniel Wheeler, is the following beautiful description of the tenderness and faithfulness of this beloved Friend in the relation of a parent, which affords instruction and encouragement. Happ would it be were the pious concern exemplified in this narration, more generally prevalent among those who occupy this responsible station—believing that the exercise of mind of godly parent on behalf of their children, even if not immediately productive of apparent good, is often like "bread cast upon the waters," to be seen after many days.

"It is far from being the intention of the editor to attempt any elaborate delineation of the character of the subject of these Memoirs; this he thinks will be best gathered from the correspondence and memoranda which have preceded. There is however one feature, on which he hopes the reader will bear with him, whilst he offers a few remarks which appear to be called for by the peculiar opportunities for observation which he enjoyed, viz., the mingled fidelity and tenderness with which his beloved father sustained the responsible character of a parent. In reverting to this particular, those who enjoy the privilege of a filial relationship, feel that they have abundant cause to rise up and call him blessed. From their early years, the benign influence of his devout and pious spirit was forcibly felt; and it is now a mournful satisfaction to the survivors to recollect, that the earliest impressions of good were associated with the affectionate counsels of their departed father. His was not the language of precept only,—but of his strikingly consistent example was still more powerful. It was impossible to observe from day to day the thankful, cheerful, humble frame of mind which he so uniformly manifested,—his watchfulness to check every rising of impropriety,—and above all, the deep reverence and filial love which pervaded his heart towards the great Author of every mercy,—without being made sensible of that blessed and all-pervading principle, which regulated the daily tenor of his life. His children at once loved and honored him; for while he possessed their entire confidence, and the fullest hold on their affections, they knew that he was unflinching in the refusal of whatever he felt to be inconsistent with his principles or their highest good. Notwithstanding the kindness of his nature, and the strength and warmth of his parental feelings, his known firmness precluded all hope of inducing him to yield to their inclinations, when these stood opposed to their eternal interests. Many perhaps may have been more systematic in their instructions; but few could keep more steadily or practically in view the superior importance of heavenly things.

"From their early years, he patiently labored to imbue the minds of his children, with love and fear of the Almighty. He instructed them diligently in the holy Scriptures; and endeavored to explain in a manner suited to the capacities, the truths they contain. He was persevering in his efforts to exhibit to them the example of the righteous of other generations and especially that exemplification of the fruit of his own principles, which the lives of the true members of our Society so strikingly display. For this purpose he set apart a portion of his

in which he read to his family works of description; a practice that was continued the period when his religious labors called from them. Perhaps some might be ready to say that such a course would be found irksome by the young; but certainly in the present case the result was widely different, and his children can now recall the feelings of solemn interest and enjoyment that often attended these readings, and the short period of quiet by which they were invariably followed. It was also his custom, when his children had retired to rest, to visit their chambers, and endeavor to cheer their hearts to their great Creator and Father. On these occasions, he would repeat to them to repeat passages of Scripture, or any other of a devotional character, to which his own feelings were frequently added; and he generally closed these sweet and well remembered seasons with a solemn pause: during which, unless, his pious spirit was often engaged in meditating them to the Lord.

As his children advanced toward maturity, and of relaxing his watchful care, he felt that there was need rather of redoubled vigilance to shield them from surrounding danger. Ever anxious for their best welfare, yet deeply sensible of the power of Divine grace alone, their youthful passions must be awakened, quickened, and enabled to hold of a Saviour's love; he was earnestly exploring for them this heavenly gift, and not in watching for opportunities to impress upon them the importance of spiritual things. In consequence of the condescension of the Lord, in answering his prayers may be introduced. As his eldest son attained the age of manhood, earnest were the cravings of his father, that the Lord would direct his heart 'into the way of God, and into the patient waiting for him.'

He knew well that to the natural man, the things of God must ever be a mystery; and he longed that through submission to the operation of the Spirit of truth they might be opened to understanding. Often with parental tenderness, he silently watched the opening convictions of his inquiring mind, and as opportunities offered, he labored to explain to him the views of himself received. At one time the contents of his son on these all important subjects were exceedingly unsettled, and he passed through deep mental conflict before he yielded to the light of Divine truth in his soul, which dispelled the doubts and reasonings by which he was assailed. It was at this period, that one day his father and he being alone together, engaged much conversation on the points which pressed heavily on the mind of the latter. On retiring to rest, his father handed him the Bible and requested him to read a chapter: he did so, and read the third chapter of Genesis. Deep seriousness overspread his countenance, and after a considerable time of silence he exclaimed, 'The Lord whom you seek shall suddenly come to his temple, even the messenger of covenant whom ye delight in;'—and he shall be like a refiner's fire, and like fuller's soap: 'yes, he will come into his own temple, the temple of the heart, and there do his own will. I never understood this chapter before, now, as I now see it, the spiritual nature of the Gospel dispensation.' The impression thus made was not soon effaced; and it was evident to his thankful and rejoicing parent, that the promised declaration was indeed fulfilled in his case,—that the Lord had come into his temple, and was there working to the purifying of his soul. The change which gradually succeeded was most striking; clearly evincing to

those around, that the day had indeed dawned and the day star arisen, in a heart long oppressed with darkness, and a prey to many doubts. In reference to this period his father once remarked with much emotion, 'this kind can come forth by nothing but by prayer and fasting,' intimating the long continued exercise of soul through which he had been led on behalf of his son.

'Two avenues to evil, he guarded with especial jealousy in his domestic sphere,—the introduction of books of an injurious tendency, and the association which he allowed to his children. With respect to reading, he was liberal in supplying whatever he thought calculated to improve or expand the mind, and furnish profitable exercise to the understanding; but very few productions of a frivolous or hurtful nature escaped the vigilance of his watchful eye. On these occasions, he regarded not the inclinations of those he so tenderly loved; and he has been known, when works that he disapproved had been lent to his young people, to return them himself to the parties from whom they came, accompanied by a frank avowal of his sentiments respecting them. With regard to society for his family, his situation in a foreign country, far separated from those of his own religious views, would doubtless have appeared to many to present unusual difficulties. These he endeavored to obviate, by rendering home as pleasant and cheerful as possible, and thus leaving his children little to desire beyond its precincts. Perhaps few domestic circles ever presented a happier scene than his own, while its links were permitted to remain unbroken. Doubtless the result of such a system has been to make the changes and separations, inevitable in a world of fluctuation and mutability, fall heavily on the hearts of survivors; but the shelter thus afforded to their inexperience, and to the unfixing principles of early years, was an invaluable safeguard; and they can now look back with grateful hearts to the wisdom and care of their departed parent. If his labors have not always been attended with adequate results, his children can freely, though with shame acknowledge, that the fault rested not with him but with themselves; and as respects those who have been called from this state of probation, the survivors are permitted to believe the counsels and prayers of their pious father were blessed on their behalf, and that they were made partakers of that redemption which is in Christ Jesus, and favored to know their robes washed and made white in His precious blood. And how full of consolation is the belief, that their spirits are now united with his, who so fondly and faithfully watched over their early years,—shielded them from temptations to surrounding evil,—and turned their feet into the path that leads to blessedness:—Therefore are they before the throne of God, and serve him day and night in his temple: and He that sitteth on the throne shall dwell among them. They shall hunger no more, neither thirst any more; neither shall the sun light on them, nor any heat. For the Lamb which is in the midst of the throne shall feed them, and shall lead them unto living fountains of waters: and God shall wipe away all tears from their eyes.'"

Anecdote of Faraday.—An English paper says: "Faraday's language was always simple, and the only poetry in which he ever indulged was the earnest expression given to some of those great truths of which he was the discoverer. He sought to reach the mind of every hearer through more senses than one. He never told his listeners of an experiment; he always showed it to them, however simple and well known it might be. If

said Faraday once to a young lecturer, 'I said to my audience, This stone will fall to the ground if I open my hand, I should not be content with saying the words; I should open my hand and let it fall. Take nothing for granted as known. Inform the eye at the same time that you address the ear.' And this was the great secret of Faraday's success. Every one left the theatre of the institution in Albemarle street satisfied that he had really acquired some useful knowledge, and that he had gained it pleasantly and without toil or labor."

Progress of the Pneumatic Railroad.—The first practical example of the pneumatic railroad ever constructed in this country has just been completed by the Holcks Machine Company, No. 628 Water street, and will form one of the prominent features at the exhibition of the American Institute in this city, now just opening. The pneumatic tube is six feet in diameter, composed of fifteen thicknesses of wood veneers, wound and cemented one upon the other in alternate spirals. This makes a tube of remarkable strength and rigidity, although the total thickness of wood is only an inch and a quarter. This tube is made under J. K. Mayo's patent. The blowing apparatus consists of a wheel 10 feet in diameter, made on the principle of a screw propeller. The pneumatic car consists of an open vehicle with a valve or disk at one end, which fits the tube. The car seats twelve passengers. The tube is over 100 feet long.

Messrs. Holcks have also built a Pneumatic Postal Dispatch for the exhibition. It consists of a pneumatic tube 24 feet in length and two feet square, having a lamp-post letter-box arrangement upon it, and a pneumatic car within. The construction is such that when the car, which is driven by air pressure, passes through the tube, it collects the letters from the lamp-post. The intention is to lay down these tubes through the city for the speedy collection and delivery of postal matter.—*Late Paper.*

THE FRIEND.

TENTH MONTH 26, 1867.

SUMMARY OF EVENTS.

FOREIGN.—The revolutionary bands which entered the Papal territory at various points on the eastern and southern frontier, concentrated at Frosenone under the command of Menotti Garibaldi. The report that Menotti had been arrested proves unfounded. Near Verona a battle took place in which the Papal forces were beaten, and the Garibaldians secured total possession of the town of Nerola and entrenched themselves there to await reinforcements. Official dispatches from Rome were received in London on the 20th, which state that further battles between the insurgents and the Pope's troops had taken place, in which the latter were victorious. They had recaptured the towns which had been previously occupied by the insurgents.

The excitement throughout Italy was very great, and the people with much unanimity call upon the government to take possession of Rome. On the other hand, the French Cabinet has addressed a circular note to its representatives at foreign Courts, solemnly pledging France to enforce the stipulation of the treaty which guarantees Rome to the Pope. It is rumored in Paris that the leading European Powers will unite with France in a joint intervention for the settlement of the Roman question and the preservation of peace.

Accounts have been received from Candia of the arrival there of the Turkish Grand Vizier and other members of the commission sent out by the Sultan. The Grand Vizier had met a deputation of Cretan insurgents at Candia in the presence of all the consuls of the foreign Powers. The insurgent deputies insisted upon the union of the island with Greece. It is reported that the Emperor Alexander, of Russia, and King William, of Prussia,

sia, have sent a joint note to the Sultan, asking him to cede the island of Candia to Greece.

The Emperor of Austria has referred to the Council of Ministers an address from the Bishops of the Austrian Empire, protesting against a new concordat. The Emperor reproves the Austrian Bishops for adopting a measure so liable to create public excitement when transportation is taken for the restoration of the council. The Emperor takes occasion to remind them that the Emperor of Austria is a constitutional Prince, as well as a true son of the church. A Vienna dispatch of the 17th says: The Reichsrath to-day passed an organic law making legal many new reforms introduced in the government. The Emperor's consent of the reply made by the Emperor to the address of the Bishops in regard to the Concordat was received with prolonged cheering in the Reichsrath.

Late advices from the seat of war in Paraguay were unfavorable to the allies. No movement had been made, and no preparations were making for an attack. The land forces of the allies, under General Mitre, were lying in wait before the Paraguayan forts, and the Argentine and Brazilian fleets were hemmed in by the guns of Lopez, and compelled to remain inactive.

The Brazilians were greatly discontented with the conduct of the war, and the French party was in the ascendency in all the States bordering on the Rio de la Plata.

A severe drought extends over the five most northern provinces of China, and much suffering is anticipated.

The Roman Catholic bishops of Ireland have issued an address denouncing in strong terms the Protestant Church establishment, the system of national schools, and Fenianism.

Lord Stanley, British Secretary of Foreign Affairs, made a speech at Manchester on the 17th. He spoke of the disturbed condition of Europe, but declared that, notwithstanding the threatening appearance, he still hoped peace would be preserved.

He alluded to the controversy between his government and the United States in regard to claims for indemnity arising out of the late war. This controversy, he said, still remained open, but England had all along dealt with America in a friendly temper in this discussion, and time was already soothing the irritation which might have arisen out of the question of the Atlantic. He mentioned in his war against Abyssinia, is to be aided by the Egyptians. The Viceroy of Egypt has ordered a corps of 10,000 men to proceed to the frontiers of Abyssinia. In consequence of a report that the Fenians had formed a plot to seize the Queen at Balmoral, the guard there has been doubled.

Up to the creation of the 21st, the accounts from Italy, received in London, were conflicting. Telegrams from Florence represented that Menotti Garibaldi maintained his position in the Roman territory, and that his command had been reinforced and was growing stronger. But dispatches from Rome assert that Menotti with all his followers had fled and abandoned their attempt on the city. On the 20th it was officially stated in Paris that the rebels will evacuate the Roman territory. Italy has pledged herself to enforce the September convention, so that the Garibaldian expedition is at an end. A Paris dispatch of the 21st says: Official assurances are given that the government will not find it necessary to give that the government is greatly relieved, and rents are buoyant. A dispatch from Toulon states that orders have been received there countermanding the sailing of the fleet for the relief of Rome, and that the troops were disembarking from transports and returning to their barracks.

The treaty with the United States for the cession of the Russian possessions in America has been ratified by Russia.

The Royal Bank of Liverpool has suspended payment with liabilities estimated at \$4,500,000.

Consols 93½. S. 5-20's 69. Sales of cotton in Liverpool on the 21st, 16,000 bales, uplands, 8½d.; Orleans, 8½d. California white wheat, 16s. 3d.; red western, 14s. 6d. per 100 lbs.

UNITED STATES.—The Indians.—The latest advices from the Commissioners who are holding a treaty with the hostile tribes in the far west say, that there is a good prospect that a treaty will be made and a lasting peace established. Many thousands of the natives had assembled at the council.

Philadelphia.—Mortality last week, 217. Of consumption, 33; of fever, 15.

New Orleans.—The yellow fever in this city, the deaths last week, from that disease, ranging usually from about 35 to 45 per day.

The Pennsylvania Election.—According to the returns received by the Secretary of State at Harrisburg, the result of the recent election in Pennsylvania is officially reported to be that for Supreme Judge, George Shartwood, Democrat, received 268,026 votes, and Henry W. Wilson, Republican, 266,224 votes, a Democratic majority of 1202. Last year the Republican vote was 307,274, and the Democratic vote 290,096, a Republican majority of 17,178. The Republicans still retain their majority in both branches of the Legislature.

The South.—About 75,000 votes were cast in the re-election in Louisiana, and the majority for a Convention is nearly 15,000.

The ex-Genl General Imboden has appealed to General Schofield from the decision of the Registry Board rejecting his vote; but the decision is sustained by Gen. Schofield. The case will now go to the courts.

Resolutions favoring the payment of the United States bonds in greenback have been introduced in the Tennessee Legislature.

The full official vote of Alabama upon the question of holding a State Convention, was: For, 87,672; against, 5685. The total number of registered voters is 165,289. General Canby has fixed for the 19th inst. the 20th of next month as the day for holding the election for the convention in South Carolina.

Miscellaneous.—In the case of a colored girl restrained of her liberty by an indenture not in accordance with the constitution of Maryland, heard recently in Baltimore, Chief Justice Chase decided that the Civil Rights bill could not be applied to persons equally with the whites are citizens of the United States.

The interest on the five-twenty bonds, payable semi-annually, falls due on the first proximo, and \$24,069.00 in coin will be required to pay the same. The interest will be paid in New York, Philadelphia, Boston, and ten other cities.

The amount of wheat is shipping from Lake Michigan ports to Montreal and other Canadian ports, which it goes by the St. Lawrence to Europe. Eight cargoes were shipped for Montreal last week from the single port of Milwaukee. One-fourth of the eastward movement of wheat for the week is destined for Canadian ports for export.

This week colleges received endowments during the year to the amount of \$3,041,000. Harvard received \$400,000; Tufts, \$300,000; Yale, \$206,000, and Cornell University \$700,000.

The Markets, &c.—The following were the quotations on the 21st inst. New York.—American gold 143½. U. S. sales, 1881, 111½; ditto, 5-20, new, 106½; ditto, 10-40, 5 per cents, 100½. Superfine State flour, \$8.20 a 9 cts. Southern flour, \$10.50 a \$14.50. St. Louis extra, \$13.30 a \$16.25. No. 1 Chicago spring wheat, \$2.25 a \$2.26; No. 2, ditto, \$2.17 a \$2.26; white Genesee, \$3.13. Canada barley, \$1.45 a \$1.51. Western oats, 80 cts. Rice, \$1.65 a 100 lbs. Western yellow corn, \$1.44; mixed, \$1.35 a \$1.38. Cotton, 20 a 21 cts. Philadelphia.—Superfine flour, \$7.50 a \$8.25; extra, family and fancy brands from \$8.50 to \$14.50. Red wheat, \$2.30 a \$2.58. Rye, \$1.70 a \$1.73. Yellow corn, \$1.46 a \$1.47; western mixed, \$1.42 a \$1.44. Oats, \$1.25 a \$1.26. Flaxseed, \$2.25 a \$2.50. Timothy, \$2.50 a 77 cts. Clover seed, \$5.75. Hops, \$9.00. Cattle reached about 3200 head. The market was dull and prices lower. Extra sold at 5 a 8½ cts. per lb. gross, fair to good, 6 a 7 cts., and common 4 a 5 cts. per lb. Sheep were also lower, about 12,000 arrived and partly sold at from 4 a 5½ cts. per lb. gross. Or boys, 2000—sold at \$9.50 a \$10.40 per 100 lbs. Baltimore.—Choice southern red wheat, \$2.80 a \$2.85; Pennsylvania, \$2.40 a \$2.55. Yellow corn, \$1.37 a \$1.42. Oats, 70 a 72 cts. Rye, \$1.62 a \$1.70. Cincinnati.—No. 1 red wheat, \$2.60. Oats, 66 a 67 cts. Chicago.—No. 1 spring wheat, \$1.85 a \$1.87. Corn, \$1.02 a \$1.08. Oats, 54 cts.

FRIENDS' FREEDMEN'S RELIEF ASSOCIATION.

An adjourned meeting of this Association will be held at Arch street meeting-house, on Third-day evening, 11th inst., 7½ o'clock.

A general attendance of Friends interested in the cause of the freedmen is particularly desired.

JOHN B. GARRETT, Secretary.

Phila., 10th mo. 1867.

WANTED.

A Teacher of Writing on the Boys' side, at Westtown Boarding School. Application to be made to

Charles J. Allen, No. 304 Arch St., or Charles Evans, No. 702 Race St.

Phila. 10th mo. 18th, 1867.

RECEIPTS.

Received from Mary Thistlethwaite, N. Y., \$1.40; No. 52, vol. 41; from E. Kester, Md., \$2.40; 41; from Sarah Hoopes, Pa., \$2.40; 41; from I. Sidwell, O., E. Sidwell, Va., \$2.40; 41; and from B. D. Sidwell, O., to No. 18, vol. 41; from W. Cope, Pa., per G. G. Oliver, Agt., \$1.10; No. 52, vol. 41; from B. R. Knowles, per H. Knowles, Agt., \$2.40; 41; from S. P. Lee, N. J., \$2.40; 41; from Jeremiah Coppock and Chr. Allen, O., per B. D. Stratton, \$2 each, vol. 41; from Stafford, O., \$2.40; 41; from Abiel Gardner, N. J., \$1.75, to No. 52, vol. 41.

WESTTOWN BOARDING SCHOOL.

The Winter Session of the School will commence on Second-day the 4th of Eleventh month.

Pupils who have been regularly entered and who by the cars from Philadelphia, on an obtain tickets at corner of Thirty-first and Market streets, by giving their names to the Ticket-agent there, who is furnished with a list of the pupils for that purpose. In such case passage, including the stage fare from the Rail Road Station, will be charged at the School, to be paid with the other incidental charges at the close of term. Conveyances will be at the STREET ROAD STATION on Second and Third-days, the 4th and 5th of Eleventh month, to meet the trains that leave Philadelphia at 11 A. M., and 2.30 P. M.

Baggage may be left either at Thirty-first and Market streets or at Eighteenth and Market. If left at the latter place, it must be put under the care of Hibt. Alexander, who will convey it thence to Thirty-first. Market at a charge of 10 cents per trunk, to be paid him. Those who prefer can have their baggage taken to any place in the built-up part of the City, by giving word on the day previous (through the post-office) to H. Alexander, No. 8 North Eighth St. His charge in such case for taking baggage Thirty-first and Market streets, will be 25 cents per trunk. For the same charge he will also collect a stage from the other railroad depots, if the checks left at his office No. 5 North Eighteenth street, are put under his care, if properly marked, will be given your attention from the owners, either at West Philadelphia depot, or at the Street Road Station but will be forwarded direct to the School. It may always go on the same train as the owner, but it will on the same day, provided the notice to H. Alexander reaches him in time.

THROUGH THE SESSION. passengers for the School will meet at the Street Road Station, on the arrival of first train from the City, every day except First-day and small packages for the pupils, if left at Friends' Store, No. 304 Arch street, will be forwarded on Sixth-day at 12 o'clock, except on the last two Sixth-days in the Twelfth month, and the expense charged in bills.

Tenth month 22d, 1867.

NOTICE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the of the Committee for the gradual Civilization and improvement of the Indian natives at Tusnessa, Cragus Co., New York. Friends who may be inclined to do so, in service, will please apply to Joseph Elkinton, No. 783 So. Second St., P. John M. Kaighn, Camden, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshallton, Chester Co. Joseph Scattergood, 413 Spruce Street, Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSEPH H. WOOD, D. D.

Application for the Admission of Patients is made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 16th inst., at Friends' Meeting at London Grove, BARCLAY R. LEEDS to MARY, dau. of Benjamin Manie, of West Marlborough, Chester Pa.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLI.

SEVENTH-DAY, ELEVENTH MONTH 2, 1867.

England in the Last Century.

A late number of *Littell's Living Age* contains an instructive article from "Blackwood's Magazine" respecting the social era of George III. In preliminary observations the writer remarks: 'We must begin by reminding our readers that incidents which mainly determine whether a nation is to be accounted civilised or the reverse are the condition of their roads, the state of their culture, and the means of transport available, at times, and under everyday contingencies, the conveyance of goods and of persons from point within the country to another. Where you find these three conditions of social existence in good order, there you may be sure that you are not sojourning with barbarians. There is no high standard of art and literature among them; their manners, in the common intercourse of life, may be rough; and even in the details which they entertain of moral and religious precepts, you may encounter a good deal which offends your more just perception of what is right. But the people as a people are lifted up to the line which divides civilization from barbarism; they have made the first and certainly the most important advances towards national respect. On the other hand, wherever these three conditions of social existence are in bad order, there you may depend upon it, you have to do with a rude people. Their country may have produced great writers, great artists, learned men, philosophers, and scholars; and luxury may abound in their capital as it abounded long ago in Rome. But the people, as a people, are actually rude; they have yet the first and most important steps to take in the direction of national refinement.'

When George III. mounted the throne, England so far as regarded the state of its roads, its culture, and means of internal transport, was at the most backward, certainly one of the most backward of European countries. In respect of roads it had decidedly fallen far behind the nation in which the Romans left it. The long and cruel causeways of that marvellous people, which no account of levels, but passing sheer from point to point, were all but obliterated, and nothing solid, or fit to bear the pressure of travel, when, or for centuries before, taken their place. And there, indeed, as on the Wiltshire downs, the moors of Devonshire, and the Yorkshire fells, stone blocks laid down irregularly on

the surface of the ground, enabled men and horses to pick their way, even in winter, from one town or village to another. But wherever the old Roman roads were lost in other parts of the country, nothing was brought in to supply their place, and travelling became, in consequence, not only difficult and dangerous, but well nigh impossible.

It is not our business to describe in detail how feeble were the attempts made long ago by legislation and royal authority to correct this evil. As early as 1285, a law was passed directing the bushes and trees to be cleared away from either side of the highways, to a distance of two hundred feet, for the avowed purpose of preventing robbers from lying in ambush. But for the construction of roads themselves no orders were given, and these became in consequence, wherever they existed at all, exactly what the amount of traffic upon each happened to make it. Hence, two centuries later, the footway at the entrance of Temple Bar was become so choked by thickets and bushes as to be all but impassable; indeed it was not till the accession of William and Mary that anything whatever was done to enforce the establishment of means of intercommunication between either the capital and the provinces, or one provincial town and another. Then the Statute of Labour, as it is called, was first passed. This threw upon parishes the burden of maintaining such roads as were already marked out. But besides that the law made no requisition for new roads, so little was it regarded in its effect upon the old roads that in Queen Anne's reign, and down to the demise of George II., the traveller who in winter approached London from the west, was in danger of sinking, even when he got to Knightsbridge, up to his saddle-girths in mud. Nor, as may be supposed, were the facilities of travel greater in the provinces than near the capital. In the neighbourhood of Birmingham, where the soil is sandy, successive generations of men and horses out down the paths here and there to a depth of many feet below the surface—one which is still existing, and known as Holloway Head, tells its own story, even though in part the hollow has been filled in. In like manner Holloway parish in London speaks of the condition in which the way or road used to be, from which the parish takes its name. As to Sussex, Fuller tells us that in his day the roads were such that an old lady, a friend of his, used to be dragged in her coach to church by six oxen. So also Cowley, the poet, encourages his friend Spratt to visit him in Chertsey, by showing that he might sleep the first night in Hampton town, and reach him in time for supper the day following. And thus things continued with very little improvement down to the middle of the eighteenth century.

Lord Hervey, writing from Kensington in 1736, complains that 'the road between this place and London is grown so infamously bad, that we are here in the same solitude as we would be if cast on a rock in the middle of the ocean; and all the Londoners tell us that there is between them and us an impassable gulf of mud.' And that Lord Hervey scarcely overcoloured his picture, is shown by the fact that when Queen Caroline passed from

St. James's Palace to Kensington, she spent two hours on the journey in bad weather, and that over and over again the royal carriage stuck fast or was upset by the wheel getting into a rut. Nor were the streets of London themselves in a much better plight. Open kennels ran in the middle of them, which, when the rain came down, flooded them altogether, leaving on the subsidence of the waters, a sea of mud, through which (for there were no sidewalks or flagstones,) passengers on foot had to pick their way, and to pick it after night-fall in the dark, for street-lamps there were none.

Over roads of this description, the only practicable mode of travelling was on foot or on horseback. The poor walked, and the bar walked or rode, according as their circumstances authorised. Ladies sat on pillion, with their arms round the gentlemen or servingmen who rode before them. Queen Elizabeth made most of her journeys in this fashion, and entered the city in state sitting on a pillion behind the Lord Chancellor. She was provided, indeed, in the course of her reign with a coach, which, like the Roman carriages, was destitute of springs, the body resting upon solid axles. But so severe was the jolting that, except on state occasions, the coach never came with her into use, nor was it for many years after her reign adopted even by the great nobility. The horse-litter conveyed ladies who were too delicate to go through a journey on horseback, and the pillion did service with the more robust.

Meanwhile, what little traffic in goods was carried on between one part of the realm and another was carried on entirely by packhorses. Corn and wool went to market in creels. Manure was carried to the fields in the same way; and in the same way from moss or forest, fuel was conveyed to towns, villages, and private houses. Even the little coal which was used in the southern counties could only be transported in panniers from the seashore or navigable rivers inland. In a country so circumstanced it was out of the question that manufactures of any kind could flourish. It was cheaper to import foreign wares into London by sea than to bring them on horses' backs from the interior. And elsewhere than in London people were content to do without articles which are now regarded as indispensable, even to the poorest. For example, a hundred and fifty years ago vessels of wood, pewter, and even of leather, formed the chief part of the household and table utensils in opulent families. Clothing, glass, 'delft,' cutlery, paper, even hats, all came from France, Germany, and Holland; and most of these, like plate in silver and gold, were in common use only among the titled and untitled nobility.

Commercial intercourse there was, however, of a certain kind even then between the capital and the provinces, and between one provincial town and another. At the time when Snodgrass made his famous journey from Glasgow to London, this was carried on partly in wagons, more frequently by packhorses. The latter were used principally for purposes of trade—the former had begun to carry passengers likewise; and of both modes of

conveyance Smollett made trial. The packhorses went in long strings, one following the other, pretty much as in the present day mules traverse Spain; and in England in 1758, as in Spain in 1867, the leading beast, because he was remarkable for his sagacity, bore a bell, or a collar of bells, wherewith to guide aright those that followed. We find in that amusing work 'The Original,' a passage which explains so accurately the circumstances under which this species of internal trade was carried on, that we cannot do better than transfer it to our own pages:—

'I have, by tradition, the mode of carrying on the home trade by one of the principal merchants of Manchester, who was born at the commencement of the last century, and who realized a sufficient fortune to keep a carriage, when not half-a-dozen were kept in the town by persons connected with business. He sent the manufactures of the place into Nottinghamshire, Lincolnshire, Cambridgeshire, and the intervening counties, and principally took in exchange feathers from Lincolnshire, and malt from Cambridgeshire and Nottinghamshire. All his commodities were conveyed on packhorses, and he was from home the greater part of every year, performing his journeys entirely on horseback. His balances were received in guineas, and were carried with him in his saddle-bags. He was exposed to the vicissitudes of the weather, to great labor and fatigue, and to constant danger. In Lincolnshire he travelled chiefly along bridle ways, through fields where frequent gibbets warned him of his perils, and where flocks of wild-fowl continually darkened the air. Business carried on in this manner required a combination of personal attention, courage, and physical strength not to be looked for in a deputy, and a merchant then led a much more severe and irksome life than a bag-man afterwards, still more than a "traveller" of the present day. In the earlier days of the merchant above mentioned, the wine-merchant who supplied Manchester resided at Preston, then always called Ford Preston, because exclusively inhabited by gentry. The wine was carried on horses, and a gallon was considered a large order.'

Allusion has been made in this extract to the perils of the road, and to the frequent gibbets which warned the travelling merchants, in the midland and northern counties, to keep constantly upon their guard. It was not, however, in the midland and northern districts of England exclusively that the practice of highway robbery was of frequent occurrence. While Turpin and Bradshaw made the Great North Road the scene of their operations, Duval, Macneath, Macbain, and many more infested Hounslow Heath, Finchley Common, Stoshen-Hill, and other approaches to the capital. Many bodies of highwaymen, hung in chains, ornamented most of these approaches; yet the example failed to deter from constant repetitions of the offence which had cost these men their lives. Nobody thought, indeed, a hundred years ago, of setting out upon a journey, whether he travelled by coach or on horseback, without getting his firearms ready; and the circumstance of having used them effectively, and beaten off or killed a robber, gained for a gentleman almost as proud a name as the soldier acquires now by winning the Victoria Cross. The following story of John, Earl Berkeley, is not new, but we give it as well illustrating the manner of the times of which we are writing.

(To be continued.)

Anecdote of Hume.—An amusing anecdote is told of Dr. Robertson of Scotland, who, with a ready wit, drew an illustration from a misfortune

of David Hume to point an argument. It was as follows:

The celebrated Dr. Hume wrote an essay on the sufficiency of nature; and the no less celebrated Dr. Robertson on the sufficiency of Revelation and the insufficiency of the light of nature. Hume came one evening to visit Robertson, and the evening was spent on the subject. The friends of both were present, and it is said that Robertson reasoned with accustomed clearness and power. Whether Hume was convinced by his reasoning or not we cannot tell; but at any rate he did not acknowledge his conviction. Hume was very much of a gentleman, and, as he rose to depart, bowed politely to those in the room, while, as he retired through the door, Robertson took the light to show him the way.

"O, sir," he continued, "I find the light of nature always sufficient," as he bowed on. The street door was open, and presently, as he bowed along the entry he stumbled over something concealed, and pitched down stairs into the street. Robertson ran after him with a candle, and, as he held it over him, whispered softly, and cunningly: "You had better have a little light from above, friend Hume," and, raising him up, he bade him good night and returned to his friends.

Selected for "The Friend."

Daniel Wheeler writes in his journal: "I had to bear testimony to the power of Truth in the heart, if believed in and submitted to. Just as we are concerned to dwell near to this power in our daily walks through life, shall we be permitted to witness its influence upon our minds, when met together for the purpose of worshipping that God who is a spirit, and must be worshipped in spirit and in truth. It was declared by the Saviour of the world, when personally on earth, that where two or three are gathered together in His name, there is He in the midst of them. But it would be well for us all to examine whether we are met in His name; whether His name, which is His power, doth rule and reign in our hearts; whether our thoughts are brought into obedience to the Spirit of Truth. None can meet in His name, in the expectation of witnessing His presence in the midst of them, but those who are subject to His power. It is for want of submission to this power in our hearts, that so many sit in dry places, where there is neither dew, nor rain, nor fields of offering. Such go from meetings as they come, barren, unfruitful, and unrefreshed; yet the Divine promise stands fast: 'Where two or three are gathered together in my name, there am I in the midst of them.'"

A Fugitive Slave Town in Brazil.—The ability of the black man to govern himself is illustrated by a curious discovery recently made in Brazil. It seems that there is in a remote district on the northwestern confines of that empire a town composed of about four thousand runaway slaves. These fugitive negroes have established a municipal government of their own; they have streets well laid out, houses built, and it is now by the merest chance that the government has heard of it. The town is called Manso, and is near the mountains of St. Jeronymo. The townpeople are industrious, but, as women are scarce, they make raiding parties to run away with women in the settlements. One of these women escaped, and gave notice to the authorities of this extraordinary town.

It is to be hoped that the Brazilian government will be sufficiently enlightened to abstain from interference with the affairs of this important settlement.—*E. Post.*

Selections from the Unpublished Letters and Journal of a Deceased Minister.

The letters and memorandums alluded to (later occupying a subsequent part of the MS) embrace a period of about fifteen years; until writer's death.

While they are manifestly the outpourings of a heart un-bungered and athirst after righteousness and deeply imbued with the love of the Saviour, they no less set forth the deep baptism, thorough participation in His cup of suffering which ever mark the devoted disciple and will be so in the school of Christ; agreeably to Saviour's declaration to James and John: "I shall indeed drink of my cup, and be baptized with the baptism that I am baptized with;" But, as proved by our Journalist, "Truth has price, and usually a costly one;" she was nevertheless enabled, through and over all, "in her heart and depth," "in weariness and painfulness," the name of the Lord to set up her banner; with much humility and patience, practically magnify that grace, through faithful obedience which she became what she no doubt was, was sanctified, and justified, in the name of Lord Jesus and by the Spirit of our God.

The often hurried composition of epistolary correspondence while, it is hoped excuse, in the emergencies, portions here presented, which could well be separated or re-arranged without injury to the whole.

"5th mo. 19th, 1838. Although the billow affliction may run high, and appear to poor, wretched human nature, almost overwhelming, yet the seaboard which in former times saved a confiding disciple, is still able to succor his dependent children, and make a way for them where there appears no way."

"6th mo. 23d. Joys of earthly origin unknown to the Son and Sent of the Father. How, then, can His followers expect exemption from suffering? I believe it remains a truth this day that 'The Lord will have a tried people.'"

"1st mo. 8th, 1843. Thou asks to be informed respecting the closing scenes of the lamented ———. The little information we have had, been through ——— who was a faithful and wearied attendant during his illness. He entirely sensible until the close; and died a believer in the faith of Jesus: which he evinced not only by words but by a patient and weak reader of his will to the will of Him who did all things well. Almost his last words were 'Happy, happy. Come Lord Jesus, come quick Receive my spirit.'

"The contemplation of a death so glorious well calculated to raise in a reflecting mind, sires so to live, that the same happy assurance acceptance may be vouchsafed us by a men God; who has promised to be with, and sustain His dependent children, throughout all time, hath graciously declared he will be with, and assist all those who seek Him. We may also assist him a striking exemplification of the transition of all the fondly cherished things of a life of existence — young, talented, the delight of family, caressed by a large circle of acquaintances and friends, to whom his many engaging qualities had firmly endeared him; he had as much reason as ourselves to look forward to length of days, anticipate the reward of talents honorably given. 'They shall perish,' remains indelibly pressed on all time can boast—but 'Thou

* A young man of talent and of religious promise.

est," will still remain to be the christian's hope here, his only anticipated joy in eternity." "1st mo. 12th. Since thy late visit another has been numbered with those forever gone; were it possible for us to peruse the registered list of mercies slighted, favors misapprehended, of omissions and commission, few could plume themselves from,—we might rationally conclude every effort would be exerted, so to employ our time from day to day, that the termination of this might find us strengthened in the hope of living in measure fulfilled our duty to our Creator, our fellow creatures, and to ourselves."

"2d mo. 18th. I do not know that I can spend long period of solitude more agreeably or profitably, than by communing with my absent brother. Periods of separation were not sometimes allotted, we should scarcely feel, to its full extent, the pleasure we derive from the social and affectionate intercourse of those endeared to us by the strong ties of nature or friendship; or how necessary they are to our happiness. It is a beautiful regulation in the social system, and when exercised in proper limits, is an unfailing source of happiness, and tends, more than any other emotion of an earthly cast, to reconcile us to the otherwise dull and tedious routine of terrestrial life. Ties of this nature, either in families or in the wider range of properly selected friends, united by a union in the truth as it is in Jesus, add a truly enriching banquet, compared to the idle pursuits of what the world terms wisdom, are feeble and unsatisfying in the extreme; yielding to its rotaries only the harrowing sentiment that the end is sorrow."

"Winter seems to have resigned his sway much earlier than usual, and given place to the storming of the seasons. Balmey gales have thrilled upon us all their sweetest influence; and feathered songsters have trilled their harmonious lays in welcome of its return. Thou mayst call me rather poetical, but spring seems alluring, and its appearance always awakens feelings which I love but too well to indulge—feelings in which all, who are alive to beauty, must take of in a greater or less degree."

"I am quite aware the hard time is working upon a change, and subduing many a propensity long obliterated has retained. Nay, a deeper principle must act upon all that is perishable, and we refine everything opposed to its pre-eminence. The heart must be created anew, ere we can be a proper offering to Him who formed it. We pursue its thoughts, affections and inclinations, are subjected to the unerring test, ere it can be cleansed and fitted to receive the engraving of the Kingdom, which is able to make us unto salvation, through faith which is in Jesus. Perhaps I may unpresumptuously say, we felt a little of its influence. I look with a different eye on what earth calls happiness, what I did a few years since. I have been mercifully sensible that it can yield no permanent treasure, and must be held in abeyance, while by the strengthening arm of the Preserver, ere we avoid contamination. I have found once took pleasure in, deeply shaded and hidden, as being unable to yield profitable and long knowledge; and have received instead, joys which are deep, and enduring, and full of peace: hopes which cheer earth's pathway, and where earth's sorrows and conflicts can find no entrance."

(To be continued.)

Concerning School Children's Eyes.—A curious has been published at Breslau lately by a German Cohn, giving the result of an ex-

amination of the eyes of ten thousand and sixty school children. The proportion of shortsighted children was 17.1 per cent., or seventeen hundred and thirty among ten thousand and sixty. No village children were found to be shortsighted until they had been some time at school—at least half a year. There were, in proportion, four times as many shortsighted children in the town (Breslau) as in the country, and shortsightedness increased generally with the demands made upon the children. Dr. Cohn attributes the evil in a great measure to the bad construction of school benches, which force the children to read with their books close before their eyes, and with their heads held downwards.—*Late Paper.*

The Plague of Locusts.

A correspondent with the Indian Commission up the Missouri river, writes as follows of the grief of the Indians at the destruction of their corn crop by grasshoppers. He says:

"The Indians believe that the Great Spirit smiles or frowns as he is pleased or displeased, hence their thanks for plentiful harvests, triumphs over their enemies, their dances, pow-wows, and thanksgivings, also their tears and wailings when the seasons fail and disaster comes on apace. Perhaps the most touching incident we ever witnessed occurred a few days since, at the Yankton Mission, illustrative of this idea. The Indians had planted, weeded, and carefully tended upward of a thousand acres of corn. During the entire spring and summer—from the time the tiny seed had been buried in the earth till it burst and shot forth its green leaves—till the thousand acres were green with waving tassels and lofty spires—till the stalks were heavy with golden fruit—till then the squaws watched it and talked over it, dreamed in their own savage way of the comfort and support it was to be to them in the winter. Last week, the armies of grasshoppers, like a pestilence, landed in the country, and flying over the river in squads and legions, looking like vast clouds of dust against the horizon, now a dark spot against the clear blue ether, now visible a few feet above the earth—a vast, buzzing, chirping, moving mass, bearing death in their touch, and starvation, suffering, and want in their wake—came upon the carefully watched corn of the Yanktonites. In a single night it disappeared. The tall, straight stalks were bowed down, the leaves, eaten through, wilted and died; the kernels, half ripe, were sucked of their strength—the whole field was destroyed. Touching enough to move the heart of the most stoical was the sight on the morrow."

"Up and down the furrows all over the field ran the squaws and children, wailing, and crying piteously. They ran to the stalks and bent them over, examining them mournfully; they tore away the husks and looked upon the eaten kernels and naked cobs with a strange look of savage despair. Starvation seemed written on their faces, as with sad and dismal wails and howls they came out of the field and looked upon their little papooses, who in sleeping innocence they had left, some hung in blankets to the fences and trees, and others playing on the green sward. 'We must die, we must starve,' so utterly helpless did they seem—so savagely hopeless. The men wrapped the blankets around themselves, and when the squaws told them the news they said nothing, did nothing to indicate that any great emotion was stirring within them, but their countenance looked so woe begone, so heart-rendingly sad, that if we were introduced to a legion of people doomed to be hanged, they could not look more sad than these poor Yanktonites."

"I had rather be a door-keeper in the house of my God, than dwell in the tents of wickedness."

Let this man glory in his illustrious ancestors:—another bless himself in a fancied superiority:—and another glory in his riches—let this man pride himself for his fine house and numerous servants, and another gloat upon his high reputation. I cannot see his character ennobled.

He enjoys the favor of the great, but not thy loving-kindness, O God, which is better than life. Oh death, what contempt dost thou pour on the high! as clouds are driven by the northern blast; as snow is melted by the sun; and as stubble is consumed by the fire; so vanishes all earthly glory at thy approach—look upon the repository of the dead where the dust of the servant and his lord are blended into one.

Miserable they! who distinguish themselves only by such distinctions as are abolished in the grave, and are of no avail in the awful judgment. With what blank faces will they look, who have no other recommendations but their illustrious pedigree, their great wealth, and their renown, when He whose life was lowly, and death ignominious, shall sift them at His tribunal? When every mask shall be pulled off, and their eternal state be adjusted, not according to their own or the world's estimate, but according to what they were in the eye of God, the Judge of all.

Cease then, O my soul, to admire or to envy the glory of the world; nor esteem them truly honorable, whose souls are not truly great, and whose glory will not descend after them into the grave. It is thine alone, Oh Righteousness of God, that can lift the poor from the dung-hill, the needy out of the dust, and make the off-scourings of all things, be the excellent of the earth.

The truly great—what though he be not a favorite of the prince when he has power with God—what though he possess not wealth, when the unsearchable riches of Christ are his—what though his house be the humble cottage, when the King of Glory deigns to come under his lowly roof, and even to dwell there—what though his memory should die away in the city where he lived, his memory in heaven is everlasting.

Go then, O immortal soul! seek that honor which comes from God only—which is no phantom to mock thy grasp, or bubble to break at thy touch—but a blessed reality—the praise of men cannot bestow it, or their reproaches take it away. The Lord of Hosts hath purposed to stain the pride of all other glory; but this honor will never be laid in the dust.

It is said of the late Dr. Marsh, that even his enemies could not long oppose him with bitterness; for he seldom spoke unkind words, consequently the flame of hatred quickly expired, there being no one to keep up the quarrel. We have here a curious instance of this. A clergyman published a pamphlet containing various false statements about Dr. Marsh, of which he took no notice:—

"Shortly afterwards," says Miss Marsh, "on some public occasion, the benefactors of the County Hospital were required to walk together in procession. My father was one of them, and the clergyman who was appointed to walk with him was the one who had attacked him. My father had heard his name, but the other did not know that his companion was the man whom he had been persuaded to calumniate. He became so charmed with him in the course of their walk, that at the end of it he said to a friend who resided in the town, 'Tell me who was my delight-

ful companion? He seems to be the *beau-ideal* of a christian and a gentleman.' 'He is the man about whom you have written in no measured terms,' was the reply. The clergyman was hurrying away, when my father hastened after him, took his hand, and expressed his cordial good wishes for him. The other was deeply touched, and at once went to his publisher to buy up the remaining copies of his pamphlet, that he might commit them to the flames.'

EVENING HYMN.

Quietly rest the woods and dales,
Silence round the hearth prevails,
The world is all asleep;
Thou, my soul, in thought arise,
Seek thy Father in the skies,
And holy vigils with Him keep.

Sun where hidest thou thy light?
Art thou driven hence by night,
Thy dark and ancient foe?
Go! another Sun is mine,
Jesus comes with light divine,
To cheer my pilgrimage below.

Now that day has past away,
Golden stars in bright array
Bespangle the blue sky
Bright and clear, so would I stand
When I hear my Lord's command
To leave this earth, and upward fly.

Now this holy seeks for rest,
From its vestments all undrest,
Types of mortality:
Christ shall give me soon to wear,
Garments beautiful and fair,—
White robes of glorious majesty.

Weary limbs, now rest ye here,
Safe from danger and from fear,
Seek slumber on this bed:
Deeper rest ere long to share,
Other hands shall soon prepare
My narrow couch among the dead.

While my eyes I gently close,
Stealing o'er me soft repose,
Who shall my guardian be?
Soul and body now I leave
(And thou wilt the trust receive,
O Israel's Watchman I unto Thee.)

O my friends, from you this day
May all ill have fled away,
No danger near have come;
Now, my God, these dear ones keep,
Give to my beloved sleep,
And angels send to guard their home.

ANGRY WORDS.

Angry words are lightly spoken
In a rash and thoughtless hour,
Brightest links of life are broken
By their deep insidious power.
Hearts inspired by warmest feeling,
Ne'er before by anger stirred,
Oft are sent past human feeling,
By a single angry word.

Poison-drops of care and sorrow,
Bitter poison-drops are they;
Weaving for the coming morrow
Saddest memories of to-day.
Angry words,—oh, let them never
From the tongue unbridled slip;
May the heart's best impulse ever
Check them when they soil the lip.

Love is much too pure and holy,
Friendship is too sacred far,
For a moment's reckless folly
Thus to desolate and mar.
Angry words are lightly spoken;
Bitter thoughts are rashly stirred;
Brightest links of life are broken
By a single angry word.

J. Middleton.

Selected.

Cicero and Seneca on War.—We could not expect the heathen to denounce a custom so emphatically their own; yet we find the wisest and best of them reprobating it in the strongest terms. *Cicero* speaks of war, "contention by violence as belonging to the brutes," and complains bitterly of its effects on liberal arts and peaceful pursuits. "All our noble studies, all our reputation at the bar, all our professional assiduities, are stricken from our hands as soon as the alarm of war is sounded. Wisdom itself, the mistress of affairs, is driven from the field. Force bears away. The statesman is despised; the grim soldier alone is caressed. Legal proceedings cease. Claims are asserted and prosecuted, not according to law but by force of arms."

Seneca, the great moralist of antiquity, is still more strong in his condemnation of war. "How are we to treat our fellow creatures? Shall we not spare the effusion of blood? How small a matter not to hurt him to whom we are bound by every obligation to do all the good in our power! Some deeds which are considered as villainous while capable of being prevented, become honorable and glorious when they arise above the control of law. The very things which, if men had done them in their private capacity, they would expiate with their lives, we extol when perpetrated in regimental acts at the bidding of a general. We punish murders and massacres committed among private persons; but what do we with wars, the glorious crime of murdering whole nations."—*British Workman*.

Holiness and Humility.

Holiness and humility are inseparably connected together. The weaker the soul comes to God, the more completely it is humbled, subdued and overpowered. It was when Job heard the voice of the Lord out of the whirlwind that he exclaimed, "I abhor myself, and repent in dust and ashes." When the "still small voice" of God spoke to the exiled prophet in his cave, he wrapped his blushing face in his mantle, and his whole being bowed before the divine presence and power. It was when the evangelical prophet Isaiah saw the glory of the Lord, and heard the six winged seraphim crying one to another, "Holy, holy, holy, is the Lord of hosts," that he cried out, "Woe is me, for I am undone." It was after Paul had been caught up into the third heaven that he said of himself that he was "the least of all the saints." And it was the beloved disciple, whose head had leaned on the bosom of Jesus, and whose eyes had beheld his glory in apocalyptic vision, whose meek, child-like spirit has been the admiration of all ages. Thus it is with every saint of God on earth, and it is so with every glorified spirit in heaven. The higher the soul rises in holiness, the deeper it sinks in humility and self abasement. So sings Montgometry:

"The bird that soars on highest wing,
Builds on the ground her lowly nest;
And she that doth most sweetly sing,
Sings in the shade when all things rest:
In lark and nightingale we see
What honor hath humility.

The saint that wears heaven's brightest crown,
In lowliest adoration bends;
The weight of glory bows him down
The most, when most his soul ascends:
Nearest the throne himself must be
The footstool of humility."

A Line from a Deceased Minister's Diary.—Many persons are seeking after Truth in natural science; but how few in spiritual things! The reason probably is that, when found in the former, it exalts the creature; but when discovered in the latter, it lays him low.

Vampires.—Vampires, so called, are by no means peculiar to Brazil, but the veritable creature insinuated itself into the company of Americans which arrived in that country recently. The writer says:—"A party of Americans went up the Amazon, and one of them was blest so badly by a vampire as to awake, in a state of exhaustion with a face like a corpse; the foot of his ham mock and the floor beneath it were saturated with blood, the flow of which was stauched with great difficulty. It is the difficulty of staunching the blood which makes the vampire so dreaded, the quantity which the creature requires to satisfy his appetite being comparatively trifling. Some persons seem to be especially liable to their attacks while others can sleep in a room infested with them nightly with impunity. A gentleman living near Para, whose house stands on the bank of a ligarspe, tells me that his room is seldom without one or more vampires in it after dark, and the have never molested him, although they have been an unlucky goat in a shed beneath his window until the creature was unable to stand, and was shot as an act of mercy. A young English lad who was visiting at this house was bitten on the first night of her arrival, and in spite of the precaution used, was again bitten a few days afterwards, bleeding from a wound on the under side of her toe until much weakened. These animals only make their attacks in darkness, and a light kept burning in the sleeping-room is an efficient safeguard. A physician, long resident here, tells me that, although poisonous reptiles are somewhat plenty in the province, the serious accidents from this cause scarcely amount to half a dozen annually in a population of 30,000." The vampire is a small species of bat.—*Latte Paper*.

For "The Friend."

One Session Per Day.

I fully concur with "A," in the seventh number of "The Friend," in his objections to the one session system. Pupils in the summer, generally attend their breakfast about 7 o'clock. They are at school from 9 till 2 o'clock, and get home to dinner, say at half-past two, making seven at a half hours between those meals. After dinner they must commence learning their lessons the next day; namely, grammar, geography, history, spelling, mental arithmetic, philosophy, and so on, a week, a scripture lesson. Grammar, besides committing a portion to memory, consists of parsing which, with beginners, requires constant assistance (to lay the foundation of the system, and explain the principles,) such assistance as teachers are capable of giving. Lessons in geography consisting of eight or ten large verses of statistics each verse containing from thirty to fifty words describing the extent of the kingdoms, the rivers, and the names of the departments, the number of square miles, the number of inhabitants, the mountains, lakes, natural features, the products of the fields, and the mines, the various manufactures, the cities and towns, the kind of government of each, and the religion, all to be committed to memory. Then comes the history with half a page to be committed to memory, a finally a spelling lesson, the most important of the children come home hungry, with their books, and all those lessons to learn in the afternoon and evening. They must be said the morning at school, without missing a word, or a pupil will not be able to keep his place in the class. Now, whilst the parents, or some part of the household are teaching the children, explaining and hearing their lessons over and over again, where are the teachers? They are either enjoying themselves in the afternoon, or attending

other business, that may increase their income. They point out to the pupils, the lessons learned at home, and their ushers in every way must attend to them. This system is attended with several evils. First, the fasting for a day and a half hours, is injurious to the health. Food which they consume is digested in two or three hours, and hunger is felt in four or five hours. Secondly, the pupils have the teaching of those long lessons devoted to, which ought to be done by the teachers at school, and for which they are paid. Thirdly, the children are deprived of that recreation necessary to keep up their health and spirits. They come home discouraged with the pressure of their task, and the fear that there is no recreation for them, and they loathe the sight of their books. But the remedy for these evils is plain and easy; namely, let there be no sessions per day, the afternoon session devoted to the special purpose of learning and teaching their lessons to their teachers, who can give the proper explanations and prevent erroneous sessions. Pupils who do not reside in the school should bring their dinners with them. Were the case, those long statistical lessons in geography, and those in history to be committed to memory, would soon be dispensed with, and geography be taught from maps of the largest size hung on the wall, a much more efficient method than teaching from the small Atlases. To complete the reorganization, give the teachers a more adequate salary, say, fifteen hundred dollars to compensate for the two sessions; increase the price per session at least five cents. Every patron would willingly pay this small sum, to be released from the burden of coming and attending to those long lessons at home, and the satisfaction for the removal of evils above mentioned. With this system well established, the playful children just let loose from school."

B.

the Ministry.—The gospel is the power of God unto salvation; it is the glad tidings of freedom from sin, and of the baptism of the Spirit; we may serve God in holiness and righteousness all the days of our life. The ministers of the gospel are those who in the spirit of Christ, by gift and inspiration thereof, preach these things to the poor and needy, to the captives, to that groan under the pressure of the body of sin.—*L. Penington.*

anecdote of a Lapslander.—The following story, we find in a late paper, shows the extreme simplicity and simplicity of these poor people. English travellers were making an excursion to the Norwegian Lapland, accompanied by a guide; it was summer time, and the day extremely hot and oppressive; so, having to travel by their way over some high mountains, they lay down on a good-sized stone to rest. The Lapsman stood at a respectful distance, but being inquisitive, as his people generally are, he kept his eyes firmly fixed on the Englishmen to observe what they were doing. One of the travellers happened to wear a wig, and wishing to cool his head, he removed it, as well as his hat. On seeing this, his extraordinary proceeding, the Lapsman for a moment spall-bound—he had never seen such a thing as a wig before. He then beat his hands on his breast, gave a most unorthodox and subsided into silence. He made no remark to the travellers proceeded on their way; the Lapsman could not be persuaded on any account to go near the Englishman who wore a wig.

Selected for "The Friend."

Frequent waiting in stillness on the Lord for the renewal of strength, keeps the mind at home in its proper place and duty, and out of all unprofitable association and converse, whether amongst those of our own, or other professions.

Much hurt may accrue to the religious mind, by long and frequent conversation on temporal matters, especially by interesting ourselves unnecessarily in them, for there is a leaven in that propensity, which being suffered to prevail, indisposes and benumbs the soul, and prevents its frequent ascendings in living aspirations towards the Fountain of eternal life.—*Book of Discipline, 1796.*

Manual Labor.—Hugh Miller, than whom none knew better the strength and the weakness belonging to the lot of labor, stated the result of his experience to be, that work, even the hardest, is full of pleasure and materials for self-improvement. He held honest labor to be the best of teachers, and that the school of toil is the noblest of schools—save only the christian one—that it is a school in which the ability of being useful is imparted, the spirit of independence learned, and the habit of persevering effort acquired. He was even of opinion that the training of the mechanic, by the exercise which it gives to his observant faculties, from his daily dealing with things, actual and practical, and the close experience of life which he acquires, better fits him for picking his way through the journey of life, and is more favorable to his growth as a man, emphatically speaking, than the training afforded by any other condition.—*British Workman.*

Our insidious adversary will not fail to prompt to any exercises calculated to prevent our seeking after that knowledge which giveth life; and the more plausible the engagement of mind, the less we suspect that a snare lies beneath. It is no matter to him, how near the christians' path we may tread, if not in it;—we are more lulled into mistaken security: even under the semblance of promoting the cause of religion, our attention may be so unsuspectingly but completely engrossed, that the great work of laboring in our own vineyards, of seeking salvation in our own hearts, may be overlooked and neglected. It is of little consequence by what bait the grand adversary succeeds; his purpose is fully accomplished, if we are but kept destitute of that knowledge which is life eternal.—*Daniel Wheeler.*

Progress of Australia.—In 1865 the imports into the Australian colonies reached £35,000,000, and the exports £30,000,000. Within the last sixteen years New South Wales and Victoria have yielded £150,000,000 worth of gold, and New South Wales has produced 5,000,000 tons of coal. South Australia has also, within the last ten years, exported £5,000,000 worth of copper. The tonnage of vessels which arrived at Australian ports in 1865 was 2,000,000, and a similar amount of tonnage left those ports during the same period. Forty years ago the number of horses, cattle and sheep in Australia, was under 400,000; the number is now nearly 35,000,000.—*Late Paper.*

The Secret.—I am prostrate, but reconciled and happy. I have found in Christ a happiness I did not think existed on this side the grave. I have been seeking religion for years by reason, but I could not get it; and I have found it by becoming a little child. That is the secret. Let me advise every man to get it in that way, then he will see all its beauties. Reason is nothing.—*Dr. Gordon.*

A great many people never think when they are reading; they just run over the words, and thus go over a volume without any impression being left on the mind. Yet some of these people would laugh at the man who borrowed a dictionary, believing it to be a novel, and, after patiently reading it, said, "this is the strangest author I ever met with; he never writes three lines on the same subject!"—*Late Paper.*

THE FRIEND.

ELEVENTH MONTH 2, 1867.

[We have received a copy of the printed Minutes of Ohio Yearly Meeting, from which we make the following condensed extracts:]

At Ohio Yearly Meeting held at Mount Pleasant, by adjournments from the 30th of the 9th mo. to 3rd of the 10th inclusive, 1867.

Reports were received from all the Quarterly Meetings. The representatives are from:

* * * * *

Who were all present except two for whose absence satisfactory reasons were given.

The Clerk of the Yearly Meeting for Ministers and Elders produced a minute of unity and concurrence for Samuel Cope, a Minister from Bradford Monthly Meeting, Pa., dated the 7th of 8th mo., 1867, endorsed by Calhoun Quarter, held the 16th of the 8th mo., 1867, setting him at liberty to attend this meeting, and for religious services within its limits. Also one for Ebenezer Worth, an elder, companion for our friend Samuel Cope, from same Monthly Meeting, dated 9th mo. 4th, 1867. They are acceptably in attendance.

The following Friends are appointed to examine the Treasurer's account, report the state thereof to a future sitting, what sum, if any, be raised the ensuing year; also the name of a Friend for Treasurer, viz.

* * * * *

The proposition of Stillwater and Pennsylvania Quarterly Meetings on the request of Hickory Grove, Coal Creek and Springville Monthly Meeting for the establishment of a Quarterly Meeting, being read and considered, was united with:—The Meeting to be called Hickory Grove Quarterly Meeting, and to be opened on the 4th Seventh day in the 5th mo. next, at 11 o'clock, at Hickory Grove; the meeting of Ministers and Elders the day preceding at the same hour, and thereafter on the 4th Seventh-day in the 2nd, 5th, 8th and 11th mos.: at Hickory Grove in 2nd and 11th mos., at Coal Creek in the 5th mo., and Springville in the 8th mo., and they are directed to forward their reports to this meeting next year: and * * * are appointed in conjunction with a like committee of women Friends to attend the opening thereof and report of their care therein next year.

Salem Quarterly Meeting informs that Salem Monthly Meeting is without a correspondent (by the death of Jehu Fawcett) the representatives from that Quarter are desired to confer together and propose to a future sitting a Friend to fill the vacancy.

Springfield Quarterly Meeting informs that Upper Springfield Monthly Meeting is without a correspondent (in consequence of the removal of Robert Ellyson without its limits) the representatives from that Quarter are desired to confer together and propose to a future sitting a Friend to fill the vacancy. * * * * *

The representatives are desired to confer together and propose to the next sitting the name

of a Friend for Clerk the present year, and one for assistant; also the names of two Friends for messengers to the Women's Meeting.

Then adjourned to 11 o'clock to-morrow.
Third-day of the week and 1st of 10th mo. the Meeting gathered near the time to which it was adjourned.—Nathan Hall, in behalf of the representatives reported that they had conferred together and were united in offering the name of Asa Branson for Clerk and Edward Stratton for assistant, which being united with by the meeting, they were appointed to the service. He also reported that they were united in offering the names of Joseph Wilson and Jacob Branson for Messengers to the Women's Meeting, which was also united with and they appointed to the service.

The queries were all read and answers thereto from the Quarterly Meetings. The following is a summary thereof.

SUMMARY OF THE ANNUAL QUERIES.

First.—A preparative Meeting established at Hopewell in Linn county, Iowa, a branch of the Springfield Monthly Meeting.

Second.—A good degree of encouragement has been given to schools for the education of our youth under the tuition of teachers in membership with us.

Third.—Endeavors are used to read and answer the queries as directed.

* * * are appointed to assist the Clerk in preparing a suitable minute embracing the exercises of the meeting and produce it to a future sitting.

Then adjourned to 3 o'clock to-morrow afternoon.

Fourth day afternoon and 2nd of 10th month, the meeting gathered pursuant to adjournment.—The committee for the purpose produced the following which was satisfactory to the meeting.

On entering into the consideration of the state of our religious Society, within our limits, we have, with feelings of gratitude, to acknowledge that the blessed Head of the Church has spread over us the canopy of his love, under which the meeting was brought into exercise for the best welfare of our members, both those that are present on this interesting occasion, and those who have not been in attendance of this meeting; and we salute you in the language of the apostle, "Grace, mercy and peace be multiplied among you through the knowledge of God, and of our Saviour, Jesus Christ." It has been a subject of deep concern on being informed by the answers to the Queries of deficiencies in the faithful support of some of the precious testimony, all of which we continue to believe have been laid upon by us Him who first loved us and called us by his grace to be a peculiar people to himself.

We regard neglecting the regular attendance of our religious meetings on worldly considerations, as a great inlet to weakness to such, and retards their growth in the Truth. We therefore beseech you, brethren, by the mercies of God, that ye present your bodies on these occasions, a living sacrifice, holy, acceptable unto God, which is your reasonable service; and be not conformed to this world, but suffer the transforming power of Truth so to operate on your minds as to enable you to prove what is that good and acceptable and perfect will of God. Thus would our love to Him, and one unto another, increase and abound, and we should be enabled to fulfil the injunctions of our Holy Head and High Priest: "Let your lights so shine before men, that others seeing your good works, may glorify your Father who is in Heaven."

It has been a comfort to us to see this meeting attended by so large a portion of our younger members, who, by their orderly demeanor and solid deportment, have cheered the spirits of their elder brethren, and afresh given rise to the hope that the preparing band of the Lord has been laid upon them for his services. Patiently abide and endure, we entreat you in the love of Christ, all the further turnings and overturnings of his hand upon you, for as you keep under it, you may rest assured His promise will be fulfilled to you, "I will never leave thee nor forsake thee." Avoid, we beseech you, substituting any work of your own planning or devising; remember for your admonition the complaint made against ancient Israel, My people have forsaken me, the Fountain of living waters, and have hewn out unto themselves cisterns, broken cisterns that can hold no water.

In advertising to this subject we have particularly had before us, on this occasion, the joining in associations such as "Free Masons," "Odd Fellows," "Good Templars," and those of kindred character as being calculated to lead away from the straight and narrow way which leads to life eternal, to gain which is more important than any earthly consideration, as we may learn from the question of our Saviour: "What will it profit a man if he should gain the whole world and lose his own soul, or what would a man give in exchange for his soul?"

The committee having charge of the Boarding School made the following report, which was satisfactory to the meeting; they also produced a revised circular, which was united with and directed to be printed:

Amount charged for board and tuition for session ending Third month 21st, 1867, for an average of about 48½ pupils, . . . \$2913 71
 From other sources, . . . 1717 25

Making, . . . \$4630 96
 Expenditures, . . . 4535 22

Balance in favor of the school of . . . 895 74
 Amount charged for board and tuition for session ending Ninth month 12th, 1867, for an average of about thirty pupils, . . . 1509 94
 From other sources, . . . 1483 92

Making, . . . \$2993 86
 Expenditures, . . . 2753 56

Balance in favor of school for session, 240 30
 And a balance for the year of . . . 336 04
 From a settlement with the Treasurer, it appears there is interest on the Benevolent Fund due to

Redstone Quarter, . . . \$16 57
 Short Creek, . . . 24 90
 Salem, . . . 24 30
 Stillwater, . . . 42 62
 Springfield, . . . 18 97
 Pennsville, . . . 34 86

The financial condition of the school at the close of last session, as reported by the committee, is as follows, viz:

Assets, . . . \$2063 32
 Deduct debts owing by the Institution, 1020 70

Balance, . . . \$1012 62

* * * * *
 In accordance with the recommendation of the Yearly Meeting, voluntary contributions from our members have been received amounting to \$255, which has been expended in repairs.

There has been an additional sum of \$177 subscribed, seventy-five of which was a donation from Women's Yearly Meeting, all of which was expended for bedding. Also a private donation of considerable amount of carpeting, bedding, &c.

Meetings for worship have been regularly twice in the week, in which many of the scholars have evinced a thoughtfulness and orderly deportment becoming the occasion, and we have reason to believe that the original design in the establishment of the Institution has been in a good way carried out.

The acting committee having prepared a revised circular with a view to its circulation among members, which, being read and approved, is directed to be forwarded to the Yearly Meeting.

ASA GARRETSON,
 Clerk for the day

Tenth month 24, 1867.

The minutes of the Meeting for Sufferings of last year were read and its proceedings approved. The representatives from Springfield Quarter reported that they were united in offering the name of Lindsey Cobbs, for Correspondent Under Springfield Monthly Meeting, which was satisfactory and he appointed to the service—dress Damascusville, Mahoning Co., Ohio.

The representatives from Salem Quarter conferred together and were united in offering the name of Samuel Street, for Correspondent of Salem Monthly Meeting, which was also satisfactory and he appointed to the service—address Salem, Columbiana county, Ohio.

From the Reports of the Quarters on Prim Schools there are 917 children within our limits of a suitable age to go to school; 326 have attended Friends' Schools exclusively; 368 have attended District Schools exclusively; 148 have attended Friends' District and Subscript Schools; 75 have not been going to school last year, most of whom have been receiving instruction at home. Twenty schools have been taught under the care of Monthly Meetings, two months, twelve for three months, one for two months, and five for six months, and two for schools for three months each, and one for particular care. The subject is again recommended to particular care of subordinate Meetings, and Quarterly Meetings to send up accounts as heretofore.

The Committee to settle with the Treasurer, made the following report, which was satisfactory to the meeting, and the Friend therein continued Treasurer, and the Quarters are directed to raise their proportions of the sum named forward to the Treasurer in the 5th month next.

* * * * *
 Martha Holloway, an elder and member of Flushing Monthly and Particular Meeting, departed this life the 4th of 12th month, 1866 the 79th year of her age.

William Head, an elder and member of 1st Ileton Monthly and Particular Meeting, departed this life the 6th of the 4th month, 1867, in the 102nd year of his age.

Martha Ashton, an elder and member of 1st Ileton Monthly and Carmel Particular Meeting, departed this life the 13th of 1st month, 1866 the 84th year of her age.

Nathan P. Hall, an elder and member of 1st Ileton Monthly and Carmel Particular Meeting, departed this life the 19th of 5th mo., 1867 the 65th year of his age.

Then adjourned to 9 o'clock to-morrow.

Fifth day morning and 3d of 10th month meeting again assembled.—Two memorials forwarded by the Meeting for Sufferings, one bearing Hannah Dixon, of Coal Creek Mor-

ng of Friends, and the other concerning
rah Branson, daughter of Jacob and Rebecca
on, and who departed this life on the 25th
mo., 1822, in the 17th year of her age,
read to our comfort and edification, and
ed to the Meeting for Sufferings for further
herein.

* * * * *

the meeting having brought its business to a close with a little increase of faith that we are regarded by Him who careth for the sparrows; and desires to meet again at the same time and place next year if permitted.

ASA BRANSON, *Clerk.*

readers may recollect that a special meeting of the Association of Friends of Philadelphia and its vicinity for the relief of colored men," was held in this city on the 10th inst., the minutes of which were published in the eighth number. That meeting was adjourned to the evening of the 5th inst., at 7 1/2 o'clock, to hold in the meeting-house at the corner of Second and Fourth streets. We hope that every one who can, without great inconvenience, will be present at this meeting.

progress made in the highly important
of school education, the evidence afforded
good already resulting from the tuition
and the critical position in which the in-
of the colored population are now placed,
this benevolent work with renewed com-
tion, and add other strong claims to those
fore urged for continued and liberal assis-

her feeling that the whole duty resting on
as towards the freedmen has not yet been
regard, and for the purpose of inducing them
raise their accustomed liberality, and supply
needed to meet the expenses of the
now, or soon to be in operation, a com-
was appointed at the meeting in the 10th
to, to act in conjunction with the Executive
in taking such measures as will recall this
to Friends' consideration, and be likely
are the money required.

Our Association began its labors, it was
 to the wail of suffering and woe, that
 from the crowds of helpless men, women
 children who had escaped or been driven
 from their former homes, and willingly braved
 poverty and nakedness in order to feel that they
 were free. Their cry of distress rang across the
 land, stirred the hearts and awakened the
 pity of the whole loyal population, which,
 as with the heart of one man, responded
 generously and by supplying the means
 to their pressing needs. The Government,
 to weaken the rebel slaveholders, and to
 itself of the physical aid of the emancipated
 as also influenced by christian charity, ex-
 tended its powerful hand to help them, and
 created the necessary organization to in-
 crease their condition, and supply food to keep
 them from perishing.

Participants largely in the feeling thus
ly excited, and felt there was also a peculiar
resting on them, as the long acknowl-
friends of the negro and advocates of his
to take immediate steps for dispensing, so
they were able, relief to their physical
and for affording them such other assistance
exigency demanded. To do this judiciously
fectively, the Association was projected
quickly organized.

As is well known, it was soon found, that the relief of physical wants required the attention, yet there were others, which, if

they did not claim as immediate relief, could not be long neglected, and Friends stand acquitted of the responsibility pressing on them. It was clearly seen, that to enable the freedmen to escape future oppression, in a community grown reckless of trampling on their rights, and to enjoy the standing of freemen, they must acquire at least, the rudiments of an English education. Hence arose the educational system, and the happy results speedily obtained by it, drew from Friends, where it was known, approbation and encouragement. It has thus been kept up and extended, until now there are forty schools under the care of the Executive Board and the patronage of the Association.

The good these schools are conferring on the colored population of the South, and on our whole country, it is not easy to estimate. Congress has conferred the same civil rights on that population in the Southern States, as have heretofore been possessed by the whites exclusively, and the black man has shown that he is not unworthy of the gift, and that if the ordinary means of education are placed within his reach, he will soon qualify himself to perform with credit, the duties connected with his new position.

But it is apparent that a re-action is taking place in the feelings of a large portion of the people, from that interest in the welfare of the blacks, which was so strongly called forth by the events of the war; and already there are unmistakable indications, that this long-oppressed people will require the continued support of their true friends, to enable them to maintain the standing to which, under the remarkable providences of the last six years, they have attained.

In no other way can we so effectually render them that support, as by imparting to them literary and religious instruction. They attach a high value to both; eagerly resort to our schools, and thankfully receive the Holy Scriptures and tracts distributed among them. Our schools are in successful operation and our teachers engaged for the next session. But the treasury of the Association is exhausted, and no little money will be required to meet the expenses. The want is pressing at the present moment.

The question is then brought home to every Friend, to whom a knowledge of this may come, shall I withdraw my aid from such an unexceptionable work of christian benevolence, and thus contribute to break down a well-working system, that is conferring so much good on my poor, ignorant, struggling fellow creatures, who have heretofore known little in life but unrequited toil and unpitied suffering? We venture to believe that the answer will be in the negative, and that as heretofore, so now, the appeal for funds will not be in vain.

The Penns and Peningtons of the Seventeenth Century, in their Domestic and Religious Life: illustrated by Original Family Letters; also incidental Notices of their friend Thomas Ellwood, with some of his unpublished Verses. By Maria Webb, author of "The Fells of Swathmore Hall and their Friends."

We have received a copy of a work of four hundred and thirty pages with the above title, from our friend Edward Penington, Jr. (who is a lineal descendant from I. Penington) Bookseller and Importer, No. 127 South Seventh street, Philadelphia, who, we understand has received from London a sufficient number of copies to supply the demand in this country.

Having been long somewhat familiar with the lives of I. Penington and William Penn, as depicted in works respecting them, previously pub-

ished, we have been surprised and gratified by finding so much new and interesting matter, illustrative of the characters and domestic life of those distinguished individuals, as is laid before the reader in this work. The account of the early life of Mary Proutie, afterwards Mary Sprignette, and ultimately Mary Pennington, is interesting and instructive. The information gleaned respecting her daughter Guli, who was William Penn's first wife, is also calculated to heighten the impression of her lovely character, produced by T. Ellwood's graphic notices of her. We believe there is nothing new respecting T. Ellwood, excepting several of his poetical productions, never before published. Some of these evince feeling deep and pure, and a knowledge of the poet's art, though not always to be commended for their rhythm and easy flow.

Our early friends were indeed a peculiar people. The spirit of their religion pervaded their whole life, manifesting itself in their language, their manners, their domestic arrangements, their social habits and their daily intercourse with the world. We would rejoice if this work, which gives such interesting insight of the families at Chalfont and Rickmanstow, would stimulate the disposition among Friends of the present day to make themselves more familiar with the biographies and journals of those eminent men and women who were the instruments in gathering the S-cociety, and more especially were they induced thereby to live up to the religious profession they make, as consistently as did those noble minded but persecuted and suffering christians.

We commend the work to the notice of our readers.

SUMMARY OF EVENTS.

FOREIGN.—Italy continues excited in relation to the possession of Rome and political matters generally. A Florence dispatch says, that the popular agitation is very great, and an extremely bitter feeling is shown against France, while the government of the king is loaded with reproaches for yielding to the coercion of Austria. The king has made an attempt to form a new ministry with Cialdini at its head, but his efforts proved unsuccessful, and Cialdini failing to find proper colleagues has declined, and advises the retention of Rattazzi. Garibaldi has eluded the vigilance of the government in making his escape from Caprea. Soon after his escape he was informed that the king had fled, and placed himself at the head of the revolutionary forces. A dispatch of the 26th says: "Garibaldi is marching on Rome in two columns, and is now at Monte Rotondo, in sight of the city. The Papal troops have retired fighting desperately. The city of Rome is in a state of great excitement, and the king is seeking refuge in the Papal States." The Paris *Mondeur* says the "Touquet" has been ordered to sail for the coast of Italy immediately.

Dispatches from Constantinople state that Omar Pasha has been relieved of the command of the troops in Candia and ordered to the Danube, and that Hussein Pasha has been commissioned to succeed him.

The Diet of Baden has sanctioned the North Zollverein and Prussian alliance, and it is expected the Grand Duchy of Baden will soon join the North German Confederation.

The Bank of Amsterdam has advanced its rate of discount to 3 per cent.

Francis Joseph, Emperor of Austria, arrived in Paris on the 23d, and was received at the railway station by the Emperor Napoleon. The *Moniteur* says the visit of the Austrian Emperor adds a new pledge of amity to the cordial relations established between France and Austria. The bullion in the Bank of France had increased 4,000,000 francs during the previous week. It is reported that Napoleon has requested the European Powers to unite with France in a general conference for the settlement of the Roman question and the pacification of Italy.

All the German States which are not members of the confederation, will sign the new postal treaty concluded between the confederation of the north and the United States. The Austrian Reichsrath has passed a bill which legalizes all civil marriages.

The laboring population of Brittany is suffering from

Friends in Norway.

A recent number of "The Friend" was in an account of a yacht excursion among the of Norway, which contained some briefs of the Friends residing there. As it may interesting to some, we propose to give a sketch of the rise of the Society of Friends in Norway—based from the account published by George

ardson in 1849 :
The first individual who appears to have em- the principles of Friends, as far as has yet discovered, was Enoch Jacobsen, of Stavanger, who was born there about the year 1790. His father was a carpenter. When he was eleven of age, he was apprenticed to an apothecary, whom he remained about five years, when he inclination to go to sea. On the 4th of 10th month, 1808, without the consent or ledge of his parents, he went on board the Meren, a privateer, which soon put to sea; but were out but three days, when they were captured by a British frigate, the Ariadne, and taken to Leith harbor in Scotland, where he was

prisoned.
In the latter part of the year 1811, he was, by the spirit of Truth, awakened to see his dangerous and forlorn condition, by which visitation he was bowed down in deep sorrow over his past course of life, whilst making profession of Christianity; and, through the powerful conviction of the Holy Spirit, he was led to see the emptiness of mere forms, and was constrained to renounce all the outward professions of religion. As he then a prisoner of war on board the Balm in Chatham river. He had, however, his attention turned toward one of his fellow prisoners, named A. Anderson, of Stavanger, who was one of those people called Høngøians, or Saints, with whom he had some conversation and intercourse. He and his companion, with some others, were transferred removed to another prison-ship, called the *Enghen*; there being then six hundred men on board. Here, for a season, they were treated with scorn and derision, on account of their circumspect conduct, and steadfast walk in the fear of God. Soon after their removal, Knud (Canute) Alvén and Elias Tasted, both of Stavanger, were added to their little community.

Some time after this, Enoch Jacobsen got access to a Danish copy of Robert Barclay's Apology for the true Christian Divinity, as professed by

the Society of Friends; a book which, under the Divine blessing, has opened the understandings of many, and carried conviction to their hearts. By this book, he discovered that there must be a people in England who were influenced by the same religious views and feelings as himself. By a little enquiry, they got to hear of some of the Friends belonging to the meeting at Rochester. To one of these, by the help of a Dictionary, Enoch Jacobsen wrote a letter; soon after which, they received a visit from them. They could not, then, at all converse intelligibly with each other; yet, by signs, in love and friendship, they understood a little of each others' feelings.

The individual to whom they had addressed the letter, in company with William Rickman, an aged minister, paid them several visits. They were also visited by Frederick Smith, of Croydon, and William Martin, of Lewes, and other ministers of the Society.

On one of these occasions, by permission of the officers on board, they held a meeting for worship in a little chamber, where there were assembled twelve persons from Norway and Denmark, all prisoners, and of similar religious views. Through Divine condescension, this proved a heart-tendering, contriving season; though none of them understanding English, they could gather but little of the religious communications delivered amongst them by the English Friends.

In the year 1813, they had a most acceptable visit from that worthy man and laborious servant of the Lord, Stephen Grellett, of North America, but a native of France. He was accompanied by W. Rickman and others. By permission of the officers, a place was prepared for a meeting on the quarter-deck, to be held on the first day of the week. The officers were present, and as many of the people as the place would accommodate. This proved another refreshing season. Three testimonies to the truth, as it is in Jesus, were delivered; and the opportunity was concluded in prayer, thanksgiving, and praise to the Lord, for this heart-tendering season.

Elias Tasted remarks, "We began to hold silent meetings before the Lord, previous to our knowing anything of the manner in which Friends in England hold their meetings, and were almost strangers to their writings. At first, we got a little room to meet in, where only three persons could sit at once, until we took our little cabin in the ship for our public meeting place, which was in the view of all the prisoners, who now seemed very kind to us, though previously they appeared to hate us. It then seemed as though the truth had more power over our outward than over our inward enemies."

"In the latter part of our captivity, we were about thirty persons, Danes and Norwegians, who professed with Friends. We held our meetings for worship thrice in the week; but there was seldom any instrumental ministry amongst us."

In the year 1814, when the time of their release came, they were sent home to their own country, and were separated and scattered into several different localities. Of those who went to Christiansand and to Tronhjem (Drontheim), little

is now known. Of the little company who settled at Christiania, there will be found further notice in the ensuing pages. The four who settled at Stavanger began to bear a faithful testimony against the world and its spirit. They were poor, and despised by many, and were obliged to hold their meetings for worship sometimes at one place, and sometimes at another, none possessing a house of their own.

The following extracts from Enoch Jacobsen's letters show the manner in which he was led by the Holy Spirit to see the error of his ways, deeply to mourn over his sins, and as he faithfully submitted to the operations of Truth on his heart, to know a glorious hope set before him, even the hope of obtaining the crown immortal.

"This voyage, when I was taken prisoner, was the first time I had been at sea, and I had no thought yet as to what would become of my soul when I leave this state of existence; but I thought that surely I was a christian, and that I was alive—but I was dead."

"I continued so for a time, when the Almighty was pleased to convince me that it was not the way to become a true christian, so long as I followed such a course; but that a man must witness repentance, and become a new creature, in order to witness salvation and eternal peace in Jesus Christ."

He further adds, "Dear brethren, I will now in short tell you how wonderful and impenetrable the ways of God are. His goodness and his mercy are so wonderfully great, that He would guide me in the right way. I, who am so young, and have sinned so much, He would lead me in the right way, and not suffer me to be overcome of evil, if I would but follow his commands. You may see that I am not a learned person. I do not know when I have read the Holy Bible, and it is but lately that I have obtained a Testament; but I now read it often, and have need to do so."

He then expresses the difficulty he had in unfolding his views to them, for want of a better knowledge of the language, and adds,—

"I believe as long as you are led and guided by the Spirit of truth, that you will rejoice with me for the great grace that I have lately received of the merciful God; and my wish is, that both you and I may remain faithful unto the end, and sacrifice ourselves to the Almighty, with all our hearts and minds, for the sake of Jesus Christ, who came to save perishing sinners, and to show us his glory that was given him by the Father, if we will follow him in all things."

"I was glad to observe your zeal, and for that answer you gave me, that you did not use any compliments; for, by that understanding and wisdom that the just God has given me, and gives to all them that will follow his commands, I thought it must be given you of God, and that it was done to prove what sort of a spirit had led me to this work, whether it was the spirit of the world, or the Spirit of truth, which Jesus Christ gives to all them who do His will and confess His name. And so I beseech the Omnipotent God and Father of our Lord Jesus Christ, that he will make you sensible that these words that I now speak are not

of myself, but of God. My wish and desire is to do the will of God, as much as he will give me strength and instruction for, by his good Spirit. I am satisfied nothing is wanting on his part, for he dispenses his gifts to all: to some he gives one, to some two, to others three pounds (or talents,) as they are faithful. I have a great desire to write you a few words, and to obtain an answer, my brethren; that I may be afresh animated and instructed, and to have my attention more properly fixed in the Spirit, so that the little spark I have may not be extinguished, but more and more enlightened.

"Then, I feel that Satan seems determined to prevent me from worshipping God as I should, or getting into the spiritual state. But, dear brothers, how ingenious and guileful he is! Shall he, then, subdue God's children? Surely he may bite the heel; but as soon as the Spirit of God draws near to me, I can fully resist him."

"I was often led by the Spirit of God to do his will; but I found it very difficult to deny myself. I was much distressed, day and night, and anxious after God: then this godly sorrow effected repentance unto blessedness, which cannot vex. I often rejoiced in God for the great grace he had bestowed upon me; and I had a great desire to read of what God promised them who would follow him, and I had sometime a foretaste of the joy of heaven—which now I may strive after, but cannot attain to, except when the Almighty pleases, whose mercy is great to a sinner who will repent and turn to him.

"But Satan, who in his cunning and subtlety prevents us from doing good, will release none often inspired the thought that there was no deliverance for me, and that I might desist, as it was of no use. But God, our Lord, was stronger than he: I saw, in the true words of Jesus Christ, that it was such men as I became to save."

"I see that I then was, and still am, in want of wisdom to lead me to the Spirit of our Lord; for without his assistance, no creature can do any thing. And I am convinced, by this Spirit, that there is a great secret in the word, which no human creature, with his own natural powers merely, can discern; yet it is open to those whom the Almighty knows will be faithful, and preserve it in honor. And as it is what cannot be bought with money, as other things can, my wish is to preserve his word in a clean heart, and to bear the fruit thereof in a holy course of life; and that I may follow his commands by the guidance of his Spirit, through the assistance of our Lord Jesus Christ; that I may be constant to the end, and afterwards obtain eternal glory in him. O, my brethren, that we all could obtain this!—having in view the joy and crown which is in reserve for all that will follow Jesus Christ. I wish that I were worthy to be a brother in Christ, and to do nothing but what is agreeable to God our Lord."

"I was on board another prison-ship, and there I saw one of Robert Barclay's books, and wished to have had it longer; but it belonged to the ship, and I was moved from that ship to this. I saw that the Spirit of God had led and enlightened you, and that you were counted worthy to suffer reproach for his name's sake; that he had chosen you to be his people, and that you should shine in darkness; that unbelievers should see your good works, and glorify our Father which is in heaven.

"My desire was so great that I had no rest without using every means to mention all these things to you. How could I dare to write and call you brothers, if I had not been led to it by the Spirit of God? For I do not know you after the flesh, nor you me, but after the Spirit; and I

can feel that I have unity with your zeal, and that you are led by the Spirit of Truth, and that it is God, of his great grace, who doth these things. May he be praised and honored now and eternally!

"I beg you, my brethren, if you cannot come yourselves on board to speak with me, that you will send me some of your books, and write me a few lines. Now, for the present, I have relieved my mind. The great and almighty God, who has in a wonderful manner performed all this, be thanked, praised, honored, and glorified for ever. Amen.

"Grace and peace be with your spirit.

"ENOCH JACOBSEN.

"Fyen prison-ship 8 mo. 21, 1812."

(To be continued.)

England in the Last Century.

(Continued from page 74.)

Lord Berkeley, it appears, had often expressed his surprise at the success with which the noted highwaymen of the day carried on their operations. He especially blamed gentlemen who gave up their purses, except when attacked by superior numbers, and said that he should be ashamed to appear in public if ever he allowed himself to be robbed by a single highwayman. The knights of the road, as they called themselves, and were called by others, appear to have possessed one of the qualities which are essential to make up the character of a great commander. Their intelligence was excellent, and the speeches of Lord Berkeley soon got abroad among them. These touched their honor, and it was determined that the earliest possible opportunity should be taken of compelling the boastful Peer to eat his words. Accordingly, when he was crossing Hounslow Heath one night in his carriage, he was suddenly roused from a slumber into which he had fallen by finding that the carriage was stopped, and that a strange face looked in upon him through the window, while a pistol was presented at his breast.

"So, my lord," said the face, "I have you now. You have often boasted that you would not be robbed. Deliver, or take this." "No more I would," replied Lord Berkeley, coolly, at the same time putting his hand into his pocket as if to find his purse, "if it were not for that fellow peeping over your shoulder." The highwayman turned round to look; it was a false move; Lord Berkeley drew out, not his purse, but a pistol, and shot the man dead on the spot.

It was not, however, by mounted cavaliers exclusively, and in the open country, that in the early days of George III. deeds of violence were done upon the road. Foot-passengers, proceeding after dark towards Kensington and Paddington, would wait till they mustered in sufficient strength to set robbers at defiance; and the proprietors of Belsize House and Gardens, of Sadlers Wells, Vauxhall, and Ranelagh, encouraged Londoners to come to those places of amusement by advertising that "during the season the roads would be patrolled by twelve lusty fellows."

It was, we believe, the astounding success, both of the advance and the retreat of the Highland army in 1745, which first drew the serious attention of the English government to the condition of the roads. The Highlanders, active, lithe, and little encumbered with baggage, made their way to Derby and back again with ease, while the armies opposed to them, with their cavalry, and guns, moved both slowly and painfully as well in manœuvre as in pursuit. It was determined to make an effort towards correcting the evil, and a beginning was effected in the north. An act of Parliament, passed in 1765, authorized a road to be constructed between Harrogate and Borough-

bridge, and turnpike gates to be set up for levies tolls on horses, cattle, and wheel-carriages. John Metcalf, of Knaresborough, a man self-educated and blind, undertook and executed this work with an amount of skill which astonished the world. He showed his countrymen also how to bridge over torrents; how to construct upon bogs a marshy places excellent highways; how to bring one town in the north into direct communication with another, provided there was enterprise enough in individuals to act on his suggestions, and perseverance to go on with them. It is curious to see how, both then and now, the people of the north of England took and kept the lead of the nation in the south in every matter demanding the qualities. When as yet the intercourse was so indifferent between London and the coast of Kent and London and the counties to the south and west of it, Yorkshire had its stages running from town to town, and passing with considerable regularity north as far as the English border, and south into Lancashire. It may be well to notice the incident in the history of the times of which we are writing a little more in detail.

Stage-coaches appear to have been introduced into England as early as the middle of the seventeenth century. They were mere wagons, which made their way chiefly for a short distance out of London and back again. The pace never exceeded four miles an hour, and their jolting was frightful. Dugdale in his 'Diary' speaks, however, of a Coventry coach in 1659, and Thorsley of a coach which ran in summer between York and Harrogate, but with the roads in the state to which we have just adverted, and in a country where drains were unknown, travelling to any distance in the carriages of any kind was both uncertain and tedious. In 1700 the journey by coach from London to York occupied a week. Tunbridge Wells, Salisbury, and Oxford, were two days' distance from the metropolises. The adventurous traveller might hope to reach Exeter in five days and, sixty years later, a full fortnight was required to make good the distance between London and Edinburgh. Even at this latter period the coach started only once a month from each extremity of its line of route, and always went forth equipped with a store of hatchets wherewith to cut down branches, and even trees, which blocked the way, and a box of carpenter's tools in order that the means might be at hand of repairing damages incident upon upsets and general breakages.

With roads in this state, and the means of communication so scanty, the inhabitants of one town and one district in England knew nothing of the inhabitants of another, though separated from them, it might be, by only two or thirty miles. Whatever people learned respecting their neighbours was learned from the pedlar or packman, who were the merchants of the road, and conveyed from place to place news as well as goods; for shops were rare even in towns of considerable size, and had no existence at all in smaller towns and villages. From these hawthorn the mistress of the house was accustomed to provide herself with finery—ribbons, lace, and the like. All the necessaries for home usage were provided at home. The wool clipped from the master's sheep was carded by the master's wands. The flax, steeped and worked up, was washed as the worsted, spun; and the thread, to be changed by a handloom-weaver on the estate, perhaps sent to some neighbouring town or village came back in due time fit to pass through the hands of the thrifty domestic seamstress or travelling tailor. In like manner, English housekeepers were accustomed, less than a century ago, to lay up in the autumn such a stock of provisions

would suffice for the winter's consumption. Sheep and oxen slaughtered and salted down, with husks of wheat, barley, malt, spices, salt, honey, and various herbs, stocked the larder and the room of the rich. The poor were content if, in addition to their meal, they could lay in a supply of salted herrings. Those were the days of great and small; some chartered, some held custom only, to which people of all ranks and conditions repaired, in order to provide themselves with time to time with such articles of luxury as the travelling merchant nor the neighboring market town could supply. At these fairs, the squire and yeoman bought and sold the produce of their farms. There, too, the hiring of servants took place; and side by side with traffic in sports of all kinds—merry andrews, jugglers, quack doctors, and what not, keeping the fair in a roar, and gathering in their train a company of the greater fairs, not a few were wont to special business. Between Huddersfield and Leeds there was a cloth fair; a leather fair was held near Northampton; and cattle fairs, and even fruit fairs, abounded in all counties of England. They were to England the seventeenth, and even late in the eighteenth century, very much what the great fair of Novgorod is to Russia at this day.

The first serious innovation upon this primitive institution of things occurred in 1760, the same year in which George III. came to the throne; to Sheffield belongs the honor of achieving it. There was set up in that year, and in that year, "a flying machine on steel springs," which the inventors undertook should "sleep the first night at the Black-man's Head in Nottingham, the second at the Angel in Northampton, arriving at Swan-with-two-necks, in Ladd Lane, on the morning of the third day." No doubt the Manchester men have some right to enter in this relation to competition with the men of Sheffield. They had their "flying coach" for the conveyance of passengers from their town to London as early as 1754; and they gave out, by public advertisement, before the enterprise began, that "however dilapidated it may appear, this coach will actually bring passengers arrive in London in four days and a half after leaving Manchester." In the trial of steel springs, however, they appear to have fallen short of the Sheffield men; and it does not quite appear that their promise of completing the journey in four days and a half was ever fulfilled. Still the impulse was given from both sides, and its rebound extended to many others. We find that, in 1766, John Scott, afterwards Earl Eldon, made his way from Newcastle to London in a fly, having spent only four days and four nights on the road. From Bath and Birmingham London was reached, a year or two later, in four days; and one day (a long one to be sure) began at four in the morning and ended at midnight sufficed, in 1770, to convey the traveler from Dover to London.

(To be continued.)

For "The Friend."

Dear with me my young friends, and let us go to the fields and woods and gather nuts, for the trees already opened the burs; we must take care along who is able to climb the trees and get them from the stem which now so slightly tremble; but first let me warn you to beware of the thorny covering which encloses so luscious fruit, and when from the top of the tree you are called by loud voice calling to you to "look out," make all possible speed to land at a safe distance, let the shower cease, and while we are thus sitting let us look around upon the glorious field

of nature. Stretched far away as the eye can reach we may see forests clothed in the richest hues of autumn, a few trees only which still retain their summer dress of dark, dark, green; and the many pretty dwellings scattered here and there with their, neat white fences, add life and beauty to the scene. We are so lost in admiration as for a moment to forget our business, till a merry voice from one of our party, who is more interested in the shaking of the tree, calls out "I have my basket nearly full," then we all fall to work to see which can gather most, and such a scratching as there is among the dry leaves, and the joyous peals of laughter from each as he fills his basket re-echo in the forest, till finally we are compelled to acknowledge there are no more to find, and so turn our faces homeward feeling quite ready for a hearty tea. As we gather round the evening fire-side with a large dish of boiled chestnuts—the fruit of our afternoon labor—let us raise our hearts in gratitude to our Father in Heaven in that He has given us not only the necessities of life but so many luxuries also, and that to all these He has added such beauty on which to feast the eye and gladden the heart, for

"God might have made the earth bring forth

Enough for great and small,
The oak tree and the cedar tree,
Without a flower at all."

And He might, too, have caused that the leaves should wither and fall without producing that rich luxuriant beauty which is so pleasing to all beholders, and which is

"His to enjoy

With a propriety that none can feel,
But who, with filial confidence inspired,
Can lift to heaven an unpresumptuous eye
And smiling say—My Father made them all!"
Tenth month, 1867.

Ravages of Wild Beasts in Bengal.—Recent returns show that in the division of Bhagule, India, which includes the Santal country, one thousand five hundred persons have been killed by tigers in the last six years. In Assam seven hundred and thirty-three have been killed, and four thousand four hundred and seventy-four tigers have been killed by hunters in the same period. The Commissioner of Cuttack, noticing the destructiveness of wild elephants in the Gurjat districts, remarks that they roam about in herds of from eighty to two hundred, but, notwithstanding that a reward of fifty rupees has been offered for the destruction of each, the natives will not, and dare not, shoot them.—*Late Paper.*

For "The Friend."

Affection, Emulation, and their Cure.

A simple but not superfluous proverb reminds us, that "men are but children of a larger growth." The attention of those who deem the work of self-examination one of primary importance, is invited to a few fragmentary thoughts on the ways of human nature, in old and young.

Appearances are manifold and mysterious; realities are few and simple. Substantial good and essential evil, therefore, however readily distinguished by those whose faculties, in the words of the apostle, "are exercised by reason of use," are sadly confounded by those who have not learned to look beneath appearances. None but those who understand the divine command, to "judge not according to the appearance," need attempt to obey the subsequent apostolic precept, to "abstain from all appearance of evil," since it is evident on the one hand that they alone can know what a true appearance of evil is; and on the other, that any, in shunning a false appearance of it, must be shunning a real good.

Let it be remembered, then, that appearances are to be studied and cultivated or suppressed, only so far as they are incidental to realities, and not as they may depend only on the fallible notions of our fellow men, which they alone, of mortals, can rectify. Thus we may hope to avoid the vice of affectation, and to grow in consistency by the practice of a true independence.

As affectation is the frequent foible of advanced years, so emulation is the besetting danger of the season of youth: for it also may be said to have its source in an undue regard for mere appearances. Both evils may exist in varying degrees, although either of course becomes generally conspicuous only when unusually intense. They differ in the circumstance that while affectation becomes conspicuous only through extraordinary ignorance of the subject which is the occasion of it, emulation is most obvious when it is joined with extraordinary knowledge. When not thus joined, emulation often appears as a desire rather to equal those who may be in advance of us, than to surpass those who are in the same stage of progress, and thus becomes more indistinguishable from a laudable love of approbation. In both cases alike, however, the stimulus of mere emulation is distinguishable to the disinterested observer, from that of the pure love of truth and good report, by the different effects of success and failure upon the different aspirants. Where emulation is the motive, success will be followed by a temporary relaxation of zeal, the apparent earnestness of the worker giving place to a real levity of manner, because the motive itself fails, and no stream can flow faster or higher than its source. To the sincere lover of truth, on the other hand, present success is valuable chiefly as an opening for future progress in truth, and accordingly stimulates him at once, though perhaps unconsciously, to renewed exertion. For the same reasons the occasional failure which in the one case brings manifest pain and mortification, is encountered in the other without disappointment, and may even afford apparent encouragement through the new suggestions which it is always able to supply.

The intelligent christian needs but little argument to remind him that an escape from both affection and emulation is to be found only in the earnestness of purpose which the religion of the cross only can supply to those in whose experience there is any remaining antagonism between realities and appearances. In individual as in social life, it alone is the reconciling agency through which the only Saviour of men "slays the enmity" of the discordant elements, "making in Himself of twain one new man, so making peace." QUIVUS.

Jerusalem.—The British consul at Jerusalem reports that the population of that city in 1866, was 18,000, of whom about 5,000 were Mohammedans, 9,000 Jews, and the remainder Christians of various denominations. Two lines of telegraph connect Jerusalem with Europe. The chief native industry is the manufacture of soap and what is called Jerusalem ware, consisting of chaplets, crucifixes, beads, crosses and the like, made principally of mother-of-pearl and olive wood, and sold to the pilgrims who annually repair to the Holy City to the number of from 6,000 to 8,000. The principal imports from England are cotton and colonial goods. Of the former some three or four hundred bales, of the value of from £16,000 to £20,000, are imported annually.—*Late Paper.*

The way to escape a fall is to fear one's own weakness, and not go too fast.

ability cannot belong to actual life. They are magnificently less than the least things which the angels not for." And his conclusion from these is thus expressed: "Under a solemn sense of responsibility involved in the assertion, I declare that the coincidence which has here occurred have had its origin in an intention to profit."

A million of dollars has often been staked on calculation of chances; but there is not, in probability, another example on record in which verdict in a law case involving that amount has been to be determined by the testimony of a dead professor, following out the principles of La Place's great work has so ably set forth, applying the unalterable rules of mathematics to determine what may seem, to the initiated, a purely fortuitous matter, namely, chances of coincidence, in its action, while long, of the human hand.

There are other very curious details, to notice would lead us too far. Among the collations raised was one interesting to philosophers, as to the comparative merit of the *Gleaner* and *Globe Senes*.—*N. Y. Tribune*.

For "The Friend."

Christ's Yoke Easy.

When the dear Redeemer first proclaimed the grace, "Take my yoke upon you and learn of Me, no doubt alluded to His yoke, in the sense in which it was generally beheld and reprobated by the world, or by those who knew Him who ever account Him a hard master, and who service a weary, unmeaning service and discipline. Thus the abuser of the talent committed, the parable of our Lord, is represented as reproachfully saying: "I feared thee, because thou art an austere man; thou takest up that thou dost not put down, and repeat that thou didst not." But when, through the adorable mercy of our God in Christ Jesus, any of His children are tendered by His love, and bowed in heart to Him, and so awakened to a humiliating sense of their sinful lost estate, as well as so

"Sick of the service of a world that feeds its patient drudges with dry chaff and weeds,"

deep contrition of soul and faithful allegiance, "My Beloved is mine," in true filial adoration, and "I am His," having given up to Him which is His just due—the whole heart—these are, they must be happy, to the extent becomes this pilgrimage state and very union in sojourn. Then the Saviour's invitation seems applicable, and His promise sweetly the promise of such:—"Come unto me all ye that are weary and heavy laden, and I will give you rest."

Take my yoke upon you, and learn of me; I am meek and lowly in heart: and ye shall rest unto your souls. For my yoke is easy, my burden is light." His yoke is easy then, in the willing and obedient and childlike, who, in measure, after the example of a great Apostle, count all things but loss for the excellency of the knowledge of Christ Jesus their Lord. We can exclaim in view of the eternal fullness, the unchanging Shepherd, O the joy, the peace, and the crown, and the glory, to await the meek, and lowly, and ever self-sufficient follower of their dear Lord.

It is in this narrow way the true rest and peace can ever be obtained. The Messiah's kingdom of peace; agreeably to the inspired promise: "Of the increase of His government there shall be no end." But let none lose sight of the conditions upon which this promise is founded: "The government

shall (must) be upon his shoulder"—the shoulder of the "child born" to save us from our sins; the "Son given" to purge from all iniquity; the "Prince of Peace," as we yield our hearts to Him in a perpetual covenant of peace never to be broken. To these the Saviour's yoke becomes easy, and His burden light, through His manifested love and favor, which sweetens every bitter cup. Having found the balm of Gilead, and the true Physician of souls, these are willing, and rejoice to bear His mild yoke, and unhesitatingly to prefer it to all that they once accounted, and the world still accounts its pleasures and its freedom. In no other way than through the low portal of submission and obedience to Christ and His yoke and cross, can any become pupils in that school of saving knowledge, which consists in learning of Him true meekness: and by which through resignation of soul, and having respect unto all His commandments, hard things are rendered easy, and crooked ways made straight. And while the path, which the Forerunner, has marked out for us, may at times be painful and difficult, He has nevertheless trodden it before us; and it alone leads to glory. May none faint then or grow weary; remembering that help is laid upon One that is mighty, and that the time is short. "For yet a little while and He that shall come will come, and will not tarry."

To the humbling, contriving influences of Christ's Spirit in the secret of the heart, all who know Him not, as well as all who are seeking to know Him, should be primarily directed as the Guide into all truth. And though vicissitudes, and crosses, and tribulations are not wanting off to bear heavily upon the spirit of those who have chosen him before all, causing the plaintive query, "Why art thou cast down, O my soul? and why art thou disquieted in me, &c.?" yet in every season of sorrow, and trouble, and conflict, of "weariness and painfulness," there remains the Christians' unfailing refuge and stronghold—the holy capacious bosom of the Lamb of God, who is eminently touched with the feeling of all our infirmities, and who was in all points, tempted as we are, yet without sin. He yet remaineth to be "the God of all comfort;" and can in his own right time, cause our peace to flow as a river, and our righteousness as the waves of the sea, to the praise of His great and ever excellent name.

Those who thus keep to Christ, the Rock of ages, are comparable to faithful Israel formerly, when it was said, "As the valleys are they spread forth, as gardens by the river's side, as the trees of lign-ales which the Lord hath planted, and as cedar trees beside the waters." These He will encamp around, as the mountains are around about Jerusalem. He will be with them in trouble. His yoke will become more and more easy to them, and His burden light. And finally being enabled through the Saviour's all-sufficient grace, which is made perfect in our weakness, to lay hold upon the hope set before them, and to "walk worthy of the vocation wherewith they are called," these will be led through the successive steps in the stature of holiness to the state of fathers and mothers, of way-marks and pillars, in the church of Christ; till harps of victory will be put in their hands, and the new song in their mouths: "Great and marvellous are thy works, Lord God Almighty: just and true are thy ways, thou King of saints."

The following "sure and living experience" of John Barclay will conclude this essay:—

First mo. 29th, 1819. This may I say, and leave upon record, that though many almost indescribable temptations and presentations of evil have been permitted to come about me, some-

times like a mighty flood, so that in hours of extreme weakness and infirmity, I have been many and many a time ready to give up the fight of faith; yet to this day, the Lord strong and mighty, the Lord mighty in battle, has been pleased in his abundant compassion to encamp around me, and to give me songs of deliverance, songs of triumph and of praise. In his name will I set up my banner; who is a Rock of defence and sure refuge to my poor weary soul in all her afflictions, as there is a concern to flee unto, abide in, and under the shadow of this mighty rock in a weary land. O! young man or young woman, to whom this may come,—my friend, my brother, my sister;—who art seeking the better country, and Him who is the way, and the guide; O! though thou be weary and heavy-laden,—take courage! O! there is a staff, a stay, and strength and succor with Him and in Him, who hath gone before; and who leadeth on his little ones gently and sweetly, as they are able to follow. Take this as the counsel of one, who writes from a *sure and living experience*, and who hath indubitably known His name (which is above every name) to be a strong tower indeed. He will be with him, even to the end of the world.

Cranberry Culture in New Jersey.

The *Trenton Gazette* gives an interesting account of the culture of cranberries in New Jersey:—

It will be borne in mind that the savanna and bottom or boggy lands of New Jersey, lying in Ocean, Burlington, Atlantic, Camden and Cape May counties, are the best known for the culture of the cranberry. It is also generally stated that these of Ocean and Burlington counties are the best in New Jersey, those in the southerly section of the State, for some reason, not being as productive as in the counties referred to. The lands used for its culture are the soft, spongy lands, known as swamps and savanna lands. Before the introduction of cranberry culture, they were comparatively valueless; now they range in price from \$25 to 100 per acre.

Those lands having a running stream of water are the most valuable, as it is of importance to be able to flood the grounds during late fall and winter, in order to kill grass and vermin, and to protect the vines from frost. In dry summers it is necessary, in order to preserve the moisture without flooding the land, to fill the lateral ditches with water. This will moisten the ground sufficiently. To flood the bog in summer will involve the scalding of the vines.

To prepare for the vines, the trees and brush are removed, the land tilled, and the roots grubbed out. Lateral ditches are dug from the main stream, dividing the ground into square plots, and the plot sufficiently raised at the centre to cause the rains to flow off.

The yield of berries is astonishing. A bog of a few acres, which had not received a particle of care since the vines were planted, yielded this year 190 bushels to the acre. Another of six acres, belonging to William Allen, which yields this year its first full crop, produces about 200 bushels to the acre. Bogs have yielded this year 250 bushels to the acre. These figures seem astonishing, but one has only to see the bog, and notice the perfect mass of fruit, to have all doubts removed. The cranberry crop of a single township in Ocean county will reach this year 10,000 bushels, and that of the county is estimated at 25,000 bushels.

As soon as the bogs are in vines they are valued at \$700 to \$1000 per acre; \$1000 per acre has been repeatedly refused for bogs which

have been in vines two or three years. The reason for this is obvious. The lowest estimate for a full bearing bog is 100 bushels per acre. The average is from 50 to 100 bushels above this. Take 100 bushels for an average yield. The cost of picking is 50 cents per bushel. The cost of cultivating, after second year, will not average 85 per acre. The present wholesale price for cranberries is 85 per bushel, or a net yield of \$150 per acre at the lowest possible estimate per year; or an interest of 45 per cent. per year on an estimated value of \$1000 per acre.

But the average is above this. The yield when the vines are three years old, and for a long series of years, will almost certainly reach one hundred and fifty bushels per acre. The cranberry is not, like strawberries, peaches, &c., perishable fruit, but can be easily kept for a year. In the spring the price often reaches \$10 per bushel. Take these figures, and you have a return of, say, \$1400 net per acre per year—an interest of 140 per cent. on \$1000.

It is not possible that the market can ever be glutted with this fruit. The small area which can be employed in its culture, and the fact that the European market has been opened to its sale, and that the berries are now used for dyeing purposes, forbid the thought that they can fail to command a good price continually. But there is a wide margin for falling off in price, and yet secure large returns.

For "The Friend."

Whilst John Churchman was prosecuting his gospel labors in England, he says: "I went to London, where I remained seven weeks and three days, visiting the meetings, and felt much of the weight and burden of the service before me there."

Whilst thus engaged, he says, "I felt my mind drawn towards Wiltshire; and as I kept quiet, I felt my heart warmed in love, and my mind opened, to write an epistle to that Quarterly Meeting—which, in the opening of truth, I wrote as follows." Upon the reading of which epistle at this time, I have apprehended a measure of the same feeling that prompted the writing of it, to spread towards Friends of the present day, to whose attentive perusal I recommend it.

Tenth month, 1867.

TO FRIENDS IN WILTSHIRE.

Having had strong desires in my mind for your welfare in the Truth, I purposed to attend your Quarterly Meeting; but being let at this time, and not knowing that I shall ever have an opportunity to see you, I feel a freedom to visit you with a few lines in the opening and love of truth, which flows to you ward.

Dear Friends, old and young, as many of you as are desirous to be called the children of God and followers of Christ Jesus, be humble, that you may be taught of him; for it is the humble He teaches of his ways; and be ye meek and low in heart, that you may serve him in your generation, and one another in his pure fear, so you will know him for your rest, and his peace your quiet habitation.

My soul hath mourned, and is in some degree covered therewith at this time, under a sense that the love of the world, and its pleasures and delights, abound in too many, which are iniquity, and because thereof the love of many towards God waxeth cold.

For want of witnessing the love of God in a pure heart, the mind becomes lukewarm, and indifferent about the things which belong to our peace and future happiness; and so fathers and

mothers, masters and mistresses, become dull, if not dead to that holy concern, which should excite them, both by example and precept, to instruct and train up their children and servants in godliness of life and conversation.

Oh dear Friends! search your hearts, and diligently inquire whether something hath not secretly crept in and stolen away your affections from God; and the deep attention of your minds from the instructions of his holy Spirit of Truth. If this becomes your concern, I fully believe the Lord will bless you with enlightened minds to see, and willing hearts to give up all to the fire and sword of his Word and Spirit, that your hearts may be purged, and made temples in which He would take delight to dwell. If the soul is chaste in love to God, and the eye of the mind single to the instruction of the Spirit of Truth, the whole body will be full of light. It is here that the children of God are preserved safe in their steps before the Lord, and free from giving occasion of stumbling to others.

I am fully persuaded there is a remnant amongst you, who feelingly know, that the living sense of the presence and power of God, in your meetings both for worship and discipline, is not plentifully enjoyed, but is at a low ebb. And it is in my mind to let you know what has appeared to me to be one great reason of it, viz.—There are many professors of the truth amongst you, who delight to be accounted Friends in esteem in the Society; who have a smooth and fawning behavior, and flattering tongues, and do seek the love and friendship of such as are Friends of truth, for their own honor and credit, and the reputation of self. Dear Friends, of such beware, for their friendship is poison, and their intimate fellowship, if cleaved unto, is benumbing, even to insensibility. And for want of a clear discovery of that spirit, some of the tender and sincere hearted amongst you have suffered.

In whosoever earthly-mindedness prevails, or the love of the world and its friendship, there is a secret giving way to, and a gradual reconciliation with its sordid practices; and the eye that once saw in the true light, becomes closed or dimmed, if not wholly blinded by the god of this world.

Liberty is then taken by parents, and indulgence is given to their children, which occasion pain and distress of heart to those who have not lost their sight and feeling. But some for fear of being rebuked and disesteemed by such who have a sense of them, will court their affections, with which bait they have been taken, and so have been afraid to speak their minds plainly, lest they should offend, or drive them further from the Society; concluding there is a tender thing in them, because they seem to love Friends. Thus many who might have made great progress have lost ground, for want of speaking truth to their neighbors; and the infection of pride, libertinism, and earthly mindedness has spread and prevailed even to the hurt of some families who were once exceedingly grieved therewith.

Wherefore, my dear Friends, fear God with a perfect heart, and in his light, walk over your yourselves and your families. So shall your hearts be warmly influenced and filled with holy zeal and love to God and his truth; in which you will be bold to act in your meetings for discipline, and in the power of God, which is the authority of the church, you will be able to judge those who walk disorderly; and being faithful therein, you will remove the stumbling blocks, and roll away the reproach which is imputed to the church.

The Lord would feed these faithful laborers with his heavenly bread, and honor them with

his life-giving presence, and whether the Lord would hear or forbear, the Lord would be the shield and exceeding great reward of people, and fill their hearts with praise to name, who is worthy forever and ever.

JOHN CHURCHMAN

London, 4th of 4th mo., 1754.

For "The Friend."

The Freedmen's Meeting last evening fully attained the Executive Board in their prospect operations. A committee was charged, with which they will at once fulfil, viz., to solicit co-operation of some Friends in each Preparatory Meeting, in order to get the funds required. The amount has been stated, as the lowest estimate to be \$25,000. But one of the most useful labors of the Association is the supplying of books and tracts. The demand for these, and the evidence of their usefulness, are constantly increasing. The previous meeting of the Association was furnished with such evidences. Now it is desired that Friends will appreciate this demand, and increase their contributions, so as to place for this purpose at least \$6000, over and above the \$25,000, the command of the Tract Committee.

In making this renewed appeal, it is animated to feel some assurance that Friends generally, common with the members of the Executive Board, sensible of being the recipients of blessings far beyond our deserts, delight to commemorate the outpouring of such blessings on others. We delight to number the tokens of Providence for all those who are striving for the maintenance and for the enjoyment of christian liberty. Can we give better evidence of this gratitude than by contributing a liberal share of our time and substance to the once down-trodden, now rising sons of Africa? Retrenchment and denial will render these contributions a light and easy offering.

Y. W.

Germanstown, 11th mo. 6th, 1867.

Rye—Its Value.—The importance of this seems to be but little understood by West farmer. We think if its value as a crop is better known, its cultivation would be general; that every farmer would have his rye-field just as much as his field of wheat, corn, oats, or potato. It is valuable as food both for man and beast. It makes excellent feed for stock, and is soon whet only, and scarcely that, in its bread-making qualities. Von Thuer says, "This substance seems to facilitate digestion, and has a singular strengthening, refreshing, and beneficial effect on the animal frame." Rye is subject to frequent casualties than any other crop, though it is sometimes affected by rust. The straw is bright and strong, which renders it better than wheat straw both for feeding out in the winter and as litter for horses and cattle. On farms stocked with cows and sheep, especially the latter, the great value of this crop does not lie in the grain and straw so much as in the great amount of pasture it affords at a season of the year when other kinds of pasturage fail. It makes excellent feed in the fall, long after grass becomes tiredly worthless. Again in the spring, so soon as the snow is off the ground, it makes good turgage, and may be used as such until the grass is large enough to make good feed. Nor is this fall and spring feeding injure the crop grain. Rye is usually ready to cut before wheat, hence out of the way before the harvest season of harvest. The soil best adapted to it is a rich, sandy loam, though no one of the crops will adapt itself to a greater variety of soils. It will do on a rich loamy soil, not

to wheat, its stronger stem enabling it to
itself under a luxuriant growth. Then,
it will make a better return on a light
soil than corn or any other crop.—*Late*

Practical Piety.—Religion that does not go
in our daily vocations, controlling and
ing us, is of little value. We should not
it obtrusive or ill-timed in any of its mani-
fests, but our hearts should be so thoroughly
with the Spirit of Christ, as to cause
action, in its own quiet way, to show forth
undation principles of our life, and speak a
er language for the Master, than our direct
It is in our worldly business, in our every-
fe, that our religion is needed, if anywhere,
n its effect on ourselves, and on those with
we are brought in contact; here tempta-
assail us, here our influence is greatest.
Let us pray and labor that our every-day
be equal to our public profession.—*British*
man.

Various Facts about Water.—The extent to
water mingles with bodies, apparently the
solid, is very wonderful. The glittering
which beauty wears as an ornament, is only
and water. Of every 1200 tons of earth
a landhold has in his estate 400 are water.
now-capped summits of Snowdon and Ben
have many millions of tons of water in a
ified form. In every plaster of Paris statue
a man carries through our streets for sale,
is one pound of water to four pounds of
The air we breathe contains five grains
ter to each cubic foot of its bulk. The
es and turnips which are boiled for our di-
vance, in their raw state, the one seventy-
five per cent., and the other ninety per cent. of wa-
ter. A weighing ten stone, squeezed in a hydraulic
seven and a half stone of water would run
and only two and a half of dry residue re-
mains. A man is, chemically speaking, forty-five
ths of carbon and nitrogen, diffused through
of half pallfuls of water. In plants we
water mingling no less wonderfully. A sun-
evaporates one and a quarter pints of water
and a cabbage about the same quantity.
A wheat plant exhales, in 175 days, about
100 grains of water. An acre of growing
on this calculation, draws and passes out
ten tons of water per day. The sap of plants
medium through which the mass of fluid is
moved. It forms a delicate pump, upon which
latterly particles run with the rapidity of a
stream. By the action of the sap various
ities may be assimilated to the growing plant.
In France is, for instance, dyed by various
being mixed with water, and sprinkled
the roots of the tree. Dahlias are also
by a similar process.—*Late Paper.*

London Quarterly Review makes the fol-
lowing showing for meat, poultry, bread and beer
per year, in London: seventy-two miles of
meat on abreast; one hundred and twenty miles
of sheep; do.; seven miles of calves, do.; nine
hundred pigs—"little ogs" do.; fifty acres of
cattle, close together; twenty miles of hares
and rabbits, one hundred abreast; a pyramid of
bread six hundred feet square and three
hundred feet high; one thousand columns
of bread, each one mile high.
The population of the earth. The above figures
multiplied by 400 gives us some idea of the con-
sumption of our world.

THE FRIEND.

ELEVENTH MONTH 9, 1867.

Our attention has been called to an extract from
a Bristol paper (England) giving a detailed ac-
count of "A wedding at a Friends' meeting-
house" in that city. It presents what is, as yet
an extraordinary picture of parade and show while
resorting to and while in a Friends' meeting for
divine worship, to perform an act which they pro-
fess to consider an ordinance of great religious
solemnity. We say, as yet extraordinary, but
there is great reason to fear that if change in our
Society continues in the same ratio as it has pro-
gressed during the last ten years, it probably will
not be long that such exhibitions will have the
celat of novelty.

We shall not introduce into the columns of
"The Friend" the description given of the pro-
cession of carriages,—some driven by postilions
in scarlet livery,—of the dress of the bride, in her
"rich train of white and corded silk," her chap-
let of orange blossoms, her long veil edged with
pearls, &c., and of the different members of the
bridal party, whose gorgeous dresses and orna-
ments are delineated for the public eye as though
depicting the dazzling follies of a court-ball. The
account has been copied into some of the periodi-
cals in this country and thus spread far and wide,
as a striking evidence of how the members are
availing themselves of "the relaxation" granted
by the Society of Friends from the observance of
its original principles and practices. It is heart-
sickening to read these narratives and remarks,
and to reflect that such an exhibit has been made
among the professedly self-denying Quakers, and
justly given rise to such comments.

The name of one of the contracting parties is
that of a family long known as members among
Friends in the city of Bristol, and the other may
also have a birthright, and therefore they had a
right to accomplish their marriage at a meeting
of the Society. But little as they must value
their right of membership, would these persons
have treated the Society with so much disrespect,
and shown such contempt for its testimony to
plainness and against vain show, had not the So-
ciety itself, in many places, brought this testimony
into disrepute by its own action? We believe not.

Much has been said of latter time on the un-
reasonableness of expecting the members of our
Society to dress differently from the sober-minded
of other religious denominations. It is alleged
that Friends have slid into a form which ought
to be broken up; that many who dress in the garb
which Friends deem plain are unconverted and
no better than others whose dress conforms to
that usually worn by those not in membership;
and that in estimating the consistency and re-
ligious standing of individuals among us the out-
side appearance should not be taken into account.
These views have been carried into practice by
many who claim to be true Friends, and the ex-
ample having been set by some in influential posi-
tions, it is found there is now no criterion of
plainness left, and in many places, every one
claims to do, in this respect, what is right in his
or her own eyes, and yet to be accepted as a con-
sistent Quaker. Many arguments may be brought
forward to support each side of this question, and
perhaps it may safely be said that if we depend
on reason alone to demonstrate the christian obli-
gation resting on Friends to adhere to a peculiar
garb, we will fail to arrive at a satisfactory con-
clusion. But the recorded experience of those
who have lived and died in the faith we hold, and

whose lives proved they were devoted servants of
Christ; a close scrutiny of those now living and
acting among us, and an honest examination of
the workings of our own fallen nature, will, we
believe, confirm the unbroken testimony of all
faithful and consistent members, that there is not
only safety in the distinguishing dress of Friends,
but that those who are really prepared for the ser-
vice of Christ in our section of the militant church,
have always and do still feel it required of them
to adopt the plain garb and the plain form of
speech which distinguish a Friend. Without call-
ing in question the sincerity of those who have
inaugurated and practice an opposite course from
this, we believe it will always be found, that those
who claim exemption from feeling the obligation
to make the well known appearance of a Friend,
and from adhering to the plain language, what-
ever the station they may hold, and however
estimable in most respects, are deficient in clear-
ness of vision respecting the importance of more
or less of the christian testimonies which Friends
are called to uphold. They show how easy it is
for them to enter into familiar association and un-
necessary intercourse with the men and manners
of the world, and how impossible, if they have
the desire, to restrain their children from indulging
in its fashions and vanities.

We wish not to be misconstrued as advocating
the plain dress and the plain language of a Friend,
as constituting a part of his religion; nor yet that
they are the evidence of an individual being a true
Quaker. Doubtless they may be often adopted
where a change of heart has not been experienced,
and if any reliance is placed on them as a substitute
for that indispensable work, they, so far,
prove a snare. But we do believe that every
member of our religious Society, who abides under
the transforming power of the Holy Spirit, which
alone can make him or her a consistent Quaker,
will find one of the early fruits of that saving ba-
ptism, to be a willingness to put on the plain garb
that distinguishes a Friend, and to adhere strictly
to plainness of speech and behavior; and unless
his or her will is so far subjugated or slain as to
yield compliance with this requisition, there is no
growth in the Truth, no right qualification for
service in the church. This is a lesson taught by
the experience of every devoted member of the
Society, man or woman, in every generation of
Friends since their rise. The fashions of the
world are always changing, but Friends not being
allowed to comply with them, have kept nearly to
one simple form of apparel, and therefore have
ever been distinguished by their peculiar garb,
and we cannot believe that the Head of the church
has revealed to the present generation in the So-
ciety that their predecessors were all wrong on
this point, and that they are no longer to be sub-
jected to this mortification of their natural pro-
pensities.

We know that these views are considered by
many of our fellow professors as contracted and
bigoted, unbecoming the progress of the age.
But they are supported by the cumulative evi-
dence of the past, the sad experience of the pre-
sent, and we have not a doubt but that the un-
foldings of the future will amply corroborate their
soundness. Would that Friends everywhere
would take warning in time, and be willing to
open their eyes to the serious consequences that
must inevitably follow the general adoption in the
Society of the latitudinarian views on the subject
of dress and address, now spreading among many
of its members, not excluding some who are con-
sidered leaders of the people. Let the plain dress,
plain language and manners that have heretofore
distinguished a Friend be generally discarded,

and the Society will not only be swept along in the current of varying fashion, but most of the christian testimonies, the maintenance of which has characterized it among other professions, will also be considered of too little importance to be longer borne before the world.

SUMMARY OF EVENTS.

FOENIX.—POPE PIUS IX. has issued an encyclical letter to the Bishops of the Roman Catholic Church throughout Europe, in which he calls their attention to the great perils by which he is now surrounded, and in poetic terms deploras the many dangers which menace the temporal power and threaten to destroy the independence of the Holy See. A dispatch of the 28th states that great agitation prevailed in Rome: the Pope had retired from the Vatican and taken refuge within the walls of the Castle of St. Angelo.

Italy had been formed, at the head of which is General Menafra.

A proclamation has been issued by King Victor Emmanuel, denouncing Garibaldi, and declaring that the policy of France, in maintaining the obligations of the September Convention, meets with the approval of the Italian government.

He commands the insurgents to return to their allegiance, exhorts the people to sustain their king and preserve the national honor, and concludes by promising that, when tranquillity is restored, Italy and France will settle the Roman question.

On the 2d inst. the French army entered the city of Rome. The Italian army had just entered the Papal territory. The revolutionists under Garibaldi had defeated the Pope's troops, and advanced to the fortifications of Rome before these events took place. Garibaldi then retired to Monte Rotondo, where he took up a strong position and remained at the date of the latest dispatches.

To the summing of the king to disarm, Garibaldi replied by refusing to disband his army or give up his enterprise against Rome, unless a change is made in the present ministry which will put the government in accord with the national will.

Napoleon has made a proposition of King Victor Emmanuel to submit to the citizens of Rome and the Papal provinces the settlement of the Roman question by a popular vote, but the Italian government declines to accept his plan for the solution of a question in which the interests of the whole nation are so deeply concerned. It is said that should no general European conference be held on the 10th inst., an arrangement will be made for the joint occupation of Rome by the Catholic Powers.

It is again reported at Copenhagen that the United States have purchased the Danish West India Islands, for which Denmark is to receive \$14,000,000 in gold.

The latest received Brazilian papers say that the allied forces on the Parana will not undertake any operations for the siege of the Paraguayan fortifications at Humaita. President Lopez, of Paraguay, had renewed his offers to the allied rulers to negotiate for peace. No reply had been returned when the steamer sailed. Dissatisfaction with the war continued to be manifested in Brazil and in Argentina.

Bavaria and Wurtemberg have joined the Zollverein, and both these kingdoms have concluded a military alliance with the North German Confederation.

The Emperor of Austria has given assent to the proposed General Conference for the settlement of the Roman question, but the Pope absolutely refuses to be a party to it, and England and Russia are reported to have declined the invitation of France to join the conference.

The Commissioners sent by Turkey to Crete, have failed in their mission.

A Madrid dispatch says: General Lersundi, to whom was tendered the office of Captain General of Cuba, has accepted the post, and will leave by the next mail steamer for Havana.

Advices from Porto Rico to the 16th, state that a severe hurricane was experienced there on the 13th. A number of coasting vessels were lost and others seriously damaged, and the ruins of several towns were reported to have been buried under the waves, causing inundations at various points and considerable damage to property.

San Domingo has declared war against Hayti on account of the sympathy and aid given by the Haytiens to ex-President Bazet.

The *Journal de St. Petersburg* prints the official copy of the joint note from Russia, France, Prussia and Italy to the Sultan of Turkey, on the Eastern question. After rehearsing the unheeded representations which have

from time to time been made by the European Powers in favor of granting the demands of the Cretans, and for a general amelioration of the condition of the christians of the Ottoman Empire, the note declares that the Great Powers will hold the Sultan responsible for whatever consequences may follow.

A Paris dispatch of the 4th says: At six o'clock this morning the Papal troops, supported by the French forces, attacked Garibaldi at Monte Rotondo, and defeated him. Some reports say that Garibaldi was killed in the engagement, and others that he was taken prisoner.

The war vessels and transports, with troops on board, forming the first squadron of the Abyssinian expedition, have left Aden for the coast of Abyssinia. The Viceroy of Egypt has offered assistance to England, and has dispatched a corps of native troops to Abyssinia to join the expedition.

The Penians are still troublesome in England. Troops have been sent to Liverpool on account of the alarm felt there.

Consols 94 7-16. U. S. 5-20's 69½. Cotton dull, middling uplands, 8½d.; Orleans, 8½d. Breadstuffs unchanged.

UNITED STATES.—*West Virginia.*—The result of the recent election in this State is that the Senate will stand 20 Republicans and 2 Democrats, and the House same as last year, 44 Republicans and 11 Democrats.

The Indian.—G. G. Taylor, Commissioner of Indian Affairs, telegraphs to Secretary Browning that thus far the Indian Peace Commission has been entirely successful. Treaties have been made with the Cheyennes, Arapahoes, Kiowas and Camanches. At Laramee, on the 8th, they expect to meet the Crow, Sioux, northern Arapahoes, and all the north-western Indians. The Indians are still to be allowed to hunt between Sucky Hill and Platte river. A denial of this privilege would have caused a continuance of the war.

Georgia.—The returns of the election indicate a result favorable to a convention. It is estimated that about 100,000 votes were given in the State on the convention question, out of 180,000 registered. Opposition candidates were nominated only in the northern part of the State where the whites are largely in the majority. In the other portions of the State the conservatives took no part in the election.

Philadelphia.—Mortality last week, 264. The *Register* and *Director* of the Bureau of Statistics has made a careful analysis of the crop to be expected this year. The yield in thirteen States is computed to amount to 1,568,357 bales.

Ohio.—At the late election the whole number of votes cast was 494,063, for amendment to the constitution so as to confer the suffrage on colored men, 216,987, against the amendment 255,240, and 21,836, in favor of it 38,352. The remaining 12,276 were blanks.

The South.—According to a letter from a district commander in the south, things have undergone a complete change since the recent elections in the north. The late rebels are no longer disposed to accept the situation. They regard the elections in Pennsylvania and Ohio as an endorsement of the friends and sympathizers of the "lost cause." These sentiments, the letter says, are not confined to the lower and more ignorant classes of southern whites, but are shared by the most intelligent and respectable.

The Chesapeake and State Railroad is preparing to purchase the whole indebtedness to the government of \$400,000, and will remit the amount to Washington in a few days.

Prior to the war the bank circulation of Augusta, Georgia, amounted to nearly \$1,000,000, all of which was well and profitably employed in legitimate trade. Now the available bank circulation is about \$440,000.

Meredonia.—The fishing boats of the six northern counties of Scotland have taken this year about 2,380,000 worth of herrings, and including the Orkney and Shetland Islands, the catch is estimated at £1,000,000. Queen Victoria's journey to or from Scotland costs upward of \$10,000 in specie. The distance from London coast to Balmoral is 892 miles, which is usually performed in nineteen hours.

Steamtugs have just been employed on the canalized portion of the Marne. The journey to and from Paris to Epernay, 350 miles, has been performed in six days, instead of sixteen or seventeen, as formerly.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLI.

SEVENTH-DAY, ELEVENTH MONTH 16, 1867.

NO. 12.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two
dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

No. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

When paid quarterly in advance, five cents.

For "The Friend."

Friends in Norway.

(Continued from page 82)

appears that in the year 1814, a little before
were liberated, they received another accept-
visit from Frederick Smith, of London, ac-
panied by William Martin, of Lewis. William
man, of Rochester, and other Friends of that
age, exercised a friendly and fatherly care
them, which appears to have been blessed to
all of them, and tended to their establishment
in Truth. We cannot better promote the ob-
jects of these pages than by inserting some extracts
the correspondence between them and some
of these Friends who felt so deeply interested in
welfare.

From Frederick Smith to Enoch Jacobsen—
London, 4th mo. 2d, 1814:—

"Dear Enoch,—There will be sent some copies
of Barclay's Apology and other books, to be dis-
tributed to those prisoners who may not have
them. * * * I wish thee to get any further in-
formation thou canst, respecting The Norway
men, and let me have it as soon as thou canst.
I am very much interested about the poor prison-
ers also respecting The Saints; and I want
to feel generally to feel the same interest. When
you go on board, give my dear love to the pris-
oners, and tell them they are very dear my
and I hope that the Lord will preserve
us so as that nothing may induce them to re-
turn to the world, but continually to remem-
ber he visited their poor souls in their great
sufferings, whereby he showed them that though
they were in trouble, and in much affliction, yet
they were kept humble, under the trying dispensa-
tion he could give them that sweet enjoyment of
his love and power, that could make up for trials
and troubles greater than they had endured.
This was a foretaste of those heavenly enjoy-
ments that those are at times favored with, who
are obedient to him.

But they must remember that while they were
in the infant or child's state, they were
that as they grew up towards manhood in
Jesus, they must expect little difficulties,
they will be tried by his withdrawing himself
while; and thus we are made to prove our
love. For if, when he leaves us, we still
in our love, and are as faithful as when he
visited our poor souls, it is then he strengthens
ourselves in many ways, that we may be ex-

perienced in the ways of the everlasting truth;
that, by this experience, we may be helpful to
others, and which we could not be, if we were
always living on milk, like babes. But the time
must come when we are to be useful to others:
we must eat strong meat—so shall we become
strong men in the Lord.

"This latter part I wish thee to look at, and
remember that those who thirst after Divine
enjoyments are not the most useful, but rather those
that are the most faithful; and this, I believe, is
thy case. Thou lovest the Lord, and art distressed
when he hides his face from thee, and art only
desirous that he should love thee. From whence
proceeds this desire after his love? Why, it is
from himself. Thou couldst not have this hunger
and this thirst, if he had not given it to thee.
Then be contented in the fulfilling of his words
in his own time, and that will be when thou art
patiently resigned to endure spiritual suffering.
It is said, 'Blessed are they that hunger and
thirst after righteousness, for they shall be filled.'
Blessed are the poor in spirit, for theirs is the
kingdom of heaven. Blessed are they that mourn,
for they shall be comforted.'

"My dear love is to thee and Canute, &c., &c.
Thy affectionate friend,—FREDERICK SMITH."

The next two letters are from another of the
prisoners, who thus describes himself:—"I in-
habit in a port called Rørvig, of Charnen Island,
twenty-four miles northward from Stavanger. I
have been master of vessels in the coast and fish-
ing trade, in the summer; and, in the winter
season, I am busy in teaching young persons writ-
ing and navigation. I have never been in the
king's service, having got privilege of freedom.
I have a wife and two children; a son, eighteen,
and a daughter, fourteen years of age. I have
also step-children; three sons and one daughter.

"KAAVER O. DAHL.

"To Frederick Smith."

"Eyen, the 10th of June, 1814.

"Dear Friends,—Your last presence here on
board have comforted my soul, and I am joyful in
the love of the Lord, and of the true religion of
the church of Christ, which I shall bear in mind
all the days of my life. You have helped to sup-
port me and my friends, both in soul and body.
Receive my sincere gratitude, as a token of my
love to thee and to all the Friends in your coun-
try.

"By occasion of the war, I am put in this con-
finement, and restrained of my bodily liberty; but
feeling myself to be in a sweet liberty as to my
soul, I thank God heartily, who has been so kind
to me, and brought me here to receive his Divine
blessing, and has used you as a means to save me,
and drawing me from worldly thoughts to the
right way, and to be a child of the Heavenly
Father, redeemed by our Saviour, and to be a true
believer, and of the church of Christ. My prayer
is to be constantly preserved in the true religion,
and in the true hope of eternal happiness in the
world to come, where our blessed Saviour is gone
to prepare a place for us, and for every one who,
in faith and true love to him, endures the allotted
trials and sufferings with patience, regarding the

short troubles and miseries of this life as nothing
in comparison with the glory of that life which is
eternal.

"Receive these few lines as a token of the sin-
cere love of your affectionate friend,

"KAAVER O. DAHL."

The period now drew near when these brethren
in bonds were to be liberated, and separated, in
some degree, from that close and tender christian
fellowship in which several of them had, for some
time, beautifully participated. The following
short letter describes their sensations on this event.
It is from the pen of Ole Edwardsen Loge, dated
Bellequeux, 17th of 9th mo., 1814:—

"Dear Friend (name not given).—Two Swedish
frigates are ready for us, and we wait hourly for
orders for our being sent on board. It is my duty,
on my own and my companions' behalf, to bid
thee dearly farewell. We thank thee for all that
care and affection thou still hast shown towards
us; and we desire thou wilt have the goodness to
remember our due acknowledgments to all Friends,
who, as well as thyself, have been careful for our
true prosperity. The Lord reward you for it!

"We are somewhat afflicted because we are now
to be separated one from another, and because we
may now have to experience severe trials; but we
trust in God. When he is with us, we have to
fear for nothing. Wherever we arrive, we shall
give you account, if possible. Receive, all of you,
our dear love, and farewell for ever.

"Thy unworthy friend,

"OLE EDWARDSSEN LOGE."

Three of the Friends, of Rochester, sent, through
Canute Halversen, Elias Tasted, and Even Samuel-
sen, a few lines, by way of certificate. In a letter,
accompanying this document, the Friends ob-
serve, "We have endeavored to word the docu-
ment in such a way that it may extend to all;
and we hope that if there be a probability of its
being of service to any of them, at any time, that
you will not fail to use your endeavors for them,
if their conduct and conversation correspond with
their profession. And we feel very desirous that
this may be the case with you all: that your meek,
inoffensive deportment, may gain you general
esteem, and evince to the world that you are re-
deemed from the spirit of war, and are the follow-
ers of our meek, lowly, crucified Redeemer. This
will recommend you to the kind notice of all con-
siderate, religiously disposed persons.

"And may the heavenly dew, that descended
upon the mountains of Zion, descend and remain
on you!"

"Your truly affectionate friends."

"To all whom these may concern.

"Canute Halversen, whilst having been a
prisoner of war at this port, has, we believe, been
favoured with the tendering influences of the love
of God; and becoming a little acquainted with us,
members of the religious Society of Friends (called
Quakers), a people, in those parts, who, amongst
other noble testimonies (an able Apology for which
he has with him, in his own language), hold the
inconsistency of war with the Gospel Dispensa-
tion, and therefore cannot, for conscience' sake,

engage therein. And we believe that he, with others of his countrymen, are made partakers, with us, of the same precious peaceable testimony; and we are desirous of recommending him to the kind attention of those with whom his lot may be cast, that he may be permitted to have their support in this religious scruple, and witness preservation.

"Chatham, county of Kent, England, 12th of the 2d month, 1814."

A considerable number of Friends' books, part of them in the Danish language, were supplied by the Meeting for Sufferings, to be distributed amongst the prisoners on their return to their respective homes.

Elias Tasted thus describes the events of this period:—"In the latter part of the year 1814, we were discharged from our imprisonment, and taken by two Swedish frigates, to Christiania in Norway, and the Danes to their own place. Then this poor and mournful little flock became separated and scattered, each to his own place of abode, far distant one from another, scarcely two or three Friends to any one place. We were, however, four, belonging to Stavanger, viz., Lars Larsen, Ole Franck, Even Samuelsen, and Elias Tasted. On our return, we were as poor and strange servants; yet we came to live so near one another, that we kept up our meetings for worship, two or three times in the week, constantly; when a few others sometimes came and sat with us, either in a loft or in a chamber. We were then as a strange and despised people to the great professors; but the Lord preserved us in our testimonies, through many and various trials and afflictions, which we then had to endure for the Truth's sake. Our sufferings were principally caused by the clergy, who stirred up the magistrates to persecution."

(To be continued.)

England in the Last Century.

(Continued from page 83.)

Such was the state of England when George III. came to the throne, as regards two of those three conditions of social life which enable us to judge, at first sight, respecting the comparative barbarism of nations. The roads were of the worst possible description. The means of conveyance between place and place were defective in the extreme. With respect to the third—the state of English agriculture, and the condition of the classes by which it was practised,—in these points the picture which meets our gaze is scarcely more cheering. Drainage, in 1700, may be said to have been a thing unknown. The courage and skill of our remote ancestors had, indeed, at periods too far removed from us to come within the province of history, constructed here and there vast mounds for damming out the sea and keeping rivers and even estuaries within certain circumscribed limits. Such a work is the great sea-dyke which interposes between the Channel and Romney Marsh, an extensive tract of country, containing about 60,000 acres, and which lies chiefly under lowwater mark, along the south coast of Kent. Such also are the embankments which exclude the Thames from its old bed on either side of the present river, including the whole of the district now known as Plumstead and Erith Marshes, Plaistow, East Haven, and the Barking Level. Such, too, are the bulwarks and causeways—the construction as is believed of the Romans—which in the fen countries of Lincoln, Norfolk, and Huntingdon, protect the land from coming again under the dominion of the ocean. But on these triumphs of old engineering skill scarcely any improvements were engrained till the

reign of Charles II. Then further attempts were made, and made successfully, to stent out the sea in other quarters, but nothing or next to nothing was done to dry the soil, or to evaporate the stagnant waters from the redeemed regions. Romney Marsh well deserved its name a hundred years ago. It was a region of swamp in winter—of hard dry baked grassland in summer. So did all the fen regions in Lincoln and Norfolk; so did Sedge Moor in Somersetshire; so did Thorne Mere in Yorkshire, with endless districts besides, of which the main produce was wildfowl and eels. And where this waste of waters happened not to be, lack of skill prevented the English husbandmen from applying the lands which they owned or occupied to tillage. Hence Warburton, the author of the "Vallum Romanum," giving the impression which was made upon him by the condition of Northumberland at a period not more remote than 1783, describes a tract of country fit only for pasturage, and that, too, of the most primitive description. "Such was the wild and barren state of the country," he says, "at the time I made my survey, that in those parts now called the wastes, and heretofore the debatable ground, I have frequently discovered the vestiges of towns and camps that seemed never to have been trod upon by any human creature than myself since the Romans abandoned them; the traces of streets and the foundations of the buildings being still visible, only grown over with grass." So also, in the middle of one of the best cultivated and richest districts of England—Lincoln Heath—there still, we believe, may be seen,—there certainly could be seen no many years ago,—a column seventy feet high, which, when George III. ascended the throne, did duty as a beacon by day and as a land lighthouse by night, to guide the wayfarer in his progress over what was then a dreary waste.

While drainage was so little practised, and roads all but impassable, the produce of the fields of England could not be other than scanty. Wheat, barley, and oats were raised in small quantities. Turnips, though sown and reared in gardens, never became a crop in any sense of the term till some time between 1760 and 1770, and even at the latter period only the most scientific of agriculturists grew them. As to artificial grasses—such as sainfoin, vetches, and even clover these, with the exception of the latter, had never been heard of. In Scotland matters were still worse. Catharine Sinclair, in the Life of her father, tells us "that in 1772 the whole country round the baronet's residence was barren moor; that scarcely one of his tenants owned a wheelcart; and that all the burdens, whether of wool or manure, were carried in wicker creels upon the backs of women." Neither were the Lothians themselves at that time much further advanced. The region between Berwick and Edinburgh, which now waves with yellow corn, lay then comparatively waste, a patch of oats intervening here and there amid the heather, and scanty flocks picking up what fodder they could among knolls and lowlands overgrown with broom.

The people who thus practised the art of agriculture were, as might be expected, rude in the extreme. Schools there were none in the rural parishes; and even in small towns, except where King Edward's foundations happened to be, such schools as existed taught but little, and few came to profit by that little. The clergy did not appear to consider that upon them the people had any further claim than for the hasty and slovenly performance of the public services of the church. Of the bishops appointed since the revolution of 1688 several were indeed learned men; but their

learning, and the exercise of it through the press, engrossed all their attention. The great majority could not even claim to be scholars; and which scholars or not, they all alike lived and died profoundly indifferent, or apparently so, to the proper duties. From 1688 till George III. came to the throne, the qualifications mainly looked in the aspirant for a mitre were, that in politics he should be a Whig—in church matters, daring and careless—one who was likely to give little trouble as possible either to the government or to the not very moral society by which he was surrounded. This baneful influence made itself felt among the higher classes, and in towns, as well as in the country. In the rural districts it kept farmers and laborers alike steeped in the depths of ignorance. Hannah More, describing a visit which she paid to the village of Chedd within hearing, so to speak, of the organ in Wells Cathedral, says—"We found more than 20 people in the parish, almost all very poor; no gentry; a dozen wealthy farmers, hard, brutal, and ignorant. * * * We saw but one Bible in the parish, and that was used to prop up a flower pot." Another witness, William Huntington, the well-known "sinner saved," thus delivers himself in his 'Kingdom of Heaven taken Prayer,' concerning the profound ignorance which prevailed in the Weald of Kent when he was boy. His book appeared in 1793, and he was then a man advanced beyond middle life; "Th was in the village (where he lived) an exciseman of a stern and hard-favored countenance, whom took notice of for having a stick covered with figures, and an ink-bottle hanging at his butt hole. This man I imagined to be employed by God Almighty to take an account of children's sins. I thought he must have a great deal to find out the sins of children; and I eyed him as a formidable being, and the greatest enemy I had in the world." The Weald of Kent is scarce we suspect, now—it certainly was not in 1824 the most enlightened portion of England; but doubt whether there could be found in it at that day, or even forty years ago, a child, far less grown lad, so besotted as to take W. Huntington for an exciseman and his ink-bottle.

It was while George III. filled the throne that the first beginnings were made to break in upon this state of pitiable darkness. To R. Rail the son of the printer and proprietor of the 'Gloucester Journal,' the merit is very generally attributed of making this beginning. With Sunday-schools his name is popularly associated; and perfectly true that he established and promoted his native city and elsewhere institutions of kind which were of great value. But R. Rail only followed in the track of another, and that other was a woman. Hannah Bell, of B Wycombe, first thought of gathering together, instructing the children of the poor, whom saw, Sunday after Sunday, driven by the be out of the churchyard. Her benevolent efforts were attended with marked success, and they of them reaching Gloucester, stirred up R. Rail to do likewise. Then came into the same Bishop Porteus, and after him many. Such the little fountain-head whence, in due time, but those waters which are now fertilizing, the superintendence of the National Society, length and breadth of England. Nor would it just to the memory of the good old king were in observing upon these matters, to leave unnoticed the part which he personally took in promoting this righteous end. George III. was friend of Bishop Porteus, and of every good man; but Bishop Porteus took up. He rejoiced in the spread of Sunday-schools, and desired

any one of his subjects might possess and be able to read a Bible. He was a zealous promoter, of improvements in agriculture. Besides exerting on his own lands, he corresponded, under the signature of "Ralph the Farmer," with Mr. Young, the well-known traveller and editor of the "Agricultural Journal." He was an admirer, also, of Adam Smith's great work, and wished to promote the study of the subject of which it treats. How well directed the king's energies were it is hardly necessary to point out. Scientific agriculture became a fashion, and that race of imbecile bent, both in England and in Scotland, which has ever since been going on. The results are before us.

(To be continued.)

For "The Friend."

The following letter was originally addressed to Isaac Friend, requesting it might be circulated among the members of the Meeting at —, since the writer has been encouraged to put it to more general circulation among Friends, and to have he affectionately solicits their serious perusal.

DEAR FRIENDS,—Seeing that with some of us the world has lost its youth, and the time begins to wax old, we feel anxious to be preserved in the way of our religious duty, and believe that the ruling sense of our own many short comings is not to operate wholly to our discouragement, but called upon to "stir up the pure mind by self remembrance" in others. This persuasion emboldened me thus to address myself to you, so unforgotten as I may be enabled, somewhat of exercise of my mind since I have been amongst chiefly as it regards our younger Friends who lately become heads of families, and some not in very early life. I have been drawn into sympathy with you in a very unexpected reference to your growth and prosperity in the self-denying principles of the religion of which we profess to espouse. Very soon sitting down in your meeting, a tender cry arose in my mind, "Oh that the lambs of the fold would but enter into the fold by the door, (John. x. 7, 9), that they would take Christ, (John. i. 5), for their leader, and follow the heavenly Shepherd," and it humbled and contrited my spirit in the full belief that if I do so, there will be a greater appearance of simplicity; that if happily you are able to resort to this Light, and to listen to the shepherd's voice, the one will not fail to disavow the other to condemn, that which is contrary to itself—hence, saith my soul, Oh that babes in their christian course, might be able to bring all superfluous things to the pure for truth in the conscience, i. e., to the—because "all things that are [to be] revealed are made manifest by the Light," (Ephes. 5), and methought one effect would be, that the tips, the tips, and the boss, &c., would appear so commonly among us.* Is it not of consideration whether such marks of ostentation are consonant with the apostolic commendation, that the adorning be not in putting of apparel, (but [said he] let it be the man of the heart, in that which is not corrupt, even the ornament of a meek and quiet which is in the sight of God of great price," (1 Pet. 3. 4). Are there not amongst your professors, advanced in years and in experience, those who are travelling for you, as, as did the apostle for "his little child, until Christ be formed in you? and whilst

I not kindly suggest whether, for example's sake, a veil might not often be dispensed with?

thus engaged to covet your growth in vital religion, they rejoice in being permitted to behold a submission to the forming hand for usefulness in the church, preparing to unite in a fervent exercise of soul when met for this solemn purpose of worship: yet they cannot but be apprehensive that these "gratifications of the carnal mind," (Rom. vii. 5), retard your advancement in the path of self-denial, and hinder you from coming so fully under the divine culture, as that the fruit designed and looked for by the good husbandman is not brought to perfection. May we not thankfully believe that there are amongst you those who are "set up [as] shepherds" (Jer. xlii. 4), over our own little flock and fold of religious professors; and do you not esteem these for their works' sake? so that a desire is at times raised to walk in their footsteps—from which, indeed, it may be asked, why should we turn aside? (Cant. i. 7). For how came they to be of this flock and fold? by birthright only? Nay, verily,—came they not in by Christ, "the door"? and did they not find there was not room enough to enter with the fashions and superfluities of a vain world in their apparel. Yes, the gate was too strait for that, and the way too narrow, so a testimony was given them to bear against such things, and it remains continued to us as a Society.

Alluding to this subject, a much esteemed Friend of our own day, so late as at the last Yearly Meeting, told us, "that these testimonies, plainness of speech and apparel,—were framed in the constitution of the Society in the very wisdom of God, to keep us a distinct people; and it is required of us to support them; and they are intended, said he, to reduce the will of the creature, and bring it into subjection to the will of the Creator." Ought they, then, to be called minor testimonies? I think not; but, be that as it may, we are sensible they are greatly neglected; is it not worthy of an impartial examination whether our individual growth in the Truth be not retarded by want of faithfulness "in the day of small things"? (Zech. iv. 10.) Is it not one cause why—in looking about our Zion—if so we may compare the constitution of our Society, intended as it was, "to be as a city set on a hill," (Matt. v. 14), if in walking about her, counting the towers thereof, and marking well her bulwarks, (Ps. xlviii. 12, 13), we see lamentable declension. Oh! how can we but earnestly desire for our dear friends—not only those who in early life have set their hand to the plough, that they look not back, "but for all that they be stimulated to come forward and repair the breaches which the enemy has made, that we be no more a reproach," (Nehem. ii. 17), and seeing it is a day wherein it is sorrowfully apparent that in different ways many amongst us are brought into captivity to the spirit of the world, may the injunction of the prophet be regarded by us all, "Seekest thou great things for thyself? seek them not—thy life will I give thee for a prey in all places whither thou goest."

The above was penned under a pointing of duty, intending it to be circulated among you as a tribute of love in my declining years, to that blessed cause which it has been my privilege, as well as yours, to be called upon to espouse, not with a divided but with a perfect heart: herewith I take my leave and affectionately bid you farewell.

ISAAC WRIGHT.

Second month, 1839.

P. S. Since writing the above another subject has weightily impressed my mind with desire that all our dear Friends everywhere, may unfeignedly unite in support of our ancient christian testimony against a hireling ministry, or any ministry which infringes upon the precept of our Lord and the example of his immediate followers,

"freely ye have received, freely give," a testimony and a standard which our forefathers were strengthened pre-eminently to erect as an ensign to the nations, whereby to invite them to behold and to embrace the purity and spirituality of gospel ministry under the christian dispensation—a standard which no other religious community had then, or since have attempted to set up, viz., a free gospel ministry unshackled from the trammels and the temptations attendant upon a ministry established by man, and supported by outward emolument.

Let us then prize our privilege, and seek to have our hearts directed in prayer to "the God of all Grace," that he will be pleased to continue unto us the blessing of a pure and free and living ministry, through messengers that "preach the Gospel of Peace, and bring glad tidings of good things," Rom. x. 15.

THE EARTH.—The very earth itself is an unsteady basis of science. Dr. Robinson said to the British Association, that "he found the entire mass of rock and hill on which the Armagh Observatory is erected, to be slightly, but to an astronomer quite perceptibly, tilted or canted, at one season of the year to the east, at another to the west." And, what is still more startling to the astronomical world, the Greenwich transit instrument, the very ark of the covenant of scientific certainty itself—must we utter it?—has wavered. The high priest of that *sanctum sanctorum* of science, Professor Airey, the Astronomer Royal, makes the alarming confession as follows:—"While the construction of this instrument, and the modes of observation with it, have given a warranty such as the world never possessed before, for the steadiness of the instrument and its adjuncts, there have been instances where the azimuth of the instrument, greatly to the surprise of the astronomer, has varied four seconds, as determined by opposite passages of the polar star." Prof. Airey has no other way of explaining this, than by the supposition that "the sound and firmest earth itself is in motion." A supposition fatal to the scientific certainty of observation made on such a tremulous basis; for if the whole hill on which the Armagh Observatory stands can be canted to the east and to the west, and if the solid earth at Greenwich has been detected in wavering four seconds, who can assume greater stability for any other observatory? Or who can tell whether such trepidations have not vitiated the most far-reaching observations? It is only occasionally that sidereal rectifications can be made, and in all intervening hours nobody can tell how much wavering may arise from the secular and magnetic expansions and contractions of the earth, which physical geographers assure us are continually active. Yet we are asked to accept visionary theories of the formation of worlds, based on observations of minute angles, where the error of the tenth of a second in the parallax of a distant star involves an error of distance of thousands of millions of miles! The whole modern theory of the lenticular formation of this earth's universe, and of the actual distances of the fixed stars, has absolutely no broader basis of observation than the accuracy of observations of the sixtieth or hundredth part of a degree. What, then, are we to think of the scientific certainty of observations continually exposed to such disturbances and jostlings?—*Family Treasury*.

St. Bernard calls holy fear the book-keeper of the soul. As a nobleman's porter stands at the door and keeps out vagrants, so the fear of God stands and keeps all sinful temptations from entering.

Expansion of Water.—The wise law of nature by which water at a temperature of 39 degrees begins and continues to expand as it cools down to the freezing point of 32 degrees, is so well known as to require no comment; but I believe that after ice is once formed, it is acted upon by the reduction of temperature in the same manner as almost every other known substance—that is, it contracts. In travelling over the large frozen lakes (Winnepeg, for instance) in America, during the winter, if a calm and cold night (say 30 degrees below zero) follows a somewhat mild day, loud cracks like pistol shots and moaning sounds are heard on the lake continually! and next morning, when travelling is resumed, large rents (occasionally several feet wide, which can be caused by contraction only), with open water in them, are seen in the ice, across which there is often both difficulty and danger in leaping. These rents are soon firmly frozen over; and perhaps in a day or two the temperature rises some 20 degrees, when there is a repetition of the noises on the lake-ice, not to the same extent however, and arising from an opposite cause, namely, the expansion of the ice, which is either forced up into the ridges or pushed up on the shore, as there is now more ice on the lake, by the amount formed in the rents spoken of, than will cover it at a moderate temperature; therefore it has to be forced up somewhere. These contractions and expansions go on during the winter, to a greater or less extent, according to the greater or less number of changes of temperature that occur. I believe that glacier motion on a large extent of surface, such as Greenland, is in a great measure caused by the contraction and expansion of the ice. Thus, the ice contracts in winter, forming wide and deep cracks in the crevasses; these are full of drifted snow; and, when the ice expands again by the warmth of summer, these crevasses being filled up, the ice is pressed out at the edges, as it must expand somewhere. There may be nothing in the views I have ventured to express; but I have never heard them promulgated by any one; which is my only reason for troubling you with this long letter on a very cold but interesting subject.—*From a letter by John Roy in the Athenæum.*

Love and Unity.

It is instructive to observe the care exercised by early Friends on this subject, lest any root of bitterness springing up should trouble the church, and many be defiled thereby. This has been lamentably the case in our day, a day in which the trials of the faithful have been of a peculiar character; yet, as these make the "Lord their refuge, even the Most High their habitation," they will experience the everlasting arms to be underneath for their support. "The watchmen shall see eye to eye when the Lord shall bring again Zion." May the day be hastened when this shall be the case, and the stumbling blocks removed out of the way of the people. Had the care recommended in the following extract been faithfully exercised by overseers, or other solid Friends, some of our meetings would not be in the situation they now are. S.

"It is advised that where there is any appearance of discension and variance, or of unkind resentment and shyness among our members, the parties be timely and tenderly apprised of the danger to which they thereby expose themselves and others, and earnestly exhorted to mutual condescension and forgiveness, becoming the followers of Christ. And if any, notwithstanding such endeavors for their help, continue to manifest an

implacable enmity to others, the overseers or other solid Friends of the Preparative or Monthly Meeting they belong to, should be informed thereof, and labor further with them; when, if they still prove inflexible, they ought to be testified against as out of the unity of the Body—the very end of whose existence is the promotion of peace on earth, and good will amongst men?"—*Book of Discipline, 1719, 1806.*

[The following beautiful lines are descriptive of the death and burial of Moses. The poet selects the time when it was supposed the great Lawgiver had taken the last glance at the miraculous view of Canaan afforded him, and in solemnity and calm resignation turns towards the valley where the Lord appointed his tomb.]

MOSES.

To his rest in the lonely hills,
To his rest, where no man knows,
By the secret birth of the rills,
And the secret death of the snows;
To the place of the silent rocks,
Where no voice from the earth can come,
But the thunder leaps and shakes
The heart of the nations dumb.
To the long and desolate stand
On the brink of an arid slope,
To the thought of the beautiful land,
And the woe of unanswered hope.
To the moments that gather the years,
Like clouds on the heaven afar;
To the tumult of terrible wars,
To the flush and the triumph of war.
To the plagues of the darkness and dead,
And the cry of a conquered king;
To the joy of the onward tread,
And the beat of a careless wing.

To the march of the pillar of cloud,
And the rest of the pillar of fire,
To the song of the jubilee crowd,
And the passionate praise of the lyre;
To the mountain, ascended alone,
And the law in its thundering ring;
And the glimpse of the feet of the throne,
And the light of the shadow of heaven.

To Memory, beating her wings
In the tremulous cage of the mind,
And a harp of a myriad strings,
That is swept by the hand of the wind;

To a grave, where no marble above
Can be voiceful of peril and praise;
Where no children can weep out their love,
No widow recall the lost days.

To these—but his step is not weak,
And he moves as one moves to a throne—
Alone with the past on the peak;
With his grief and his glory alone.

J. S. W.

Selected.

LOVEST THOU ME?

How lightly some can speak of love,
And call the Saviour dear,
Who seldom lift their hearts above,
Or throbb with holy fear.

They say thy glory in the Cross,
But none themselves they bear;
They think, while free from pain and loss,
The martyr's crown to wear.

But love is just the hardest thing
A man can learn to do;
And that of which two thousands sing
Is understood by few.

It is not but a passing thrill,
A ray of winter's sun;
It is a heart, and mind, and will
By which our life is done.

It yields, if God should ask for much,
Nay, if He asks for all;
It welcomes 'e'en His chastening touch,
And hears His lightest call.

If truly we would learn to live,
To love we must begin;
Yet who can force himself to give
What only Grace can win?

My Saviour, if I dare not say
That I have love to Thee,
Do Thou, I pray Thee, day by day,
Reveal Thy love to me.

And this shall be my rapture, when
Before Thy face I bow;
I only wished to love Thee, then,
I know I love Thee now.

For "The Friend."

The Anointing Teacheth all Things.

The following letter of John Barclay to a person under conviction of our religious principles, interestingly points to doctrines and practices held dear by this religious Society. What that we all, whom the Lord has visited by His quickening Spirit, might double our diligence seek Him before all; who would thus be a stronghold in the day of trouble, and a peaceful calm to the tempest-tossed mariner in every storm a tempest that may assail on the turbulent tribulated ocean of life.

"25th, First month, 1819. When the Master sent forth his chosen ones to do the work which he had appointed for them, he said, 'Behold, send you forth as sheep in the midst of wolves: be ye therefore wise as serpents, and harmless as doves.' These few words of scripture sprang so forcibly in my mind, in the midst of no less anxiety for thy real welfare, and sympathy with thee under thy various and peculiar trials,—it appeared right for me to convey them in this way, and to relieve myself of some weighty solicitude on thy account; earnestly desiring that this little stepping-stone, thrown in thy way, might not in any sense prove a stumbling-stone, hurt instead of helpful. First then, and first of all I would direct thy attention to the Comforter, heavenly Instructor, the Spirit of Truth; whose precious teachings, I am persuaded thou hast been already brought, and so, in that sure most profitable for thee at present, art taking of the refreshment, peace, joy, faith, strength, and holy fortitude and wisdom, which are richly in store for all such as submit themselves to its guidance. The Apostle John bids the minds of those whom he addressed, to anointing which they had from the Holy Spirit, whereby they knew all things necessary to growth in grace. Though I know but little thee in an outward sense, yet I am persuaded that the hand of the Lord is truly upon thee, and greatly do I crave, that thy continual and caution may be, to keep close to this anointing. That which anoints is Truth, the Spirit of Truth, the Power of Truth: this is what seizes upon the soul, bruises our self-conceit, breaks our false peace, awakens us out of dreams of pleasure, riches, honor and acquiescence, shows us our real state, where we are, far we have missed the road, whether in principle or practice, and clearly points the way to true everlasting peace;—giving us also such full convictions that we cannot possibly miss of it, if we follow them, and not our own reasonings and imaginations. What holy invincible armor our great Captain clothe his little striplings,—those that are after his own heart, as David was,—those that lay aside all their own other people's weapons and strength, laying only of the hope set before them. May thy sire be unto thy Lord, that He may furnish with a sling, and give thee the smooth stone

art in the way to meet thine enemy; and thy true dependence be, yet more than ever hast known it to be, immovably fixed on Rock, thy Redeemer: and do not let the y put thee on any improper leaning on books, but lean upon Jesus, as all his beloved ones have done. O! it is a safe spot to tie at the feet of Jesus, rather than at the of Gamaliel, and be not cumbered about things,—remember *one thing* is needful; this one thing is a learning of Him who is lowly in heart,—that true learning is not merely a hearing, but a doing also; sayings, who speaks with such authority and in the secret of the soul, as to make us cry "He told me all that ever I did;" is not the Christ within, the teacher, who it was should never be removed into a corner, as Joseph-did prevailed? There is, indeed, a jug the pitcher of water, and going our way the city, to proclaim to others, by our life conversation, the name or power of Christ, has been pleased to manifest himself unto opening in us the well of water, which springs to everlasting life. But how seldom, (as soon expresses it,) does the soul keep silent to hear his voice, who speaketh as never spake; how seldom are we simple enough to let him whithersoever he leadeth; and when cution or affliction ariseth because of the igh in the heart, by-and-by we are offended said,—forsaking our leader, when he leads straight and narrow way of the cross; and ing him, in whose name we may have done some mighty works—saying with poor Peter, pow not the man? There is, as thou well est, a going before our guide, a kindling of us and warming ourselves at them, an offering of sacrifice before the prophet come; and O! burdens have the upright in heart at times hereby; what a 'lying down in sorrow,'—a close rebuke from our great prophet and priest, 'Thou hast done foolishly.' We remember Saul said, 'the Philistines will down upon me, and I have not made sup- sition to the Lord;' and he waited seven days (amul, and the people were scattered from and trembled for fear of the enemy. O! was an offering of something good, in the and will of the creature; but it was not ed good nor accepted, because it was not d of the Lord's prophet, neither offered in but in faithless fear. Truly I say not things to cast anything like discouragement ty way, but rather as an encouragement for to look up for help, to steer clear of all es that would hurt or hinder thy steady pro- and inward growth *downward* in the root life of religion. Be not very anxious about re- but fruits appear: if thou art chiefly seeking e grafted into the true vine, the precious s of that righteousness, which He is the or of, will not be wanting in their season. There is a winter, when not a leaf appears; but that a superficial observer would say, at good comes of this graft? Of what use religion been to him? Yet the husbandman es the times and the seasons, and that if even d were to be put forth, it would be struck by frost. O! there is a time to be empty, to be ped, to be poor, to be buffeted by the wintry as, to be deprived of all sense of life, any h for, or savor of good: and then I have d it safe to lie low in the littleness, in patient ty, in the true insignificance,—waiting in abandonment of self, in the silence of all, for His re-appearing, 'in whose presence e is fulness of joy' and abundance of cou-

solation, saith my soul from undoubted experience. Then wait in the filial fear, in the living faith, though it seem small as the grain of mustard seed, though it may lie very low: wait thus I say, upon the Lord; occupy with this thy talent; it is enough for thy present wants,—the Master knoweth what things thou hast used of, before thou ask for the food and raiment, even the daily bread, the wine of the kingdom. He will not withhold the oil and the wine from thy wounds or weaknesses; neither dost thou know how much he has in store for thee, as thou followest him in the way of his leadings in faith and faithfulness. Keep not back part of the price—part of the inheritance which thou didst inherit from thy fallen father Adam, and camest into possession of by actual transgression; but give up all, that thou mayest be clothed as *his* lilies are, with his innocence, not with thy own righteousness, which is but as filthy rags. Be wise then as a serpent; be wiser than the serpent that beguileth, that lieth in wait sometimes as an angel of light, to deceive the hearts of the simple. He suits his baits with much artful wisdom, according to the state and temper of mind in which he finds people. Do they love what is good? he is ready with an appearance or resemblance of good to entice them: and how can any discover his deceptions, or keep out of his snares, but as they come to that which alone can give the true discernment. What is that which enables us at any time to distinguish between the good and the evil, to choose the one and to refuse the other, though ever so much gilded? It is the true wisdom, of which Solomon wrote in his Proverbs, which preserveth out of the snares of death. How clear, how intelligible is her voice, in and unto the awakened upright soul; this word of wisdom is nigh thee, to those already knowest,—thou needest not go far away to find it, thou needest not mind the 'Lo! *here's*,' and 'Lo! *there's*,'—the kingdom is within, the king's laws are written in the heart. Receive not then for doctrines the commandments of men: try all things by this infallible touchstone, which never yet led any into error, but out of all error 'into all truth.' And when thou art examined concerning those principles or practices, into which the Truth hath led thee, and which nothing short of the same (I trust,) has given thee strength to profess before men, be not dismayed, be not discouraged, be not disturbed; let the Truth plead for thee, 'for it is not thou that speakest; nor canst thou by any ability short of that which the Lord giveth in the very hour of need, do anything availing in support of the great cause. Remember those faithful valiants who replied to the king (Nebuchadnezzar), 'We are not careful to answer thee in this matter;' and remember how our great Master was silent, and as one dumb before his accusers, though Pilate put a very short question to him,—'What is truth?' yet we read not of any answer being given, to feed the subtle-ensnaring wisdom in him who made the inquiry.

"I desire for thee an increase of the true strength and stability; and that is to be had by daily waiting on the Lord in the closet of the heart. A humble weighty deportment shows forth and best upholds the dignity and beauty of the christian religion; it becomes and adorns the gospel. A retired, calm, and watchful frame of mind, in many respects, a hedge and preservation about us, when thrown among those, who are not acquainted with our high profession of a principle of Truth shown in every heart as a seed; which is truly the grace of God that appears unto and in all men, leading them out of all evil into all good. We have perhaps but few examples of

what this heavenly influence would do, for those who are passive as the clay under the potter's hand. Look not out at the example of others, so as to stop short where *they* do; look rather to thy Master, and follow with a simple, submissive, grateful spirit, all his secret intimations, wheresoever he leads: follow *such only* as they follow Him, not by imitation but conviction; for there are many services and sacrifices into which others are led, which possibly thou mayest never be called upon to evince thy love for the Truth by engaging in; and some requirings may not be called for at thy hand, in the same way or time as they were at the hands of others; it is also possible thou mayest have a narrower path than any brother or sister that thou knowest of. Keep then 'thine eye single' to the light of Christ; let that lead thee whithersoever and whensoever it will: then only is the language of the heart, 'Thy will be done, O Lord, in and by and through this poor earthly vessel.' Then only do we availingly know and feel the blood of Jesus, the Mediator, to cleanse from all sin, whilst we 'walk in the light, as God is in the light.' For it is not the outward name of Jesus, but his power revealed in us, changing our hearts, that *saves*; neither is it an historical faith alone in what the Saviour did for us whilst on earth, that will avail anything; for if we reject him as our sanctifier, none of us can truly know him to be our sacrifice, (as W. Penn wrote:—) We read that the very devils could acknowledge that Jesus was the Christ: yet they did not submit to his government, but rebelled against him, or they would not have been fallen angels. There are many that can talk about the atonement, the intercession, the justification, the redemption of Christ, and about baptism, and the communion and heavenly union between the saints and the King of saints, who nevertheless confess they are 'miserable sinners, bound and tied by the chains of their sins,'—notwithstanding it is written, 'let him that nameth the name of Christ depart from iniquity.' My desire is for thee, and for all men, that they may come to the true and saving knowledge of God and our Saviour; which is only to be attained unto, through obedience to the manifestations of his Spirit in the heart, 'given to every one to profit withal;' without which none can fear him acceptably, or have true faith in his Son: for the things of God knoweth no man, but by his Holy Spirit.

"Farewell; keep to the Truth, and it will keep thee. Remember, 'He that dwelleth in the secret place of the Most High, shall abide under the shadow of the Almighty.'" J. B.

Explorations of the Red River.—At a recent meeting of the New York Historical Society, a paper read by Colonel Meline, U. S. Army, was an interesting historical sketch of the different explorations to discover the source of the Red River. There were, he said, five Colorado or Red rivers within the limits of the United States, but the subject of his sketch was the Red river of Louisiana. This river was known to Europeans three centuries ago, but it was only within fifteen years that its source was definitely known. The first attempt to explore the river was made in 1760 by French officers, and failed. They supposed that it rose in the Rocky Mountains of New Mexico, and was about 500 miles in length, whereas, it has been ascertained to be not less than 2100 miles long.

After the purchase of the Louisiana colony by the United States—a somewhat detailed and very interesting account of the circumstances attending which was given by the speaker—the second ex-

ploration of the Red River was attempted by the United States government. This also failed, partly from the want of correct information by the exploring party, and partly from opposition encountered from the Spanish authorities of New-Mexico. The third attempt to discover the source of the river was made under the authority of the United States government by Captain Pike, whose expedition went as far as what is now known as Pike's Peak; but instead of discovering the source of the Red River of Louisiana, as they at first supposed, found the head waters of the Red River which empties into the Arkansas, and is commonly called the Canadian River. Capt. Pike, too, was taken prisoner by the Spanish authorities, who imagined he was in some way connected with the Aaron Burr conspiracy.

The fourth attempt was made by Captain Long, in 1819, with an expedition fitted out by the United States government. But this, like the others, failed, and it was not until 1852 that another organized expedition was sent out by the government to discover the source of the river. The expedition was under the command of Captain Mason, and succeeded in discovering the source of the river. There was little doubt, the speaker said, that the source of the river was visited by De Soto 300 years before, but the European and American world had continued ignorant of the origin of the river for three centuries thereafter. —*Late Paper.*

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 75.)

Of a friend in whom she felt particularly interested, and who had just become awakened to serious thoughtfulness, she thus writes:—

"1st mo. 12th, 1834. — appears really awakened to his lost estate without obedience to Christ. Should it continue, we may look for the most happy results. But oh! the cross—that is the stumbling-block to many of the would-be christians. It is too humbling, too mortifying to the proud will of man to submit to all that it calls for. However there is room to hope. He, who is rich in mercy to all who truly seek Him, knoweth the frames of his children, and remembereth they are dust. I believe I feel truly thankful it has made the impression already manifest; but knowing the weakness of our nature, rejoice with trembling."

"6th day morn. 4th mo. (supposed) 1834. I feel much ashamed, my dear mother, to have so long withheld the trifling degree of information I could give respecting our Annual Meeting. I had intended writing frequently, and endeavoring to convey to thee a short history of our proceedings, but really time has passed so rapidly, I have scarcely known when to find opportunity for such employment. I have felt intense anxiety since the account of —'s illness reached us, until so agreeably relieved yesterday. May the dispensation be sealed to his lasting instruction, and the return of health find him prepared to devote to an especial manner his life to Him who has in mercy spared it. The business of the Yearly Meeting is advancing I believe about as usual. The house is almost full, and the galleries full to overflowing. Several strangers are in attendance, but the burden of the word appears principally to rest with a few. — has much to say to us, and her communications are as touching and deeply absorbing as ever. She, with some others, have mentioned this as an era in our Society, which calls for the deep concern of all its members. A discourse a day or two since was particularly

solemn. She reverted with much feeling to what the Society had so recently passed through, and expressed her deep disappointment that so little of what we might reasonably have supposed would have attended such an awakening dispensation was to be found amongst us. She dwelt in a very impressive manner on her own feelings with regard to some who appeared about that time to be aroused to the necessity of making a decided stand, and become willing combatants for the promotion of Truth. But the stir had ceased; and they had settled down in the enjoyments of ease and plenty; and where are they? she emphatically queried. Those who should have become valiant in the Lord's army and stood as princes of the provinces—where are they? The picture was sorrowful indeed and must at the time, I think, have impressed the feelings of almost all present. But year after year precept after precept is handed out to us, but the visible results, how incomparably trifling to what they should be. Samuel Rhoads was led a little similarly at Orange street yesterday. He told us he thought that if the favors, mercies and privileges so abundantly heaped upon us were not more justly appreciated, in a few years the judgments of the Lord would be more signally evident than we had ever known them.

"We have proceeded in our business about as usual, and I believe have not much else, except the epistles. It does not appear probable that meeting will close before Seventh-day eve; if it should not, inclination will lead me to remain, though I have felt rather in a straight to know what to do about doing so, as it would keep us one day unnecessarily."

"6th mo. 1st. If the mind had nothing to stay upon but its own unassisted strength, how doubly afflictive would it be to contemplate the wasting effects of disease on a beloved object, with whom we feel our own existence so deeply interwoven, that a separation will materially blight our earthly prospects, and leave us sad and lonely mourners over departed happiness. But there is a balm for sorrow, rich and unailing. Religion suggests the soothing prospect, that it is only in mutability change can affect us; and that there are regions of happiness where those that are separated on earth, may enjoy together a fruition of bliss. Who would exchange such hopes for all that earth can offer? And for the enjoyment (if it can be called enjoyment) of the fleeting, uncertain things of time, defer a preparation for the most important event human reason can contemplate. Although assured by the lip of Truth that trouble awaits us here, we shrink from its endurance, and would fain seek some other road to the Kingdom than the one marked by suffering. But the attempt is vain. Conflicts and baptisms await the christian traveller; and a ready and unreserved submission to the requirements of Infinite Wisdom, can alone insure us peace. And the result is perfectly rational. Flesh and blood, with its inherent infirmities, cannot inherit the kingdom; and the spirit destined to immortal existence in the regions of light and blessedness cannot, while inhabiting the earthly tabernacle subject to weaknesses and frailties, but journey on sorrowing, save at times when mercifully favored with refreshing incomes of the Saviour's peace, or with ability to rejoice in the prospect of liberty from its bondage, when the warfare assigned it here is accomplished."

"7th mo. 10th. We are social beings; and I believe may often mingle socially, and feel our better life strengthened thereby. But, then, this intercourse must, if bearing the character I assume for it, be rightly seasoned, and partake of the leaving virtue which we are told is not sought in vain.

T. Shillitoe's Journal, I doubt not, is to y as to others, an interesting monthly treat. W a diligent, persevering, faithful, self-denying; ant he proved himself. "They that be wise heavenly wisdom) shall shine as the brightness of the firmament, and they that turn many to righteousness as the stars forever and ever."

"10th mo. 7th. Perhaps it is necessary, dear sister, the creaturely part should be subject to deep provings, even as regards temporal affliction, if, as some of us profess to believe, our situations are all respectively ordered by One who knows us as we are, and who only can appoint the joys and sorrows, the trials and alleviations suit our different dispositions and casts of character, we must endeavor to do what we can; leave all to Him who regardeth even the sparrow and with especial favor and compassion cover those that are faithful as with a mantle; and mains ever present to succor and sustain them the hours of conflicting trial and difficulty all redeemed must know."

"10th mo. Although the secret extending best help is most generally supposed to belong spiritual concerns, yet the great and good use in testifying, that in temporal concerns its influence is not withheld if properly sought for. Matthew Hale observes: 'I can call my own experience to witness, that even in external afflictions, and incidents, in my whole life have never been disappointed of the best direct when I have in humility, and in a sense of own deficiency, sincerely implored it.'"

(To be continued.)

The Feejee Islands.—The acquisition by the United States of three of the Feejee Islands, announced by telegraph from San Francisco, not a very valuable one, although one of the islands is reported to have a good harbor. It has little commerce in that quarter of the world.

The Feejee Islands are a group in the South Pacific ocean, 225 in number, of which ably eighty are inhabited. The population has been variously estimated at from 130,000 to 300,000. Two only of the island are of considerable size: Viti Levu and Vanua Levu. The former is by 50 miles in extent, with about 50,000 inhabitants, and the latter 100 by 25, with a population of 31,000. The islands are mostly volcanic origin, but there is no active volcano in the group. Earthquakes are frequent and sometimes periodical and destructive. The islands are very dangerous of access on account of the shoals and reefs by which they are surrounded.

Though very near the equator, the climate of the islands is not so pernicious to white men as might be expected. It is debilitating, but not deadly. The mean temperature of the group is about 80 deg., though in the interior great extremes of heat and cold are experienced. A temperature of 121 deg. has been noted in Vanna Leon.

December, January and February the heat is very oppressive. February and March are months most feared by seamen, and are called "hurricane months." The soil is exceedingly rich, and the tropical climate and abundant water cover the mountains up to their very summits with a luxuriant vegetation. Plants grow with marvellous rapidity. Turnips, radishes and a hard, after being sown twenty-four hours, are at the surface, and in four weeks are ready for use.

Besides the usual tropical vegetables and fruits the tea plant of China and cotton flourish. Many of the islands are well adapted for cod. The coast fisheries are inexhaustible. Form sandal wood was exported from the islands, the natives failing to plant new trees, the st

soon exhausted. Tripang (a sort of fish esteemed in China) and tortoise shell are the chief articles of traffic, which trade has been mostly in the hands of citizens of Salem.

As is well known, the Feejeans were formerly great cannibals, but the labors of English missionaries among them since 1835 have wrought the major part of the population within the pale of christianity, and that savage custom, cannibalism, is now rare. The people are ruled by a chief to whom great deference is paid, and who, it appears, to acknowledge the supremacy of the chief of Ambo, who has assumed the title of the Feejeans. The islands are about 100 miles from the eastern coast of Australia.—*r.*

Selected for "The Friend."

dear —, we need not tell each other that the removal of our dear friend Thomas from the Militant Church, has been a affliction.

Just about a week before the close, I believe that he would not live many years to the weary-hearted, and stand for the support of the precious principles which he loved his life, never occurred to me: and though with him a number of times in his sickness was near him when the spirit left its dwelling, and sat by the inanimate remains for some time, the thought that he has *gone out* rises before me again and again, with the sense of something new. I do not know that I ever, scarcely, at least not for a long time, tried to expect to see him. The visits to him in trouble, to whom he was enabled to render comfort, I believe are beyond what any soul has any idea of.

Just the summer of 1836 (which is the date of my first acquaintance with him) he has in the same manner watched over me; for the last years in particular, has exercised a parental influence over me; he has been led into sympathy with me, and poured into a wounded spirit sweet words of comfort which have at times served as food for my soul. In difficulties of any kind I never found a ready sympathizer and prudent counselor. The query often arises, who is so feeble heart is *capable* of listening in so feeble a manner to the griefs of so many?

Though our spirits are at times almost melted, may we remember it is not an unkind heart that does this, but He who loves his people—"Who doth not afflict will afflict the children of men." It is in time when, to our short-sighted vision, no one could be spared who are at all pre-occupied with the standard;—but the Lord is working by many as by few, and notwithstanding the storms and darkness which seem to be gathering thickly around us, surely He will send the little company of Gideon to go forward in battle.

SUSANNA LIGHTFOOT.

Language similar to that conveyed in the foregoing letter cannot many of us adopt in the way of death (within a very short period) of nursing fathers and nursing mothers. Philadelphia, 2d mo. 28, 1845.

For "The Friend."

The testimony of our late friend James Wood concerning Susanna (Lightfoot) Wood, shortly after her decease:

That a favor to have such a friend, as thou art, Susan,—so artless and yet so ardent, as thy friendship as her devotion,—both profiting from the Fountain that is inexhaustible. I often fear that my life has been one of too

much profession in a religious way, too much, for the fund of grace within, and I have much desired if this has been the case, that I might be preserved in future,—preserved from being more in show than substance. Such I believe, was not dear Susan—one of the many hidden ones, who are as the 'bone and sinew' of the body, the church,—and who, though they may now be esteemed as 'the last,' will be found among 'the first' in the end, when the secrets of all hearts are revealed."

At her grave-side, our late dear friend Elizabeth Evans, bore this testimony concerning her: "It is with me to revive the language—'Write, Blessed are the dead that die in the Lord, yea saith the Spirit, that they may rest from their labors and their works do follow them.' She believed this was the case with our dear friend; referring to her humble, consistent, self-denying walk through life,—she had left many seals to her labor; it appeared to be the particular business of our dear friend to bring children to Christ, many of whom could set their seals to this, and that they were as *very seals* themselves.

Chester Co., 9th mo., 1867.

Aroma of Coffee.—The berries of coffee, once roasted, lose every hour somewhat of their aroma, in consequence of the influence of the oxygen of the air, which, owing to the porousness of the roasted berries, it can easily penetrate. This pernicious change may best be avoided by strewing over the berries, when the roasting is complete, and while the vessel in which it has been done is still hot, some powdered white or brown sugar—half an ounce to the pound of coffee is sufficient. The sugar melts immediately, and by well shaking or turning the roaster quickly, it spreads over all the berries, and gives each one a fine glaze, impervious to the atmosphere. They then have a shining appearance, as though covered with varnish, and they in consequence lose their smell entirely, which, however, returns in a high degree as soon as they are ground. After this operation they are to be shaken out rapidly from the roaster and spread on a cold plate of iron, so that they may cool as soon as possible. If the hot berries are allowed to remain heaped together they begin to sweat, and when the quantity is large, the heating process by the influence of air increases to such a degree that at last they take fire spontaneously. The roasted and glazed berries should be kept in a dry place, because the covering of sugar attracts moisture.—*Baron Liebig.*

Renovation and Renewal.—In the name of Jesus is our only hope; who "saveth his people from their sins," not only by imputation and remission, but also by a real renovation and renewal into the heavenly image; as it was testified concerning some formerly, who once were the servants of sin and free from righteousness: "But ye are washed; ye are sanctified; ye are justified in the name of the Lord Jesus, and by the Spirit of our God."—*Samuel Scott's Diary.*

THE FRIEND.

ELEVENTH MONTH 16, 1867.

The transitions from wealth to poverty and from poverty to wealth, are probably more frequently and more strikingly seen in this country than in any other. If large estates are accumulated, and the style of living conforms with the means of outlay, as there are no laws of primogeniture pre-

venting division of what may be left when the parent is called away, the children when they enter in possession of the portion that falls to their lot, too often find that the habits of self-indulgence in which they have been allowed to grow up, demand an expenditure much larger than the income they can command from their share of the paternal estate. Not unfrequently from the impulse of pride or a want of proper foresight, we see the descendants of rich men, uneducated for the struggle of life, unfitted to apply themselves to suitable and lucrative employments, and clogged by luxurious tastes and habits of ease, descend, step by step, from the position occupied when in the parental home, and becoming dependents on those who may choose to befriended them.

Again, we often see men who have been nursed in poverty and grown up amid the trials of labor and active competition, by energy, sobriety and integrity, rapidly acquiring positions of influence in society, and almost certainly obtaining ultimate success as to the possession of wealth. But the cases alluded to are instructive. Each teaches the dignity of labor, and that children should be brought up with right views of the value of labor as a wise provision of Divine Providence, contributing alike to the respectability and happiness of man.

We apprehend that every one who has observed the course of education and the training of children and young men in our community within the last quarter of a century, must have remarked the great mistake that has been committed in relation to this important feature in domestic and social comfort and necessary adjunct to a remunerative political economy. The value and dignity of labor have been greatly underrated or entirely ignored, and a false sentiment has gained currency that work was to be left for menials, and the material prizes of life to be sought for and obtained in the counting-houses of the merchant or the walks of professional men. The consequences are now being felt throughout the whole country, and they prove to be disastrous and afflictive. Hundreds of young men who have eagerly entered into mercantile life, have found themselves unable to meet the keen calculation or more favorable circumstances of their competitors, and have either been forced into bankruptcy or obliged to retire from contest in the marts of trade. Others who have gone into the ranks of the learned professions, find them overcrowded; that hundreds in them are plodding the weary rounds of professional duty, scarcely able to obtain sufficient to satisfy the demands of nature, and make a reputable appearance, and that they themselves lack both the mental ability and the education to raise themselves above the common level.

We speak within bounds when we say there are at the present time, in our principal cities, thousands of young men, who have never been taught in mechanical business, and probably have accustomed themselves to regard manual labor as beneath them, but who as clerks, accountants, railway employes, doctors and lawyers, are anxiously seeking occupation which will yield them sufficient to support life, going by scores to obtain a situation when an advertisement of a vacancy meets their eyes; too often to be turned away in bitter disappointment. How often, we doubt not, many of these sadly regret the choice they made as to the means for obtaining a livelihood, and now wish they were prepared to share in the rich harvest all classes of mechanics are reaping.

We have referred to this subject on a former occasion, but we think it of sufficient importance to call the attention of our readers to it again. We believe Friends have participated in the com-

mon error, and that if they are wise they will hereafter provide for the future material well-being of their sons, by giving them the sure resource of a well learned mechanical trade. In this country a competent mechanic is much more certain of an ample income than the great majority of merchants, doctors or lawyers. Work, mental or physical, is the inheritance of man; but when the offended Creator declared to Adam, "In the sweat of thy face thou shalt eat bread," he mingled mercy with punishment, for man's physical organization is such, that exercise—labor of some kind—is necessary for his health and enjoyment. The barbarous sin of slavery in one portion of our country, and the false notions of independence and gentility prevailing generally have heretofore had a hurtful influence on the minds of both parents and children, but if there is any real worth in the boasted improvement of the present time, one of its evidences will be a more just estimate of the dignity of labor and the true elements of personal worth and respectability.

SUMMARY OF EVENTS.

FORNIO.—In the fight between the Garibaldians and the Pope's troops, near Terni, three thousand of the former were either killed or wounded. Garibaldi and his son Menotti were taken prisoners, and sent to Florence as prisoners of war. Four thousand Garibaldians, while on the march to reinforce the insurgents, were stopped, disarmed and turned back by the Italian forces. The total loss of the Papal and French troops in the battle near Terni, was estimated to be less than 100 men. The Italian troops have been recalled from the territory of Rome. One division of French troops has been withdrawn from Rome, and has returned to Civita Vecchia, and the rest will soon follow. The whole expedition for the relief of Rome will then remain at Civita Vecchia, and there await the action of Italy. Serious riots have been instigated by a party of action in different parts of Italy, and particularly at Milan, where it was found necessary to call out the troops to quell the disturbances. Many of the rioters were killed and wounded. A Paris dispatch says, the call for a general conference of the European Powers will soon be issued by the French government.

The visit of the Emperor of Austria to France has ended. On the 5th inst. the emperor departed from Paris for Vienna. The Vienna Dispatch states, that the policy of France and Austria is the same, namely, that of peace. A Paris dispatch says: Information has been received from Rome that the Pontifical authorities intend to prosecute citizens who voted in favor of union with Italy. The French government has made representations to the Pope, advising him not to allow this purpose to be carried into effect.

The British Parliament has been called to reassemble on the 19th of the present month. Serious bread riots occurred in Exeter on the 4th and 5th inst. Every meal and bread shop in the city was sacked, and incendiary fires kindled in several places. By the efforts of the authorities the troubles were suppressed and many of the rioters arrested. Disturbances caused by want of employment and scarcity of food, are common in Devonshire. Riots are reported at Torquay, Exmouth and other places.

A royal commission to inquire into the Protestant church establishment in Ireland has been appointed, with Earl Stanhope as chairman.

A terrible explosion occurred on the 9th inst. in the Ferndale Colliery, Wales, by which upwards of 200 persons met their death.

The Sultan of Turkey has replied to the last note of the European Powers, declining to receive advice, and accepting the responsibility for events which may ensue.

King Victor Emmanuel has extended aid to families of the Garibaldians who were killed or wounded in the recent engagements. A general disarming is proceeding throughout Italy, and a state of siege is threatened in every large town. The King of Italy firmly protests against a European conference composed only of Catholic Powers, for the settlement of the Roman question.

The French government has asked the Papal authorities to release the insurgents taken prisoners, but the request has been refused.

The following were the Liverpool quotations of the 9th inst. Middling uplands cotton, 8 1/2-16d.; Orleans, 9 1-16d. California white cotton, 17s. per 100 lbs.; red western, 13s. 9d. Consols 94 1/2. U. S. 5-20's, 75 1/2-15.

General Banks, of the United States, who accompanied Romero, the Mexican minister, on his return to Mexico, had arrived at the capital and was officially received by President Juarez. The newly elected Congress will contain a majority favorable to Juarez for the Presidency. The Austrian Admiral Tegethoff had finally succeeded in his mission. President Juarez had ordered the remains of Maximilian to be delivered to him for removal to Austria.

The Island of St. Thomas was lately visited by a tornado of unprecedented violence. The town was almost destroyed, all the shipping in port wrecked or blown ashore, and about 500 persons killed.

The London Globe contradicts the report that all the Danish West India Islands are to be disposed of, and says the Island of St. Thomas only is to be sold to the United States, for which the sum to be paid to Denmark is \$8,000,000 in gold.

FINANCIAL STATEMENTS.—The Public Debt.—The U. S. Secretary of the Treasury reported the debt on the first inst. to be as follows: bearing interest in cash, \$1,778,110,992; bearing currency interest, \$426,768,640; bearing no interest, \$402,385,677; matured debt not presented for payment, \$123,537,591 total, \$2,625,550,848; from this sum may be deducted the balance in the Treasury consisting of \$111,540,317 in cash, and \$22,458,082 in currency, leaving the amount of debt, less cash on hand, \$2,491,560,450; which is \$3,772,936 less than on the first of the Tenth month.

Philadelphia.—Mortality last week, 214. The mean temperature of the Tenth month, according to the record kept at the Pennsylvania Hospital, was 57.55 degrees, the highest during the month was 78°, and the lowest 41.50°. The amount of rain during the month was 4.32 inches. The average of the mean temperature of the Tenth month for the past seventy-eight years is stated to have been 54.63 degrees. The highest mean during the entire period was in 1795, 64°, and the lowest in 1827, 43°.

New York.—Mortality last week, 357.

Pennsylvania.—The official count of the votes given at the late election in this State for Judge of the Supreme Court, shows a total of 534,575, viz: George Sharswood, 267,751 and Henry W. Williams, 266,824.

Indian.—The Peace Commissioners having made a pacific arrangement with the southern tribes, have gone to Fort Laramie where they will meet the northern Sioux and other tribes. They will have a conference with the southern Sioux and Cheyennes at North Platte.

Alabama.—The Reconstruction Convention of Alabama organized at Montgomery on the 5th. Captain Barker, of the Freedmen's Bureau, was chosen President, and Moses Avery, of Mobile, a colored man, Secretary. There are sixteen colored delegates. An ordinance was introduced and referred to the appropriate committee, to organize a provisional government for the State, and vacating all the important State offices on the first day of the year 1868. The Convention decided against a proposition to put no prescriptive features into the new constitution.

Virginia.—The full vote of Virginia at the late election was as follows:

	Whites.	Blacks.	Totals.
For Convention,	14,829	92,507	61,342
Against Convention,	61,249	638	61,887

Majority for Convention, 45,455
Total number of white votes cast, 76,089
Total number of black votes cast, 92,155

Total votes cast, 168,229
The total registration was 116,982 whites, and 104,772 blacks.

South Carolina.—There are 125,336 registered voters in South Carolina, and the colored majority is 33,834.

North Carolina.—The official registration returns show 103,000 white voters, and 71,000 colored.

Miscellaneous.—Of one hundred and twelve members drawn for the jury in a county in Louisiana, but twenty-five are white men.

The opponents of a prohibitory liquor law have elected a two-third majority in their interest to the Massachusetts Legislature.

The State authorities, in accordance with the directions of the President, are about to disband the colored volunteer companies in the District of Columbia. It is thought that all armed volunteer organizations throughout the south will be suppressed.

A public session in British Columbia is represented to be unanimously in favor of annexation to the United States.

The Apaches in Arizona have been very troublesome of late, and there is an end to nearly all progress in mining and agriculture.

The new tariff of the Atlantic cable goes into operation on the first of next month. Fifty letters will be sent for \$25. Every word after the first ten will be \$2.50. Address, date and signature free.

The Markets, &c.—The following were the quotations on the 11th inst. *New York.*—American gold U. S. sizes, 1601, 112 1/2; ditto, 6-20, new, 107 1/2; 10-40-5, per cent, 101 1/2. *Surfline State* gold, \$8.35. *Shipping* Oil, \$9.40 a \$10.40; *finer* bar, \$11 a \$17.50. *Chicago* spring wheat, \$2.21 a \$2.24; *Canada* State, \$2.70 a \$2.75. *Western barley*, \$1.15, *Canada*, \$1.62. *Western oats*, 77 cts. *Rye*, \$1.15. *Western mixed corn*, \$1.38 a \$1.39. *Cotton*, 10 1/2 cts. *Philadelphia.*—Superfine flour, \$7.50 a \$8.00 extra, family and fancy brands, \$9 to \$14. *Red* wheat, \$2.20 a \$2.45. *Rye*, \$1.55 a \$1.60. *Yellow corn*, \$1.05, 65 a 75 cts. *Clover seed*, \$6.50 a \$7.50. *Timothy*, \$2.50 a \$2.60. *Flax seed*, \$2.50. *The arrivals* and of beef cattle at the Avenue Drove-yard numbered 1000. *Extra* sold at a 58 cts. per lb. gross, *fat* cows, 60 to 74 cts., and common 4 a 6 cts. per lb. *Hog* 6000 sheep sold at 4 a 5 1/2 cts. per lb. gross. *Hogs* lower, sales of 5500 at \$9 a \$10 per 100 lbs. *Chicago.*—No. 1 spring wheat, \$1.80 a \$1.82. *No. 2*, \$1.01. *Oats*, 52 a 53 cts. *St. Louis.*—Spring wheat, \$1.90 a \$2; winter red, \$2.50 a \$2.60; white, \$2.50 a \$2.65. *Cincinnati.*—No. 1 winter wheat, \$2.00. *Old corn*, 90 a 92 cts., new in the ears, 82 a 83 cts., 62 cts.

RECEIPTS.

Received from Jos. Armfield, Agt., England, £1. vols. 39, 40, and 41, and for Samuel Alexander, Sr. Cope, and Elizabeth Thwaites, £2 each, vols. 38, 39, and 41, for Samuel J. Alexander, Wm. Bingham, Sr. Bradburn, Richard Baker, Sarah Dirkin, Chas. R. Enoch Hall, Richard B. Smith, J. R. Smith, Wm. Daniel Pickard, Samuel Pickard, and A. S. Sweetland £1.10s. each, vols. 39, 40, 41; for Charles E. B. Root, Highland, John Hodgkin, Jas. Kenway, and J. Williamson £1, each, vols. 40 and 41; for Geo. E. Son, John Horniman, Thos. Pierce, and Wm. To. each, vols. 39 and 40; for Wm. Pelle and William Hall, each £10.50, vol. 40; for J. B. Smith, £5, to No. 28, vol. 39, and for Jane Wright, £1.10 No. 52, vol. 41; from Mary B. Evans, £11, \$2.40, £2, vol. 41; from Thos. F. Fawcett, O., per M. M. Agt., \$3.61, to No. 9, vol. 41; from Isaac Fiske, £1 Mass., \$8, to No. 52, vol. 42.

WANTED.

Either an old or new copy of "A short account long journey from Babylon to Bethel," by Stephen J. Alder. Address Mr. Baldwin, 902 Sprague Grand Office of "The Friend."

A young woman, Friend, qualified to teach the Irish branches, wishes a situation in a family school. Apply at the Office of "The Friend."

NOTICE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the Committee for the gradual Civilization and improvement of the Indian natives at Tunesassa, Angus Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Philadelphia, or John M. Knight, London, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co. Joseph Scattergood, 413 Spruce Street, Phila.

FRIENDS' ASYLUM FOR THE INSANE
NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA)
Physician and Superintendent, —JOSHUA H. WATSON, M. D.

Application for the Admission of Patients is made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other member of the Board.

DIED, on the 8th of Eighth month, 1867, at the residence of her son William F. Lippincott, near V. town, New Jersey, HANNAH W. LIPPINCOTT, an ex-member of Northern District Monthly Meeting, Pl. in the 76th year of her age.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

DL. XLI.

SEVENTH-DAY, ELEVENTH MONTH 23, 1867.

NO. 13.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

at 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

England in the Last Century.

(continued from page 91.)

While the mineral wealth of England, had lain hid, or been but partially brought to light, for centuries, began to make itself felt, coal was abundant there were probably few Englishmen who were not aware, yet the expense of removing it even a few miles from its mouth rendered it, for all the practical uses of life, up to the year 1760, comparatively worthless. There was then only one canal country, if the deepening of the Sanky can be spoken of as a canal. It passed through a district where no obstructions presented themselves, and as far as it went—only a few miles—conferred vast benefits on the district. But where else, roads impassable except to pack-trains in winter, or in the height of summer to waggons, put quite beyond the reach of the Englishman's infant industry the means of forwarding in the way of improvement. In 1760 the idea presented itself to Francis, third of Bridgewater, of attempting to do on a scale what the deepeners of Sanky Brook had done on a small. He proposed, if possible, to connect his coal-fields at Worsley with the town of Manchester by a canal constructed on a scale at which the most accomplished engineers of the day pronounced the scheme to be absolutely impracticable. Worsley was separated from Manchester by miles of broken country—a broad river crossing the line by which the canal was to be carried forward; and how to overcome the obstacles met first by a succession of hills, and next by the Irwell—that was a point which no reasonable man would undertake to grapple with. How it was grappled with and to what success, M. Smiles, in his interesting *Life of a Great Man*, has well told. Before the daring of that great genius all difficulties melted away. The river was tunneled; over the Irwell an aqueduct of sufficient height to admit of the passage beneath of masted vessels; and Manchester, with its 40,000 inhabitants, was enabled to supply itself with fuel at less than half the cost which had been incurred the year before. The canal to Liverpool, and thereby the connection that report with Manchester, was the great scheme taken up and executed. Others followed, and it is not necessary to particularise them, but by-and-by between each populous English town and almost all the rest, whether inland

or on the seaboard, easy and inexpensive means of communication by water were provided. Forthwith the riches which had heretofore lain in the bowels of the earth were exhumed. Not coal only, but iron and lead, and whatever else could be applied to the convenience of human life, became as accessible to the dwellers in every village as to occupants of large towns; and the impulse thereby given to other industries than that of the loom began to make itself felt. A word or two will suffice to show how this came about.

The cotton trade is now, and has long been, the great staple of this country. In 1760—the year of the king's accession—the profits on the cost of the raw material, and of the labor bestowed upon it, were calculated to amount to £200,000 for the whole of the United Kingdom. And poor as the recompense was, and easy to be accounted for, we may reasonably doubt whether increased facilities of turning out the goods would have benefited the producers, who, in the absence of other means than the pack-horse of conveying them from place to place, must have locked them up and left them to rot in cellars and warehouses. No sooner, however, were facilities afforded of throwing in upon large towns, at a comparatively cheap rate, the products of their looms, than manufacturers began to study how they might render their looms more productive, and merchants cast about for opening with foreign nations an export trade which as yet had, in cotton goods at least, no existence. The same year in which the king came to the throne, and the original Bridgewater Canal was mapped out, John Kay, of Bury, invented the fly-shuttle, by means of which the hand-loom weaver was able to make in a day twice as much cloth out of thread as he had made before. John Kay's immediate reward was much the same as attends on every inventor. He interfered with the established routine of labor. He made the loom so productive that thread could not be supplied fast enough to keep it busy, and the weavers, irritated by intervals of compulsory idleness, and blaming Kay's invention, fell upon Kay himself and drove him out of the country. Then help came to trade in the shape of improvements in the process of spinning, of which Lewis Paul, James Hargreaves, Thomas Hughes, and the ill-fated and wayward Samuel Crompton, were consecutively the authors. By-and-by arose Richard Arkwright, just as much as Brindley a self-taught man, who, beginning life as a barber in Bolton, died one of the richest men in England. Contemporary with him was Robert Peel, the father of the late Prime Minister, and, far more original than either, Edward Cartwright, a clergyman and a poet. Each of these added his share to the common stock of mechanical invention, the last especially giving to his country the most important of the whole, the power-loom. It is worthy of note that these great things were begun, improved, and perfected within the limits of the era of which we are writing, and that in sixty years more a country which had heretofore depended on foreign nations for the supply of almost all its artificial wants became mistress of an export trade larger and more remunerative

than ever before was heard of since the world began.

About the same time, or a little later, were introduced those improvements in making porcelain or china which have advanced from year to year ever since, till they place the England of the present day quite upon a footing of equality with Holland and France. In 1763, Josiah Wedgwood turned his attention to this matter, and in due time produced a cream-colored earthen-ware very different from any which had previously been seen in this country. Not that in the qualities of smoothness and beauty it surpassed, or even came up to, the older productions of Bow, Worcester, and Chelsea. But the porcelains of Bow, Worcester, and Chelsea, contributed only to increase the luxuries of the rich, whereas the Wedgwood ware made its way into the dwellings of the poor. From these it expelled by degrees the wooden platters and brown dishes which had been in universal use prior to J. Wedgwood's success. Nor has the art stood still. When Wedgwood began his labors, the estimated profits upon the whole porcelain industry of England, after providing machinery and paying workmen's wages, amounted to not more than £5000 a year, and the number of people employed upon it were very few. Ten years later the profits had risen to £100,000, and the work-people could be numbered by hundreds. Now many thousands earn their bread in the potteries, and the whole civilized world—the east, the west, the north, and the south—is stocked with the works of their hands.

Simultaneously, or nearly so, with these inventions came Dr. Roebuck's important discovery, that, in the smelting of iron, pitcoal is as efficacious as charcoal: and that to the iron-industry of this country, heretofore cramped by the danger of exhausting the forests, no limits could be placed. Confident in the soundness of his own principles, Dr. Roebuck looked out for a convenient site on which to apply them, and finding it at Carron, a place within easy reach both of coal and iron, he there set up that great foundry which soon became, and long continued to be, the main source whence England derived the principal supply of cannon for her fleets and fortresses. Meanwhile James Watt was working out those improvements in the steam-engine which others took up and carried continually further, till it became what we of the present generation find it to be. The progress which he made, in conjunction with partners less scientific, but bolder than himself, was indeed quite astounding. Within a few years of 1763, steam had, to an enormous extent superseded the water-power, as water-power had previously set aside the power of hand, in all our principal manufactories. How it has gone on since, leading up, step by step, to the steamship, the steamcarriage, and though indirectly, still decidedly, to the electric-wire, we may not stop to show. But this great truth we must ask our readers to observe and ponder upon. To whatever point of excellence the arts which civilise life have attained, the hardest portion of the battle was fought, and fought out, in the reign of George III. When he came to the throne, England was

For "The Friend."

destitute of roads, and could boast of only one canal, scarce three miles in extent, and navigable for the lightest possible craft. Without means of intercommunication between the interior and the coast, and between one town and another, she could command neither foreign commerce nor domestic trade. The population was sparse, and little employed in manufactures. The manners of her humbler classes were rude, and they fared indifferently. Where the richest crops of corn are now reared, enormous swamps spread themselves out; and for lack of bridges, rivers were impassable, or passable only by fords and ferries. In 1820, when the old king died, the roads of England were the best in the world. Coaches, beautifully horsed, and well appointed in every respect, ran over them, summer and winter, at an average rate of ten miles in the hour. The whole island was intersected with canals. Not a river or small stream, except in remote and out of the way districts, lacked its bridges; and fens were drained, and heaths cleared away. As to the trade of the country, foreign and domestic, it had become a marvel in men's eyes, as it might well be.

*** Besides these there were many other points of comparison between England as she was in 1760, and England as she had become in 1820. At the former of these periods there was no protection to travellers except their own right hand, either in town or city. At the latter period watchmen guarded the streets in towns, mounted patrols kept the approaches to London safe, and the mail coaches, with their well-armed guards, had completely driven highwaymen from the roads in the provinces. In 1760 the state of our prisons was frightful, and the law, not criminal only, but of debtor and creditor likewise, absolutely savage. In 1820 Ogilthorpe and Howard had done their work, and that process of amelioration was well begun which, if it be not wisely watched and directed, threatens to carry us into the opposite extreme of undue lenity. In the interval between 1760 and 1820, the church had reformed itself, and profligate parsons were become as rare as their opposites had been when the cycle began. Schools were springing up likewise in every parish. Under their influence, the working classes lost by degrees their brutality, and society in its upper ranks purified itself."

The moral, intellectual and religious condition of a people at different eras in its history cannot be so well compared as can those things which form the most striking points in its merely material civilization, and quite probably the essayist from whom we have quoted has rather overestimated the improvement in the first mentioned particulars. It is however a fact beyond all question or dispute, that the people of England are now more enlightened and liberal, and that the sense of moral and religious obligation and duty pervades the community far more generally than it did a century ago. These are cheering indications to the philanthropist, and encourage the hope that the kingdom of our blessed Redeemer may still further spread and prevail among that energetic race whose influence in the world for good or for evil is now so very great.

Gospel Ministry.—O the spiritual skillfulness, distinction and propriety, which ought ever to attend the exercise of a gospel ministry! What was predicted of the holy head also appertaining in measure to the members; "he shall be quick of understanding in the fear of the Lord;" "but who is sufficient for these things?"—*Samuel Scott's Diary.*

Friends in Norway.

(Continued from page 93.)

On the arrival of the Friends at Christiansund, from their imprisonment, some remained there, others settled near Trondheim, and others went to Christiansand.

Berent Rasmussen, in a letter to a Friend, of Rochester Meeting, thus describes some of his own trials:—

"When I came to Norway, I got a situation in a shop, though the master did not just want me at that time; but as Hans Neilsen Houge is brother-in-law to my master, it was thought best to keep me here, to try my conversation, and become acquainted with the principles I professed. The family have been very kind to me, though I often fell into many exercises; but the Lord of heaven and earth has been graciously pleased to strengthen me from time to time. I often feel myself in weakness and in fear, lest I should lose those divine favours which I had received of the Lord. I have often thought of you, my friends, desiring that the Father of Mercies would be pleased to keep you in his own bosom, as he has been pleased to condescend to us his blessed Spirit, through our Lord Jesus Christ; and as here, in this world, there are many temptations which may surround us, yet, if we keep near to the fountain of life, it will preserve us in every state, as I can a little witness of the mercies of God; though I feel myself not so perfect as perhaps the Lord requires; but as my desires to be guided of Him continue, I hope he will strengthen me, by his own power, to overcome that which may displease him.

"It did not, at first, seem so pleasant to me, and was a great exercise, because I had none to unite with me in the mode of worship, which the Lord himself had taught me. I sometimes met together with the 'Saints'; but it did not satisfy me, as their mode of worship consists in praying and singing, whenever they come together. Thus, it is in their own will. I was fearful of being drawn into the same. I did not understand so much of these people as I have known since; for they tried very much to have got me into the same way of worship, had not the Lord been pleased to show me that it was wrong, and did not please him.

"I sometimes waited in silence by myself; but, as I was a servant, I did not demand of the master any room in the house for religious worship; and thus I continued until my friend Enoch Jacobsen came to this place; and he is here in this house still. He did not like, neither, to hear such singing, but told them that it did not please our Lord, as it was done in their own will. Enoch and I have had many sweet opportunities together; and we have regular meetings for worship, every first day forenoon and afternoon; and we are greatly strengthened by our heavenly Father.

"The mistress of the house attends our meetings, and also the master; though he has not yet got a true sense of the 'still small voice'; but has, no doubt, been visited by Christ Jesus, though he has rather fed in a wrong way; so that he must be brought down (in his mind) before the life can rise afresh. His wife, who is a sister of Hans Neilsen Houge, is much persecuted by her brother, and many others of the same Society; but she has confessed openly to them that true religion does not consist in such outward things. And I think it is a great blessing to me that the Lord has been pleased to open the way thus. May he be pleased to strengthen her in his fear, and carry on his great work to his own glory.

"It is remarkable how He has thus visited us

poor creatures. May we never forsake him who waits on his condescending love, and humble selves before him, and walk with fear in his love. "I feel much for thee, and wish your presence in the love which comes by Jesus O. May the Lord be pleased to reward thee for the kindness to me and my other companion. My dear love to William Kirkman.

"Thy affectionate friend and brother,
"BERENT RASMUSSEN

Another letter written about this period descriptive of the constancy of these poor Friends and of some of the trials to which they were exposed, that it will be perused with interest:—

"Dear friend and brother,—If this letter thee, I believe it will satisfy both thee and thy friends that I am well in Christ. I shall first form thee how it has been with me since I been in Norway. When I got home to my mother, she began to cry, and told me that she had been expecting pleasure in seeing me, but I came home to give her sorrow; and I found hardly possible to satisfy her. But the peace, and would speak with me. I was not at home. He asked if I had any books, and another took the New Testament, and showed it. He asked again if I had any other books. The mother said they were all sent out. The priest wished me to call on him, and take me all the books I had of the people of Quakers. When I came home, my mother more satisfied, as the priest had not said any unfavourable of the principles I professed; told her she should not lament so over her I went to the priest, and took with me R. H. day's Apology, William Penn's Key, and D. Baptism. There was in company with I gentleman, and they desired me to let them the books, and I replied they were well. They asked me if I knew the Bible and Testament. I said I was not much learned. Scriptures, they enquired, 'Why do you not off your hat?' and also about oaths and When they could take no advantage of these points, they told me if I would come in the morning of the Spirit, and declare it. French and Greek languages, they would tell me. The priest said he thought it would be for me to go over to England, among my friends there, where I should enjoy peace. When he had used all the means they could with me, I discovered that I was not much versed in scriptures, they told me it was the devil that entered my heart, and that of every Quaker they found that though I was not much acquainted with scripture, I yet answered died they grew tired. I then remembered what erick Smith told me, that when we were before magistrates, &c., it should be given to us. We ought to speak, and I found it verified.

"At another time, as I was on business master, to pay money to a lieutenant, he me because I could not take my hat off, so angry as to pull it off my head, and pull the hair, and forced me out of doors, and with difficulty I could get my hat again gnashed his teeth at me, and appeared very angry.

"At another place, I was told that I must be in the country in twenty-four hours, as no of religions are tolerated than the Lutheran; at if I would not desert my religion, I must go over to England; for there was no Quaker country; and that if one stopped here, he make an uproar, and would be worse than the Quakers. When I was there, I was with H. N. Houge. He said he had been in eleven prisons for his religious principles.

he I was but a young brother, and could not
or strong fold."

There is also a letter to a Friend, of Rochester,
Thornes Johnson, who appears to have gone
tains of a vessel sailing from, and belonging
ristians. It is dated, 4 mo. 24, 1815.
rites, "May the Lord hold us in his blessed
for ever. I have seen the Lord's great
ness and strength in a distant land, so that
every where. He is the light that shines
hearts, and has chosen a people from all
th to be his sons and daughters, and he will
ir God. I see that many of the people go
ad that leads to destruction; and not many
of the blessed Spirit within, the light of life
given, in measure, to all people.

he people of Norway are under a hard press
e clergy, for they do what he says, whether
wrong or right. Those books given to me,
e lent out. The people called Saints are
near to them [the principles set forth in the
] and they confess that it is the same blessed
that has called them to repentance. Many
are real true christians; and there is great
of others. Many of them are farmers.
ay the Lord God of all preserve us in the
life!"

the summer of 1818 the Friends in Norway
ed a visit from Stephen Grellett and Wil-
Allen, by whose advice a simple system of
fine, adapted to their circumstances, was
ed. The first meeting of discipline appears
to have been held at Stavanger, on the 29th of
o. 1818, when eight individuals were recog-
as members of the Society.

(To be continued.)

The Names of Coins.

the present time, when the acts of the
national Committee for a uniform cur-
" have excited so much interest in all parts
world, and particularly in the United States,
few words in reference to the names of
ins now, or formerly in use, may be of in-

the American dollar is derived from the Ger-
"thal" (literally, "Valley piece," the first
s having been coined in Goebishthal, in
ia, where there are extensive silver mines,
same name is also used in Sweden and Den-
mark, where the unit of currency is called a rix-
daler royal dollar. As for the sign or abbrevia-
tion of dollar (\$), authorities are divided as to its
origin, but it is generally admitted that \$ was origi-
nally written with the S on the U; but for the
convenience it was considered to be expedient
to change the U to two strokes through the S,
and has remained the accepted sign.

The American mill, cent, and dime, the French
the mil and decime, the Italian centesimo, the
American centaro, are terms derived from
Latin, denoting the thousandth, the hun-
dredth, and the tenth part of the unit of currency.
In the Italian cities at the height of their
wealth in the middle of the sixteenth century,
the coins naturally spread over the world, and
the names were taken for the coins of many other
countries, thus the world-renowned Florentine
coin (in Italian florino, so called from the flower,
of Florence, being on the reverse of every
coin) was adopted by the French and English,
who gave the same name to the German coin
—derived from gold money. The Venetian
coin, in Italian zecchino—from *zeco*, a mint—
was adopted by most of the Oriental countries,
which the Venetian merchants trafficked.
The Milanese ducat was taken into France and
Spain when the armies of these countries overran

Milan. The Neapolitan *carlino* is a small coin,
with the head of Charles on it. The Roman *scudo*
—in French *écu*—took its name from the *shield*
originally placed on this coin.

Another Italian coin which spread over Europe
was the Roman *grosso*, called in England a groat,
in France a *gros*, in Bremen a grote, and still re-
tained in Prussia and Saxony as a little groat or
groschen. The French *sol* is evidently derived
from the Italian *soldo*, or piece with which one
can solde or pay one's debts.

The Hanseatic towns also furnish coins, witness
the *mark*, so called from the government *mark*,
that it was of good weight. The *shilling* of Ham-
burg was adopted in England, where it is called
a *shilling*, and also by Denmark and Sweden,
where they call it a *skilling*.

Many coins derive their names from the marks
or signs, printed on the reverse, and retain the
name, although the sign may have been disused.
Thus, a coin which has a crown on the reverse
was called an *écu* in French, a *crowa* in English.
A piece which had a cross on it is called a *kreuzer*
in Germany (from the German word *kreuz*—a
cross;) although no sign of a cross can be dis-
covered on the modern *kreutzer*.

The English "pound" was originally a pound
of money; but it has been gradually reduced to
present form, and called a "sovereign," from the
sovereign's head being on its face.

In France, during the reign of Louis XVI.,
there was a coin called a *livre*, or pound, which
the republic adopted as the unit of currency,
changing the name to that of *franc*, which it still
retains.

When the Kingdom of Italy, and more recently
the Papal States adopted the French system, they
retained the old name of *livre*—in Italian, *lira*,
and made that the unit of currency, so that the
franc of France, and the *lira* of Italy are of exactly
the same value.

The "Napoleon" or "Luis," of the French is
simply a conventional name given by the French
to a twenty franc piece; in the same manner as
the Americans call a ten dollar piece an "eagle,"
and as the Prussians have a "Frederick." The
English guinea derived its name from the fact
that the gold from which the first guineas were
made came from the Guinea Coast. The English
farthing is so called from its being the fourth of
a penny; the derivation of the Spanish *cuarto* is
the same, the *cuarto* being the quarter of a real
or royal piece.

The names of the South American coins are
mostly of Spanish or Portuguese origin; the peso,
or Rera, is a piece that *weighs*, from *pesar* to
weigh; the *centaro* is the hundredth part of the
unit of currency, and the *rei* of Brazil is a royal
piece. From the above mentioned facts it will be
seen that the tendency of all nations has been to
adopt the coins of other nations; witness the groat
which travelled from Italy to England, France,
and Germany.

Sometimes the value was altered, for instance
there is a florin in Bavaria worth 40 American
cents, and divided into 60 kreutzers, while in
Austria there is one of the value of 50 American
cents, divided into 100 kreutzers.

To give an idea of the difficulties a merchant
doing business with Germany has to encounter,
it must be remembered that there are five distinct
coinaiges in use in that country, namely: Prussia
and Saxony who use *thalers*, worth 75 cents,
divided into 30 groschen; Hamburg, with marks of
30 cents, divided into 16 schillings; Bremen, with
its *groten*, and Austria and Bavaria before men-
tioned.

In Italy the same state of things existed until

the establishment of the Italian Kingdom in 1860.
Several years ago the French Government pro-
posed to the States whose coinage was the same
as hers, namely, to Belgium, Switzerland, and
Italy, that the coins of one should pass without
diminution of value in the territory of each of the
others. This proposal was immediately accepted
by these countries, and by Rome some time after.
It is this arrangement, called in Europe "La Con-
vention Monetaire," which it is proposed to ex-
tend so as to make a universal currency.—*Cor.*
Commercial Advertiser.

Friendly Words to Mothers.

The first falsehood, which a child may tell to
hide a fault, is often caused from fear of the
punishment which is expected to follow. Children
are naturally truthful and open, but at the same
time, they are timid and fearful of the rod. There-
fore, I would ask you to pause before you beat
your child for breaking a cup, or tearing a frock,
which articles are replaced for a few pence, but
once cause your child to utter a falsehood, and
the beautiful principle of truth and honesty has
fled, perhaps forever, and all the gold of India
cannot bring it back again! A little more judg-
ment in the correction of your children, would be
better for them and for you. Do not be severe
upon them for slight faults and carelessness, but
always punish them for falsehood, or any moral
wrong. And when you are obliged to chastise
them, do not give way to any outbreak of temper,
or your child will fear but will not respect you.
Let him be made to understand that it is a very
painful duty on your part, which you perform for
his good. Any parent who loves his child, will
deeply grieve when it requires correction, and
when an affectionate child perceives the sorrow
which he causes a loving father or mother, he will
strive all the more earnestly to overcome his fault.
The temper of a child is often spoiled, and his
spirit broken by perpetual scolding, harsh words
and blows. The spirits natural to youth and
health are subdued, the affections chilled, the
warm gushing love which fills the heart, turned
back upon itself, and too often home, which should
be a heaven of peace upon earth, is looked upon
as a prison, and the child seeks amusement else-
where, finds bad companions, and becomes selfish,
headstrong and unruly, when with kind and judi-
cious training, he might have been a bright orna-
ment to his home.

I am aware that the noise and boisterous mirth
of children, may be trying to the weary parents,
who have been toiling hard for their support; but
though each day in the week, and each hour in
the day, may bring some little trial to the spirits
and temper, strive to bear them patiently and
cheerfully and you will end the day with more
comfort to yourself and those around you. Re-
member that you were once a child yourself, and
make every allowance for the thoughtlessness of
youth. A few years only will pass over all their
heads, and your children will enter upon all the
temptations, trials, pains, and sorrows which you
now experience; let them, then, look back with
pleasure upon the happy home where kind words,
and unselfish actions, lessons of mercy, love and
truth, were first made known to them. Try, if
possible, always to present a calm, patient, loving
manner towards them. Do not vent a hasty tem-
per on them, pushing and striking them one mo-
ment, petting and caressing them the next, ac-
cording to your own irritable or delighted feelings;
this is not fair to the little ones. Never tell them
to do what you do not mean to enforce; if you
tell them to do or not to do any particular thing,
be firm in seeing that they obey you. Obedience

is the first stone to be laid in building the character of your child, and when this is accomplished, it will be easily led, and cheerfully guided. Try especially to prove by your own manner of living, that you practice *yourself* what you endeavor to teach your children. You may indeed say, "it is wrong to tell falsehoods, fall into passions, and deceive," but this will have no effect, unless you are yourselves, in your lives and conduct, what you wish your children to be. You teach more by the consistency of your daily conduct, than by all the good maxims, preaching and punishments, that you can think of. What is more natural than for the child to imitate the voice, manner and actions of those it is constantly with? therefore, how very guarded you should be in your own words and conduct. It is important to give your children habits of usefulness, cleanliness and order. Teach your girls to mend their clothes, your boys to work in the garden; if possible, send them always tidy and clean to school,—water costs nothing, but for the want of water health is often injured, and fevers and other ailments, cause no end of trouble and expense.—*Episcopalian.*

Be Patient.—Patience is the guardian of faith, the preserver of peace, the cherisher of law, the teacher of humility. Patience governs the flesh, strengthens the spirit, sweetens the temper, stifles anger, extinguishes envy, subdues pride; she bridges the tongue, refrains the hand, tramples upon temptation, endures persecution, consummates martyrdom. Patience produces unity in the church, loyalty in the State, harmony in families and societies: she comforts the poor and moderates the rich; she makes us humble in prosperity, cheerful in adversity, unmoved by calumny and reproach; she teaches us to forgive those by whom we have been injured; she delights the faithful, and invites the unbelieving; she adorns the woman, and approves the man; is loved in a child, praised in a young man, adored in an old man; she is beautiful in either sex, and every age.—*Bishop Horne.*

Statistics of Co-Operation.—The results of a twenty-three years' trial of the co-operative system, was recently announced at the opening of a new central co-operative store by the Rochdale Equitable Pioneers' Society in England. In their first year they had 28 members and a subscribed capital of £28. The members now number 7,000; the receipts for goods sold during the past three months have been £69,663, and the profits for that period nearly £10,000, while the assets of the society amount to £120,000. The society has eleven groceries, one draper's and tailoring establishment, three shoe shops, and the same number of clothing shops. Their fixed stock, consisting of buildings, horses, carts, &c., is stated at a nominal value of £16,460, but is in reality worth more. They have eleven newsrooms and six thousand volumes, which are supported by an allowance of two and a-half per cent. from all the net profits. The London *Spectator* remarks that statistics, as a rule, are dull reading; but these contain the story of a peaceful revolution which will literally renew the face of the earth, as far as the masses of the people are concerned. One fact more must be mentioned to show the vitality of the co-operative system. Six years after the "Pioneers" started it was found that money accumulated in their store beyond the immediate wants of the society. So some of the members formed a corn-mill society, which, has now, seventeen years after its formation, a capital of £82,000, and is doing an annual business of £400,000.—*E. Post.*

THE STREAM OF DEATH.

Selected.

There is a stream whose narrow tide
The known and unknown worlds divide,
Where all must go,
Its waveless waters, dark and deep,
Mid silent silence downward sweep
With motionless flow.

I saw where at the dreary flood
A smiling infant prattling stood,
Whose hour was come;
Unthought of all, it nard the tide—
Sunk as to cradled rest, and died
Like going home.

Follow'd with languid eye anon,
A youth diseased, and pale and wan;
And there alone
He gazed upon the leaden stream,
And fear'd to plunge—I heard a scream!—
And he was gone!

And then a form of manhood's strength
Came bustling on, till there at length
He saw life's bound;
He shrunk, and raised the bitter prayer—
Too late! His shriek of wild despair
The waters drown'd!

Next stood upon that surgeshore,
A being bow'd with many a sorrow,
Of toilsome years
Earth-bound and sad, he left the bank,
Back tur'd his dimming eye, and sank,
Ah! full of fears!

How bitter must thy waters be,
O death! How hard a thing, ah me!

I mus'd—when to that stream again,
Another child of mortal men,
With smiles drew nigh.

'Tis the last pang—he calmly said
"To me, O death! thou hast no dread!—
Saviour, I come!
Spread but those arms on yonder shore
I see—ye waters, bear me o'er—
There is my home!"

THE ELECTRIC TELEGRAPH.

Selected.

Along the smooth and slender wires
The sleepless heralds run,
Fast as the clear and living rays
Go streaming from the sun.
No peals or flashes, heard or seen,
Their wondrous flight betray;
And yet their words are quickly felt
In cities far away.

Nor summer's heat, nor winter's hail,
Can check their rapid course;
They meet unmoved the fierce wind's rage—
The rough wave's sweeping force:
In the long night of rain and wrath,
As in the blaze of day,
They rush with news of weal and woe,
To thousands far away.

But, faster still than tidings borne
On that electric cord,
Rise the pure thoughts of him who loves
The Christian's life and Lord;
Of him who, taught to smiles and tears,
With fervent lips to pray,
Maintains high converse here on earth
With bright worlds far away.

Ah! though no outward wish is breathed,
Nor outward answer given,
The sighing of that human heart
Is known and felt in heaven:
Those long frail wires may bend and break,
Those sleepless heralds stray,
But Faith's least word shall reach the throne
Of God, though far away.

J. J. Lyons.

The Shepherd's Dog.—The following incident is related in the *Glasgow Post*. A gentleman, a considerable flock of sheep to a dealer, with the latter had not hands to drive. The shepherd, however, told him he had a very intelligent, which he would send to assist him to a place at thirty miles off, and that when he reached the of his journey, he had only to feed the dog desire him to go home. The dog accordingly off with the flock and the drover; but he absent so many days that his master began to be serious apprehensions about him, when one morning, to his great surprise, he found his dog turned with a very large flock of sheep, including the whole that he had lately sold. The turned out to be that the drover was so pleased with the colley that he resolved to steal him, locked him up till the time when he was read leave the country. The dog grew sulky and various attempts to escape, and one evening succeeded, went immediately to the field, collected the sheep, and drove them all back to his master.

Are you Happy.—A correspondent of *British Workman* says: "Rothschild, who supposed to be the richest man in the world, once asked this simple question: 'Are you happy?' 'Happy,' he answered, 'when you are going to dinner you have a letter put in your hand saying, 'If you don't lend me a hundred pounds I will blow your brains.' Happy when you have to sleep with pistols at your pillow? No, indeed! I am not happy.'"

Astor, another very rich man, was once asked the same question. "Ah!" he answered, "I leave it all when I die. It won't put off sick it won't buy off sorrow; it won't buy off death. And so it was plain to see, he was not happy."

But I went once to see a poor, lame and woman who lived in one small room, and as a part of her scanty living by knitting; for rest she had to depend on the kindness of others. I asked her this same question: "Lydia, are you happy?" "Happy!" she answered with a long face; "I am just as full as I can be. I believe I could hold another drop of joy." "Why?" I asked, "You are sick and alone, have almost nothing to live upon." "But you never read, said she, pointing to the Bible, 'all things are yours; and ye are Christ's; Christ is God's?'" "And again, 'Ask and receive, that your joy may be full.'"

A Touching Picture.—In a pamphlet published by Isaac Taylor, Incumbent of St. Matthew's, Bethnal-green, with a view of showing the effect of the destitution which prevails in his district alludes to "children's trades," of which, he says, "Among these trades the foremost perhaps is the manufacture of lucifer boxes. For this work payment is twopenny farthing per gross, or boxes for one half-penny, out of which small laborers have to find their own paste. The other day I took upon my knees a little girl employed in this manner. She told me she was four years old. Her mother said she had earned her own living ever since she was two years of age. This infant now makes six hundred boxes every day of her life, and her wages suffice to pay the rent of the miserable which the family inhabits. The poor little wretch as might be expected, is grave and sad in her years. She has none of a child's vivacity. She does not seem to know what play means. Her whole thoughts are centered in the eternal work of lucifer box making, in which her whole life is passed. She has never been beyond the street in which she was born. She has never so much

Sanctification.—The work of sanctification carried on in the believers' heart, is a slow and costly one, and cannot be completed without many a severe prick in the process.—*Jacqueline Pascal.*

a tree or a daisy, or a blade of grass. A sickly little thing, and yet a sweet, obedient, the deadly pallor of her face proclaiming istakably that she will soon be mercifully away to a better world, where at last, the weary fingers shall be at rest. And this is one case out of scores and hundreds.

The Bones of a Mastodon.—One of the most peculiar curiosities of nature, says the *Chicago Times*, is now on exhibition at the Academy of Sciences. As the readers of this paper will remember, some weeks since an account of important discoveries in the earth of mastodons, was received in this city. The remains were found about sixteen miles north of Fort Wayne, Indiana, by Dr. Stimpson, of the Smithsonian Institute. The doctor, assisted by other gentlemen, has been at work assiduously in probing the search, and the most pleasing degree of success has rewarded their labors. The remains were mastodons, a male, female, and calf, have been discovered in an excellent state of preservation. Dr. Stimpson was in the city only a few days ago, and furnished the following information relative to the startling discovery. An intimation was conveyed to him not long ago that a farmer in Hunterdon, Indiana, had, in the cultivation of his farm, come across, at various times, the bones, evidently the remains of some huge creature. The farmer, not being a naturalist, did not take any notice of the circumstance other than to dig a stake in the spot to mark it as a place low and marshy. When Dr. Stimpson learned of the discovery he proceeded to the spot, obtained the farmer's permission to dig. He began his work of discovery. After digging five feet in the earth he came across the remains imbedded. Bone after bone was dug out; the skull, four feet in length, was first, and the work was carried on vigorously. The other day three team loads of the bones were sent to Fort Wayne, thence to be conveyed to Chicago. The bone at the Academy of Sciences is a long bone, and in size it conveys some idea of the former owner. It is about four feet in length, and four inches in diameter. Dr. Stimpson estimates that the animal to which it belonged to have been at least seventeen feet in length and fifteen feet in height. The remains are supposed to be at least three thousand years old—a position based by Dr. Stimpson upon the usual methods for determining the age and character of bones in natural science. The remains will form a part of the collection of curiosities in the Academy of Sciences.

For "The Friend."

Communications from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 94.)

The earliest memorandum of the deceased, now before me, is an account of the religious visit and of a departed, yet well remembered servant of the Most High, with a few solid reflections upon him, as follows:

Feb. 10, 1834. "Hinchman Haines, from whom I attended our meeting to-day. After a preliminary, he repeated the third verse of the chapter of Matthew: 'Blessed are the poor in spirit: for theirs is the kingdom of heaven;' and exhorted freely upon the benefit of this poverty. We were very apt to recur to past seasons of affliction, in periods of lowliness, and dwell on the imparted, as though we wished to erect a monument and abide there. But our rest must be in them. Seasons of poverty must be often in, and it was when we felt our own weak-

ness and inability to do any good thing, we were in the most likely state to receive instruction. Instantly the transfiguration of our blessed Saviour, and the attendance of Moses and Elias. The disciples were then permitted to enjoy a foretaste of the happiness that awaits the blessed, and wished to repose in that happy and blissful state. But Jesus was left alone; the types and figures faded in him, and to Him alone must we look for support and succor. He expressed near and tender sympathy with the class whose situation had elicited the foregoing. Another class was then addressed, who had become too deeply involved in the cares of this life. Those who, in the ardor of pursuit for the necessary things, had suffered them to engross too much of their care and attention, to the exclusion of the all-important subject of their soul's well-being. He appeared deeply solicitous that some, whom he thought had made but a partial sacrifice, might give up all; and not endeavor to possess, what was altogether irreconcilable, the pleasures of the fleeting state, and the joys of eternity. He told us his faith was still strong, that our Society was designed to become great and exalted: that the Lord would yet bless us; and although he believed another season of deep proving and trial awaited us of a different nature from that we had lately passed through, yet he greatly hoped the prayers of a repenting and sincere people would avert the calamity. The different dispensations allotted us individually, in a society capacity, and as national chastisements, were feelingly portrayed. Some, he said, had to endure the tedium of a bed of languishing. Others, for their refinement, were stripped of their parents; and parents sometimes deprived of their children; while from some the bosom companion, the dearest earthly friend, was snatched away, to recall, or to fix the undivided attachment on things of higher moment. The meeting concluded with a most feeling and impressive supplication; in which, with other petitions, he asked for strength for some who, through weakness of spirit, had not performed what duty called for; appealing to Him who knoweth the hearts of all, for aid on their behalf.

"We are indeed highly favored. May I duly appreciate blessings such as these; and submit myself wholly and unreservedly to the guidance of Him who regards the meanest of His family, and supports, with the sustaining bread of life, those who are humble and teachable."

12th mo. "—addressed us last First-day, in a manner different from usual. He commenced, with expressing the feelings of sadness which had possessed his mind on witnessing the vacant seats of many of our members. And the query had arisen, whether they could find a sufficient excuse for neglecting so necessary and important a duty. For the few assembled—the precious few he termed them—consistently concerned to present themselves regularly at our stated seasons for worship, he expressed much affectionate solicitude; saying, he believed there were among the younger class, those under the forming band, who if they steadily and patiently endured the necessary means for their purification, would become as shining lights. He entreated them not to shrink from suffering; as it was only by a process most humiliating to the selfish nature, we could be cleansed from the pollutions of the flesh; and although some might have greatly to endure the furnace of affliction, he desired, that as the passive clay, they might remain there, until fit to be formed into a vessel by the hands of the great potter."

12th mo. 3d. "I often condemn my own remissness with regard to letter-writing, and could wish that so ready and interesting a source

of enlivening and perpetuating friendship, might be more justly appreciated. — I expect has informed thee of the death of our cousin —. It occurred sooner than we had anticipated, but not until she was favored with entire resignation, expressing only a few days before her death, that her day's work was done. Cousin M. appears to feel his loss most sensibly; but with the other members of the family, supports it with becoming fortitude and composure. J. T. has also buried his wife within a few weeks. His loss, as well as our cousins, will be most sensibly felt in their immediate families. A number of children are hereby deprived of a mother's care, at a period when they appear most to need the love and direction of her who, beyond all others, must naturally feel most interested in any thing that relates to their comfort and happiness. But we are sometimes told it is over such He whose love far transcends that of any earthly friend, is specially mindful; and if the conduct of those early deprived of her who was the support of their infancy, be such as to invite His peculiar care, they will find a sure Friend in trouble, and a support and comfort when all earthly gratifications lose their power to divert the mind from the trials that must await this uncertain state of being."

2d mo. 15th, 1835. "— had an appointed meeting here yesterday week; also attended our Quarterly Meeting. She had a good deal to say to us, holding forth the language of encouragement and consolation to the little few bearing our name. She certainly must rank high among the commissioned servants, evidencing, as she certainly does, from what source her ability proceeds. As is generally the case, — meeting claimed a larger share of her labors than the others composing our Quarter. She attended there on First-day morning; and in the afternoon held one for the members."

"I am now reading a work I feel much interested in, entitled 'Diary of Alexander Jaffray,' with an account of the rise of Friends in Scotland. He joined our Society at an early period, and his diary very interestingly sets forth the gradual preparation of his heart to receive doctrines which rendered their possessor obnoxious to a series of sufferings, calling for the exercise of strong faith, and firm dependence on that spirit of the Redeemer so much ridiculed by the professors of that day; yet so mighty to sustain the humble and devoted few, who felt it indeed sufficient to support them, as its direction was heeded, to a haven of rest and true peace."

(To be continued.)

Reformatory and Industrial Schools in England.—At the present time there are 64 reformatories in Great Britain, 50 of which are in England, and the remaining 14 in Scotland. Of these 39 are for Protestant boys, 17 for Protestant girls, 5 for Catholic boys and 3 for Catholic girls. The number of juvenile offenders under detention in these schools on December 31, 1866, was 5335, being an increase on the corresponding number on December 31, 1865, of 420.

During the year, 1207 inmates have been discharged, of whom 938 were boys and 269 girls. Of these 69 emigrated, 155 went to sea, 20 enlisted, 33 were discharged on account of disease, 13 as incorrigible or as having been reconvicted and sentenced to penal servitude, 34 (viz.: 27 boys and 7 girls) died, and the rest are in various occupations in England. The total expenditure for the year ending December 31, 1866, was £102,191 15s. 4d., and the receipts were £104,318 14s.

In the industrial schools at the same period

2566 boys and girls were detained, showing an increase of 504 over the year before. In addition to these, who are lodged and boarded as inmates, about 2000 children attend as day pupils, receiving instruction and being partly fed. The income of all the certified schools amounted to £49826 2s 10d.

The Pall Mall Gazette says: "The probabilities are that in the course of the next few years the system of industrial schools will be considerably extended. Of late the opinion has very properly gained ground that something ought to be done for the ragged and starving children who crowd the streets, and whose very condition implies criminal negligence or helpless poverty on the part of their parents. Several experiments have been tried, and to a very great extent they have all proved successful. It is impossible to visit any of the certified industrial schools in Middlesex, or such institutions as the Boys' Refuge in Great Queen street, or the training-school Chichester, without seeing that the immediate good done is immense.

"There is no comparison between the condition of the boys at the institutions and those in the streets. In the latter they are miserable themselves, a nuisance to all with whom they come in contact, and the chances are they become dangerous and costly members of society; while in the former they are comfortable and apparently happy, and give promise of turning out useful citizens. The danger is that very poor parents should be so impressed with the comfort and good to be found at these institutions as to neglect their children on purpose to have them sent there.

"The results of the three years, 1863, 1864 and 1865, are certainly satisfactory. In these years 2793 boys and 727 girls have been discharged from the English and Scotch reformatories. Of the boys 84 have died, and of the girls, 17. This leaves 2709 boys and 710 girls to be accounted for. Of the boys 1931 (above 72 per cent.) and of the girls 481 (above 67 per cent.) were known to be doing well; 104 boys (less than 4 per cent.) and 104 girls (above 14 per cent.) were reported as doubtful or indifferent; 394 boys (above 14 per cent.) and 60 girls (above 8 per cent.) had been reconvicted; while 250 boys (about 9 per cent.) and 65 girls (about 9 per cent.) also were unknown."—*Evening Post*.

For "The Friend."

A persecuting spirit, even in the present day, to whatever extent it exists, from whatever cause or motive it proceeds, or however it may manifest itself, will sooner or later most assuredly, in proportion to its extent, draw down the righteous judgments of God, as is clearly and sadly exemplified in the following affecting account of Matthew Hide, taken from "Ketty's Early Friends."

"With the same measure that thou metest, it shall be measured to thee again; is a solemn axiom, which was often strikingly verified in the case of the persecuted Quakers, as their records testify. One instance in particular, may here be profitably related; because it is soothing to remark, that sincere repentance (as we may humbly hope) mingled with, and ameliorated the bitterness of that cup of retributive justice, which, in this case, the offender was required to drink of.

"The individual alluded to, was one Matthew Hide, a person of some note in the city of London; who had made it his business, for the space of nearly twenty years, publicly to contradict the Quakers in their meetings, and, as far as he could, to disturb them in their mode of worship. It would seem, however, that a blind zeal to put

down what he considered as *heresy*, was his motive for acting thus, rather than any furious hatred against their retired and serious devotions; which as being so *contrary* and *reproving* to the *lustle and stir of the fleshly mind*, was, no doubt, the great offence for which they were generally so much opposed, and ill used.

"It was not by noise and clamor, but by gaining what they advanced, that this man interrupted the preaching of ministers amongst Friends; inasmuch, that William Penn sometimes he moved to pray very earnestly for his repentance, and to tell him in the presence of many auditors, that God would assuredly plead with him by his righteous judgments; and that the time would come, in which he would be forced to confess the sufficiency of those very principles which he then opposed.

"This prophetic warning, at the close of many years, was at last affectingly verified; for this Hide, being by sickness brought to the brink of death, began to take that new and distinct view of things, which is seldom or never taken, in times of health and worldly prosperity. Oh, it is an easy thing to dispute about truth; and to contend for one way against another, whilst we appear to have time enough before us, to follow which way we choose! But when the soul is brought into that amazing state, in which an untried eternity is before it—that which brings into peace with God—that (call it by what name you will—deride it how you may)—which has power to support, to comfort, and to direct, in times of tribulation—that is found to be the truth—the tried and everlasting truth.

"And now in the hour of his great exigency, when principles were to be proved, this man was reminded by the monitor within, of those of Friends. Well-sayed—well proved—doubtless he had seen them oftentimes; himself having been one that had helped to try them. Ah—there was no chaff there! no vain words without a meaning—no letter doctrines, dry and dead as the unbelief to which they spoke—no empty notions—no supples, lifeless phrasesology—but Christ the true Vine—the good Shepherd, breaking the bread of life through his own true and faithful servants—these were things he remembered—and alas!—remembered also, that they were things which he had mocked and rejected.

"But though it were so, he believed that as the ministers of a merciful Lord, he had but to ask their attendance at his dying bed, and the request would be granted. He therefore desired that George Whitehead, and some of his friends might be sent for; and although it was late in the evening when the message was delivered to them, they immediately visited him.

"I am come," said George Whitehead, "in love and tenderness to see thee."

"I am glad to see you," said Hide.

"If thou hast anything upon thy conscience," said Whitehead, "I would have thee to clear it."

"To this Hide returned for answer, that what he had to say, he spoke as in the presence of God. 'As Paul was a persecutor of the people of the Lord,' he said, 'so have I been a persecutor of you, his people; as the world is, who persecute the people of God.'

"He added more; but being extremely weak, his words could not well be understood.

"Thy understanding being darkened," said George Whitehead, "when darkness was over thee, thou didst gainsay the truth, and people of the Lord; and I knew that that light which thou didst oppose, would rise up in judgment against thee. I have often, with others, labored with thee, to bring thee to a right understanding."

"To this Hide made answer, by again declaring as in the presence of God, that he had done as in persecuting Friends; and that he was heartily sorry for it; adding, 'The Lord Jesus Christ has mercy unto me!—and the Lord increase your number, and be with you!'

"After some interval of silence, George Whitehead addressed him with an earnest entreaty to ease his conscience of every burden that bore upon it. 'My soul,' said he, 'is affected to bear testimony against thy evil, as the Lord hath borne thee a sense of it. In repentance, there is mercy and forgiveness; in confessing and forsaking sin, there is mercy to be found with the Lord; who, in the midst of judgment remembers mercy that he may be feared; and after a little discourse, and some intervals of silence, he deeply inquired, 'How is it with thy soul? I thought not find some ease?'

"I hope I do," answered the dying man; "if the Lord should lengthen out my days, I should be willing to bear a testimony for you, as public as I have appeared against you."

"And if the Lord should not lengthen thy days," said Whitehead, "dost thou desire what thou sayest, should be signified to others?"

"Yes," he replied; "I do"—and perceived him to be suffering much from weakness, want of breath, George Whitehead and his friends took their leave of him, commending him to mercy and forgiveness of God.

"As this occurred on a Saturday night, several times desired, after the Friends had withdrawn, that he might be permitted to live till next day; since, as it was on a Sunday that had most often opposed them in their meet for worship, he now wished on that day, to witness in his favor.

"But this was not allotted to him; he died in about two hours after the above interview; signifying before he departed, that he favored to feel some relief in his spirit."

The Dismal Swamp.—The New York Tribune says: "This is probably the largest available deposit in America, if not in the world; its availability arises in a great measure from the fact that a canal large enough for small boats traverses its centre. Its extent was discovered March, 1728, by the surveyors of Virginia and North Carolina State Line. It required eight days' diligent labor to make the sage where that line crosses the swamp. Although its surface is so covered with roots that a plank cannot travel over it; yet a pole can anywhere thrust down from 10 to 40 feet through the peaty substance below. This swamp is everywhere covered with a dense growth of timber, smaller plants which have been growing and decaying from time immemorial. All this furnished the substance of which peat is formed to such an extent that the supply is inexhaustible. This is contrary to the received scientific opinion that peat is formed only in cold climates. Evidence to the contrary is here patent. The companies at least have been organized have several of Leavitt's Peat Machine work upon the banks of the Dismal Swamp; and they find a ready market for their product. The steamboats pass up the Great I. Swamp Canal, within 50 rods of their work. The engineers of these boats are so much pleased with this fuel that they have contracted to all the companies make with their present facilities, at \$6 per ton. Other applicants for fuel are already numerous, and a coal-dealer at Richmond has made written application to secure control of the entire product of the

ELEVENTH MONTH 23, 1867.

INDIANA YEARLY MEETING.

(Continued from the printed Minutes.)

Indiana Yearly Meeting was held at Whitewater Meeting-house, in Richmond, Indiana, on Fourth-day, 10th mo. 2d, 1867. Epistles from the Yearly Meetings in correspondence with it were read, also the general epistle from London, and a committee appointed to prepare replies to the former. Charles F. Coffin was appointed Clerk. An annual report from the Committee on Freedmen was read, and a lively interest in that portion of our fellow-citizens was manifested. The report contains some interesting facts, and from it we learn that those adults and children at Helena Asylum, who in the report of the committee last year, were spoken of as having become members of the Society of Friends, are enrolled "members of a religious meeting" and as was open for it, may be joined in membership with Friends of Indiana Yearly Meeting." Over \$18,000 had been expended in this concern during the year. A report was read from the committee having charge of Earlham College: the average attendance during the past year was 160, and the whole number entered in the two sessions was 257, of whom 169 were members among Friends, and 88 were not members. The expenditures amounted to \$32,345.46. The committee appointed for the purpose last year, reported having forwarded the "address" to the " Wesleyan Methodist Conference." "An epistle from the Indiana Yearly Conference of the Wesleyan Methodist Connection in America" addressed to this (Indiana) meeting was received and read. The Clerk was directed "to acknowledge the receipt of this christian and brotherly address, and to inform the Conference that it has been read in this meeting, and has renewed feelings of interest and christian love towards them." The committee that attended the opening of Canada Yearly Meeting reported having so done. A committee was appointed to consider the propriety of making some change in the time of holding the Yearly Meeting. The report of this committee subsequently made, that "the Meeting be opened on the Fourth-day after the last First-day in the 9th month, was approved." After reading the queries and answers, a "Minute on the state of Society" was adopted and directed to be read in the Quarterly and Monthly Meetings.

Nine persons are reported as having been recorded as ministers during the last year. From the statistical reports it appears there are 13,984 members of the Yearly Meeting; 567 have been received during the past year, and 56 "ceased." The committee appointed last year to propose "some plan by which greater unity of action may be brought about amongst the different Yearly Meetings of Friends, and which might, if possible, lead to the adoption of a uniform discipline," reported "way did not open to propose any action," which was accepted by the meeting. The following extract from the report of "the Acting Committee on Indian concerns" is interesting: "The school has been kept up during the past year with an average attendance of thirty-five scholars, and is progressing to good satisfaction; the children have made considerable advance in their various studies, including reading, writing, arithmetic, geography and English grammar. The boys have been instructed in farming, having done quite an amount of work the past season, and the girls have received instruction in the

for that market. The cost of labor there is less than at the North, as they employ men, mostly at a dollar a day. We have samples of this fuel which cannot be excelled in quality in any northern region.

Dredging, it is found that the roots of reeds which are all upon the surface or not over two feet below; then the mass is perfectly plastic, and firm that it can be cut into cakes of any size that can be handled.

much of the Dismal Swamp lands are not covered with timber, but contain a buried forest, the logs of which are as sound as they are aged.

It is a fact worth knowing that operators in well as in other peat swamps are generally negroes. During the time of slavery, the deepest of this swamp were always inhabited by negroes who built their cabins elevated upon stilts above the water. As the whole ground becomes covered as fast as cleared of peat, it can be excavated by steam dredges, carried in boats to the dredging machines, and from them shipped on small vessels navigating the canal. The water in Lake Drummond is remarkably clear, although of a reddish color. Upon a part of the bottom has yet been found, but the peat at the lowest depth is equal in quality to that at the surface. The peat appears to have many antiseptic qualities as that of the Irish peat. One of the peculiarities of the Dismal Swamp water is that it never spoils at sea."

Selected.

On the 4th day of the Fourth month (about the year 1700) I was drawn forth to wait on the Lord, and I was waiting, the consideration of dear children whom the Lord had taken to himself in their innocence, came before me, and I blessed his holy name for his great love to them and me, in that they are gone to rest, and shall never partake of those excruciating sorrows, those that remain in the world. Then my soul was poured forth before the Lord for them that remain, that as they grow in years, they may grow in grace, and in the knowledge of our Lord and Saviour Jesus Christ. I could rather follow them to their graves whilst they were young, than that they should live to the honor of His worthy name. Then a moral and weighty concern came upon me for dear children of Friends that are grown up, and do not understand the yoke, nor bear the cross. Obey that ran through my soul. In the anguish and bitterness of my spirit, I said, "Lord, wilt thou do with Friends' children when they come off the stage of this world? Wilt thou raise up children, and not those of believing parents?" This was the word that lively sprang into my soul. They reject my counsel, and cast behind their backs, and will have none of my proofs; and though my hand be stretched forth till the day long, yet they will not hear, but are their own heart's lust. Then I said in my heart, "Lord are they all so?" The answer there are some that are innocent, whom I will bless, and they shall shine forth to my praise. O my Friends! dwell and abide in the innocent love, that so the blessing of the Lord you may feel it to descend upon you. As for you that "reject the counsel of the Lord, and cast his law behind your backs, and will have none of his counsel," sorrowful sayings concerning the children of believing parents—you who are under the blessing of the Truth, which will do you no good unless you return unto the Lord, I desire that you all return unto him, whilst the day of a suffering merciful God lasteth. But if you

still reject the counsel of the Lord, the many faithful warnings you have had, how will you answer it in the day when he cometh, "To render unto every one according to their deeds?" And now, something further is with me to parents. Dear friends, you that have been convinced of God's unchangeable Truth, and have known the operation of it, working out and bringing down that which was of a contrary nature to it; Oh! that we may all abide faithful in His work, and retain our integrity to the Lord, then let our breathing cries and prayers be offered up to the Lord for our children, that he would be pleased to look down in mercy upon them, and visit them as he did our souls. David said, "If I regard iniquity in my heart the Lord will not hear me;" so I desire we may all be clear in our offerings before the Lord, that he may smell a sweet savour from them.—*Hannah Carpenter.*

Amber.—The yield of amber in the Samland, the district between Königsberg and the Baltic, was recently 5300 pounds in one year. Amber is found on the sea coast of Eastern Prussia, and on the shores, at the bottom of the Fresh and Curish Hafes. It is fished for in the surf with nets, or dug up out of the sands, but the most successful method is to dredge for it at the bottom of the water. In former times amber was only procured by picking it up on the seashore, but it has since been discovered that large amber fields exist from sixteen to thirty feet below the surface of the sea, in a tertiary stratum. The digging up to 1862 had yielded very fair profits, but by the system of dredging, a Memel firm in one year obtained 17,500 pounds of amber, at a cost of about 53,000 Prussian dollars. In 1863 the quantity collected by this method was nearly twice as large; in 1865 more dredging machines were in operation, and 50,000 pounds of amber were raised. In 1866 the quantity had increased to 73,000 pounds. At present, about fourteen machines, and above four hundred workmen are employed in dredging, who work day and night if the Haff is not frozen up. The Memel firm pays about 4000 Prussian dollars per annum to government, in rent, and the current expenses are said to amount to 180,000 Prussian dollars a year. Similar works are about to be established in the Fresh Haff, near the Port of Pillau. The quantity of amber thrown up by the sea of late years has been inconsiderable; the exact amount, however, cannot be ascertained, as the fishermen who collect this mineral sell it privately in small parcels. The amber found at Memel is of excellent quality, and is considered to be particularly adapted for pipe mouth-pieces. The prices vary according to the size and quality of the piece, from five silver groschen to eighty dollars per pound. The largest piece ever found in the neighborhood of Memel weighed about five pounds, and was valued at about four hundred Prussian dollars.—*Late Paper.*

The Way to Peace.—I have never known an easier way to favor with the Lord of life and glory, than that of passive submission to all His holy will concerning us, even under dispensations most proving and mortifying to the fleshly mind.—*Sarah (Lynes) Grubb.*

At Divine Disposal.—It is to my mind as clear as the day, that, let us be how we may occupied in this life, whilst we are unreservedly at Divine disposal, and no longer, are we in the full discharge of this duty, which will bring its reward.—*Sarah (Lynes) Grubb.*

various branches of housewifery, including dairy operations." The committee appointed last year on "the request for the establishment of a Yearly Meeting at Wilmington, Ohio," reported unfavorable thereto, which was accepted.

A committee was appointed to take into consideration the propriety of "holding General Meetings at different points within our limits," and they deemed it advisable to hold such meetings, "to report as to their object and character, as well as the times and places they should be held." This committee reported at another sitting in favor of holding such meetings, not more than two in a year. A "Committee of ten men and ten women Friends to be appointed to co-operate with similar committees to be appointed by such Quarterly Meetings as may see fit to take part in such General Meetings," "to determine the time, place and length of continuance of such meetings." The "leading object of these meetings should be Divine worship; but it may also be right and proper to devote some time to the consideration of subjects of general interest to Friends." The Yearly Meeting adopted the report and appointed the committee proposed. The number of those between six and twenty-one years of age reported 3287; of whom 2001 have attended school during some part of the past year; 1292 at schools under the care of Friends, and 1226 at schools uncontrolled by Friends. "The Central Book and Tract Committee" made report of their labor during the year, which was approved, and the Treasurer of the Yearly Meeting directed to pay \$1000 annually to that committee, to aid in the distribution of books and tracts. "A standing committee on the subject of Peace" was appointed, and the Quarterly Meetings directed to raise \$2,400 to "carry out the object in view." They were also directed to raise \$4,500 for general purposes. Epistles to ten Yearly Meetings were read and directed to be forwarded. The meeting concluded on the 7th of 10th month.

SUMMARY OF EVENTS.

FOREIGN.—The *Paris Monitor*, in its official column, announces that the Emperor, seeing that Italy is resolved to do her duty, and fulfil all her obligations under the convention with France, has withdrawn the French troops from Rome to Civita Vecchia. A Paris dispatch of the 17th states, that the French troops were making preparations to go into winter quarters at Civita Vecchia. The *Florence Gazette* publishes a diplomatic note from Prime Minister Menzies, which declares that the suppression of the temporal power of the Pope is indispensable to the maintenance of good relations between France and Italy. The French government has issued a second note, wherein even the third-rate Powers of Europe are called to join the conference on the Roman question. The Italian government and the Pope alike, object to the proposed conference. It is said the Powers are divided on the subject, and that Spain alone supports the temporal power of the Pope. Late dispatches from Italy, say that the feeling against the French has reached a perfect furor. The authorities have taken steps to prevent another outbreak, which is deemed imminent, and more French troops have been dispatched from Toulon to Civita Vecchia. King Victor Emmanuel and General Menzies have become very unpopular. French has joined the Italian Government, and called out the reserves and ordered the formation of three large camps. Garibaldi is still in confinement.

Late dispatches from Athens state that since the failure of the Turkish mission to Crete hostilities have been resumed in the island.

The Swiss Congress approved the new postal treaty negotiated with the United States of America.

The new Captain General of Cuba, Lersundi, will sail from Cadiz on the 30th inst. for Havana.

By a royal decree Porto Rico has been placed under the government of the Captain General of Cuba.

Private advices from Paris report, that many political arrests have lately been made by the police in that city. It was rumored that the existence of a secret society, of an alleged political character, had been made

known to the government, and that these arrests were made in consequence of the discovery. The French tax on grain in foreign vessels has been removed.

The 13th of the month of the Convention of the North Germany assembled at Berlin on the 15th. The session was opened by the King of Prussia, who read the usual speech from the throne. The king declared that the relations of the confederation with the other nations of Europe were entirely satisfactory, and he believed there was no probability of the peace of the confederation.

The Cabinet of England, which for a long time has had the subject under consideration, has resolved to place all the telegraph lines of Great Britain under the direction of the Post-office Department.

A loan of \$1,000,000 for the Honduras Railway has been introduced in London. The loan is for the construction of a railway through Honduras, Central America, from Porto Cabello, on the Atlantic, to the Gulf of Fonseca, on the Pacific.

The Island of Porto Rico has been devastated by a hurricane. It is stated that a thousand houses have been blown down, and three thousand heads of stock. The cane crop was destroyed and great numbers of cattle have been killed.

A dispatch from Alexandria, Egypt, says that the American Consul-General at that port has induced Ismail Pasha, the Viceroy, to issue a decree permitting the return of the Egyptian American Missionaries and native Christian converts who had been exiled from the country.

The French Chambers were opened on the 18th. The Emperor in his speech declared there was no longer any objection to German unity and consolidation, on the part of the French government.

Consols 94 1-16. U. S. 5-20's, 76½. The Liverpool markets were quiet and steady. Cotton, Orleans, 81-11-16; uplands, 81-12. Bradstuffs unchanged.

UNITED STATES.—Philadelphia.—Mortality last week, 210. Of consumption, 29; cholera, 3; old age, 8.

The South.—A call has been issued for a Southern Agricultural Convention, to meet at New Orleans on the 16th prox. It is to be composed of colored delegates only, and is to embrace representing of every southern State.

The Alabama Reconstruction Convention has adopted a memorial to Congress asking the removal of the U. S. Marshal, and that all taxes paid by these 9th mo. 1st last, shall be refunded to the producer. Gen. Swayne has issued an order giving the freedmen a lien on the crops for their wages.

The official vote of Georgia has been declared as follows: The registered voters numbered 188,647; the vote cast was 106,410; for the Convention, 102,983; against the Convention, 41,27—majority for the Convention, 98,156. The number of whites voting for the Convention was about 36,500.

The States of Arkansas and Florida have voted in favor of holding conventions under the Reconstruction acts.

Savannah is now the leading cotton port, outranking even New Orleans. While the receipts at the latter port from the 1st of the 9th to the 1st of 11th months were but 35,616 bales, they footed up for the same time at Savannah 45,554 bales; at Mobile, 31,710 bales, and at Charleston but 22,919 bales, those of Savannah being nearly double those of Charleston.

The Indians.—Fort Laramie advices of the 12th inst. state a council was held with a few of the Crow Indians on the 11th inst. They desire to remain in their own country. The Sioux were not represented, and will not come to Fort Laramie until next spring, but request General Hareley to meet them at Fort Phil. Kearny.

Muskegon.—General Rousseau, Governor of the new territory of Alaska, telegraphs that he reached Sitka on the 18th ult., and a formal transfer of Russian America to the United States was made on the same day. All well, and all satisfactory. The revenue cutter Lincoln arrived at Victoria from Sitka on the 11th inst. and had been many with heavy rains, no less than 37 inches having fallen in the 8th and 9th months. An exploring expedition had returned to Sitka with a large botanical and conchological collection. The party had determined the latitude and longitude of several places.

The ships happened to 5525 ships and 500 steamers during the first half of 1867, according to the returns of the London Lloyd's. Of these 1072 ships and 37 steamers were totally lost, with 687 human lives.

It is understood to be the decision of the Treasury Department that unless the holders of 7-30's will present their notes for conversion into "new currency," the option to make such conversion is lost, and the 7-30's will afterwards be paid in greenbacks.

The statement contained in recent dispatches from

Mexico announcing the arrival of General Banks in that country, is incorrect. He was recently at his home in Cham, Mass.

The schooner at Matamoros, on the 7th and 8th of month, caused loss of property valued at \$5,000. Six hundred houses were destroyed, and the ranch thirty miles around. All the river steamers shared the destruction. Many persons were killed or injured.

Commander Sands reports to the Navy Department that the schooner "Albatross," of 14th mo. 1st was the most brilliant since 1833. One thousand men were seen in half an hour, and two thousand in the twenty minutes. Observations with similar results made at Albany, Chicago, Detroit, and many other places. At Paris the display was very fine. The men were so numerous as to defy any attempt at count.

KANSAS.—Eighty-three representative districts of State elect twenty-two Democrats, and the remainder Republicans and independents. Forty counties give following result: For negro suffrage, 7591; against, 16,714; for female suffrage, 6270; against, 16,365; for disfranchising disloyalists, 11,390; against it, 10,240.

The Markets, &c.—The following were the quotations on the 18th inst. New York.—American gold, U. S. sizes, 1881, 113½; ditto, 5-20, new, 107½; 10-40, 5 cents, 102½. Superfine State flour, \$8.99. Shipping Ohio, \$9.75 a \$10.00; finer \$11 a \$15.50. Chicago spring wheat, No. 1, \$2.29; No. 2, \$2.18 a \$2.20; amber State, \$2.70; Genesee, \$2.97. Canada barley, \$1.59 a \$3.30; Western oats, 80 a 81 cents. Canada rye, \$1.64. Mixed corn, \$1.33 a \$1.35. Middling uplands 8½; Orleans, 10 cents. Cuba sugar, 12 cents; Havana, refined, 16½ a 16½ cents. Philadelphia.—Super flour, \$7.50 a \$8; extras, \$8.50 a \$9.20; family flour, \$10 to \$14. Red wheat, \$2.25 a \$2.55. \$1.63 a \$1.65. Yellow corn, \$1.42. Oats, 73 a 74. Clover seed, \$7.25 a \$8. Timothy, \$2.50 a \$2.75. Flaxseed, \$2.45. The arrivals and sales of beef cattle, at the New York market, 2400. Extra, 73 a 74½ cents per lb. gross, fair to good, 6 a 7 cents common 4 a 5 cents per lb. gross. About 6000 sheep at 4 a 6 cents per lb. gross. Of hogs, 5800 sold at \$1.80 per 100 lbs. net. Chicago.—No. 1 spring wheat, \$1.85; No. 2, \$1.74. New corn, 80 a 81 cents; old, 79 a 80 cents. Oats, 52 a 54 cents. St. Louis.—Spring wheat, \$1.81 a \$1.85; white winter, \$2.40 a \$2.55. Corn, 80 cents. Oats, 65 a 67 cents.

RECEIPTS.

Received from Mary Wilson, O., per E. Hollingshead, \$1.25, to No. 52, vol. 41.

WANTED.

Either an old or new copy of "A short account long journey from Babylon to Bethel," by Stephen H. Burleigh, address M. Balderston, 902 Spring Garden or Office of "The Friend."

NOTICE.

A suitable Friend and his wife are wanted to assist and manage the affairs of the family under the direction of the Committee for the gradual Civilization and improvement of the Indian natives at Tusnessa raugus Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkington, No. 733 So. Second St., John M. Kighin, Camden, N. J., or Wm. Carson Sharpe, Jr., St. Louis, Mo. Richard B. Ealy, Marshalltown, Chester C. Joseph Scattergood, 413 Spruce Street, Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE, NEAR SPAERFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSEPH A. WATSON, M. D.

Application for the Admission of Patients made to the Superintendent, to CHARLES ELLIOTT, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting-house, New York, on the 13th of 11th month, S. H. HAYES, of New York, to MARY E., daughter of Cooper, of the former place.

DIED, in this city, on the 25th of 10th month, HILYARD, Jr., in the 22d year of his age, a native of Burlington Monthly Meeting.

WILLIAM H. FILE, PRINTER, No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLI.

SEVENTH-DAY, ELEVENTH MONTH 30, 1867.

NO. 14.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

For "The Friend."

Friends in Norway.

(Continued from page 99.)

In the latter part of the year 1821, Thomas visited Norway. He spent some time at Alesund, meeting regularly with the few Friends there, and attending to such other religious duties as presented. From thence he went to Bergen. The following extracts from his journal speak of Friends there, and of his labors at that time:

"Fifth-day. Attended the usual meeting for Friends at this place. Most of their wives, and many strangers, gave their attendance. At the close of the meeting, a solid crowd of men, unknown to Friends, stood up, much apparent exercise of mind, and exclaimed themselves in a feeling manner, which produced a solemnity over the meeting. We afterwards learned, that a person, who was at the meeting I had at Christiansand, had written an account of that meeting to some of his friends at Bergen, which had brought this and other persons to the meeting that day."

"At the close of their meeting for worship, two months' meeting for discipline was held. Two of this country require all, without distinction of sect, to render an account, to persons appointed by government, of all marriages, births, deaths, that take place in each parish; which duty Friends here had not complied with, and which they had brought themselves under difficulty to perform. As I had been informed, by some in audience, that this omission, on the part of Friends, was deemed obstinacy and opposition to the will of government, and as I could see no ground for refusal to comply with the requisition, in order to prevent a continuance of this omission on the part of Friends, I drew up a minute, and translated for the approval of the two Friends' meeting, to become a standing minute on minute-book, and be the first minute always read, and to be replied to by Friends who should be appointed to receive these accounts, and hand them to the persons appointed by the government to receive this information."

"Being constrained to labor with Friends, I brought about a better observance of true order amongst them. I recommended that, when they discovered that any of their members, who were constant attenders of their meetings, walked disorderly, or heard reports of

them to their disadvantage, they should labor with them in private, as being the way to promote the unity of the one Spirit, which is the bond of true peace; and that they should be especially careful how they judged those of other religious Societies, or meddled with them, relative to their religious rites and ceremonies, unless they were well assured in their own minds that necessity was laid upon them so to do.

"Also, to avoid a too familiar intercourse with those of other religious professions; but to keep in view, that Israel (of old) was to dwell alone; because, if we run into the way of temptation, for the sake of gratifying our natural inclination, let it be in whatsoever way or manner it may, we cannot expect to receive that Divine support and protection essential to our escaping the danger we thus willingly expose ourselves to. I felt thankful in believing these remarks, from observations they produced, were reasonable and well received."

Thomas Shillitoe gives an account of a large, crowded meeting, in which he spoke without the assistance of an interpreter, yet to the contrivance of many hearts, and much to his own relief. Many present knew a little of the English language; and some who did not were much affected by the power of Truth. The meetings on the usual meeting days were largely attended, and generally very satisfactory. Several of the persons in power and authority, upon whom he called, evinced a considerate and kind disposition towards the Society, but laid great stress on those of Stavanger being recognized by the Society in England. T. S. showed some of these the epistles which the Meeting for Sufferings in London had addressed to the Friends of Stavanger; also the Book of Extracts which had been printed for their use, taken from the Book of Discipline published and used in England. This information appeared to give good satisfaction. He says:

"Previously to my departure, I received a visit from two young persons, who have, of late, become diligent attenders of Friends' meetings here, respecting whom, a comfortable hope was raised in my mind, that if they hold on their way as they have begun, they will add strength to this meeting. They were members of the Lutheran church. The young woman had been a diligent attender of her own place of worship, but afterwards absenting herself for a considerable time, the priest sent for her, and inquired if she had any thing against him that was the cause of it; she said she had, and told him she had attended the burial of a man, who was well known to be an irreligious, immoral character; that, in a sermon he preached at the grave, he endeavored to set him forth to the hearers as a man of good conduct, one who had walked amongst men as uprightly as the Patriarch Jacob did; that she durst no longer sit under his preaching; that, for some time, she spent her first-days at home, until her mind was divinely turned towards the meeting of Friends. At first, she met with great opposition from her brother; but, in time, her steady conduct so wrought upon his mind, that he has become her steady companion in attending Friends' meetings."

They appeared to be coming very near to that principle of light and life, which, if fully yielded to, they would become true way-marks to others, and be made instruments, in the Divine hand, of increasing this meeting."

After leaving Stavanger, T. Shillitoe proceeded in a small boat to Bergen, where he had one small religious meeting, to his own satisfaction; hoping that though what was given him to express might be imperfectly translated, yet that the broken fragments might be accompanied by the Divine blessing. In his journal, he says,—

"The preacher of the German congregation, and the consul, had informed me there were two members of our religious Society in Bergen. They were described as very poor, but highly respected by people generally, for their uniform, steady, good conduct. The man came to my lodgings, and brought his wife with him. I was much struck with their neat, clean, and respectable appearance. They were not of our religious Society, but part of a company, who, several years ago, suffered great persecution, on account of their religious principles, in the late King of Württemberg's dominions. On inquiry, it appeared that, in many respects, they held the principles of Friends, with regard to war, oaths, language, and respect of persons. The woman, who appeared very intelligent, gave me an account of some of their sufferings, on their leaving the established religion of the nation. Their number was small; their good conduct so gained the esteem of the king, that he gave them a parcel of land for a settlement; but, in time, their number increased to several hundreds. When this great increase came to the king's knowledge, he withdrew his kindness, and began to persecute them, in which, it was supposed, he was put on by others; casting into prison men, women, and even children (as young as ten years of age); having the men flogged almost daily, until the blood ran into their shoes, to compel them to renounce those scruples which they believed they were called upon to maintain, against war, oaths, flattering language, hat-honor, and other matters of faith. The governor of the castle, fearing lest their constancy under their sufferings should excite compassion towards them, in the minds of those appointed to execute this rigor of the law, generally attended in person, to see that no part of the punishment designed to be inflicted should be omitted. One day, the individual who had been an instrument in the Divine hand of gathering this religious body, being brought out to undergo his punishment, the governor standing by to see that it was thoroughly inflicted, the poor man, whilst under his sufferings, addressed the governor in nearly the following words:—'The Lord will reward thee for thy cruelty, in that thou art so unmerciful towards us.' At which the governor smote the poor man several times over his breast with his sword, saying, 'Dost thou *thou* me?' To which the poor man replied, 'I say the Lord will reward thee for thy cruelty towards us; and thou shalt never again be able to witness such acts of cruelty towards us.' At which the governor spurred his horse, and the beast set off with such speed that

he fell with him, whereby his sword was forced out of its sheath, and entering his body at the hip, wounded him in such a manner that he never was able to leave his bed while he lived. This circumstance reaching the king's ears, he gave orders that those who had the poor sufferers in their power should be careful not to endanger their lives when punishing them. Another of the officers was equally cruel. * * After long and severe imprisonment, the king gave them their liberty, on condition that they left his dominions."

From the time of T. Shillitoe's visit Friends continued to hold their meetings for worship and discipline regularly, till the year 1825, when the meetings for discipline ceased to be kept up. The cause of their being discontinued appears to have been a division or strife amongst the members, on account of a person, not in membership, pretending to have had high revelations, and wanting to be regarded as a gospel minister. Some of the members embraced his views, accepted his testimonies, and wished him to be admitted as a member of the Society. Others, on the contrary, were dissatisfied, and could not agree with him. Amongst these was Elias Tasted, who earnestly contended for what he believed to be the pure testimony of truth. A few uniting with him, and remaining firm, most of the others resigned their membership. The small number remaining, of about four persons, kept up their meetings for worship steadfastly; though many prophecies and hard speeches were pronounced against them by those who had left.

In the year 1830, Friends in Norway were forbidden to hold their religious meetings; and those of Stavanger were required, by the local authorities, to keep within three-quarters of a mile around the town. One of them, named Iver Halversen, whose farm lay at a greater distance, wrote a letter of remonstrance to the government. It was dated Stavanger, 7th mo. 19th, 1830. It is addressed—

"To the king, or those into whose hands this may come.

"The reasons assigned by Iver Halversen for dissenting from the public worship.

"I have lived on my farm twenty-two years, and have attended to the king's laws, although I am charged with not submitting to his commands like others. I wish him to examine our principles, and uphold us in our just rights—a people who desire that peace and morality may prevail in our native country, and that the king's government may obtain the blessing of God.

"To becrave me of my land, will cause the ruin of myself and family. I am a free man, endeavoring honestly to live by my daily labor.

"Remember Gahalael's counsel to the Jews, in the case of the apostles, by which we may perceive (in his pleading for truth) that true Christianity is through faith in Christ; therefore we look higher than ourselves. We look beyond compliments and mere outward observances, desiring to experience a pure, upright heart, and a freedom from sin, even in this life, through the blood of the Lamb—through Him who knows all our thoughts, words, and actions.

"They who exert their authority to the disturbance and injury of peaceable men, should consider that their power is limited to the body, and to this present life. The prophet Daniel who faithfully attended to his duty to God, was delivered from his persecutors; and we trust that He who preserved him, will also protect us, whom we must serve and obey rather than men. Many thousand persons are permitted to dwell quietly under their respective governments, who have embraced the same truth as we have, seeking to do the will of God.

"The righteous (as we read in the New Testament) walk in the light; and though they meet with many trials, they forsake wrath and bitterness, and endeavor to live in peace; for the Spirit of Christ enables them to bring forth good fruit, which all experience who fulfil his law. I have witnessed this in my own heart, and have seen the Lord's goodness towards those who live in his fear, and keep his commandments.

"The magistrates of Stavanger have forbidden us to hold our religious meetings; but they cannot limit our conscience towards God. Over this the king and government have no control. We have no command of men for our faith, any more than Daniel had, when a decree was made by the king, which was likely to ensnare him. Even now, as at that period, there have been, and are, some who valiantly confide in God. Should it fall to our lot to have our freedom taken from us, yet we must do the will of God. Our Lord Jesus Christ said to his disciples, 'Ye shall be hated of all men for my name's sake.' The apostle James, addressing some in his day, says, 'Ye have condemned and killed the just, and he doth not resist you.'

"We love religious freedom, exempt from persecution, and seem to be compelled to this vindication of our conduct. We desire that the king and our rulers may walk in the light and strength of the Lord, and be clothed with that lamb-like nature, which establishes unity (and peace) amongst men.

"I am aware that some, under the christian name, have not abode in the truth, but are an offence and a stumbling-stone. The offences of these are imputed to those of the same profession; yet we wish our own hearts to be established in the truth, rather than specify the errors of others.

"We earnestly crave the king's influence, * * * being often engaged in prayer to God for his welfare, that of our country, and that his people, of every class, may walk uprightly all their days, to the honor and praise of God.

"I entertain a hope that government will not prevent us from serving Christ, who will judge all, and visit for injury done to his faithful people.

"IVER HALVERSEN REVERED."

(To be continued.)

The Telescope.

We might be apt to think, on a slight view of the matter, that there can be no immediate relation between the grinding and polishing of an optic glass, and fitting two or more of them in a tube, and the enlargement of our views of the Maker and Governor of the universe. Yet the connection between these two objects, and the dependence of the latter upon the former, can be fairly demonstrated.

The son of a spectacle-maker of Middleburg, in Holland, happening to amuse himself in his father's shop, by holding two glasses between his finger and his thumb, and varying their distance, perceived the weathercock of the church-spire opposite to him much larger than ordinary, and apparently much nearer, and turned upside down.

This new wonder excited the attention of the father; he adjusted two glasses on a board, rendering them movable at pleasure; and thus formed the first rude imitation of a perspective glass, by which distant objects are brought near to view.

Galileo, a philosopher of Tuscany, hearing of the invention, set his mind to work, in order to bring it to perfection. He fixed his glasses at the end of long organ-pipes, and constructed a telescope, which he soon directed to different parts of the surrounding heavens. He discovered four

moons revolving around the planet Jupiter—on the surface of the sun, and the rotation of the globe around its axis—mountains and valleys on the moon—and numbers of fixed stars which scarcely one was visible to the naked eye.

These discoveries were made about the year 1610, a short time after the first invention of the telescope. Since that period, this instrument passed through various degrees of improvement, and by means of it celestial wonders have been explored in the distant spaces of the universe which in former times were altogether concealed from mortal view. By the help of telescopes combined with the art of measuring the distances and magnitudes of the heavenly bodies, our view of the grandeur of the Almighty, of the plenitude of His power, and of the extent of His universe empire, are extended far beyond what could have been conceived in former ages. Our prospect of the range of the Divine operations are no longer confined within the limits of the world we inhabit; we can now plainly perceive that the kingdom of God is not only "an everlasting dominion," that it extends through the unlimited regions of space, comprehending within its vast circumference thousands of suns, and ten thousand worlds, all ranged in majestic order, at immeasurable distances from one another, and all supported and governed by Him who created them, "who sit on the heaven of heavens," whose greatness is unsearchable, and whose understanding is infinite.

The telescope has also demonstrated to us the literal truth of those scriptural declarations which assert that the stars are "innumerable." By the invention of this instrument, not more than a thousand stars could be perceived by unassisted eye in the clearest night. But this invention has unfolded to view not only thousands but hundreds of thousands and millions of bright luminaries, which lie dispersed in all directions throughout the boundless dimensions of space. And the higher the magnifying power of the telescope are, the more numerous countless orbs appear, leaving us no room to doubt that countless myriads more lie hid in the distant regions of creation, far beyond the reach of the finest glasses that can be constructed by human skill, and which are known only to Him who counts the number of the stars, and calls them by their names."

In short, the telescope may be considered serving the purpose of a vehicle for conveyance to the distant regions of space. We now consider it as a wonderful achievement can transport ourselves two hundred thousand miles from the earth, in the direction of the moon, in order to take a nearer view of that celestial body.

But this instrument enables us to take a nearer inspection of that planet than if we actually surmounted the force of gravitation, and versed the voids of space, and left the earth at a hundred and thirty thousand miles behind. For supposing such a journey to be accomplished, we should still be ten thousand miles distant from the moon. But a telescope which magnifies two hundred and forty times, can show views within one thousand miles of it; and with a scope such as Dr. Herschel's forty feet re- which magnifies six thousand times, would enable us to view the mountains and vales of the earth as if we were transported to a point about ten thousand miles from her surface. We can view the magnificent system of the planet Saturn by means of this instrument, as distinctly as if we had formed a journey of eight hundred miles in the direction of that globe, which rate of fifty miles an hour, would require a

re than eighteen hundred years to accomplish the telescope we can contemplate the region fixed stars, their arrangement into systems, their immense numbers, with the same directness and amplitude of view as if we had not taken a flight of ten hundred thousand miles into those unexplored regions, could not be accomplished in several million of years, though our motion were as rapid as projected from a loaded cannon.

would justly consider it as a noble endowment for enabling us to take an extensive survey of the works of God, if we had the faculty of sorting ourselves to such immense distance as the sphere we now occupy, but by means of telescopic tube we may take nearly the same view of the dominions of the Creator, with-
 out a foot from the limits of earth.

An instrument may, therefore, be considered an accidental gift, bestowed upon mankind to facilitate the meantime, as a temporary substitute for the powers of rapid flight with which the human mind is endowed, and for those superior powers of motion with which man himself is gifted when he has laid aside this material garment and entered that spiritual world for which he was created, where time and space do not exist, all his acquisitions in knowledge and power will be more fully developed, and where he will be enabled the better to perceive the greatness and goodness of that Heavenly Father who created all things, visible and invisible, who might bestow happiness on all that he pleased, and number of beings which His divine love has created; all which knowledge he has made man with humility and submission.

The Turkish Women.

most striking and painful feature of Mohammedan countries is the degraded position of the women.

The lower classes wear out their lives in the most brutal and ignominious manner, in proportion as they are the scale of rank and beauty (beauty makes a difference) they are petted and caressed, but at the same time guarded with the most jealous care. Any woman in the Sultan's dominions, no matter what her birth and circumstances, may become an inmate of his harem provided she possesses the requisite perfection of face and figure, what is yet stranger, she may often anticipate giving in recognized marriage to some of his chief officers. Yet there is no respect shown because of her nature, her character, her sphere. She is admirable only so far as she contributes to the pleasure of man; and, in all that whatever influence she has is due to her personal charms. Alas for the one who is the object of admiration for her face or form? Her happiness is not of this world, and according to the creed her heritage is doubtful in the world to come.

It is a mistake to suppose that Mohammedan women go abroad. You meet them in every bazaar, but always veiled according to the usual fashion of the place they inhabit, and attended just in proportion as they are valued, so that the more restricted they are the more complimented they must feel. Their dress is everywhere much the same—loose robes, confined at the ankle, a flowing robe or shawl about the waist, and jewels proportionate to the wealth of the wearer—a style much more graceful and desirable than many modes of dress dictated. At Cairo, the women of the lower classes wear usually in the street a black silk or velvet which envelops them from head to foot, and a black veil or screen which entirely conceals

the face, except the eyes. The dress of the poor is similar, but the material is a coarse blue cotton. Hundreds of women of this latter class sit all day upon the ground with a little pile of bread or fruit or vegetables by their side for sale; and through all the oppressive heat never lift their veils, considering it a disgrace, which only the lowest will incur, to have their faces exposed to view, while at the same time perhaps neck and bosom are wholly bare. The young girls at eight or nine years of age assume this veil. In Damascus, a thin bright-colored handkerchief of silk or cotton is drawn over the face and fastened behind. The shrouding mantle here is of white cloth, sometimes of embroidered muslin, and with the wealth of those rich silk fabrics for which Damascus is so renowned. Nowhere, except in sea shells and sunset skies, have I seen such tints as there—yellow pinks, rose purples, orange blues, crimson greens, maroon browns, all shot through with gold and silver thread, a blending that pleases and yet bewilders the eye. The native dyes of Cashmere boast of having more than forty distinct and peculiar hues. I think there cannot be less at Damascus.

In Constantinople the veil gives place to the *yachmac*, a scarf of the finest and most delicate white muslin, which is folded across the head and face, leaving the eyes and part of the forehead uncovered, and pinned or gathered into a knot at the back. Nothing could be more becoming than this gauzy muslin, giving a transparent look to the complexion, enhancing the brilliancy of the soft black or brown eyes which glance from between its folds, and only half hiding the luxuriant hair. I noticed that the prettier the woman the thinner was its texture; and there were some blooming faces to which it was only such drapery as the moss is to the rose bud. Often it was caught back with pearl-headed pins, while pearls hung in the ears or gleamed in a bandeau along the brow. The outer garment, the *feridje*, is more graceful in shape than those worn elsewhere, and falls from the shoulders like a cloak or shawl. Its common material is merino or poplin, of a plain light color—gray, fawn, lilac, maize, and sometimes crimson or green. Rings set with turquoises and diamonds sparkle upon the fingers, but gloves and black shoes are rarely seen, the slipped feet being encased for walking in loose boots of red or yellow morocco.

It is said that many of the Turkish women are wearying of their present prescribed attire, and getting a taste for Western fashions. Indeed, some of them have carried their discontent and envy so far as to spit upon and push down Europeans passing them in a fresh Paris costume. An elegant English lady, residing in Constantinople, told me that she had twice been thus treated in the bazaars of Stamboul. Their own dress, however, is very pleasing, from its simplicity of form and color; and, if they did but know it, unless they could be guided by a faultless taste, they would lose, rather than gain, by the change.

The alabaster smoothness and clearness of skin which many of them possess is doubtless owing to a great measure to their frequent use of the bath—the first and most important part of their toilette. It subserves also another purpose for which women are wholly Eastern. It is a kind of a matrimonial market, and the brokers are the attendants. The customs of society makes it so difficult for young men to see young women, and to judge of their attractions at first hand, that they often go to the matrons of the baths to hear of some one captivating to their fancy; and when such an one is described, if there is no obstacle, negotiations are commenced. In this way, I am told, many marriages are brought about.—*The Independent.*

Nonconformity to the World.

Christians must not conform themselves to the world in their carnal amusements. The taste of men discovers itself in nothing more plainly than in their choice of amusements. It is easy to know what these are, and what is adapted to the corrupt taste of the carnal mind. Worldly men are never so much in their element as when engaged in them; and to enjoy them they will often sacrifice their most important interests.

Among these the amusements of the theatre have the first place; for these the world strongly pleads, and affects to place them on a level with divine ordinances, by saying they can learn as much from a good play as from a sermon. But it should be remembered that serious and means of grace, derive all their virtue from the authority of Christ who appointed them and has promised to bless them; but the advocates of plays can never pretend that Christ has either ordained them, or engaged to put his blessing upon them.

So far as plays from being useful to the cause of virtue, that they are one of the most successful engines of vice that Satan ever invented. Several of the heathen philosophers and lawgivers opposed them in the strongest terms. Plato banished them from the commonwealth. Xenophon commends the Persians for not suffering their youth to hear any thing amorous, thinking it dangerous to add any weight to the bias of nature. Seneca complains that by the stage vice made an insensible approach, and stole on the people in the disguise of pleasure. Tacitus says the German ladies preserved their honor by having no play-houses among them. The Athenians would not suffer a judge to compose a comedy. The Lacedæmonians would not endure the stage under any kind of regulations. The Romans, in their better times, reckoned the stage so disgraceful, that any Roman turning actor was degraded. And we may add that the English laws, till very lately, denominated stage-players rogues, vagabonds, and sturdy beggars. The earliest christians abhorred them. Tertullian, in the second century, says, "We christians have nothing to do with the phrenzies of the race-ground, the play-house, or the barbarities of the bear-garden." Some of the ancient councils ordained that players should be excommunicated, and that even the sons of clergymen must not be present at plays, "it being always unlawful for christians to come among blasphemers." A good writer says, "Will you not avoid this seat of infection? The very air suffices by their impurities, and they breathe the plague. What though the performance be entertaining; what though innocence and virtue shine in some parts of it; it is not the custom to prepare poison unpalatably. No; to make the mischief spread, they must oblige the sense and make the dose pleasant. Thus the devil throws in a cordial drop to make the draught go down, and steals some ingredients from the dispensatory of heaven. Look upon all their fine sentences, their flights of fortitude and their loftiness of style, as honey dropping from the bowels of a toad or the bag of a spider."

Archbishop Tillotson thought plays "a mighty reproach to Britain, and not fit to be tolerated in a civilized, much less in a christian nation." He calls the play-house "the devil's chapel, the school of vice and lewdness."

The dancing of both sexes, and especially in public places, is another species of amusement highly pleasing to the world, but extremely dangerous to good morals. The gayety it inspires, the company into which it leads, and various evils connected with it, render it every way unbecoming the christian, who has the utmost need to

cultivate seriousness and gravity, and to live and act as a pilgrim and a stranger. There is scarcely any thing, not absolutely and notoriously wicked, in which conformity to the world consists more than the amusements of the ball-room. Not a few have been called out of it into eternity; but where is the person who would wish, when summoned to the bar of God, to be found so employed?

Playing at cards is another favorite diversion with the world. The express purpose of this amusement is a sufficient argument against it—it is to *kill time*. Alas, our time is short enough, and will die of itself, we need not hasten its exit. Our days are as a hand-breadth, and our age is as nothing. We complain of the shortness of life, and yet labor to reduce its narrow span. It may justly be doubted whether any game be lawful which depends upon casting a lot, for dealing the cards is of that nature, and is therefore a kind of appeal to God for the success of our play, for "the lot is cast into the lap, but the whole disposing thereof is of the Lord!" But, not to insist upon this, it is really a childish business. It is a poor employment for rational and immortal beings to spend many hours of precious time in throwing about bits of spotted paper. The conversation that accompanies it is generally frivolous and foolish. The passions of avarice and anger are frequently excited, and the tragical consequences of gaming are so perfectly opposed to the christian character, that a good man ought to reject the amusement altogether.

There are other diversions, as horse-racing, &c., as well as conformity to the world in gay, indecent or too expensive fashions of dress, upon which we have not room to comment particularly. There is one grand rule applicable to them all, and which may afford a pretty good test of their propriety or impropriety. You will find this apostolic direction in Col. iii. 17—"Whatsoever ye do in word or deed, do all in the name of the Lord Jesus, giving thanks to God and the Father by him!" Now, can we see a play, dance, or play at cards, "in the name of the Lord Jesus and to the glory of God?" Can you pray for the Lord's presence and blessing on these engagements? A good man once convinced a company of the folly of these plays, by offering to say *grace* before cards, or to pray for a blessing on them. The company felt the impropriety, and asked him what he was going to do! The good man replied, "God forbid I should do any thing on which I cannot ask his blessing!" Common sense forbids you to say, "Lord, go with me to the play-house, and bless the good instruction I go to receive!" or, "Lord, give me a good hand at cards!" Such petitions would be justly reckoned impious; but the impropriety clearly shows that what cannot be done with a good conscience cannot be done to the glory of God, and therefore ought not to be done at all. In all these things the consistent christian must remember the text: "Be not conformed to this world."

From what has been said it is surely evident that it is the duty of christians not to be conformed to this world. It is plain that God's people are a distinct people, and ought to be a separate people. There is a holy singularity, though not an affected singularity, which well becomes them. This indeed requires courage. In certain situations, when persons have been closely connected with the carnal and the gay, and especially with the great, it will not be very easy to come out from among them, and avow that they belong to Christ. Yet, let none despair. The scriptures show us how it may be done: "Whosoever is born of God, overcometh the world; and this is the victory that overcometh the world, even our FAITH."

This subject shows us the necessity of the new birth. If we would not be conformed to this world, it is necessary for us to be transformed by the renewing of our mind. Be ye transformed—changed into a better form—from being "earthly, sensual, devilish," to become heavenly, spiritual, angelical; and this is done "by the renewing of our minds!" Oh, that Divine Grace may so transform our hearts that we may prove, and prove by our own experience—for nothing else can teach it—how happy a thing it is to be wholly devoted to God, and to be governed in every respect by his sacred will.—*Village Sermons.*

Selected.

THE LAST WALK IN AUTUMN.

O'er the bare woods, whose outstretched hands
Plead with the leaden heavens in vain,
I see, beyond the valley lands,
The sea's long level dim with rain.
Around me all things, stark and dumb,
Seem praying for the snows to come:
And, for the summer bloom and greenness gone,
With wioter's sunset lights and dazzling morn alone.

Along the river's summer walk,
The withered tufts of aster's nod;
And trembles on its arid stalk
The hoar plume of the golden-rod.
And on a ground of sombre fir,
And azure-studded juniper,
The silver birch its buds of purple shows,
And scarlet berries tell where bloomed the sweet wild rose!

With mingled sound of horns and bells,
A far-heard clang, the wild geese fly,
Storm-sent from Arctic moors and fells,
Like a great arrow through the sky,
Two dusky lines converged in one,
Chasing the southward-flying sun;
While the brave snow-bird and the bardy jay
Call to them from the pines, as if to bid them stay.

I passed this way a year ago:
The wind blew south; the noon of day
Was warm as June's; and save that snow
Flecked the low mountains far away,
And that the vernal-seeming breeze
Mocked faded grass and leafless trees,
I might have dreamed of summer as I lay,
Watching the fallen leaves with the soft wind at play.

Since then, the winter blasts have piled
The white pagodas of the snow
On these rough slopes, and strong and wild,
You river in its overflow
Of spring-time rain and sun, set free,
Crashed with its ices to the sea;
And over these gray fields, then green and gold,
The summer corn has waved, the thunder's organ rolled.

Rich gift of God! a year of time!
What pomp of rise and shut of day,
What hopes wherewith our northern clime
Makes autumn's dropping woodlands gay,
What air outblown from ferny dells,
And clover-bloom and sweet-brier smells,
What songs of brooks and birds, what fruits and flowers,
Green woods and moonlit noons, have in its round been ours.

I know not how, in other lands,
The changing seasons come and go;
What splendours fall on Syrian sands,
What purple lights on Alpine snow!
Now how the pomp of sunrise waits
On Venice at her watery gates,
A dream shall to me be Arabian tale,
And the Alhambra's halls are but a traveller's tale.

Yet on life's current, he who drifts
Is one with him who rows or sails;
And he who wanders widest, lifts
No more of beauty's jealous veils
Than he who from his doorway sees
The miracle of flowers and trees,
Feels the warm Orient in the noontide air,
And from cloud minarets hears the sunset call to prayer!

At times I long for gentler skies,
And bathe in dreams of softer air,
But homestead towers would fill the eyes
That saw the Cross without the Bear.
The pine must whisper to the palm,
The north wind break the tropic calm;
And with the dreamy languor of the Line,
The North's keen virtue blend, and strength and joy join.

Better to stem with heart and hand
The roaring tide of life, than lie,
Unmindful, on its flowery strand,
Of God's occasions drifting by!
Better with winded nerve to bear
The needles of this goading air,
Than, in the lap of sensual ease, forego
The Godlike power to do, the Godlike aim to know.

Then let the icy north wind blow
The trumpets of the coming storm,
To arouse sleep and blinding snow,
Yon slanting lines of rain transform.
Young hearts shall beat the drifted cold,
As gayly as I did of old;
And I, who watch them through the frosty pane,
Unenvious, live in them my boyhood o'er again.

And I will trust that He who heeds
The life that hides in mead and wild,
Who hangs yon alder's crimson beads,
And stains these masses green and gold,
Will still, as He hath done, incline
His gracious care to me and mine;
Grant what we ask aright, from wrong debar,
And, as the earth grows dark make brighter every star.

J. G. Widd.

Marmalade.—A paper was read in the B. Association on the "Confectionery and Marmalade Trade of Dundee"—a trade which has been in existence for seventy years. Some curious statements were made which we copy:

The quantity of marmalade made in Dundee at the present time amounts to above 1,000 tons annually, for the production of which more than 3,000 chests of the finest bitter oranges are imported from Seville, as it has been found that the oranges grown in and around city possess a peculiar and agreeable aroma, renders them better adapted for the purpose than those of any other district either in Spain or elsewhere. When the marmalade is prepared, a sufficient quantity of sugar is added, to preserve it from being, without in any degree impairing the flavor. About four hundred persons are directly employed at the Dundee confectionery works, and it is added that occupation is furnished to many in connection with them. For example, of the Newcastle potteries is to a large extent employed in turning out the well-known plate for marmalade. Of these there are about on a half millions required every year, costing about £6,500. The marmalade season, may be called—that is, the period during all that is required of this preserve for the supply must be made—usually continues about four months, viz., from the beginning of December to the end of March.

The manufacture of confections is also carried on a very large scale, and embraces an immense variety of lozenges, comfits, candied peels, supplied the constantly increasing demand both at home and colonial markets. The quinquina sugar, chiefly refined, used for the coulis marmalade, and preserves made in Dundee would be difficult to estimate, but it is estimated to amount to two thousand tons annually.

Paper.
"If christians must contend," says Taylor, "let it be like the olive and the fig which shall bear the most and best fruit; let the aspen and the elm, which shall make the noise in the world.—*Late Paper.*"

For "The Friend."

the following article from the *British Friend*, fully expresses the views and feelings of the writer of this, that he hopes it may find insertion in *The Friend*," and lead many to ponder the text seriously.

Those who have no sensible experience of the mercies of God, referred to by the Apostle in passage quoted, and which are detailed in previous parts of the Epistle, especially in the chapter, the appeal will be in vain; but to those who have known something of these mercies, this affectionate and moving exhortation of the Apostle need be in vain, but be listened to and obeyed. To attend week-day and business meetings is one way in which the true Christians among our members may confess their Saviour; though no claim can be made upon our Father for blessings, when we do but draw near Him, we receive, yet through His superabounding goodness, confession of Jesus, and coming to the Father to worship Him in spirit, who seeks, yes, such worshippers, will be greatly blessed to do so, as all can testify who have tried it.

J. E. R.

Barnstaple.

NON-ATTENDERS OF WEEK-DAY MEETINGS.

I beseech you, therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service" (Rom. xii. 1.)

Not forsaking the assembling of ourselves together as the manner of some is" (Heb. x. 25.) And the king said unto Arahnah, Nay; but I will surely buy it of thee at a price: neither will I offer burnt-offerings unto the Lord my God at which doth cost me nothing. So David bought the threshing-floor and the oxen for fifty shekels of silver" (2 Sam. xxiv. 24.)

Do not the vacant seats in too many meetings of the Society of Friends, especially on week-days, sadly testify to the neglect of these duties; and is it not to be feared that "the manner of some is" to offer unto the Lord of that which costs them nothing, by presenting themselves before him on the first day of the week, and then, alas! they neglect the assembling of themselves together when the service of the King of the universe, as they imagine, with the superabundant duties or enjoyments of life. It is contrary to most professing Christians to assemble with others for the public worship of God on the first day of the week. There may be little thing of true fealty to him in this. It would seem disreputable, and they would feel conscience-stricken, to omit so obvious a duty; but attendance on mid-week meetings for worship and meetings for discipline is regarded by many as of little importance. They bow to the opinions of their fellow-men as regards first duties; whilst the love and fear of God prove sufficient motives to detach them from their too pressing secular engagements at other times. Very plausible reasons are often assigned for the omission of such attendance—that other duties call for it. In the way—needful attention to business—are of a family—reasonable relaxation—inactivity to spare the time required—deference to employers or partners in trade. Such excuses are to be considered valid if religion were of a trifling matter—if temporal things were to be first, and then the things of God. But the command is clear, distinct, imperative, "Seek ye the kingdom of God;" and no humble creature need fear to accept this in all its comprehensiveness, and with all the consequences it entails fulfillment entails.

The writer believes plain speaking is needed on this subject, and, whilst desiring to plead with the negligent in Christian love, he would that they might very seriously consider whether they are not robbing God of his due, and their own souls of much spiritual benefit, by withholding from him what may cost them something, but which is unquestionably their reasonable service.

Is there not still left amongst us a measure, at least, of that deep and fervent love to Christ and to his cause which so characterized our forefathers, whom neither fines nor imprisonment could deter from attending their meetings? Is the burning zeal of other days no more to be found within our borders? Have those courageous and dedicated ones who feared no evil, but whose hearts were fixed, trusting in the Lord, left no successors? and are we indeed becoming, as a people, faint and feeble in our allegiance and service to our God? Some of us humbly, reverently trust that we are not forsaken of him, but that in many ways He is very graciously condescending to revive his work in our little community.

Whilst freely availing ourselves of every increased facility now offered for scriptural instruction, and of all other means really calculated to promote our spiritual growth, may we never forget the ancient landmarks; never lose faith in the direct influence, guidance, and teaching of the Holy Spirit, or the high privilege of communion with God through him; but rather be willing to be stirred up to greater diligence in the attendance of all our meetings for worship and discipline.

Many can testify that a rich and continued blessing has been bestowed upon them, both outwardly and spiritually, in thus giving up to the calls of duty; and how many have had to deplore a neglect of these meetings as the first steps in declension, which, abating their love to God and their joy in his courts, has led them downward in the path of unfaithfulness and sorrow.

Why should not our younger members seize these opportunities of identifying themselves more fully with a Society which many of them dearly love, and with principles which have stood the test of many a fierce and fiery ordeal?

Let us be faithful to one another, and faithful to ourselves in this matter. Let us ponder in prayer what is due to the Society of which we are members, to the cause of God, and of that dear Redeemer who has done so much for us. If we have been negligent as regards these duties, let us seek in the strength of our Lord to be so no longer, ever remembering the rapid approach of that day when "every one of us shall give account of himself to God."

For "The Friend."

Itacolomite—or Flexible Sandstone.

A few weeks ago a brief notice of a specimen of flexible sandstone appeared in "The Friend." A fuller account of this interesting mineral, (by no means so rare as the writer supposed), is here presented—principally condensed from an article in Silliman's Journal, by Chas. M. Wetherill, M. D., of the Lehigh University.

Its scientific name, Itacolomite, is derived from the mountain Itacolme in Brazil. It is a quartz rock, with a little tale or mica, and occurs in extensive formations in Brazil, in the Ural Mountains, and in Georgia and North Carolina in the United States, and appears particularly to accompany the diamond. The specimens examined by Dr. Wetherill, were from Brazil and North Carolina.

Scattered through the rock are small scales of mica, which are comparatively few in number,

but of uniform size, thin, and determine the cleavage of the rock. These plates lie in parallel planes, as they would settle naturally from a liquid. Where they are abundant in any plane the rock splits there readily. The chief constituent under the microscope, is quartz in very sharply fractured and fine grains. Occasionally are to be seen very minute black grains. The relative hardness of the siliceous grains appears to be that of agate, which may be scratched slightly by them. On one occasion the bottom of the agate mortar received a very decided scratch, which gave color to the supposition of a minute diamond as the cause. The rock is quite porous when compared with other sandstones; water placed in an excavation will filter very readily through the stone, even in a direction perpendicular to the plane of stratification.

The flexibility of this rock has heretofore been attributed to the mica which it contains, an inference which Dr. Wetherill shows to be unwarranted. The flexibility is really due to *small and innumerable ball and socket joints*, which exist throughout the mass of the stone very uniformly. Each joint permits a slight movement which is always greater in one direction. The accumulation of joints suffers a limited motion in every direction. This mobility is not perceptible in thick slabs unless they are large as to their other two dimensions. From such a slab it is easy to obtain a small and thin piece in which the flexibility may be observed; and the thinner the section the greater is the motion. Where small joints or fissures occur, the motion is greater at those points.

This jointed structure is so wonderful that it would warrant the name "articulate" to be given to the mineral, especially if we should find it again in other sandstones by observing them in very thin slabs.

These articulations or joints may be perceived with the microscope in any fragment of the mineral. A piece is fastened to the stage, which is then inverted and slightly tapped to remove any loose grains of sand. Upon adjusting the instrument and touching the specimen gently with a quill point, it is perceived to be composed of small botryoidal masses or congeries of grains of sand. The observer can scarcely divest himself of the impression that he sees a loose layer of sand, until the stage is again inverted and jarred, which demonstrates that the grains are interlocked. By managing the reflected light, with which the object is illuminated, the plates of mica can be distinctly seen; they are very few in number, and take no part whatever in determining the motion. The articulation is not that of basaltic columns. The component grains are arranged so that most of the groups have cavities and projections, and so that the projection of one group engages in the cavity of its neighbor. The rock may be dissected with a needle point, and shown to be made up of such groups of sand particles.

Each group appears to be composed of from twenty to fifty grains of sand not very strongly agglutinated. The individual grains are very sharp fragments of silica, not flat plates, and of great uniformity with respect to size.

The Brazil mineral presents almost exactly the same character under the microscope as that from North Carolina, with the exception that the individual grains, as well as the groups, are somewhat larger.

The flexibility of the itacolomite is shown in a striking manner by a cylindrical piece sawn out from a thick slab of the sandstone and rubbed down to the required shape. This specimen is seven and three-fourth inches long and three and a half inches in diameter. When one end is fixed the

other end may describe a circle of one and three-eighths inches in diameter, touching every point within that area. The rod can also be twisted about its axis, the torsion being 10° .

The most interesting relation of this rock is to the diamond which it accompanies. This gem, found at first in the disintegrated rock, has at length been discovered *in situ*, in the itacolumite itself; thus showing that this sandstone is at least one of the sources of the diamond.

The physical conditions which have led to the peculiar intrinsic character of the itacolumite may have had an important bearing upon the crystallization of the diamond, and hence it is of interest to ascertain what those conditions were, with the hope of throwing light upon the origin of the gem.

It would appear that the sand which formed this rock contained something diffused in a regular manner (and which was subsequently removed), which prevented the uniform contact of the siliceous grains. It is possible to conceive that petroleum might have that effect when added to sand of a certain degree of moistness, and that the sand of petroleum might be afterwards slowly removed by a process which permitted the crystallization of a portion of its carbon. When water was dropped upon dry sand and the mixture stirred, lumps were found of a uniform size; if, before stirring, a little petroleum was added, the lumps appeared to form more readily. The siliceous particles forming the lumps have water between their component grains, causing them to cohere, while the lumps themselves are kept from aqueous contact by a coating of petroleum around each one. Cohesion could take place between the particles, but not between the lumps. Under the microscope the sand thus treated bears a striking resemblance to itacolumite.

Dr. Wetherill says he made this supposition before he knew of DeChancourtois' hypothesis that the diamond may have been formed from hydro-carbons, and that its origin is thus connected with the existence of petroleum-bearing schists.

There is in the museum of the Academy of Natural Sciences in Philadelphia, a slab of this sandstone, some three feet long, placed in a glass case, with an outside handle by which the stone is readily bent, and its flexibility shown.

For "The Friend."

When sickness prevented Mary Dudley from attending one of the Quarterly Meetings to which she belonged, she wrote as follows:

"It appears clear to my best feelings, that if those gathered, and such as are in right ordering personally absent, were first to feel after the renewings of inward strength, bringing their spirits into a state of humble waiting, resignation would be their peaceful covering as individuals, and in proportion to the degree of spiritual life attained to, concern felt that the assemblies might be crowned by the presence of the King immortal; or if he proved a God hiding himself, that His devoted children might continue the acceptable exercise of faith and patience, until He was pleased to command 'light to shine out of obscurity, and their darkness to be as the noon day.' Yea, such would be encouraged to put up a prayer for the remnant that is left, whether in vocal or mental aspiration, till the Lord turn the captivity of the people generally, and cause a glorious breaking forth as on the right hand and on the left.

"I have viewed mentally an assembly such as our Quarterly Meeting, collected under the solemn profession of being spiritual worshippers, sitting in outward silence before the Lord, and apparently waiting only upon Him. Oh the awfulness where-with I have often beheld these meetings, while

my eye has affected my heart, and the language forcibly arisen, let us *be as we appear*, let us gather to the source of unfailing help; fully believing that if all were properly engaged in feeling their wants, and the only way of having them supplied, the united breathing would ascend as pure incense, and the lifting up of the heart be an acceptable sacrifice.

"It is religious consideration which all have need increasingly to dwell under, and were the mind sufficiently withdrawn from subliminal objects to the contemplation of those which are alone pure and permanent, many would assuredly be prepared in a spiritual sense, to unite in the testimony which was borne on a very inferior occasion, many which was borne on far, that the one half was by one coming from far, that had the Lord's not told me. Nay, verily! for had the Lord's not told me, 'the tongue of the learned,' or could messengers, 'the tongue of the learned,' or could they utter with angelic power the sensations they may at times be favored with, all would fall short in describing the beauty of Zion, the safety of her inhabitants, and those transcendent pleasures which are at God's right hand. Let the Lord then work in your hearts, beloved young friends, convincing how true substantial rest is to be found, and through converting goodness entered into.

"The choice is left to us all, none will be forced into the path of happiness, but as the awakening, attractive influence of divine love is yielded to, and the light which maketh manifest obediently followed, the work of transformation will gradually advance; 'the new man which after God is created in righteousness and true holiness,' will strengthen and mature, until there is a reaching to the fullness of the stature mercifully designed."

Cultivation of Nuts.—There are several kinds of native nuts which are extensively consumed, and the sale of them constitutes quite a branch of trade. The Pecan out of the southwestern States is a species of the walnut, of which vast quantities are sold annually, and it is an excellent variety. The shellbark (hickory nut) grows in abundance in many places in this section, especially on the intervals of Nashua river. An hundred bushels are sometimes gathered on a single farm in a season, which sell readily at a fair price. There is a large variety of this nut found in western Pennsylvania, and other places. Many trees of the common hickory produce nuts nearly equal to the shellbark, but in general they are much inferior in quality. The butternut grows spontaneously. In some places in the Northern States the nuts are consumed to considerable extent, and are much superior to the fruit of the black walnut, which, also, is common in New York State, as well as others. The chestnut is the prevailing growth in many sections. In Worcester county it is abundant, forming nearly the entire growth. In some wood lots, instances are known where thirty or forty bushels of nuts were gathered on a farm in a year. Chestnuts vary much in size. Some varieties are nearly as large as the Spanish, others are quite small. The Spanish and other European kinds, some of which produce fruit nearly as large as the horse chestnut, might be grown here in many sections. The imported walnuts and filberts alone, which are consumed in the United States, amount to an enormous sum, and if they can be produced here equally as well, it would appear advisable to make the effort.—*New England Farmer*.

So, Friends, when you come together to wait upon God, come orderly in the fear of God; a few that are thus gathered by the arm of the Lord into the unity of the Spirit—this is a sweet and

precious meeting, where all meet with the Lord. Those who are brought to a pure, still wait upon God in the Spirit, are come nearer to Him than words are; for God is a spirit and in Him spirit is He worshipped; so that my soul is dear union with you who purely wait upon God in the Spirit—though not a word be spoken to the hearing of the outward ear. And there is true feeding in the Spirit; and all who thus meet together to wait upon the Lord shall renew their strength daily. In such a meeting, where the presence and power of God is felt, there will be an unwillingness to part asunder, being ready say in yourselves, it is good to be here; and it is the end of all words and writings—to bring people to the eternal living word. So all hearts, when you come together to wait upon God, come singly and purely; that your meeting together may be for the better and not for the worse. And if any be moved to speak words wait low, the pure fear, to know the mind of the Spirit where, and to whom they are to be spoken. Any be moved to speak, see that they speak in Power, and when the Power is still, be ye still. *Alexander Parker*.

A Dangerous Insect.—Du Chaillu, the celebrated traveller, in a lecture on Africa, gives the following description of the black Bashikonay ant:

"These black Bashikonay ants may well be called the lords of the forest. It is the voracious creature I ever met. It is the dread of all living animals, from the leopard to the smallest insect. It is their habit to march through the forests in a long regular line, a line about six inches broad, and often several miles in length all along this line are larger ants, who act as officers—stand outside the ranks and keep this regular army in order. If they come to a place where there are no trees to shelter them from the sun, whose heat they cannot bear, they immediately build an underground tunnel, through which the whole army passes in columns to forest beyond.

"When they grow hungry, as if by a sudden command, the long file spreads itself through the forest, advancing forward, attacking and devouring all living things with a fury quite irresistible. The elephant and gorilla fly before them, the big men run away, even animals that lives in the line of march is chased. In an incredible space of time those that are caught are overwhelmed, killed, eaten, and only the bare skeleton remains. They seem to travel day and night. Many a time have I been awakened out of a sleep and obliged to rush into the water to save myself from them. When they enter a house they devour every living thing. Cockroaches are devoured in an instant; rats and mice spring from the room in vain. They will not touch vegetable matter; thus they are very useful, clearing the country of many insects. When on the march the insect world flies before them, and I often heard the approach of a Bashikonay ant heralded to me by these means.

"Wherever they go they make a clean sweep even ascending to the top of the trees in pursuit of their prey. Their manner of attack is impetuous leap; instantly the strong pinces fastened, and they only let go when the prey gives way. At such a time this little insect seems animated by a kind of fury which causes it to disregard entirely its own safety. The men relate that criminals, by which they were made wizards, have sometimes been exposed to Bashikonay ants, tied to a tree so they may escape, and then been devoured to the bone.

Selected.

only from carrying on their regular occupations, may be that they can engage in any mechanical labour or mercantile transaction on that day, provided it differs from that which they pursue on other days of the week, and thus we may have it but little distinguished by cessation from labour. Nor can we admit his attempt to prove that, because the running of the cars will accommodate some, by carrying them to their places of worship, and others, by affording the means for escaping from the city to the country, it is therefore a work of mercy or necessity, has force enough to overcome the objections on account of its promoting a disregard of the duties of the day, and its agency in further demoralizing the irreligious portion of the community.

We are convinced that loss has been sustained in regard to a proper estimate being placed by the community generally on the complete devotion of one day in seven to rest for man and beast, and to the duties of public worship and other religious acts, by the promulgation of unscriptural and unsound sentiments relative to the authority for observing the First day of the week, and a peculiar sanctity being attached to it. With the open bible and the general ability to read it, the unauthorized assumptions and the far-fetched inferences on which this Judaizing theory rests, are readily detected by the people; and in their opposition to what they justly attribute to priestcraft, they are liable to, and have run into an opposite extreme: we think the present infringement on the quiet that has heretofore reigned in Philadelphia on the First day of the week, is greatly attributable to this cause.

It is sorrowful to see that in our own religious Society—which from its rise has never acknowledged any moral or religious obligation to observe one day more than another, except as agreed on by Christians generally, and recognized by the law of the land—many, in imitation of other professors, have adopted the use of the word Sabbath to designate the First-day of the week. Did we as scrupulously adhere to truthful language as our profession calls for, and were we as anxious as we ought to be to maintain and spread correct views of the gospel dispensation among others, we are persuaded this would not be the case. The Jewish Sabbath having been fulfilled by Christ—who alone is the believer's rest—and passed away, and neither Christ nor his apostles having given any command, or recommended the observance of any one day more than another, the use of the term Sabbath, as applied to the First-day of the week, conveys an erroneous idea, and is therefore untruthful. But while we believe there is nothing to be found in the New Testament that can be correctly construed as an injunction for the Christian to set one day in seven apart for the service of the Creator, and that the teachings of the Holy Spirit in the heart are, to sanctify every day alike by obedience to and the heartfelt worship of the Almighty, we nevertheless are fully convinced that the general observance of one day in seven for public worship, &c., as practised in Christian nations, is a wise provision, highly promotive of the best interests of the people, and should not be disregarded but for works of necessity and charity.

SUMMARY OF EVENTS.

FORESAID.—Dispatches from Rome announce that the Pope, in accordance with the edicts of France, has ordered the release of all the Garibaldians who were taken prisoners during the late campaign. Transports have been ordered to proceed from Toulon for Civita Vecchia for the purpose of bringing back the French troops. It is reported that Garibaldi is lying seriously ill in prison at Varignano.

It is stated that the government of Bavaria and the

Pope have both acceded to the proposed European conference on the Roman question. It has also been agreed to by Italy and by Wiatenburg. The Conference is to meet at Munich on the 12th of next month. The Austrian government has signified its willingness to join in the conference. Lord Stanley stated in the House of Commons that England had been invited to join a general European Conference, but had refused to do so, on account of the non-acceptance of the first proposal. Lord Stanley thought that participation in such a Congress would only add to the responsibilities of England, without doing any good.

The French Emperor made a speech at the opening of the Chambers, which is pacific in its tone. The speech refers to Italian and German affairs, and questions of peace and reform. It is praised by the *London Times* as a peaceful, liberal, and sensible. He disavows all wish to interfere in the affairs of Germany.

The British Parliament was opened on the 19th inst. The Queen was not present. A Royal Commissioner read the speech from the throne in substance as follows: King Theodore having rejected all demands of Great Britain for the release of her subjects, cruelly and without just cause imprisoned by him, her majesty had no alternative but to send a military expedition to Abyssinia, and reference is made to the supply bills necessary to defray the expenses. The invasion of the Papal States by Garibaldi, and the hostilities between the Emperor Napoleon III and the King of Rome, caused the Emperor Napoleon III to soon withdraw his forces from Italy, and avoid friendly relations with Victor Emmanuel.

Fanaticism has been repressed in Ireland, but has taken the form of organized outrage and murder in England, where it must also be suppressed by the first fulfilment of the laws, and by the loyalty of the people.

The Queen's speech concludes with the promise that her government will bring before Parliament reform bills for Scotland and Ireland, and other domestic measures of an important character.

The English government is not in any way bound to grant the demands of the Inter-oceanic Railway, in the country of Honduras.

Dr. Livingston is now known to have been alive and well, in Central Africa, in the Fourth month last.

Three convicted Fenians named Allen, Larken, and Gould, were executed in Manchester on the 23d inst.

The Sultan of Turkey, though he has declined to adopt the measures of compromise, is endeavoring to restore tranquility and peace to Candia.

Winter has fairly set in at Petersburg, Russia. The river Neva is frozen over, and navigation between Lake Ladoga and the Gulf of Finland is closed.

Consols, on the 23d, 94½ U. S. 5-20's, 73½. The London market for breadstuffs was quiet. Cotton, 84c. for uplands, 84c. for Orleans.

The allied forces in the Paraguayan war have taken Pinar, as reported. The Paraguayans lost 286, killed and captured. A battle was fought near San Solano, on the 3d ult, in which the Paraguayans were again defeated.

UNITED STATES.—Congress.—The fortieth Congress reassembled at Washington on the 21st, according to adjournment. The House is now constituted with one hundred and ninety-three members, and the Senate with fifty-four. In the Senate the Republicans number 42 to 12 Democrats, the House has 144 Republicans and 40 of the Opposition. By the adjournment of the Constitution the regular session commences early in the Twelfth month, and it is supposed but little business will be attempted until after the regular session begins. Sundry resolutions were introduced in both Houses, and they adjourned from the 21st to the 26th. It is believed at Washington that the tax collection bill will be repealed.

Mortality and Agriculture.—The *Union Pacific Railroad* is now finished to the Rocky Mountains, 528 miles west from Omaha. It is intended to prosecute the work during the winter whenever the weather will permit.

Alabama.—The Reconstruction Convention has imposed an additional tax. The bill of rights declares that all persons and classes in the State who may be declared citizens of the United States are declared citizens of Alabama. None can be convicted of treason except on the testimony of two witnesses to the same overt act, or upon his confession in open court. Those convicted of treason are not allowed the right of appeal. All who, on being pardoned by the President had not entered the plea of pardon and guilty, are disfranchised to the number of forty or fifty thousand.

The article of the constitution on the judiciary, as reported, provides that the Governor shall appoint all the judges of the several courts; he appoints and removes to be confirmed by the Senate. The magistrates shall be appointed by the Governor, but the Legislature

may change the manner of appointing them. The chief clerks shall appoint the registers, and the judges shall appoint the clerks of the several courts. The term of these officers shall be six years.

The appointment of judicial officers is provided for, to prevent the elections being controlled by colored voters.

Louisiana.—The State Convention met at New Orleans on the 23d. A majority of the delegates are colored men, and it was supposed they would elect a colored President.

North Carolina.—The registered voters in this State number 174,717, viz., whites, 103,060, and blacks, 657. A large majority has voted for a convention.

South Carolina.—The total registry is 15,338, of which the blacks have 79,585, and the whites 457. In this State also a convention will be held.

Pensions.—The Commissioner of Pensions, at the request of an officer of the Treasury Department, has issued a report showing that the whole number of applications for pensions, by reason of casualties in late war, was 287,472. Of this number 209,628 have been finally acted on, and 67,915 are suspended for additional evidence, and 9293 are awaiting action in order.

The Indians.—The efforts of the U. S. Commission to hold treaties with the northern tribes at Laramie, Nebraska, have been successful. At Laramie a few Indians attended and were willing to make a treaty, but the Commissioners advised the wait until spring when another effort will be made, hold a council with all the northern tribes. At Platte no Indians appeared up to the 23d of February, and the Commissioners separated.

Prairie Fires.—There were recently several of a large of the west. In western and northern Missouri Kansas, many farms were devastated, and immense amounts of property destroyed. The swamps of southern Missouri were said to be a mass of fire, and along Illinois Central Railroad for a distance of 100 miles prairie fires were burning. The general extinguish the fires were greatly desired by the inhabitants.

The Markets, &c.—The following were the quotations on the 23d inst. **New York.**—American gold U. S. prices, 1881, 113; ditto, \$20, new, 107½; 10-40, 5 per cent, 117½. **Superfine** Superfine flour, \$2.50. **Shipping** Oats, \$2.50 a \$1.50; new, \$1.50; floor, \$12.50 a \$15.50; St. Louis, \$10.50 a \$15. **Gennessee** wheat, \$2.81. **Canada** barley, \$1.60. **W. oats**, 80 cts. **Rye**, \$1.67. **Western** mixed corn, \$1.36. **Cotton**, 17½ a 18½ cts. **Philadelphia**—**Superfine** flour, \$7.50 a \$8.50; **super** brands \$9 a \$14. **Wheat**, \$4.40 a \$2.55. **Rye**, \$1.72 a \$1.85. **Barley**, \$1.43 a \$1.45. **Oats**, 75 a 78 cts. **Corn**, \$7.50 a \$8. **Timothy**, \$2.50 a \$2.60. **Flaxseed**, a \$2.50. **Cincinnati**—**New** corn in the ear, 70 a 72 cts. **Do**, 62 a 64 cts. **Middlings** cotton, 15½ cts. **Oil**—No. 2 spring wheat, \$1.72. **Corn**, 87 a 90 cts. **St. Louis**—**Superfine** flour, \$1.75 a \$1.85. **Old** corn, 97 a \$1; new, 98 cts. **Oats**, 67 a 69 cts. **New Orleans**—**Fair** 11½; **prime**, 13½ cts. **Yellow corn**, \$1.10. **Oats**, 78 cts. **Baltimore**—**Prime** red wheat, \$2.55 a **Yellow corn**, \$1.35 a \$1.37. **Oats**, 70 a 73 cts.

NOTICE.

A suitable Friend and his wife are wanted to attend and manage the farm and family under the management of the great and glorious Civilization, and movement of the Indian natives at Tunnessas, Kansas Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., John M. Kaighn, Camden, N. J., or to Charles B. Sharples, West Chester, Pa., or to Richard B. Bagg, Marshfield, Chester Co., or Joseph Scattergood, 413 Spruce Street, Philadelphia.

DIED.—on the 5th of Eleventh month, 1867, A. Scull, in the 82d year of her age. "Blessed be dead which die in the Lord from henceforth: Ye of the Spirit, that they may rest from their labors; their works do follow them."

—, on the 30th of Ninth month last, at the residence of his mother, Deborah Ann, HENRY LISA, a member of Chester Monthly Meeting, 74 years.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

DL. XLI.

SEVENTH-DAY, TWELFTH MONTH 7, 1867.

NO. 15.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

Gold Beating.

The origin of this art is not known, but it seems of some antiquity. It was known in Greece, mentioned by Homer. The ancient Persians made very thin sheets of gold and nailed together on the walls of their temples. On the sides of the Theban mummies specimens of gold leaf are met with where the gold is in so thin a state that it resembles modern gilding. It seems to have been practised in India, as there are rude specimens of gilding at Tippos's palace at Bangalore.

The thickness of the leaf is spoken of by Martial as a vapor, and by Lucretius it is compared to spider's web. From a description by Pliny, of the gilding, the thickness of the leaf bears comparison with that of the modern gold beater. It accounts an ounce of gold was made into one hundred and fifty leaves, each four fingers thick. This is about three times the thickness of leaf now in common use; but some quality so thin that two hundred and ninety sheets make a pile only one inch in height; and specimens have been made only one hundred and sixty-seven thousand and five hundredths of an inch in thickness, which is one hundred and two hundred times thinner than ordinary gilding paper. The thinnest gold leaf of French manufacture is not thicker than the four hundred and eighty thousandth part of an inch, that of the English is about the three hundred thousandth.

To prepare the gold for beating it is melted in a lead crucible, with borax, in a wind furnace, and as soon as it is in perfect fusion it is poured into an iron ingot mould six or eight inches long, three quarters of an inch wide, previously greased, and heated so as to make the metal run and smoke, but not so as to flame. When the gold is fixed and solid, it is made red hot, and the unctuous matter, and then reduced to a long plate, which is further extended by passing it between polished steel rollers till it becomes no thicker than a ribbon or a sheet of paper. The plate, or ribbon as it is called, is evenly divided by compasses and cut by shears into square pieces; each of these pieces is worked by hammer on the anvil till it is one inch square, and is then annealed to correct the brittleness acquired by the forging and flattening, each piece weighing about six grains, and, next, in this state, being about one seven-

hundred and sixtieth of an inch in thickness, one hundred and fifty of them weighing two ounces, the quantity commonly operated on at a time.

These are now to be extended by beating; and to effect this it is necessary to interpose some smooth body between them and the hammer for the purpose of softening the blow and defending the gold from its immediate action, as also to place between every two of the plates some intermediate substance, which, while it prevents their uniting together, may suffer them to extend freely. These objects are attained by means of certain animal membranes; these are of three kinds, and used for different purposes: First, the outside cover is commonly parchment, made of sheepskin; secondly, for interlaying with the gold in the early state of the process they use fine vellum made of calfskin; and, thirdly, for the later part of the operation they use the intestines of oxen, which are slit open and prepared for this purpose only, and hence called gold-beater's skin.

The manufacture of this article is a secret which, it is said, only five men in the world now know. The art of preparing it has brought a fortune to the manufacturers. Wickstead, of London, attained the highest perfection in the art in the last generation, and promised to leave the secret to a relative at his death-bed. In his dying gasp he called the relative to his side to open the mystery, but died, and it remained still a secret. F. Puckridge, of London, is the most celebrated maker now. With great perseverance and expense he succeeded in perfecting the art. He has promised, it is said, to reveal the secret to his nephew.

The bed on which the gold is beaten is a smooth block of black marble, weighing from three hundred to six hundred pounds, about nine inches square on the upper surface, fitted into a wooden frame two feet square, so that the frame and marble surface are one level. The back and both sides are furnished with a high ledge, and the front, which is open, has a leather flap fastened to it, which the goldbeater uses as an apron for preserving the fragments of the gold which may fall off. The only tools are three hammers having round and somewhat convex faces; the first or heaviest, called the cutch hammer, is about four inches in diameter and weighs from seventeen to twenty-five pounds; the second is called the shoder hammer, and weighs about twelve pounds, having the same diameter; and the third, still nearly of the same diameter, weighs about ten pounds. The square pieces of gold—one hundred and fifty in number—above mentioned, are interlaid with leaves of vellum about three or four inches square, one leaf being laid between every two, and about twenty more are laid on the outside, over these is drawn a parchment case open at both ends, and over these another in a contrary direction, so that the vellum and plates of gold are kept tight and close. The whole is then beaten alternately with the right and left hands, with the heaviest of the three hammers, which rebounds by the elasticity of the skin and saves the labor of lifting, till the gold is extended to the breadth of the vellum. Each leaf is then

taken out by a delicate pair of whitewood pincers, and cut into four pieces with a steel knife, and put between the skins of a "shoder," four and a half inches square and three-quarters of an inch thick, containing about seven hundred skins, which have been worn out in the finishing process. The beating is then repeated with the lighter hammer for two hours. As the gold will spread unequally, the "shoder" is beaten upon after the larger leaves have reached the edges. The effect of this is, that the larger leaves come out of the edges in a state of dust. This allows time for the smaller leaves to reach the full size of the "shoder," thus producing a general evenness of the size of the leaves.

Each leaf is again cut into four pieces, and placed between the leaves of a mould composed of about nine hundred of the finest skins, five inches square and three-quarters of an inch thick; this is the last and most difficult stage of the process; and on the fineness of the skin and judgment of the workman the perfection and thinness of the leaf of gold depend. During the first hour the hammer is allowed to fall principally upon the centre of the mould. This causes gaping cracks upon the edges of the leaves, the sides of which readily coalesce and unite without leaving any trace of the union after being beaten upon. At the second hour, when the gold is about the one hundred and fifty thousandth of an inch in thickness, it for the first time permits the transmission of the rays of light. In pure gold, or gold but slightly alloyed, the green rays are transmitted; and in gold highly alloyed with silver the pale violet rays pass. The mould then requires in all about four hours' beating with a seven-pound hammer, when the gold will have arrived at the ordinary thinness for the gold leaf of commerce. It is then taken out of the mould, and the rough edges are cut off by slips of ratan fixed in parallel grooves of an instrument called a "wagon," the leaf to be laid on a leather cushion for that purpose. The leaves thus prepared are placed in a book capable of holding twenty-five leaves each, which have been rubbed over with red ochre, to prevent the gold clinging to the paper.

The dryness of the cutch, shoder and mould is a matter of extreme importance. They require to be hot-pressed every time they are used, although they may be used daily, to remove the moisture which they acquire from the atmosphere, except in extremely frosty weather, when they acquire so little moisture that then a difficulty arises from their over-dryness; the brilliancy of the gold is diminished, and it spreads very slowly under the hammer. On the contrary, if the cutch or shoder be damp, the gold will become that which is technically termed hollow or sieve-like—that is, it is pierced with innumerable small holes; and in the moulds in its more attenuated state, it becomes reduced to a pulverulent state. This condition is more easily produced in alloyed gold than in fine gold.

It is necessary that each skin of the mould should be rubbed over with calined gypsum each time the mould may be used, in order to prevent

the adhesion of the gold to the surface of the skin in the process of beating.

Gold used for beating is never quite pure, because pure gold is too ductile to be worked between the goldbeater's skin; the finest gold for the purpose has three grains of alloy in the ounce, and the coarsest twelve grains. But in general, the alloy is about six grains to the ounce, or one-eighth part. The alloy is silver or copper, or both, and the color produced is of various tints accordingly. Two ounces and two pennyweights of gold are delivered by the foreman to the workman, who, if skillful, will return twenty thousand leaves, or eighty books, together with one ounce and six pennyweights of cuttings.

The leaf in this perfection is so thin that a hair of the head falling in between the leaves and the tool will cut ten or twelve of the leaves. And, although this leaf is the thinnest substance known to science it is perfectly airtight.

SILVER LEAF.

We have seen that the gold-beater cannot mix a considerable quantity of alloy with the gold without destroying its ductility, but a means has been devised of producing what is called part gold leaf, the basis of which is silver, and which has only a superficial coat of gold on one side. This is done by placing a thick leaf of silver and a much thinner leaf of gold one upon the other. Being heated and pressed together they unite, and being then submitted to a process in every respect similar to the one above described, the gold, though in quantity only about one-fourth of that of the silver, is found everywhere to cover it, the extension of the latter keeping pace with that of the former.

By the above process silver is beaten. Though much less malleable than gold, it may, nevertheless, be beaten out to cover a greater surface than the same weight of gold, in consequence of its greater bulk for the same weight. But the inferior value of the metal does not render it commercially desirable to bestow so much labor upon it. Copper, tin, zinc, palladium, lead, cadmium, platinum, and aluminium can be beaten into thin leaves, but not to the tenuity of gold or silver.

Dentists' gold is gold leaf carried no further in the process than that of the cutch, and should be perfectly pure gold.

The fragments of the gold-beater's table are not lost, but may be melted over, or used in the manufacture of shell gold, used by gilders and illuminators, and with which gold letters are written. They are generally put to the latter use. The process of preparing shell gold from these fragments is interesting. It is made by grinding the gold fragments with honey, and afterwards separating the honey from the powdered gold by means of water. When the honey is washed away the gold may be put on paper or kept in shells—whence its name. When it is used it is commonly diluted with gum water.

The ordinary size of a leaf of gold is three and three-eighths inches for the production of two thousand leaves, of which, from eighteen to nineteen pennyweights of gold were allowed to the workmen fifty years since, in London; but now, owing to the improvement in the quality of the skin and superior skill on the part of the workmen, not more than an average of sixteen pennyweights is required, and with very skillful workmen it is sometimes accomplished with fourteen pennyweights. This, however, is not to be taken as any test of the extreme malleability of gold; it is only the point to which it is desirable to attain for commercial purposes.

The United States is becoming the great market for the manufacture and sale of gold leaf. It is now more extensively used here than in any other part of the world. In bookbinding, gilding frames, ornamenting of steamers, churches, places of amusement and saloons, it is used extravagantly with us.

In the city of New York there are thirty establishments for the manufacture of gold leaf, only five of which, however, are on an extensive scale. There are altogether sixty minor establishments in New York and its vicinity, comprising Newark, Jersey City, Williamsburgh and East New York. The beaters of New York purchase their material principally from the Mint at Philadelphia, in bars twenty-four carats fine.

Some purchase their gold from the refiners in this city. Many buy up old English sovereigns, but the principal dealers will not purchase them, because this gold is but twenty-two carats fine.

The manufacture in New York hardly keeps pace with the demand, which is constantly increasing. A large quantity of gold leaf is imported to this country from abroad, but the American manufacture is fully equal, and by some considered to be superior, to any foreign importation.—*E. Post.*

Friends in Norway.

(Continued from page 106.)

In 1838 the meetings for discipline, which had been suspended for some years were revived, and more young Friends received into membership. The continued emigration to America, tended to reduce their numbers, though the vacant places were supplied by fresh conversions.

In 1839 Elias Tasted, under date 4th mo. 4th, writes thus: "It is at all times pleasing to hear from true Friends, and of their welfare; but sorrowful to hear of their decay and falling away from the truth, and of the great harm such do to the true seekers after the way to Zion; and, above all, that the great name of the Lord should thus be dishonoured.

"Ah! how great sorrow does it cause to the true laborers in the Lord's vineyard, to look on those who once were called disciples, when they become scattered by the enemy, and as sheep without a shepherd. May those who behold such instances with sorrow and distress, be steadfast and faithful in maintaining the Lord's standard, even although they may be standing alone, and none to help them.

"Oh! how many times have we felt ourselves as strangers in a strange land, where we must sit alone, sorrowing as a dove which has lost her mate."

"Friends here are few, yet there is an increase; and some are brought amongst us by conviction; yet the grand adversary, like Pharaoh with his army, is striving to catch, and bring them back again into bondage.

"The governor of this town has sued me at law, two or three times, because I cannot pay to their school, because of the kind of books (the Lutheran Catechism, &c.) which they keep to teach the children by, and some other considerations.

"I was also sued many years since, for not burying my children in their graveyard. It amounted to between three and four pounds (English), but they never took the whole of it.

"These things are all as nothing, so long as our dear Lord does not withdraw his grace from us; for if he did, all would be lost.

"My health is lately a little better, and I feel a desire to see some of you once more. I desire to live before my God, that in his love I may

always continue to remember my brethren and sisters, who are travelling through this wilderness of proving and affliction. May such seek after the eternal crown. May the times of darkness never be such as to separate us from this desire of thy affectionate friend, Elias Tasted."

Fifth mo. 23d, 1840. Elias Tasted writes to Friend of Newcastle, England: "Soren Erickson of Stagland, lives 24 English miles northward over the water. He has a wife and six children, all of his mind. He keeps weekly meeting in his house. He has been sued by law for not baptizing two children; and one horse, six cows, and some sheep, have been distrained, and nearly all the cattle that he possesses. They worth £13 English [80s.] They are not sold (but were sold) except the sheep. We keep meetings up stairs in my house, twice on First day and have two evening meetings during the week. The meeting for discipline is held every 2 months, and the queries respecting Friends' principles are read amongst us. Our meetings worship are mostly held in silence. We have plenty of Friends' books in English, which I read and interpret to my friends and others; and of have they caused the tears to run from their eyes. May the peace of Zion be amongst all of you who love the Lord Jesus Christ."

The following lively little letter is from E. Rasmussen, one of the Friends of Stavanger, acknowledging the receipt of a copy of Barclay's Apology, in the Danish language:

"4th mo. 14th, 1841. "Beloved Friend,—thou art thanked here for the book sent me * * * I am infirm, yet dress thee a few words; for we may not see each other in this life, but believe I have fellowship with you in spirit.

"We, in this strange land, are far separated from one another, and from you; but when we hear our Heavenly Father's will, we have confidence that when our time here in this world is done shall be gathered together into our Heavenly Father's presence with gladness. The love respect shown to the poor Friends in Norway convinces me that we are one spiritual family when one member feels for the other, it is the love which the Lord Jesus describes 'By which shall all men know that ye are my disciples, if ye have love to one another.'

"My low moments are often enlivened to hope that should I never see you in this life may, by an upright walk, find communion in heaven, by life. I feel love and regard flow to Salute all the Friends. From a feeble Friend in Norway, who desires the grace of God for you for himself.

ENDER RASMUSSEN. In 1844, the same Friend writes: "Here is any sounding instrument, as a minister of the city, in our religious meetings; but the sound in our silent gatherings, is a low sigh or groan, the outward ear, and tears rolling down Friends' cheeks to the outward eye; which, I believe that sacrifice which the Lord, to this day graciously accepts. And we have a hope that of greater clearness, or brightness, will arise in the Lord's time.

"We hope it will be cause of gladness to hear that the Lord is at work amongst the people of this town, in our apprehension, more than before. Amongst the young people, some are desiring to attend our meetings, and others enquiring after the true way, which is the gladness to us."

Endre Dahl, a young Friend who had some months in England during the previous year, studying the English language, writes 10th mo. 18th, 1844: "It rejoices me that

from thee and thy Friends that we experience a birth in our little society; many attend our assembly who appear to be touched by the tender affection of the Divine Witness in their own hearts. They have found no true peace in their former ceremonial worship; and although we have a minister who (speaks) to our outward ear, yet believe the Bishop of our souls is often present among us; and we have learned the necessity which is laid upon us, as a Christian body, not to be our dependence upon man. Some of the more convinced Friends appear to be very ardent in their spirit, and a great love is felt towards them. We are persuaded they are not convinced of men, but by Divine Grace alone, which called them out of Egypt spiritually, and by the light of Christ, which shined unto them, and showed them which way they should go. And thus have we a hope that the plants which the Heavenly Father himself has planted, will bear fruit. I believe a great love to be maintained among Friends; and we are few in number, we appear to love one another the more; and we would therefore more value the want of the conversation of a single one than to whom the affairs of the society are their best concern.

We also feel that the spirit of this world does choke the seed of the Kingdom, so that it bears no fruit. The Apostle warns us not to be conformed to this world. So ought we, according to our high and holy profession, to be very self-denying in our lives and conversation. And I hope to perceive that the young convinced Friends amongst us, have their attention directed to the self-denial in their apparel, and the simplicity which the Cross of Christ led Friends into at the beginning."

The same Friend, 7th mo. 11th, 1845, remarks: "Though the Lord in his wisdom has seen fit to be useful for us to be yet in want of such qualifications, notwithstanding this there has still become added to the church. We have learned the school of Christ not to depend upon man, but solely upon the Lord Christ, the Bishop of our souls. He said to his disciples, 'I am among you that serveth.' Let us, therefore, examine ourselves, how far we have been willing, like him, to sit at Christ's feet, choosing that good which should not be taken away from her; thus he may thoroughly purge his floor. For we seem willing to do much for the Lord, who will be willing to separate from all that prevents the work of the Lord going forward."

In the 7th of last month, accompanied by myself and other two Friends, we set out to visit Friends and others who profess with us, at a distance from Stavanger. We took a stage and travelled by land and water 120 English miles. We visited many pious people, and dismissed tracts amongst them.

A few weeks after this, we made another visit to a little boat, to a similar class of persons, it was to our own edification. In both these visits we met with several who received us kindly; and we hope some of them will turn to the Lord and Christ."

(To be continued.)

Deep Well.—A late American traveller after exploring the Saxon fortress of Königstein, a work of great extent and immense strength, situated on a high ground, thus speaks of its celebrated well: "Perhaps, however, the most interesting feature in the fort is an immense well, which has been sunk through the solid rock six hundred feet in depth and twelve feet in diameter, and has, at the bottom, sixty feet of water. Forty years of incessant labor were spent in this work, neces-

sary to the completion of the impregnability of the fort, for without a supply of water the period to which the resistance of a siege could be prolonged would be brief. The work is a marvel of human industry and perseverance, which is rendered the more appreciable to the visitor by the assistance of a portly old dame, who, while you are gazing with a sense of awe into its black depths, pours a jug of water over its curb, which, if you take the trouble to time it, you will find takes seventeen seconds to reach the bottom. Another mode of showing the great depth of the well is to light a curiously constructed lamp, having four arms, with burners at the end of each arm, which she lowers by means of a small cord from a reel arranged for the purpose.

"The fitful glare of the descending light upon the moss covered and deeply stained walls enables one to obtain a still more realizing sense of the huge task which the work presented to its projectors.

"As I turned and left the precincts and descended to the peaceful valley below, the reflection was once more forced upon my mind, as it has been so often, during my stay upon this side of the water, what a different spectacle would these long-inhabited countries present to the world, both in a moral and physical point of view, had the vast proportion of labor and expense which could have been so well spared from the enormous amounts that have been devoted to the development of the military arts and the construction of works of defence, been appropriated in a spirit of disinterested humanity to the intellectual culture of their people and the development of the industrial arts. Then, instead of the turbid stream of stolid and vicious masses which now pours from hitherward to our broad and hospitable shores, the outpourings of their surplus population would consist of material capable of enriching the newer countries into which it might flow—instead of serving, as it is so largely the case in our experience, as a disturbing element, taxing the vigorous assuiling powers of our freer intellectual growth to their uttermost.

Selected.

Some expressions of Thomas Shillitoe respecting himself to a Friend who called to see him during his last illness: "I feel that I have nothing to depend upon, but the mercies of God in Christ Jesus. I do not rely for salvation upon any merits of my own; in my own works are as filthy rags: my faith is in the merits of Christ Jesus—and in the offering he made for us. I trust my past sins are all forgiven me,—that they have been washed away by the blood of Christ, who died for my sins. It is mercy I want, and mercy I have; and notwithstanding I thus speak; I am sensible that I must not presume upon this mercy, but it is only as I endeavor, through Divine assistance, to walk circumspectly, that I can hold out to the end." He afterwards said: "My love is to everybody, the wicked and all; I love *them* but not *their* deeds. I truly know sorrow as it is to the body, but not as to the mind. My head aches but not my heart. What am I better than other men? But now I shall have to appear to answer for my precious time. What have I done that I should not have done, and left undone that I should have done?"

When Dean Swift was arguing one day with great coolness with a person who had become exceedingly warm in the dispute, one of the company asked him, "How can you keep your temper so well?" "The reason is," replied the Dean, "I have truth on my side."

Supply, Value, and Uses of Peat.

As to the supply of this new fuel, new to this country, all inquiries seem to tend to the same general results, to wit:

That the supply of peat is abundant throughout the whole northern line of our States and Territories, and in Canada.

That a very large proportion of these deposits are of excellent quality for fuel, varying, however, in character and value in much the same manner as the different kinds of wood and coal.

That a very large proportion of these deposits are accessible to existing routes of transportation, many of them near to and easily accessible from towns or cities where the present consumption of fuel is very large, and which would, at any time, afford a ready market for this fuel, if produced.

That in many sections where, by reason of diminished supply or increased cost of transportation, the cost of fuel has of late years, so rapidly advanced as to give serious cause for alarm, extensive deposits of good peat have been discovered, which need only to be properly developed to afford abundant supply, and absolute relief from impending difficulty.

That in many places, both in the Eastern and the Western States, the proper development of these resources of fuel will unquestionably tend directly to promote manufacturing interests to a very considerable extent, and that the iron interest is to be especially benefited by it.

That the general development of these resources of fuel are to operate to great advantage upon railroad interests in all sections of the country.

That throughout very large sections of country at the West, not yet populated, but presenting large inducements for emigration and improvement, and lacking only the very essential commodity of fuel, there have been discovered extensive beds of peat from which can be produced an excellent fuel, in ample quantities, and at small cost, to supply this only lack, and the general tenor of correspondence and numerous newspaper articles from that region indicate conclusively that these discoveries are considered as deciding the question of the settlement of some of these localities, which, but for this supply of fuel, would inevitably remain unimproved and uninhabited.

That for many years in all parts of the country this material, in its crude unmanufactured state, has been used, to a limited extent, as an article of fuel, and that from actual use, the fact is well established and universally acknowledged that it is a good fuel.

That the experiments of the past three years have abundantly demonstrated the fact that by simple and inexpensive methods of manufacture, it can be very much reduced in bulk, increased in density, and put in good merchantable form available for transportation and for use wherever fuel of any kind is required, whether for domestic purposes, or in manufactures and arts.

That although in its manufactured form, above-mentioned, its excellence and superiority, even for many purposes, is beginning to be freely acknowledged, yet its full value and merit are really comprehended as yet, by only a very few, and those who have become familiar with its use and proper management, give testimony concerning its comparative value, which at present will hardly be credited, though a little prudent attention to the very important matter of "how to use a good fuel after you get it"—will give practical results which the community are hardly prepared for.

We are informed of several little trials of this fuel recently made in New York City, which are

of a similar character with many others which come to our knowledge, but don't happen to get into print.

At the Metropolitan Hotel, a trial was made of it for cooking purposes with very gratifying results. At a recent meeting of the directors of one of the prominent banks on Wall street, their fire was supplied with the "new fuel," which attracted so much attention by the simple display of its good qualities, that said directors passed a vote approving of it in the strongest terms.

W. D. Andrews & Bro., one of the largest iron houses in this city, used a quantity under their patent super-heating steam boiler, fire-box 36x42, with the same grates and draft as for coal, which by no means an economical manner of using it, for the size of the fire-box should be reduced full one-half, and the draft should be reduced even more than that, although it is difficult to make people believe this; yet an intelligent fireman soon comprehends it, from the fact that this fuel ignites very easily and generates a volume of gas such as is not produced from any other fuel, which, if drawn off too rapidly is not consumed, but lost. They say:

"For rapid steaming the peat is superior to any fuel we have used, raising steam twice as fast as coal, makes it invaluable for many purposes, such as for steam fire-engines, wrecking purposes, and for portable steam purposes generally, as it greatly enhances the available power of any given size of boiler. We used a portion of the peat for working steel with a very gratifying result, and believe it to possess qualities for that purpose even superior to charcoal."

At the Delamater Iron Works, it was found by their engineer that a barrel of condensed peat would hold the steam at a given pressure for 80 minutes, while a barrel of coal, applied under precisely the same circumstances, would hold the steam at the same pressure for only 30 minutes. This statement is beyond anything that we were prepared for, and we could hardly expect it to be credited outside of those who have had experience as to what peat fuel will do; but the unqualified statement of the engineer is confirmed by several others in the establishment.

During the past year, a great many peat beds have been examined, and in many cases specimens taken out, dried in the ordinary way and used for fuel for household and ordinary purposes with almost universal satisfaction. In some places material that was supposed to be simply black mud, has proved when taken up and dried, almost as combustible as charcoal.

The value of peat fuel can only be ascertained by using it properly. It can be wasted or burned to disadvantage as easily as coal, but it can be used economically, managed and burned to good advantage, much more easily than coal. Peat should be burned in smaller fire-boxes, and in less quantity than coal, and with very little draft, but replenished somewhat more frequently. It burns with a brilliant flame. The heat is clear and intense.—*N. Y. Tribune.*

Need of Watching.—Dr. Johnson, giving advice to an intimate friend, said, "Above all accustom your children constantly to tell the truth, without varying in any circumstance." A lady present, emphatically exclaimed, "Nay, this is too much; for a little variation in narrative must happen many times a day, if one is not perpetually watching." "Well madam," replied the doctor, "and you ought to be perpetually watching. It is more from carelessness about truth, than from intentional lying, that there is so much falsehood in the world."

THE LITTLE FLOCK.

"The Lord knoweth them that are His."

He knoweth all His people,—
From everlasting knew,—
The greatest and the smallest,
The many and the few,
Not one of them shall perish;
He guardeth each alone
In living and in dying
They shall remain His own.

The little flock He knoweth,—
Who, though by faith, not sight,
Th' Invisibles are seeing,
And trusting in His might.
Born by His word of power,
And nourished by that word;
Within His storehouse finding
The armor of their Lord.

And thus He knows His people,—
By hope so bright and blest,
By faith that can its burden
Upon the Saviour rest;
And by the look of gladness,
Where truth shines forth serene,
That plant that ever weareth
An amaranthine green.

He knows them by their loving—
The fruit of His own love,
And by their earnest longing
To please their Lord above;
By their long-suffering patience
When others work their ill,
By blessing as he blesteth,
And bearing all His will.

And thus He knows His people,—
From everlasting knew,—
The greatest and the smallest,
The many and the few.
Where His own Spirit's working
In gracious power is seen,
By faith, hope, love abounding,
Where'er His step has been.

So help us, Lord, we pray Thee,
Our goings thus uphold,
That none of glory rob us,
Nor make our love grow cold;
That when the day of wonder
Reveals thy judgment-throne,
We may look up rejoicing,
Since numbered with Thine own.

HOPE.

Never despair? The darkest cloud
That ever loomed will pass away;
The longest night will yield to dawn—
The dawn will kindle into day;
What if around thy lonely bark
Break fierce and high the waves of sorrow,
Stretch every ear—there's life ahead
And thou wilt gain the port to-morrow.

When fortune frowns, and summer friends,
Like buds that fear a storm, depart;
Some, if thy breast hath tropic warmth,
Will stay and girdle round thy heart—
If thou art poor, no joy is won,
No good is gained, by sad repining;
Gems buried in the darkest earth,
May yet be gathered for the mining.

There is not a lot, however sad,
There is not a roof, however low,
But has some joy to make it glad,
Some latent bliss to soothe its woe—
The light of Hope will linger near,
When wildest beats the heart's emotion:
A talisman when breakers roar,
To guide us o'er life's weary ocean.

The farmer knows not if his fields,
With flood or drought, or blight must cope,
He questions not the fickle skies,
But ploughs, and sows, and tills in hope—
Then up and strive, and dare, and do,
Nor doubt a harvest thou wilt gather;
'Tis time to labor and to wait,
And trust in God for genial weather.

Selected.

Statistics of the Bible.—Bible history covers 480 years before Christ. Septuagint version m. 248; first divided into chapters, 1253. The English edition was in 1536; the first authorized edition in England was in 1589; the second translation was ordered to be read in churches, 1591; the present translation finished, September, 1611. The following is a dissection of the Old and New Testaments:—

In the Old Testament.	In the New.	Total.
Books, 39	27	66
Chapters, 929	260	1,189
Verses, 23,214	7,659	31,111
Words, 592,493	181,253	773,746
Letters, 2,725,100	838,880	3,563,980

The Apocrypha has 183 chapters, 6081 verses and 125,185 words. The middle chapter is least in the Bible, is the 117th Psalm; the middle verse is the 8th of the 118th Psalm; the middle line is the 2d Book of Chronicles, 4th chapter and 16th verse; the word and occurs in the Testament 35,535 times; the same word in New Testament occurs 10,684 times; the word *Jehovah* occurs 6855 times.

Old Testament. The middle book is Proverbs, the middle chapter is the 29th of Job; the middle verse is the 2d Book of Chronicles, 20th chapter and the 18th verse; the least verse is the 1st of Chronicles, 1st chapter, and 1st verse.

New Testament. The middle is the Theophilus, 2d; the middle chapter is between the 13th and 14th of the Romans; the middle verse is the 17th of the 17th chapter of Acts; the least verse is the 35th verse of the 11th chapter of Gospel by St. John.

The 21st verse of the 7th chapter of Ezra all the letters of the alphabet in it.

The 19th chapter of the 2d Book of Kings, the 37th chapter of Isaiah are alike.

The Book of Esther has ten chapters, neither the words Lord nor God in it.

Selected for "The Friend."

I have perceived from thy account, that help at times has been near, sufficient for the occasion. My heart was warmed with gratitude, the favor, and an engagement felt that thy shining might be low and humble, not reaching; even a word which was not in due course of feeling and immediately given, so that life be administered unto life: keep little and lo then there is nothing to fear; be contented if a few words be given—more will be given if Great God ever sees best; He leads safely—thine knows—yet to be reminded of what we all know is sometimes a help. The Head of Church is sufficient for his own work.

The Properties of Sound.—One of the remarkable and pleasing illustrations of the properties of sound is the extinguishing of a light candle by pure noise. Professor Tyndall, in one of his experiments, placed a lighted candle at the end of a table supported on bracket-holders, resting on the table. The end of the tube was large and open. By clapping two books together at the large end, Professor Tyndall extinguished the candle at the other end. "Pooh!" says our over-intelligent reader, "that is nothing, simply blowing out a candle through a pipe." No such thing, supersensuous critic, as Professor Tyndall proceeds to prove. He burns a piece of brown paper in the tube, filling it with smoke. Now, if the candle be put out by a blow, smoke will issue from the pointed end of the tube. Again Professor Tyndall claps the books.

le goes out; but no smoke comes out of e. Whatever has passed out to the candle through the air and smoke in the tube, is extinguished by a pulse, not by a. The candle is put out by sound—noise.

The Language of Japan.

Rehrig, to whom we owe the following interesting communication on the language of informs us that one of the greatest and inevitable obstacles which foreign nations in their intercourse with the inhabitants of who have lived so long and so rigorously from the remainder of the world, is undoubtedly the complicated and peculiarly different language; and, in fact, of all the known parts of the globe, that of Japan appears to be the most rebellious to foreigners, and will, under any circumstances, forever baffle their strenuous efforts for mastering it, in however high a degree. The study of this extraordinary language has to be commenced in early years, and is not to be acquired through acquaintance with the already difficult language of China is an indispensable prerequisite to a fair knowledge of it. It is, however, important to distinguish between the spoken language of Japan and the written language, which is used only in literary composition. The former, the colloquial Japanese, as much needed for the common purposes of everyday life, can in a measure be acquired by routine and prolonged stay among the people of that country. This is a far less arduous task than the study of the incomparably more difficult language of the Japanese books. But even in the merely conversational tongue we meet with many things which will render the progress slow, the final mastery very uncertain, and study exceedingly tedious and discouraging. Difficulties affect the pronunciation as well as the syntactical structure; they apply moreover to idiomatic peculiarities, and have an intimate relation to the intricate rules of Japanese politeness. As regards the pronunciation, the correct utterance of the Japanese is by no means an easy matter. Thus the final *a* is pronounced with a peculiar intonation, especially the former; *f* and *h* are always very distinct; there is a particular mode of pronouncing them which cannot be easily imitated by vocal organs. There is also a sound which fluctuates between *r* and *d*. The Japanese *re* *z*, the *i* in foreign words is constantly lengthened by *r*, and when they pronounce English almost invariably say "right" for "right" and the word "long" is uttered by them in a manner which makes it sound like "wrong," the Japanese language belonging to the class of agglutinative languages, and being in a remote degree related to the Ural-Altaic, of which the Manchoo, Mongolian, Turkish, form a part, it shares with a portion of these languages in this class the construction which would call a constant inversion of the mode of order in which we think. Thus, all those sentences would begin their sentences where we end, so that our thoughts would really appear to be in our mind as inverted. Moreover, the word order characterizes or determines another has to be, so that not only, as in our language, the active comes to stand before the noun, but the possessive or genitive case before the active, and the objective case before the active. The principal verb always closes the whole sentence; all other verbs that occur in the sentence are put in the form of a participle or gerund, whereby the sense remains, in some measure, undetermined and suspended to the end

of the period. Then and then only it will be seen, in a great many cases, whether the whole sentence had to be understood as past, present or future; as affirmative or negative; whether a request was granted or refused, or an offer accepted or rejected, &c. The Japanese construction is, therefore, the very reverse of the syntactic order of the language of China. That most heterogeneous Chinese element which has almost submerged the genuine idiomatic nature of the Japanese language, is, although of a paramount importance to the student, nevertheless a foreign intruder, somewhat similar to the abundant Romanic element in our purely Germanic English, or to the Hebrew-related Arabic in the purely Indo-European, Persian and Hindustani. Another great difficulty results from the extreme ceremoniousness and politeness of the Japanese. Thus, in speaking with any person (except a son or a servant,) it is always of the greatest importance to choose expressions which show our respect for the individual we address, in a measure exactly proportioned to his rank or social standing. In speaking of absent persons, the same rule has to be strictly observed in regard to all the deference, honor and respect to which such persons may be entitled. On the contrary, in speaking of one's self, it is always necessary to use expressions of great humility. This affects, in either case, the choice of the pronouns (of which there exist a great many different forms to serve all purposes,) and the selection of an appropriate form of the verbs, different in the various moods and tenses; it affects likewise the declension of the nouns in the cases, as well as the formation of the plural; it affects even the particles and the whole quality, meaning, form and nature of the words used in conversation. There exists, moreover, in Japanese, a large number of honorific verbs that express nothing but manifestations of humility and submission, or a display of courtesy and refined etiquette. When speaking of two persons at the same time, one of whom is much higher than the other, then we have to add to the name of the latter both a particle of respect and one of humility, thereby to indicate our respect for him, and also to show that a still greater honor is to be bestowed on the other person mentioned on account of his superior condition and rank. Thus, to speak Japanese in a fairly correct manner, we have constantly to consider the person in whose presence we speak, the person to whom we speak and the person of whom we speak, and this is often even extended to things or objects belonging to or sustaining any relation to such persons. As to the written or book language, of which we may treat on some other occasion, it is fraught with so many and such inextricable difficulties, that Father Tynggren declared it (see his grammar, published in the city of Mexico, 1738, under the title "Arte de la lengua Japona") to be "simply an artifice of the devil to keep the gospel out of that country." In fact the Bible has never yet been published in Japanese, and a complete manuscript translation of the scriptures, by M. Brown, missionary at Yokohama, was unfortunately consumed in a late conflagration in that city.

For "The Friend."

The establishment of the evening meetings once a week in Philadelphia, for the winter season, has been felt, it is believed by many, as a token for good from the hand of the "Master of Assemblies," in the midst of the long period of drought that has appeared to pervade this portion of the church. Sensible that it is not by their might or power, but by the Spirit of the Lord alone that His work can be revived again in the

midst of the years, it is a cause for humble gratitude to these, that the Heavenly Shepherd has condescended to make His presence felt on the occasions when these assemblies have been gathered this year; so that an obvious solemnity has been spread over them, wherein we may reverently trust, spiritual bread has been broken and handed forth to many hungry souls, whose mental supplications have often been comparable to that of the royal Psalmist: "As the hart panteth after the water brooks, so panteth my soul after thee, O God. My soul thirsteth for God, for the living God; when shall I come and appear before God?" The language of the Almighty through the prophet Haggai, to encourage Zerubbabel and the residue of the Israelites to rebuild the temple at Jerusalem, has seemed somewhat appropriate to the condition of our waste and desolate heritages, if we but have faith to receive it. "This people say the time is not come, the time that the Lord's house should be built. Is it time for you, O ye, to dwell in your celled houses, and this house be waste? Thus saith the Lord of hosts; Consider your ways. Go up to the mountain, and bring wood and build the house, and I will take pleasure in it, and I will be glorified, saith the Lord."

What is Done with London Sewage—An Experimental Farm—Remarkable Results.

The great sewage system carried out by the Metropolitan Board of Works in London, at a cost of £3,000,000, is to be further improved by applying the fertilizing material to eight thousand acres of barren lands at Maplin, which it is proposed to render as productive as a garden; at the same time bringing the sewage within reach of many thousand acres of arable land. An experiment is now in progress at "Lodge Farm," comprising two hundred acres. The results are given by the London Star:

"The sewage at present used is brought through 15 inch pipes to the farm from the pumping station. The pump is worked by an engine of 25 horse power, which, when the culverts are complete, will be used for the general purposes of the farm. The pipes are carried under the soil on the line of the future culverts, and discharge through a syphon into a tank on the boundary of the farm. In this tank are regulating chambers, and the height over the soil is sufficient to secure a rapid and thorough irrigation, which is effected through moveable shoots as well as through the field carriers."

"The farm is devoted to the raising of grass and green crops principally, but experiments have been made in white crops and garden vegetables, which have succeeded to admiration. There has been raised this year on the farm a small breadth of wheat. The yield was satisfactory, and the straw was fine and strong, plainly showing that, contrary to the theories of certain writers, the sewage contains abundance of silicates; for it has been said that corn grown with sewage manure alone always lodged when ripe because of weakness in the straw, from the absence of a sufficiency of silica. There are also upon the land some splendid cabbages, and, perhaps, the largest celery that could be seen. Last winter some sticks were grown having eighteen inches of white, crisp, edible part. Some strawberry plants, just put out, cuttings from a small bed, look stout and healthy."

"But the great power of the farm—the great result of the sewage—is shown in the marigolds and the grass. The marigolds are a wonder. M. Neilson, himself a practical farmer on a large scale, lifted one for show (there were many fully

as large,) which, we believe, weighed not less than eighteen pounds. He means to exhibit it in Liverpool as a proof of the fertilising power of sewage, which he has himself long applied to his farm. The average of the marigolds, which, of course, will continue to grow in all October, will be then about sixty tons to the acre. The grass laid down extends to fifty or sixty acres, and is principally Italian ryegrass. The growth is almost beyond belief. There are already this year seven cuttings, at from seven to ten tons the acre each cutting. The greatest part averages the ten-ton cutting. The first cutting was in April, owing to the severity of the spring. There are two cuttings more expected before the winter. The expense of irrigation is as near as can be calculated fifty shillings per acre per annum, or about five shillings to six shillings for each cutting of grass. What is not required to feed the stock on the farm is sold to London cow-keepers and others for about £10 per acre for each cutting.

"The company maintain on the farm at present one hundred and eleven cows, all giving milk, and at one period of the present season they had two hundred and seventy-six, but even then they did not feed off all their own grass. Hope, who has now a large experience, relies implicitly on carbolic acid, both as a curative of disease, if it should appear, and as a preventive. This year he applied it to cows indicating the approach of the riderpest, administering it internally, and applying it externally also. Externally, it was rubbed in at the base of the skull and the root of the tail, and the building in which the cattle stood was syringed daily three times with a dilution of the acid. Every animal remained in good condition, and from the time the treatment and syringing commenced there has not been even an indication of the pest. Indeed, M. Hope insists that riderpest is no more incurable than any other cattle disease, and pointed to a couple of living proofs, upon which we shall not enlarge in the face of the very extensive powers of the cattle inspectors.

"The sewage of the Metropolitan Sewage Company is carried under Barking Creek through a double range of east metal pipes six feet in diameter, the culverts at either side terminating in wells, from which the pipes convey to one side what passes in at the other. These pipes will have to bear a very heavy pressure, but no doubt they have been duly tested. Through the marshes between the creek and the farm the culvert is carried over a viaduct, which has been deemed the cheapest mode of obtaining a foundation. The solid basis is over thirty feet below the surface. Into the marsh shafts are sunk and piers built on the solid foundation, over which arches are thrown, and upon these are raised the culverts. The cost of this work is £40,000 per mile. The contractor is M. Webster. The arch of the culvert is ten feet in diameter, and the brick work seems perfect, and is, we believe, equal to its appearance. The culvert was first constructed with four courses of brick over the lining, and, moreover, lateral supports of equal thickness. Now a suggestion of M. Hope is carried out which saves much outlay, and secures equal if not greater strength. Instead of brickwork, courses of concrete are used, and the economy is as remarkable as the success. The company, when in operation, calculate on realizing £750,000 a year. Assuming that all the sewage were well sold, it would be much more."

—E. Post.

Live always in the best company when you read. No one in youth, thinks of the value of time.—Sydney Smith.

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 101.)

Fifth mo. 3rd, 1835. "I recur to our late Yearly Meeting as a season of peculiar favor. The united and harmonious labors of burden-bearers among us, evidenced the superintending care of Him, who first called us to be a people. I think I never felt so sensibly the privilege of membership; a privilege that must certainly increase our condemnation, if not justly appreciated. I sometimes fear the inclination to attend such opportunities, proceeds too much from the excitement my animal spirits feel, from joining so many of my fellow-members for the ostensible purpose of worship. But while we have need to be jealous of ourselves on this hand, let us settle in a lifeless form, it is doubtless a necessary and acceptable sacrifice; and as the watch is maintained, we shall find strength given, to order our thoughts and our conduct consistently with our profession."

5th mo. 6th. "I often think sickness is dispensed to teach us what we are too proud to learn in health; and it is to me an humbling mark of Divine condescension. When elated with the most favorable concurrence of outward circumstances, we are too readily disposed to take our rest in them, slighting the gentle calls and admonitions of our Preserver and Friend. But His unutterable love and mercy, leaves us not to perish because of our rebellion. The ability to enjoy this rest is taken from us; we are shown their vanity; and in this awakened state, again entreated to sue for an interest in that unfailing Helper, who is a sure anchor to stay upon, not only when surrounded with health, and with apparent happiness, but when these gay visions fail, and we are thrown upon other sources of relief than this world can offer us. In these seasons what can be more desirable than an interest with Him who has all power in heaven and in earth; who heareth the cry of the afflicted, and careth for them with the most unceasing regard."

6th mo. 17th. "The tenor of thy last letter convinces me thou hast so far yielded to feelings of depression, as to conclude thy situation peculiarly trying and difficult. But while I readily admit this tenacious nature of ours shrinks from the endurance of anything opposed to its ease and tranquillity, I would affectionately query with thee, whether yielding to discouraging prospects ever added either to thy natural or better strength? Has it not rather weakened the spiritual perceptions, and erected a barrier against that trust and confidence we are taught to repose in Divine aid? Is it not better for us, frail and dependent as we are, to regard our different allotments as dispensed by Infinite Wisdom, and consequently best calculated to bring about His own wise ends? If He proves us, is it not for our refinement? and if chastened, may it not work out the same glorious end? 'Our light afflictions' are comparatively but for a moment. And I often reflect upon the words 'take no thought for the morrow,' as a relief in periods of strippedness, when faith is at a low ebb, and there seems scarcely a probability of continuing the warfare. What matter if this life's path is strewn with thorns? It is rapidly passing from us; and if we only endeavor day after day to direct our steps aright, and bring every action and motive to the balance of the sanctuary, and find them answer our account there, whatever adverse occurrences overtake us, we may look upon them only as helps to wear out our attachments from this perishing scene, and fix them with our hope and love undivided, upon

that promised haven of rest, where sorrow and sighing are unknown.

"I cannot see anything in thy situation so discouraging than at some other times; and thou wilt strongly endeavor to cast off some of this gloom. If discoverable in the female, it often affects in a greater or less degree the whole family; and it is so much the duty of wife and mother to throw self altogether and live for those so closely interwoven with our existence, that I think the whole life of an individual calls for a strength, a decision, firmness and gentleness of mind and character, only to be attained through deep self-denial, a constant recourse to that Source of strength, Fountain of wisdom and knowledge, known only to those who have obeyed the injunction, 'Seek ye shall find.'"

6th mo. 1835. * * * "But not in created objects to impart to the mind a settled and abiding satisfaction which renders this life its comfort and its hope. We may grieve with the 'loved of earth,' and derive congeniality of tastes and pursuits, much tends to cheer the weary round of care, and lighten the burden of toil and anxiety that life of friendly intercourse might more cause us to feel. But to be enjoyed it must be partaken only at intervals; an incessant round must not weary and exhaust the better strength. And as for myself, if obliged to choose between constant society, and uninterrupted solitude, I think I should unhesitatingly decide upon the latter; believing frequent retirement so essential to the growth of that Divine principle, so important for all to experience, and cherish all everything else. The retirement of a solitary chamber is often a source of unspeakable affliction, and I have returned to it, after being obliged to devote much of my time to society, the ordinary care of life, with a relish heightened by abstinence.

"G. L. is frequently an invalid, with an occasional chill, cough, weakness and pain in the breast; yet generally favored to get out to a long. I cannot help watching with affectionate interest the varying state of her health. Still one of our strongest props; and what is to be of our feeble company when the few who sustain the ark of the testimony are gathered home, is known only to Him who is strength and weakness, and who can carry on His work, by many or the few, as best pleases Him. For greater dedication in the younger members of our Society. How might thy come forward united band, strong in the Lord's power for work—able advocates in the most ennobling cause that can occupy rational and immortal beings."

9th mo. 1835. * * * "But are the admitted and indulged habits of our ordinary pursuits, too apt to prevail over the higher improvement, even the duties our religion absolutely calls for? I fear it is the case; that in allowing them to exert an undue influence we are weakening ourselves in the most important; and nurturing seeds that will produce to our sorrow. Strict mental discipline, calm, steady, patient perseverance, are virtues that cannot be too earnestly sought, and if properly obtained, will insure their possessor a degree of satisfaction not easily disturbed. And can we much look for in this mutable state of mind can rank higher than satisfaction? The mind is subject to the direction of the All-wise Ruler of events, may indeed, in intervals when the love of His countenance is raised upon them, perceive a tranquil joy, unspeakably precious of more value to them than millions of woe."

ulations seem oftenest the portion of the favored of the human family; and their gales along are marked with exercises and s, that must await the way-worn and weary seeking a better home. The path that ased Jesus trod on earth was one of suffering and it is certainly enough that ours be like

(To be continued.)

Cataract in Montana.—A correspondent *Frontier Index*, writing from the wild and district of country around the Yellowstone of Montana, says:—

On the outskirts of this monstrous locality a lake on the top of the mountain that is ten over, the ice and snow covering its some twenty feet deep. Two main forks of Yellowstone, one heading opposite Wind and rivers, and the other opposite Henry's Snake river, in the same vicinity that the and Gallatin rise, empty into the big which has for its outlet the Yellowstone and just below the lake the whole river over the face of a mountain thousands of feet, may rising several hundred. A pebble was by a watch in dropping from an overhanging of one perpendicular fall, and is said to quired eleven and a-half seconds to strike the face of the river below. That beats Niagara 'all hollow.' The river at these falls is represented to be half as large as Missouri at Omaha, and as clear as crystal. Yellowstone Lake, like all others in that range, abounds with salmon trout from forty pounds weight, and where the milky mineral waters from the geysers intermingle the pure, clear waters from the running of these fine fish can be taken by the boat

Inroads upon English.

er the above very appropriate heading the number of *Blackwood* has an article upon words and phrases which have been on this side of the Atlantic, and are getting more or less currency in England. Cong the usual anti-American prejudices of *Blackwood*, the article is exceptionally fair and

the writer is candid enough to admit that of the words erroneously considered as Americanisms are really of old English origin. It is that in New England the common is far nearer to the pure English of the King James II. than it is in any part of the land. Our inventions in the way of new are numerous, because, owing to the countermining of our people, and the universal of reading newspapers, a "pat," ingenious phrase or word adopted in one the country soon becomes known everywhere and is incorporated into everyday speech. s both more originality of invention and a facility in the circulation of new words than our sluggish and heavy counsels across ter. Of course, this renders us all the able to have our language distorted by new and harmful accretions of this sort.

ing the words supposed to have an American origin, but really of English ancestry, the writer mentions "bender," which he originally introduced by the Scotch, and Allan Ramsey to prove it. Our beautiful "fall" was also once common in England the English mind was more susceptible to phrases than at present. The word "skunk," to skulk, was in common use in Shake-

peare's time. "Muss," almost always regarded as an Americanism, has its genuine Bowery significance as used in "Antony and Cleopatra." Even our common word "platform," in its political sense, is to be found in Shakespeare and Hooker.

Equally orthodox ancestries are made out for such inelegant words as "rile," "sag," "slick," "slide," "sliver," "splurge," "squelch," "squirm," "starr" and "wile." All of these words, excepting "bender," are approved by *Blackwood* as "worthy of the favor of English writers and speakers."

The writer apprehends that with the Americanization of English politics, the political slang of this country will be imported to supply new exigencies—such words, for instance, as "buncombe," "caucus," "lobbying," "wire-pulling," "ax-grinding," "mass meeting" and "indignation-meeting." Undoubtedly they will, for the things will demand names, and the English will find these done to hand for them in better style than any they are likely to invent.

The *Blackwood* writer does not object to the legitimate expansion of the language, "whether the expansion come from the new or the old home of the race." He does, however, and rightly, object to corruptions and vulgarisms, and says "if we require new words we have an immense mine of treasure in the English of the days of Piers Ploughman, from which we can advantageously borrow

"Ancient words

"That come from the poetic quarry as sharp as swords."

He gracefully admits, too, "into this treasure the Americans are dipping more deeply than we; and so far the influence of their example upon the mother-tongue must be recognized as both legitimate and beneficial."—*E. Post.*

Rabbits in Australia.—A Melbourne paper says: "Eight years ago fourteen rabbits were turned out in M. Austin's estate of Barwon Park. The number of progeny shot last year on this estate was 14,253; and in spite of this destruction, and what goes on outside the estate, they have swarmed over the neighboring country, and have been found at considerable distances around."

In trouble we often come off better than we expect, and always better than we deserve.

THE FRIEND.

TWELFTH MONTH 7, 1867.

The first winter month has made its entrance with more than its ordinary rigor, giving due notice that the season for ice and snow, for chilling blasts and sleety tempests has arrived, and that physical comfort is to be found only within our tight finished, well furnished houses, and by the side of our genial hearths. It is a season of much social enjoyment to those who can command the luxuries or even the necessities of domestic life, and are prepared to bid defiance, in their well-warmed habitations, to the pitiless storm, and to draw around their abundantly provided tables, the friends who multiply their pleasures, or sympathize with them in their sorrows and trials.

But far otherwise is it unwished for presence to the poor and destitute. To them it is a time of aggravated privation, and often of continued suffering. Trade is dull, the mechanical arts pined with greatly diminished vigor, manufacturers working on contracted time; and hence while many

are thrown out of their ordinary employment, work of other kinds is scarce, the days short and dreary, and many an honest poor man who starts out in the morning to earn his daily bread by his daily toil, finds the shadows of evening closing around him before he has been able to obtain sufficient to supply his wife and children with needful food, or procure fuel to keep up a fire in his cheerless home, made doubly necessary by the want of seasonable clothing. The driving snows and biting winds tell sadly on the poor man's domicile, and, with their inevitable accompaniments, extort many a sigh of distress, perhaps mingled ill-dissembled murmuring, at their unpitied lot, from those who shrink at the thought of owing their support to any hands but their own.

We are aware that this, and the duty of charity, are trite topics, familiarity with which, as in other things, has too generally begotten indifference if not contempt, for the platitudes penned in commending them to attention. Much also has been said, and much is stereotyped on the subject of public provision for the poor, the proper administration of which is one of the hardest problems to solve that claims the ingenuity of the political economist: so we will not, at the present time, offer any suggestions on this latter prolific topic.

We however trust that we may, without any invidious imputation, remind our readers that the present winter will probably be one of more than usual trial on the poorer class, especially in cities, and that private charity, perhaps beyond ordinary limit, will be invoked by positive want and suffering, as well as by the obligation resting on the christian, who is bound to keep ever in remembrance the duty of feeding, clothing, and administering to the comfort of the hungry, the naked and the oppressed, enjoined in that beautiful but impressive parable which teaches the otherwise incredible condescension of the Saviour of men, in that He accepts as done unto himself that which is thus done unto the least of his brethren.

Rents are high, and provisions of all kinds are dear. Wages have been proportionately advanced, but, as before observed, at the present time and throughout the winter months, many cannot obtain employment that will yield them sufficient remuneration to keep them from destitution. There must therefore be many calls on the benevolence of those, who can spare that which will assist in supplying food and clothing to the deserving poor; and those who are imbued with the spirit of their divine Master will require no other prompting to contribute their full proportion.

By the course pursued in this very thing of giving to the poor, or rather testing our feeling of stewardship in the manifold gifts bestowed on us, we often obtain a deeper practical insight into the springs of action and workings of the human heart, than by most other acts affecting ourselves and others, not so directly influenced by an abstract sense of duty. To really feel that every man is a brother, and that, if in the dispensations of divine Providence this our brother is in want, while we abound, we are bound to share with him the temporal gifts which we also have received from our common Father, is one of the attainments of the disciple of Christ, as it is a plain doctrine of his religion, devoid of doubt or mystery. And yet the duty of sharing with the needy in his distress, is so connected with the social inequality, the wants and the common interests of mankind, that a feeling of its presence is often exhibited in those whose hearts are yet unregenerated. But its full force and unselfish action must spring from a far higher source than we can command, which will prove its divine origin by a course not only fraught with liberality but stamped with love.

The poor ye have always with you, and when ye will ye may do them good.

The report of "The Female Society of Philadelphia for the Relief and Employment of the Poor," will appear in our next number.

SUMMARY OF EVENTS.

FOREIGN.—While the steamship Bonbolio, which carried the mails between Liverpool and Greece, was about leaving the wharf in Liverpool on the 29th ult., one of her boilers exploded entirely destroying the vessel. There were 73 persons on board, 40 of whom were killed, and 20 were injured. The steamer was loaded with arms and munitions of war.

The House of Commons has voted a supply of £2,000,000 for the expenses of the Abyssinian war. Disraeli stated that if it should be found necessary to replace the Indian troops sent on the expedition, a further sum of £3,000,000 might be needed. It is proposed to provide these sums by a special tax on incomes.

The Fenians are still uneasy and troublesome, both in England and Ireland. Outbreaks were feared at Manchester and at Cork. In the latter city a great demonstration of sympathy for the Fenians executed at Manchester was made on the first instant. Nearly twenty thousand persons walked in the procession, including some of the priests. On the 29th ult., an army in Cork was entered by supposed Fenians, who carried off 120 revolvers and 100 rifles.

The St. Petersburg Journal, an official paper, declares that it will be impossible for the proposed conference to maintain the present boundaries of Rome. Garibaldi has so far recovered from his illness as to be able to support the fatigue of travel, and by permission of the government will immediately set out from Varignano for Capri. The reports that Italy had agreed to the propositions of France for a general conference are premature. An English note has been sent to France asking certain explanations, and the final reply of Italy will depend on the nature of Napoleon's answer.

The mail steamer from Brazil brings an account of another battle between the Allies and Paraguayan forces, in which the latter were defeated with the loss of 300 men.

A dispatch from Naples states that Vesuvius, which had been smouldering for a long time, has at last broken out in violent eruption.

In the Austrian Reichsrath the new constitution has been adopted after strenuous resistance by the Liberals. The French Minister of Foreign Affairs, addressing the French Senate on the 30th ult., said that the stay of the French troops now in the Ruman territory would be brief, and was only intended to insure the safety of the Pope. The question between Italy and the Pope was one of distrust, and the object of the European Conference proposed by the Emperor, was to remove this distrust.

The United States squadron has left China to punish the pirates in the island of Formosa. It is reported that ten thousand people were drowned by a deluge at Manila.

The Prussian Diet, by a vote of 181 to 160, has adopted a resolution declaring that the constitution of Prussia guarantees the liberty of speech.

The Austrian frigate Novara, arrived at Havana on the 1st inst., with the remains of Maximilian. President Juarez has received a majority of votes in every State of Mexico.

An earthquake, accompanied by volcanic eruptions, occurred at St. Thomas and the neighboring islands on the 18th ult. The sea rose fifty feet, doing much damage to houses and shipping.

Dispatches of the 2d state that a small body of French cavalry still occupy Rome, and will probably remain there. With this exception the French troops have left the Papal dominions. The Pope has taken measures to materially strengthen his army. The fortifications of Civita Vecchia are being strengthened and altered so that a garrison of Papal troops can hold the city as an open gate for the return of the French should the safety of the Pope hereafter require that step.

Consols, 94 13-16; U. S. 10-20, 71 5-16. Middling uplands cotton, 7½d.; Orleans, 7½d. Breadstuffs quiet. California wheat, 15s. per 100 lbs.

UNITED STATES.—Congress.—The House of Representatives has adopted a resolution instructing the Committee on Banks and Currency to report a bill for withdrawing the national currency from circulation and for supplying its place with greenbacks. The Committee of Ways and Means has been directed to consider

a change in the laws so as to stop the further contraction of the currency, to reduce the liquor tax and provide for its better collection, the repeal of the cotton tax, &c. The Committee on Military Affairs has been instructed to report on the propriety of reducing the army to its lowest possible limit. The majority of the Judiciary Committee presented a report relative to the impeachment of the President. They submitted the testimony taken in the case, and closed their report with a resolution that Andrew Johnson, President of the United States, be impeached for high crimes and misdemeanors." Two minority reports were offered, both dissenting from the views taken by the majority. Horace Greely has been confirmed by the Senate as Minister to Austria, and Horace Capron as Commissioner of Agriculture.

Fortieth Congress commenced its second session on the 20th inst. Bills on various subjects were introduced, and were referred to the appropriate committees. The Committee on Ways and Means was instructed to inquire into the expediency of authorizing a new loan, payable after ten years, and redeemable after thirty years, in coin, by the issue of five per cent. bonds, interest payable semi-annually in coin; taxable at the rate of one per cent. to be deducted from interest when paid.

Jefferson Davis.—The rebel ex-President appeared at the stated time last week, before the United States District Court, at Richmond. The trial was postponed until the 20th of Third month next, and Davis' bail bond was extended to that day.

The Army.—The War Department has reduced all infantry and artillery regiments to the minimum of fifty privates to the company; limited the recruiting service and ordered the muster out of all volunteer officers at the close of the current year, excepting the Bureau of Defenses, Freedmen and Abandoned Lands.

The South.—General Hancock has issued an order assuming command of the Fifth Military District, consisting of the States of Louisiana and Texas. The State Convention met in New Orleans on the 25th ult., eighty-five members being present. Judge Taliaferro was elected President, and John W. Caldwell, a colored man, was elected Sergeant at arms. The Secretary of the Convention and Doorkeeper, are also colored men.

In Central Carolina the Convention was defeated, as the vote polled fell short of the requisite majority of regular members.

There will be a Convention in North Carolina with a radical majority.

The Alabama Reconstruction Convention has passed an ordinance to organize the volunteer militia, authorizing one company to every thousand voters. An ordinance was also passed, declaring that the State, and all its liabilities excepted, directly or indirectly, in aid of the war null and void, was also passed. The Convention has decided that the Judges of the Supreme Court and the Chancellor, shall be chosen by the Legislature, all other officers to be elected by the people. By a vote of 51 to 31, the Convention adopted an article providing for the establishment throughout the State, of one school or school district, one or more schools, at which all the children of the State, between the ages of eight and twenty years, may attend, free of charge. A motion to amend by providing separate schools for white and colored children, was tabled—yeas, 58; nays, 27.

San Francisco Pacific Railroad.—A San Francisco dispatch of the first inst. says: The track of the Central Pacific Railroad is laid from Cisco to Summit, and through the great tunnel, over 7000 feet above the sea. The first passenger car passed through yesterday. Twenty-four miles of track have been laid on the east side of the mountains, and a fortnight of open weather will complete the gap of six miles, when a connection will be made to Lower Truck, 130 miles east of Sacramento.

Philadelphia.—Mortality last week, 246. **The Freedmen's Bureau.**—The total expenditures for the aid of the freedmen, from Aug. 1, 1866, to Oct. 1st, 1867, (eleven months) were \$3,597,397. Gen. Grant, in his report as Secretary of War, says: "The freedmen as a people are making progress in education, in mechanic arts, and in all branches of industry." Apprenticeship in Maryland still holds large numbers of colored children in virtual slavery. The evils attending the system of apprenticeship have been recognized by the State laws, are matters of constant complaint. As many as two thousand cases have been presented in the last year.

The Markets, &c.—The following were the quotations on the 23d inst. *New York.*—American gold, 166½; U. S. 10-20, 71 5-16; U. S. 5-10, 71 5-16; ditto, 10-40, 5 per cents, 10½; Superior State flour, \$8 a \$8.75. Shipping Ohio, \$2.40 a \$3.40; California

flour, \$12 a \$13.25; St. Louis, \$10.40 a \$15.75; waukie spring wheat, \$2.20 a \$2.23. Canada by \$1.67 a \$1.70. Western oats, 80 cts. Western \$1.67; State, \$1.73. Western mixed corn, \$1.13-1.34. Uplands cotton, 15½ a 16 cts.; Orleans, 17 cts. Cuba sugar, 11½ a 12½ cts.; refined, 16½ cts. *Philadelphia.*—Superfine flour, \$7.50 a \$8.25; family and fancy brands, \$8.50 a \$13.50. Fair prime red wheat, \$2.40 a \$2.50. Rice, \$1.70 a \$2.00. Yellow corn, \$1.42; new corn, \$1.30. Oats, 70 a 75 cts. *Uplands cotton,* 15½ a 16 cts.; Orleans, 17 cts. Cuba sugar, 11½ a 12½ cts.; refined, 16½ cts. *The arrivals and sales of beef cattle at Avenue Drove-yard* were about 1800. Sales of cattle, 8½ a 9 cts. per lb. gross, fair to good, 7 a 8 cts. common 4 a 6 cts. Five thousand sheep sold at 4 cts. per 50 cts. Hogs were lower, sales of 500 at \$8.75 a \$9.50 per 100 lbs. *Edinboro.*—Wheat, 10½ a 11½ cts. New corn, \$1.12 a \$1.15, 69 a 72 cts. *Chicago.*—No. 1 spring wheat, \$1.18. Old corn, 83 a 86 cts; new, 72½ a 77 cts. 53½ cts. *St. Louis.*—Prize fall wheat, \$2.40 a \$3.00; spring wheat, \$1.75 a \$1.90. Corn, 96 a 97 cts. 40 a 72 cts. Rice, \$1.40 a \$1.50. *Cincinnati.*—Wheat, 12½ a 14½ cts. New corn, in the ear, 75 a 78 cts. 66 a 67 cts.

RECEIPTS.

Received from Richard Hall, England, £1, for copies of vol. 41.

WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the Committee having charge of this Institution, will be held in Philadelphia on Friday, the 18th inst., at 2 p. m.

The Committee on Instruction meet at 10 a. m.; the Committee on Admissions at 11½ a. m., on the day.

The VISITING COMMITTEE meet at Westtown Seventh-day afternoon, the 14th inst.; attending there the next-day, and visit the Schools on 3rd and Third-day.

SAMUEL MOSKOWITZ.

Philadelphia. 12th mo. 3d, 1867.

A conveyance will be made the trains that leave Philadelphia on Seventh-day, the 14th inst., at 2.30 a. m. 4.50 p. m.

NOTICE.

A suitable Friend and his wife are wanted to attend and manage the farm and family under the care of the Committee for the gradual Civilization and improvement of the Indian natives at Tununessah, Cragus Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Philadelphia. John M. Knigh, Camden, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Barry, Marshallton, Chester Co. Joseph Scattergood, 413 Spruce Street, Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH H. WORTON, M. D.

Application for the Admission of Patients is made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 7th day of Eleventh month, 1867, Messrs. Meeting-house, Middletown, Delaware Co. JOSEPH WARNER JONES to SARAH L., daughter of W. Webster, all of Middletown.

DIED, on First day evening, 4th of Eighth month, at residence to Jamestown, Guilford county, MARY MENDENALL, relict of Richard Mendenall deceased, a member of Deepriver Monthly Meeting, 80th year of her age.

On the morning of 26th of Tenth month, HANNAH HOWES, widow of the late Joseph H. in the 80th year of her age. She was a diligent at meetings, and strongly attached to our christian truths and testimonies. Her health had been feeble for several years, and though the summons was she was found with her lamp trimmed and glowing, waiting for the coming of her Lord; and having recently believed, gained an admittance into the kingdom, which needeth not the light of the sun nor moon to shine in it; for the glory of God doth light and the Lamb is the light thereof.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

L. XLI.

SEVENTH-DAY, TWELFTH MONTH 14, 1867.

NO. 16.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

When paid quarterly in advance, five cents.

An Epistle to Friends.

Im that hath an ear, hear what the Spirit saith unto the churches.

My Friends,—You whom the Lord hath led into this the day of his love, and hath known the way of Truth and righteousness through the raising up of that holy living Jesus of himself, that long lay hid and buried, and hath brought you to a secret feeling of the love of God in you, that is worth the minding and guarding; and the Lord causing this to appear in the day of your seeking, as a light in the darkness, and its power, by which you formerly holden, and given you by his spirit and secret hope, that in this light, the way of life was to be attained unto; this hope you not ashamed of the light which before you, but you came to know and embrace it, while others still hated it, and you for its sake your hearts being affected with the hope and the power thereof, could not but so far join in it, as to make public profession of it for its own sake; and for no other end or design, or in any other way, but with resolution in that light, to follow the salvation of God. Dear Friends, it is the will of God, that both now, and for many days and weeks, my heart hath been deeply affected concerning, even night and day; and the power of the Father's love, doth often come into me, and draw me forth now to say and to do these things unto you for your admonition and establishment. And indeed it is you who are the ones who are rightly own the way of Truth, and know the power thereof, and believe in the gift and mercy of God for the souls, that I do aim at; for those that have taken up the profession of the precious promise of God, by respects and sinister ends, and but as a cloak to their carnal minds, I do pity them, yet I have not much at heart to say to them but this; The day shall come, and their garments shall not hide

you, oh, my Friends! who had fellowship in the deep travails of our beginnings, and have come to Truth the same way, and have the power and virtue of it, many times using you in your inward man, which hath been crying out, Lord, evermore give us this light, and hath made you as a watered garden, and I have said, how shall I express or signify unto you those longings, those ardent desires, and those breathings of my soul, that you, even you,

might abide to the end of all trials, tribulations, and adversities, and might inherit that crown of immortality that is in Christ Jesus our Lord, and might not by any means be bereft thereof; this is singly my travail in body and spirit, that you might be kept and preserved out of all the subtle snares of the wicked one, who hunts for the souls even of those that have believed. And, therefore, in dear and tender love, I have a few things to write unto you, for the clearing of my conscience, and discharging my duty in the sight of the Lord; and the Lord give you all a tender and an understanding heart, that both you and I may yet have cause daily to praise the Lord in the glorious light of his salvation, which he hath manifested among us, by the revealing his son Jesus Christ; to whom belongs dominion, honor, and glory, forever, amen.

And first, dear Friends, it is in my heart, to put you in remembrance of that by which we were called and convinced, which as a foundation principle was laid in and among us; and it being unchangeable and unalterable in itself, doth therefore admit of no alteration or change in those that are rightly kept to it.

It was a light which arose in our hearts, and shined forth from God, the Father of lights, carrying in its appearance the nature and property of God, both in its condemning evil, which the enemy had sown or planted in us; and owning, allowing, and justifying every thing that was good and honest, just and equal; even those thoughts in our hearts, which were of turning towards the Lord, and seeking his righteousness; these thoughts were justified and encouraged by the light, and all of a contrary nature discovered and judged, as they were brought to it to be tried. Now this light did our souls rejoice in, as they had good cause, though it took away our former rejoicings; our pleasures in vanities and iniquity did, our glory in this world withered, our friendship with the sons of men decayed, and we stood in the light and saw all these things, and were not sorry at it, but waited daily to see these things more and more brought to pass; neither was there a permitting our thoughts to go out, how we might prevent those damages, or repair these losses, but the cross of Christ was indeed our glorying or rejoicing. And the hope that was before us, did make us despise the pleasures, treasures and honors, friendships and delights of this world.

And in those days, you grew into a feeling of the heavenly joy, where the hundred-fold was witnessed in your bosoms, and the zeal of the Lord was kindled by his own spirit in you, against whatsoever this light of Jesus in the conscience did witness against: and the Lord beheld your integrity and blessed you, and multiplied you, and added to your strength and stature; and then did the fruits of this glorious work abound among you, in three more general and special effects; by which effects, or by their continuance among you, let all now come to search and try themselves, that so, dear Friends, those that have continued faithful in them all, may persevere in like manner to the end: and those who upon true search do find that they have failed, and fallen short in all

or any of them, may make haste to repent, and to turn to that which was the root of them all, that they may not be found as fruitless and withered branches, in the day that cometh, lest they be cut off, and utterly consumed, and blotted out from among the living branches of the vine: for a day cometh, that Truth will look into the fig-tree for fruit, and leaves will not defend it from the curse and blasting.

The three especial fruits that did spring forth from this blessed root, and were and are to continue and increase in us, and among us to the end, are these.

1. Purity, manifested in a godly conversation.
2. Unity, manifested in dear and tender love one towards another.

3. Faithfulness, manifested in bearing a constant and faithful testimony to the things we had received and believed, though it were unto great loss and sufferings.

And against all these, doth the wicked one appear, to see if he can make you barren concerning them, and that with divers wiles and subtleties, that he may prevail on you, and not be known to be the enemy, but might so overcome you, as that you might both submit to him, and then plead for him and his snares and wiles, as being just, right, lawful, prudent, convenient, &c. But oh! dear Friends, let all be watchful and diligent, to wait in the sense and true feeling of that seed that never fell nor was beguiled; and you will, (even the least of you,) see and comprehend his workings and transformings, and be delivered from them.

1. Purity and holiness was a fruit in you, which doth yet flourish in many, (blessed be the Lord,) who are as watchful and careful to approve themselves in obedience to the light of Truth in their inward parts, as ever, and find as great a necessity both of trying and judging with its judgment as ever; these having thus waited, have renewed their strength unto this very day, and do mount up as upon the wings of an eagle; these are neither weary in running, nor faint they in their walking; but alas! Friends, even these do know with how great and manifold assaults they have been assailed, and know and see with sorrow of heart, how the assault hath prevailed upon some, by working into the mind a secret liberty and supposed enlargement, whereby a carelessness hath entered some; and they having no keeper but the measure of light revealed in their hearts and consciences, so soon as they came to be persuaded to slight the reproofs of that, they soon erred; and this supposed liberty entered, that now, after so many years strictness and circumspection, they should not need now to stand so straitly to try things and words as at first, because now a day of more liberty was come. And this liberty secretly prevailed against that pure fear that once was placed in their hearts, and against the very obedience of Truth, inwardly in the subjection of the mind, and then it became manifest outwardly; the actions sometimes blame-worthy, the words and speech again corrupted, and run into the old channel of the world, like them again; and the single pure language, learned in the light, in the

time of their poverty and simplicity, almost lost and forgotten, and so the work of God which he wrought, in a manner laid waste. And then when this liberty is entered and made use of, as aforesaid, oftentimes a secret subtlety ariseth against the judgment of Truth, either from within, or from any outwardly, that are grieved with this loose and careless kind of speaking or acting; which subtlety leads to contend for it, against the judgment, telling the creature, why these things are but small things, and little things, and what! we must not strain at a gnat, and such like. Oh my friends! beware of these evil suggestions of the wicked one. How came they to be small and little things, seeing they were great things with us in the beginning? And how comes an offence in this nature to be light now, seeing it was heavy in the beginning? Oh let not the greatest mercies of our God so fill us, as to make us slight or forget the least obedience; but rather let the continuance of his mercy, the more quicken you up unto a zeal for his name and Truth in all things, to be found doing and speaking according to the rule of righteousness, which ye learned in the light, in the day of your being low and little; and then nothing will rise up and be exalted in the multitude of God's mercies, but that holy birth which lives in purity, when it is at the highest. And so that life of righteousness will shine forth more and more, which glorifies God, and seeks his honor. Dear friends, that ye might be kept so unto the end, is the breathing and travail of my soul; and that where this neglect hath entered, and this aforesaid corruption either in speech or action is to be found, that ye would receive the word of exhortation in meekness and fear, in which it was written unto you: and may redeem the time, for the days are and shall be evil, and none will hold the mystery of the faith, (that saves from falling in the evil day,) but such as do keep the pure and undefiled conscience, which none can do, but by persisting and continuing in the daily sanctification of the spirit, and belief and obedience of the Truth.

(To be continued.)

Wooden Cows.

Persons who reside in our large towns, especially the largest, are very apt to slander the milkman, and ascribe the semi-lactescent appearance of his commodity to a free use of "the cow with an iron tail." It is not our intention to join in any such scandal, for the milk of our history is genuine, and unadulterated, although not derived from a quadruped cow, goat, or any animal whatever. Some, perhaps most, of our readers will have heard something of the existence of vegetable cows, or plants yielding milk; it is of these "wooden cows" we purpose to refresh their memories.

The caoutchouc, or India-rubber of commerce, as it exudes from the tree, very much resembles milk in color and density. Many other plants yield a similar fluid, and in some instances this is so sweet and palatable as to be employed by the natives for almost all the purposes of animal milk.

The "cow-tree of Demerara" was first observed by a traveller of the ubiquitous family of Smith, in an excursion up that river. It is described as a tree from thirty to forty feet in height, with a diameter at the base of nearly eighteen inches. This tree is known to botanists by the name of *Taberna montana utilis*, and to the natives as the Hys-hya. It belongs to the same natural order as the Penang India-rubber tree, and the Poison-tree of Madagascar (*Apocynaceae*). It occurs plentifully in the forests of British Guiana, and its bark and pith are so rich in milk, that a

moderately-sized stem, which was felled on the bank of a forest stream, in the course of an hour colored the water quite white and milky. The milk is said to be thicker and richer than cow's milk, mixes freely with water, and is perfectly innocuous, and of a pleasant flavor; the natives employing it as a refreshing drink, and in all respects as animal milk.

The Cyngalese have also a tree which they call "Kiriagihuma," but which belongs to a different order of plants (*Asclepiadaceae*). It is the *Gynema lactiferum*, and yields a very pleasant milk, which is employed for domestic purposes in Ceylon.

There appears to be also a milk-tree common in the forests of Para which the natives call "Masendendron," but of which we have no definite knowledge, except that it was for a considerable time used on board H.M.S. *Chanticleer* as a substitute for cow's milk. It was said to suffer no chemical change by keeping, neither did it show any tendency to become sour.

The most celebrated of all the cow-trees was that discovered and made known by Humboldt, as the "Palo de Yaca," or "cow-tree." Singularly enough it belongs to a different natural order from these already mentioned (*Artocarpaceae*), and to one which includes also the poisonous Upstree of Java. The botanical name of this cow-tree is *Galactodendron utile*, the "useful milk-tree," or, as more recently called, *Brosimum utile*. Its discoverer states that while staying at the farm of Barbulu in the valleys of Aragua, "we were assured that the negroes of the farm, who drank plentifully of this vegetable milk, consider it a wholesome aliment; and we found by experience during our stay that the virtues of this tree had not been exaggerated. When incisions are made in the trunk, it yields an abundance of a glutinous milk, tolerably thick, devoid of all acidity, and of an agreeable and balmy smell. It was offered to us in the shell of a calabash. We drank considerable quantities of it in the evening before we went to bed, and very early in the morning, without feeling the least injurious effect. The viscosity of this milk alone renders it a little disagreeable. The negroes and the free people who work in the plantations, drink it, dipping into it their bread of maize or cassava. The overseer of the farm told us that the negroes grow sensibly fatter during the season when the *Palo de Yaca* furnishes them with milk. This juice, exposed to the air, presents on its surface membranes of a strongly animalized substance, yellowish, stringy, and resembling cheese. The people call it cheese. This coagulum becomes sour in the space of four or five days.

This extraordinary tree appears to be peculiar to the Cordillera of the coast, particularly from Barbulu to the Lake of Maracaybo. At Caucasga the natives call the tree that furnishes this nourishing juice, the "milk-tree" (*arbol del leche*). They profess to recognize, from the thickness and color of the foliage, the trunks that yield the most juice; as the herdsman distinguishes, from the external signs, a good milch-cow.

"Amidst the great number of curious phenomena which I have observed in the course of my travels," continues the discoverer quoted above, "I confess there are few that have made so powerful an impression on me as the aspect of the cow-tree. A few drops of vegetable juice recall to the mind the all-powerfulness and the fecundity of nature. On the barren flank of a rock grows a tree with coriaceous and dry leaves. Its large woody roots can scarcely penetrate into the stone. For several months in the year not a single shower moistens its foliage. Its branches appear dead

and dried; but when the trunk is pierced it flows from it a sweet and nourishing milk. It is at the rising of the sun that this vegetable foam is most abundant. The negroes and natives are then seen hastening from all quarters, furnished with large bowls to receive the milk, which grows yellow and thickens at its surface. Empty their bowls under the tree itself, or carry the juice home to their children.

D. Lochart also visited the cow-trees in Caracas, and drank of the milk from a tree which had a trunk seven feet in diameter, and more than a hundred feet from the root to the first branch. Sir R. K. Porter also paid them a visit, and observations confirm those already recited. "The color and consistency," he says, "were precisely those of animal milk, with a taste not less sweet and palatable; yet it left on the tongue a slight bitterness, and on the lips a considerable cleanness; an aromatic smell was most strongly perceptible when tasting it."

Other trees are known which possess similar properties to a greater or less extent. On these is the "Tabayba dulce" of the Cam (*Euphorbia balsamifera*). Here again we find a plant belonging to a different natural order than any of the others, namely, the *Euphorbiaceae*, one containing a large number of plants with milky and purgative juices. Leopold von Buch states that the juice of this plant is similar to cow's milk, and, thickened into a jelly, is eaten as delicacy.

A species of the Cactus (*C. mamillaria*) yields a milky juice equally sweet and wholesome; it now constitutes the type of a genus *Mamillaria*. The milk is affirmed to be inferior in its quality to the majority of the others.

It would scarcely be advisable for us to here upon the subject of the chemical composition of any of these vegetable juices, or to show in connection with those lactescent fluids which harden upon exposure, and then are known as India-rubber or caoutchouc. Although none of the cow-trees enumerated yield a true India-rubber substance, or one greatly resembling it afforded by some of their allies. It is curious to observe how, when failing to serve mankind in one direction, these trees become important in another. How forcibly this reminds us of the quaint lines of George Herbert:—

"More servants wait on Man,
Than heeth take notice of; in every path
He treadeth down that which doth befrend him;
When sickness makes him pale and wan;
Oh, mighty love! Man is one world, and bath
Another to attend him."

M. Fletcher, on Dress.

I prayed for direction, and saw clearly a plainness of dress and behavior best became a Christian, and that for the following reasons:

1st. That of the Apostle to women professing godliness to let their adorning be that of a quiet spirit, &c.

2dly. I saw the reasonableness of the command, and proved it good for the proud heart to wear the plain and modest livery of God's children.

3dly. It tended to open my mind; for when I appeared like the world, in Babylonish garb, I had its esteem and knew not how to part with it. But when I showed by my appearance that I considered myself as a stranger and foreigner, none can know, but by trying, what an influence it has on our whole conduct, and what a influence it is to keep us from sinking into the spirit of the world. For there is no medium; they who conform to the fashions, customs, and manners of the world, must embrace the spirit also.

shall find the esteem they seek, for the world is its own. But let them remember also, that the Friendship of this world is enmity to God.

Y. I saw myself as a steward who must give an account for every talent, and that it was a privilege to have the smiles of God on every day of my time, or penny of money which I received.

Y. I saw clearly that the helping my fellow-creatures in their need, was both more rational and more pleasant than spending my substance on vanities; and as I am commanded "to love my neighbor as myself," and to consider all others as a household of faith as done to Christ, surely it is not only to suffer my superfluity to give them their necessity, but also (as occasion may require) my necessities to their extremities.

Y. But it is not only the talent of money, but time which is thrown away by conformity to the world; entangling us in a thousand little amusements which a dress entirely plain cuts off at once.

Y. The end usually proposed by young persons in their dress is such as a devout soul would despise. A heathen may say, It will promote my comfortable settled in life; but I believe the Lord appoints the bounds of our habitation, and that no good thing shall be withheld from those who walk uprightly. I have therefore given up to do but to commend myself to God in obedience, and to leave every step of my life guided by his will. I will therefore make my rule to be clean and neat, but in the plainest according to my station; and whenever I am out on the subject, these words would pass through my mind with power, For so the holy Spirit, &c. of old adorned themselves.

For "The Friend."

Report.

Female Society of Philadelphia for the Relief and Employment of the Poor, offers, with full heart, to its subscribers the following report of last year's proceedings.

Some of our friends may not be acquainted with the early history of the Society, a short account of its formation may be of interest.

It was originated in 1795, by the efforts of two Friends, who became impressed with the necessity of some more systematic method of affording relief to the poor. From the first minutes of the Society we extract the following:

"A number of young women have been induced to believe, from the observations they have made, that they could afford some assistance to suffering fellow-creatures, particularly widows and orphans, by entering into a subscription for relief, visiting them in their solitary dwellings, without distinction of nation or color, sympathizing with them in their afflictions, and as far as their ability extends alleviating them, have for the purpose associated together.

"We propose to appoint some of their committee to seek out and visit such whose situation demands their attention and sympathy; and to encourage and promote industry by endeavoring to procure employment for such as are capable of

it. The first few years its labors were exclusively directed to out-door relief and assistance; later, finding the best way to help the poor is to aid them to help themselves, spinning and sewing were introduced to the deserving at their own request.

In the year 1798, it was decided that more might be done at less expense by bringing the poor together into one house, where they

could be employed under the supervision of a committee; their children taken care of, and they provided with comfortable meals.

The Society was incorporated in 1815, under the present name, and in 1816 purchased the property in Ranstead court, which they occupied until 1846, when their number having increased so much as to render larger accommodations necessary they removed to their present location, where they endeavor to carry out the views of the originators, and trust that their labors are attended with benefit both to themselves and to those employed.

A portion of the Holy Scriptures has been read daily in the room by the committee, also several tracts, in the contents of which the women have expressed much interest. We hope the reading may be attended with good results.

Since we last met together, death has removed from amongst us our beloved friend and faithful co-laborer Susan W. Hartsborne, at the advanced age of 81 years, after a membership in the Society of more than 50 years.

Ann Burns, who has served the Society faithfully for forty years as Matron, having, by age and failing eye-sight, become incapacitated for active duty, we have thought it needful a younger person should be employed to conduct "The House." Ann Burns will still continue an inmate of the establishment.

The House was opened on the 26th of Twelfth month, 1866, and closed the 4th of Fourth month, 1867, during which time employment was given to 100 women; 27 children were admitted to the nursery, and 12 others came to dinner; 126 garments and 98 pairs of shoes were given to the women and children.

There were completed 834 garments and 18 pairs of pillow cases; 171 comfortables, 13 bed-quilts, and three silk Afghans quilted; also eight pounds of carpet-rags cut and sewed.

Eleventh mo. 2d, 1867.

For "The Friend."

Friends in Norway.

(Concluded from page 115.)

In 1845 the government of Norway passed a law granting much greater liberty of conscience than had before been enjoyed by the dissenters from the Lutheran Church. This is alluded to in the following letter:

8th mo. 30th, 1845. "Although I and thou are personally unknown to each other, I believe we yet do know each other in the hidden man. I feel a true union in my spirit with you, the Friends in England. Often am I in my loneliness turned towards you in love and sweet fellowship in my spirit, even as if I were amongst you. This fellowship has its source in Christ, the true vine tree, in whom all true unity and fellowship consists.

"Your love is great toward us, and the concern you have evinced in both spiritual and temporal things, is much appreciated; and I believe, yet more precious in the sight of God, who rejoices to behold his love poured forth on earth, as it is in heaven.

"You are much mentioned amongst the young Friends, and love bursts forth from them towards you. I trust all will be to the praise and honor of Him who has thus united us together in the spirit.

"I will now inform thee of a great visitation of grace from on high, which was felt in our meeting on the first First-day in the Fifth month last. I believe the Lord's presence was near the assembly, and was felt by all present, as our dear friend, Endre Dahl, stood up and publicly bore testimony

amongst us. A shaking or motion was felt by the whole assembly. He has also appeared in ministry a few times since; and has travelled to visit Friends who live at a distance from Stavanger, and who lack ability frequently to attend our meeting. I have also been with him on a visit to some Friends.

"We are now granted religious liberty by the king of Norway; and, perhaps, Elias Tasted or Endre Dahl will send a copy of the law to thee, by which thou canst see how great our liberty is.

"It was determined, in our two months' meeting, held in the Sixth month last, that, in the Sixth month of each year, all Friends in Norway, who live at a distance from Stavanger, should be invited to meet as regularly as possible for them, as many have a dangerous voyage to travel; and that all things relating to the two months' meeting, which have occurred during the year, should then be discussed and considered.

"Perhaps we may venture secretly to look for some one from England to visit us at Stavanger. It would be very acceptable to us, if it were the Lord's will. Friends are well, except two women, who are very feeble. And now thou art affectionately saluted from thy friend and fellow pilgrim,

ENER HANSENSEN.

In the spring of 1846, as individual accustomed to attend meetings at Stavanger, had occasion, with her husband, to come over to Newcastle, where they were kindly noticed by several Friends. On their return home, they mentioned the surprise with which they had observed, in the houses of Friends, a departure from that ancient simplicity which the early Friends were accustomed to observe, both in their apparel, and in the furniture of their houses. This being reported to the dear Friends of Stavanger, gave them pain; and proves the need we have, as members of a Society hitherto so remarkable for its self-denial, and abstinence from an indulgence in the pomps and vanities of this wicked world, to be very careful in an adherence to that innocency and simplicity of life and manners which was so impressively inculcated by our Lord, when he warned his disciples against the pursuit of such things; adding, "After all these things do the nations of the world seek; and be not ye like unto them."

In a letter to a Friend of Newcastle, the writer remarks:—"They are telling some things which is a grief to tender-hearted Friends, and which, they say, only worldly-minded people do, as it is not useful for any thing but to grieve upon. Friends ask me, Is that true? and have Friends liberty to do it? Is it consistent with Friends' principles? Are they not more separated from the world than this? Such questions do they put to me, because I never told any body of such things amongst you, although I saw it when with you, and looked upon it as superfluity."

Is not this occurrence a caution to all to beware lest we unhappily offend or give occasion of stumbling to any of the little awakened tender-hearted ones of Christ's flock, who are honestly enquiring after the true way to the kingdom of God: and whose eyes have been measurably opened to see that the lusts of the flesh [the carnal mind,] the lusts of the eye, and the pride of life, are not of the Father, but of the world.

In 1846 they were visited by some Friends from England, who found the number of members and of those who attended meetings in Norway, to be about 165. Of these Friends they remark:

"As regards the little flock in and around Stavanger; it is a comfort to be able to confirm the view already impressed on the minds of those who have been in frequent correspondence with them. Solid and orderly in their deportment,

and weighty in spirit before the Lord, they appear as the 'savour of life unto life.'

"We remark, amongst others, that their gravity, and faithful maintenance of the principles and testimonies professed by them, amidst surrounding difficulties; the tenderness of their spirits, and daily walk, are deeply interesting and instructive."

"There is evidence in Norway (among some who have known but very little of Friends) of the quickening power of Divine grace immediately revealed. It was very striking to remark in some instances, how strength had been granted, from time to time, to forsake all for the love of Christ, and, in his name, to plead with the people.

"Helge Ericksen, a young man of Ilagane, in Valdres, has, for most of seven years, travelled under an apprehension of religious duty, enduring all the fatigue and hardship attendant on the rigour of the climate, and many changes of heat and cold, industriously supporting himself, in the interim, by making neat watchguards, and chains for fishermen's knives of brass wire, as he journeyed. He has five times walked from South Ourdal to Gudrang, a distance of one hundred and forty miles, to visit those whom he believed to be in a seeking and tender state, and to whom his mind had been attracted.

"Berthe Danielsen also left her husband, family and home, and travelled many miles as a preacher, until apprehended in Sweden, and imprisoned there for eight weeks for conscience sake, after having been engaged in travelling for twelve months, literally without purse or scrip.

"Jugebr Jevensdatter, now about eighteen years of age, commenced travelling through Norway at the age of thirteen, and continued, for three years, to preach and exhort the people, having no certain dwelling place, but over mountain and moorland, through summer's heat and wintry snow, often thinly and poorly clad, continued her course, and experienced, as I think, a remarkable degree of preservation. She is now an attender of Friends' meetings at Stavanger, and was much tendered in the sitting we had with her. I omitted to name that Berthe Danielsen and her husband, although very poor, are so hospitable, it is said, they would share their meal, even to the last, with suffering humanity.

"As a striking instance of faithfulness under suffering, amongst many others, might be mentioned the case of Soren Ericksen, of Stagland, who, when he became convinced of the principles professed by Friends, felt he could no longer allow his children to be baptized by the priest of the district within the limits of which he resided. This brought him into much trouble. A demand was made for the baptismal fee of sixteen schillings, being equal to about 36 cents. In enforcing this demand, which was enormously swollen by excessive charges of various kinds, the whole of his cattle were seized and sold, with the exception of a single calf; yet his neighbours, who have a great regard for him, have had occasion to rejoice in the increase of his flock. His sheep are now more numerous than those of any other person in the district. Andre Dahl remarks of this family:—They have kept faithful to their testimony through many difficulties and trials.' At Stavanger also, and at other places, a noble testimony has been borne to the authority of Christ in the Church, and to the spirituality of the Gospel dispensation. The care they have extended to the poor within their borders, *whether members or not, if needful and deserving*, is also very exemplary and confirming; and they appear to have endeavoured to the utmost to promote the education of the children of these.

"All, without any exception, are furnished with the scriptures; and to those attenders who are too poor to purchase for themselves, they are granted on loan."

Selected for "The Friend."

HOPE.

No blinder bigot, I maintain it still,
Than he who must have pleasure, come what will:
He laughs, whatever weapon Truth may draw,
And deems her sharp artillery mere straw.
Scripture indeed is plain; but God and he
On Scripture ground are sure to disagree;
Some wiser rule must teach him how to live,
Than this his Maker has seen fit to give;
Supple and flexible as Indian cane,
To take the bend his appetites ordain;
Contrived to suit frail Nature's crazy case,
And reconcile his lusts with saving grace.
By this, with nice precision of design,
He draws upon life's map a zigzag line,
That shows how far 'tis safe to follow sin,
And where his danger and God's wrath begin.
By this he forms, as pleased he sports along,
His well-poised estimate of right and wrong;
And finds the modish manners of the day,
Though others loose as bubbles as an infant's play.
Build by whatever plan Coprice decrees,
With what materials, on what ground you please;
Your hope shall stand unblamed, perhaps admired,
If not that hope the Scripture has required.
The strange conceits, vain projects and wild dreams,
With which hypocrisy forever teems,
(Though other follies strike the public eye,
And raise a laugh) pass unmolested by;
But if, unblameable in word or thought,
A man arise, a man whom God has taught,
With all Elijah's dignity of tone,
And all the love of the beloved John,
To storm the citadels that rise in air,
And smite the untempered wall to spare,
To sweep away all refuges of lies,
And place, instead of quirk's sometimes devise,
Lama Sabachthani before their eyes;
To prove, that without Christ all gain is lost,
All hope despair, that stands not on his cross;
Except the few his God may be so impressed,
A tenfold frenzy seizes all the rest.
Throughout mankind, the christian kind at least,
There dwells a consciousness in every breast,
That folly ends where genuine hope begins,
And that he finds his Heaven must lose his sins.
Nature appears with her long burning wheels;
This rising stroke, this ultimate decree;
And, while religion seems to be her view,
Hates with a deep sincerity the true:
For this, of all that ever influenced man,
Since Abel worshipped, or the world began,
This only spares no lust, admits no plea,
But makes him, if at all, *come out of her*;
Sounds forth the signal, as she mounts her car,
Of an eternal, universal war;
Rejects all treaty, penetrates all wiles,
Scorns with the same indifference frowns and smiles;
Drives through the realms of sin, where riot reigns,
And grinds his crown beneath her burning wheels!
Hence all that is in man, pride, passion, art,
Powers of the mind, and feelings of the heart,
Inseparable of Truth's almighty charms,
Starts at her first approach, and sounds to arms!

Selected.

RAPIDITY OF TIME.

The moments fly—a minute's gone!
The minutes fly—an hour is run!
The day is fled—the night is here!
Thus flies a week, a month, a year.

A year, alas! how soon 'tis past!
Who knows but this may be my last!
A few short years, how soon they're fled,
And we are numbered with the dead.

The Tea Tapers of Russia.—The tea-houses of Russia are quite as characteristic a feature in the manners and customs of that country as those of Japan. M. Lumley, her majesty's secretary of embassy at St. Petersburg, states in a recent report that in the capital alone there are six hun-

dred and ninety-seven common tea-shops, besides the cafes and restaurants of superior description; the daily consumption of tea at some of these places being from eighty to one hundred pounds. They are the resort of the drowsy drivers, carters and laborers of every description; and it is without interest to witness the orderly behavior and polite demeanor of those poor peasants, as they enter the long room in which the tea is served, each man greets the bar-keeper, and as passes the sacred image which is to be found in every Russian room, and before which a lamp, always burning, he reverently doffs his cap, while in the room all remain uncovered. Numerous tables are ranged along the apartment, each of which may be seen groups of six or eight sturdy monks wrapped in their sheep-skin peases, which are worn with the fleece inward, and which, no matter what the heat of the room, seldom taken off, or even opened. A large tea of boiling water, and a smaller one containing allowance of tea for each man, are placed upon the table; a saucer of very small lumps of sugar like dice, one for each man, and a glass of corn brandy, constitute the repast. Both tea are generally replenished as soon as the largest emptied, but occasionally the larger one alone is refilled, and the liquid becomes tea only in name. The tea is drunk out of saucers, and the sugar not put into the tea, but is held in the mouth. Some poor fellows who are still more economical put a piece of black bread in the saucer, and after drinking two or three cups in this way, wrap the slightly diminished piece of sugar in paper, and carry it away with them. It seems to be no object with the tea drinkers, as at a sitting, many will take six or eight, and more, cups of tea before turning the cup down the saucer as the sign that they have had enough. The effect of the atmosphere, heated by a stove seventy-five degrees or eighty degrees of Fahrenheit, in a low room from which the air is carefully excluded by double windows, combined with the numerous cups of hot tea, on a body wrapped in sheep-skin pelisse, may be easily conceived. A tea drinker, while imbibing his favorite beverage, is literally taking a modified vapor bath. Some men will go on steadily drinking until they have reached a condition which is denoted by the term "*Pey do trellavo pota*," to drink to the third degree, of transpiration; on which time will tally forth into a temperature of perhaps twenty degrees below the freezing point, throwing themselves on their sledges, fall as it were enveloped in steam, having thus imbibed, for no doubt intentionally, a sufficient amount of caloric to last them to the next halt, where repetition of the tea drinking takes place on the same scale, and with the same effect.

Near the close of his life Samuel Foote said, "Death has no terrors, nor will it give me any victory. My soul triumphs over death, hell, and the grave. As I have lived so I shall close, with the most unshaken assurance that I have not followed cunningly devised fables, but the pure, living eternal substance. Let them be strong; let the middle-aged be animated, the youth encouraged; for the Lord is still Zion, the Lord will bless Zion. If I now be moved out of the church militant, where I have endeavored in some measure to fill up my duty, have an evidence that I shall gain an admission into His glorious church triumphant far above the heavens. My dear love is to all them who love the Lord Jesus Christ.

The End of Four Great Men.—The four at persons who occupy the most conspicuous places in the history of the world, are Alexander, Hannibal, Caesar, and Bonaparte.

Alexander, after having climbed the dizzy heights of his ambition, and with his temples and with chaplets dipped in the blood of countless millions, looked down upon a conquered land, and wept that there was not another world him to conquer—set a city on fire, and died a scene of debauch.

Hannibal, after having, to the astonishment and consternation of Rome, passed the Alps, and went up to fight the armies of the mistress of the world, and slipped "three bushels of golden coins from the fingers of the slaughtered knights," made her foundations quake, fled from his army, being hated by those who once exulted in his name to that of their god, and called Hina Baal, died at last in a foreign country, poison administered with his own hand, unattended and unwept.

Caesar, after having conquered eight hundred nations, and dyeing his garments in the blood of millions of his foes; after having pursued to the only rival he had on earth, was miserably assassinated by those he considered his dear friends, and in that very place the attainment which had been his greatest ambition.

Bonaparte, whose mandates kings and popes obeyed, after having filled the earth with the name of his name, and after having deluged Europe with tears and blood, and clothed the world in sackcloth, closed his days in lonely banishment, almost literally exiled from the world, yet he could sometimes see his country's baneful waving over the deep, but which did not, and did not bring him aid.

Thus these four men, who seem to stand the representatives of all those whom the world calls great—these four men, who each in turn made earth tremble to its very centre by their empires, severely died—one by intoxication, or, as supposed, by poison mingled in his wine; a suicide, one murdered by his friends, and a lonely exile. "How are the mighty fallen!"

Reading and Writing in France.—Two maps, published in Paris, are entitled, "France can read and France can write." In the first the districts in which persons married in 1860 could not sign the register—in a proportion from thirty to seventy-five per cent.—are colored in black. Fifty-five departments are thus colored, comprising all the south, centre and west of France. The ten departments where the greatest number of the newly married have been to sign (the others being only from 1.44 to 10 per cent.) are the Lower Rhine, Meuse, Moselle, Haute, Marne, Meurthe, Upper Rhine, Doubs, Jura, and Manche. The average of the illiterate married in 1860 is thirty-three per cent. *The Steele*, which sums up these statistics, is horrified:

One-third of France unable either to read or write! Fifty-five departments out of eighty-nine in which the number of illiterate persons is from thirty to seventy-five per cent. Is it not a shame? We talk of a new military organization! Let other busy ourselves with the instruction of black phalanx of ignorance; let us devote to national work a tithe of the millions we usually squander. Let us begin by beating Prussia in this ground. As regards primary instruction we are in the lowest rank of the European nations, and we imagine ourselves to be marching at the head of civilization!"

For "The Friend." Selections from the Unpublished letters and Journal of a Deceased Minister.

(Continued from page 119.)

Ninth mo. 1835. * * * "If thou art only disposed to seek unto Him, to submit to the gentle teachings of His spirit, operating upon the mind at seasons, which I believe all realize, it will be to thee a source of consolation and comfort, when all outward consolations fail. The picture presented to the youthful mind, of what this world possesses of happiness, is apt to be bright and glowing. We see only the fair side: and conclude anything so specious, cannot glow but to deceive. But believe me, my dear —, it promises more than it has in possession; and those who mistrust the fair parent, and discover in early life, that this is not the place of our rest, and thence flee to Christ Jesus the only sure strength, fortress, and refuge, save themselves many a disappointment, and lay hold upon the only Hope, that is sure, abiding, constant."

The following extract alludes to a change of attire, and perhaps of manners in the individual addressed.

"Is it not a matter of surprise, that serious people of all professions of religion, most especially our own members, do not see and feel the obligation of bearing a more faithful testimony against the corruption of the age in these respects? Against that vain longing of the fallen, natural heart, which would seek respectability and admiration in the fashionable garb or mere outward adorning, too unmindful of 'that which is not corruptible; even the ornament of a meek and quiet spirit, which is in the sight of God of great price.'"

Tenth mo. 7th, 1835. "Part of thy letter awakened impressions I have long entertained respecting thee, causing me to fear thou wast wasting thy strength for nought, and through the insinuations of the arch-deceiver, deferring something called for, to the increase of thy disquiet and doubt. I allude to that part where thou express 'some things weigh heavily upon me,' and acknowledge a fear lest thou shouldst act in the wrong time, or in thine own strength. There is to be sure, danger of running too hastily, and getting before our Guide; but I do think the hindering considerations on thy part have acted long enough: yield, then, to what is required of thee as a part of the *whole burnt offering*; and realize the reward of obedience. He who is calling for it will assist thee to perform it, strengthen thee to continue the 'daily sacrifice' until the whole is completed, to His honor, and thy own unspeakable satisfaction. Excuse my earnestness; I can scarcely express how anxious I sometimes feel, that unfaithfulness in these little things need not interfere with our progression in the increased knowledge of God, and his ways. I know it is very easy to reason ourselves into the belief that adopting the garb of self-denial, and appearing different from some other whose religious attainments we prefer to our own, may induce the fear we are going too fast; and that it will be impossible for us to maintain our ground, and so to conduct ourselves as to fail bringing reproach on a Society we love, and a cause we honor. But while it is well to be jealous of ourselves, these considerations need not move us. He with whom we have to do is omnipotent, and if we look to Him for direction, and steadily persevere in patient endurance, whether in seasons of depression, or those favored with the Light we seek, we need not fear. His strength is made perfect in our weakness. And our Friend and Helper is almighty."

11th mo. 15th. * * * "Surely time has sped most quickly since the commencement of Autumn. I have heard it remarked that every successive year appears shorter than the preceding; and if such is the fact, I think the later period of existence (where that existence is extended) must seem as only a little speck; a transient meteor of the evening sky, scarcely realized ere gone.

"Our Quarterly Meeting consisted almost entirely of our own members; but yet I thought it was a season of instruction. 'Tis a happy privilege we enjoy in the assurance that acceptable and available worship is independent of human means. We need not the interference of man, nor the vain pomp of outward ceremonies; but if rightly concerned to seek, and accept the tuition of the great High Priest of our profession in total outward silence, and the silence of 'all flesh,' we may experience the heart prepared to maintain immediate communion with Him who observeth and knoweth us altogether. But although messengers were not sent, we had excellent advice and warning administered by J. W. and R. H. The latter is certainly a remarkable instance of the power of Divine Grace. I have listened to her with astonishment; and think in her the exclamation of Elihu strikingly exemplified: 'Who teacheth like Him.' We had a pleasant visit from C. H. He is certainly a very animated and interesting companion, and his conversation savoring, as it generally does, of the instructive and improving, is calculated to advance the work he long since so nobly espoused.

"Cousin J. M. spoke to us to-day, after perhaps two years silence. He affectionately urged the necessity of 'walking in the light' while the opportunity was afforded us, so that we might become children of the light. Intimating that the day of visitation might pass from us unimproved, and the awful situation be realized, resulting from disobedience, and disregard of the monitions of the inward Teacher; which fails not at certain periods to make itself known as a transient, if not steady resident in the bosom of each of us."

12th mo. 27th, 1835. "Messengers are still sent among us; but the fruit of their often painful labors, is sorrowfully disproportionate. What more must we have to break the lethargic slumbers of too, many within our borders—those who are at rest, and are quiet, notwithstanding the repeated calls for greater industry and watchfulness? It often appears to me, that the living members have great need of 'holy patience' when they are given to see the lapsed state of the churches, and to feel that their strength is wasted almost for nought. Were it not that these have a refuge to flee to, certainly their spiritual strength would fail them; and their conclusions, like the mournful prophet's would be, 'to speak no more in His name.' But girded with the invincible armor, and made willing to 'spend and be spent' for the cause sake, they are made willing to act in the strength afforded, and leave the event to Him whose power is unlimited, and whose compassionate, ever watchful eye is continually over us for good."

(To be continued.)

Importance of Rags.—From time immemorial rags have been the symbol of poverty, worthlessness, and vileness, and as such are referred to in the bible, and in the earliest profane works. Their usefulness as a material for paper seems, however, to have been discovered several centuries ago. The oldest specimen of a paper made from linen rags contains a treaty of peace between the kings of Arragon and Spain, bearing the date of 1178. Raw cotton was, however, used for paper

making before this time. It is tolerably certain that mills for making paper from rags were operated in Spain as early as 1085.

Rags, particularly cotton and linen rags, have been for many years one of the housewife's perquisites; and many a shining treasure in the kitchen, and many an elegant teapot on the table, has borne witness to the good woman in her practice of economical saving. All these rag-savings find their way to the paper-mill. Their price has more than quadrupled since the diminution in the supply of cotton caused by the war. But the supply of this country is wholly inadequate to the demands of the manufacturers and the public. Once writing-paper was not very generally used; at least, the people generally required but a small portion compared to the quantity they now demand. It might have been supposed that the increased facilities of travel would have diminished the necessity for writing; but the contrary seems to be the case. Personal contact and mutual acquaintance beget new commercial alliances, and correspondence is necessary. The rags made in this country constitute but a small portion of those used by American manufacturers. We imported for the quarter of the present year ending June 30, rags to the value of \$126,766. In the ten years ending with 1865 the amount of rags imported was 209,883,718 pounds. Italy furnishes a large proportion of the rags brought into the United States. Everybody has heard of the Italian lazzaroni, who wear the scantiest dress of the filthiest race; yet from this unpromising source three-fourths of our supply comes. It is the country of the open palm, and begging and rags go together. Begging there, and in other parts of southern Europe, is as much a profession as any industrial pursuit in this country, and the uniform of rags is more important to its successful prosecution than in the government livery of the soldier. Still, valuable as rags are to the professional beggar, and important as they may be to abject poverty, they are far more important to the world at large; for up to the present time no other material has been found to usurp their place as the basis for paper. Their scarcity and constantly enhancing value have stimulated ingenuity to provide a substitute, but it has not been so successful as could have been wished. Straw, wood, and other substances have been, and are now, extensively used in the manufacture of the coarser papers, but nothing equals linen and cotton for the production of the finer and finer qualities. Some of the European governments, for this reason, have prohibited their exportation.—*Scientific American*.

Dignity of Labor.—I have faith in labor, and I see the goodness of God in placing us in a world where labor alone can keep us alive. I would not change, if I could, our subjection to physical laws, our exposure to hunger and cold, and the necessity for constant conflicts with the material world. I would not if I could, so temper the elements that they should make vegetation so exuberant as to anticipate every want, and the minerals so ductile as to offer no resistance to the strength or skill. Such a world would make a contemptible race. Man owes his growth, his energy, chiefly to that striving of the will, that conflict with difficulty, which we call *effort*. Easy, pleasant work does not make robust minds, does not give men such a consciousness of their powers, does not train to endurance, to perseverance, to steady force of will—that force without which all other acquisitions avail nothing.—*Channing*.

No Easier Way.

For "The Friend."

In calmly viewing the state of things in our favored Society as well as out of it, we are brought painfully to the conclusion, that the great tendency of things in our day, aided by the strenuous efforts of the envier of our peace, is to persuade that, "religion has softened her features," and that the way to heaven is much smoother, and wider, and easier than was formerly the case, or than our fathers found it from true and living experience to be. This sort of flimsy faith has brought, or must bring about a corresponding relaxation in practice—the expressive language of consistent conduct,—and will, if not arrested, finally lead into a halting, stumbling gait, which will again give significance to the expression, "The lame and the blind are the guards of the house, instead of David and valiant men." The fruits of a deteriorated faith, must sooner or later be a deterioration in life and conversation, which are ever the visible tests by which that faith must be shown and judged. And how deplorable is the consequence, of becoming faithless or lukewarm in that most important of all duties, which can claim the attention of an immortal being. How much better to be stripped of all in which the flesh can glory, and in the simplicity of a little child to sit, as faithful Mary did, at the feet of Jesus, learning of Him, who was meek and lowly in heart, the only needful lesson of choosing Him for our portion.

This resigned, and teachable, and childlike state is sweetly exemplified in the subjoined account of Catharine Burling; to which we would particularly invite the attention of our dear young Friends. She preciously alludes to the "child's state, filled with innocence, and abounding with love," which all are called to; agreeably to the dear Saviour's own words: "Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven."

It is submission to Christ Jesus, taking His yoke upon us, and becoming like little children—even new-born creatures in Him—that can alone enable us to grow up in Him after the order which He has prescribed: first the blade, then the ear, and then the full corn in the ear—the young man, the strong man, unto the stature of fathers in grace and holiness in His house. This dear young Friend, had, it seems, a time of great distress and deep spiritual conflict, so that, as she said, "many wearisome nights have I gone through, and have watered my pillow with my tears." This we believe to be the invariable way in which the Father of Mercies deals with His children. He brings them down into the valley of humiliation, tries them, and proves them; and chooses them in the furnace of affliction. Not in anger, or that they should be discouraged does he humble and abase them, but that they should turn from every false rest—from the tempting snares and fond delusions of a deceitful world—and lay every crown at the footstool of the Crucified. For it is not in the easy way to the fleshly nature, but in the narrow way of the cross that we are to be found working out our salvation, unto that glorious, regenerated heavenly life which is in Christ Jesus our Lord.

Catharine Burling's heart, through her obedience to the light of the Saviour, "which maketh manifest" all that is reprovable—the law of the spirit of life in Christ Jesus which setteth free from the law of sin and death—"came" as she testified, "to be filled with the love of God." So that she could also exclaim, "The work of regeneration is a great work. I know it experientially. I am become a new creature; new

thoughts, new desires; my affections set upon things above. I have a new name written in it Lamb's book of life, and the white stone is given to me."

May the perusal of this memoir of her, stir the pure mind in the youthful reader of the present day, so that such may be as fresh animated and encouraged to devote themselves with renewed energy to His service and disposal, who is wondrously to be gracious to all; and is especially calling upon sons and daughters, one here and another, to acknowledge Him in *all their ways* for men, that He also may acknowledge them both now and in the awful day of account, before His Father with the holy angels. May it changeless joys, accessible to all through Jesus Christ, even the promised pleasures at God's right hand forevermore, incite all to that diligent application of soul before the Father of spirit which is acceptable in His holy sight; agreeably to the language: "Blessed are they which hunger and thirst after righteousness: for the shall be filled." In no easier way than through true hunger and thirst after the bread and water of life, even at times pausing after God as at that panteth after the water-brooks, will He have savingly found of us. In no other way, through the obedience which is of faith in Christ and in His self-abasing cross, can the crown of eternal glory ever be won. In a word, in no other way than by submission and allegiance to Christ Jesus, who, though all time, is the way the truth, and the life, can any come to the Father. May we so run as to obtain. So was worthy of the vocation wherewith we are called that when life's short but conflicting campaign is over, we may, all unworthy as we are, be permitted through unmerited mercy to enter, as was the case with this dear young woman, into the joy of our Lord. The memoir is as follows:

"Catharine Burling, daughter of John and Ann Burling, of the city of New York, in America, was taken ill of a slow fever, which weakened her gradually, so that, to use her own expression she was reduced step by step; all means used for her help proving ineffectual.

"When she was brought low, and her recovery appeared doubtful, she was for a time under great exercise of mind concerning her future state, as prayed to the Lord for a little more time, and that she might witness a better state; which He graciously pleased to answer not long after, saying her mind was changed. She came to witness the child's state filled with innocence abounding in love; often saying, 'My mind like a little child's.' Her heart came to be filled with the love of God, and in the abundance thereof, for several weeks before her departure she was at times enabled to declare of the Lord's goodness to her in a wonderful manner; and all to exhort many who came to visit her, to a moment of life, that when they come to life on a second they might be made enjoyers of that peace she was then made partaker of; often saying she felt his peace flow in her mind as a gentle stream and that her cup ran over.

"Though order of time may not be kept strictly to, yet many were the sweet expressions which this young woman uttered, some of which, nearly as could be remembered, are as follows viz.:

"Many wearisome nights have I gone through and have watered my pillow with my tears. I was long in doubt of my eternal happiness, as in the time of greatest distress, I cried to the Lord that he would be pleased to lengthen a little time a little longer, that I might be more fully prepared. And He was graciously pleased to be

grant my request; and now He has been pleased to me a full assurance of it, and to lengthen time, that I might speak of his goodness to us, and tell what He has done for my soul. Praises, praises, praises, be given to his great glorious name! My tongue is too short by O if I had the tongue of an angel, I could sufficiently express my gratitude to that great God who has been thus pleased to favor me eminent a manner!

My disorder is very changeable: very flattering to be some, but it does not flatter me, resigned to the Lord's will, let him do just as pleaseth him with me, his poor frail creature.

A few days ago, when I thought I was launching into eternity—that boundless ocean of glory—I prayed to the Lord that he would ease to give me a little longer time, and He graciously pleased to hear and grant my request. The work of regeneration is a great work, now it runs experimentally. I am become a creature, new thoughts, new desires, my affections set upon things above. I have a new written in the Lamb's book of life, and the stone is given to me.

He at the same time advised her brothers and sisters to plainness of speech and apparel, saying, "Remember our blessed Lord, that great pattern of meekness, who when on earth went up and doing good, and wore a garment without ornament."

He was crucified, he was nailed to the cross for our sins, for my sins: Oh love inexpressible!

During the last five weeks of her illness she frequently speaking of the Lord's goodness to being favored in an extraordinary manner; saying, "I have nothing to do with this world." "O let my time be employed in praising the Lord, and telling of his gracious dealings with my soul."

* * * * *

He departed this life, without sigh or groan, on the 4th of the Fourth month 1761, in the eighth year of her age."—*Pietly Promoted.*

For "The Friend."

Choice of Business.

How cordially did I unite with the remarks by Editor, in a recent number of "The Friend," pointing the importance of a right choice of employment by our young men when starting in life. We see daily the great mistakes made by the engaging in business for which they have no qualification; and we cannot but suspect that many instances which have ended disastrously upon him has been the beguiler.

How should dignify his occupation, not the position the man. Let then no false ideas of profitability influence the choice of an employment. How much more really respectable may be a superior mechanic learned in the history of his trade; how much more to be valued the carpenter, the mason, or the house painter, who is an adept in his line, than the lawless merchant, or the physician struggling with the difficulties of a profession he can never mount.

Many reasons present to induce a choice of mercantile rather than of mercantile pursuits. A man has generally more time for intellectual improvement, than if immersed in the feverish life of mercantile speculation; he enjoys more domestic happiness, because his is a mind at home, while his certain gains enable him to command the useful comforts, and even at an advanced period in his career, to enjoy many of the pleasures of life.

It should ever be borne in mind, that wealth and honors so called, cannot be the prize of all; and more than this, that they are not prizes worth contending for, because unproductive of solid happiness. The approbation of the worthy and the wise is ever to be desired, and it will ever be found that the thoroughly honest, upright, conscientious man will necessarily fill an honored position among his fellow men.

Young men, about to make a choice of business, consider well the motives which influence you. Is it to obtain social position? Remember that the homage the world awards to wealth is hollow, and that that respect only is to be desired which is the reward of merit, and that this will be yours if you but dignify your calling, be it what it may. Is it to become suddenly rich? Remember, "He who hasteth to be rich maketh himself a snare."

V. V.

An Ice Cave.—Nearly all the ice used on the Pacific coast is obtained from a never failing ice cave in the northern part of Oregon. The remarkable subterranean cavern, where the ice remains in a perfect state the year round, is situated on a stream known as the white Salmon, which empties into the Columbia river, on the Washington territory side, about thirty miles below the Dalles. The entrance to this icy chamber is near the base of Mount Adams, which stands twenty miles from the Columbia, and whose melting snows constitute the water of the White Salmon.

The dimensions of this cave are vast, extending many miles under the snowy mountain, and the scenery inside is supremely grand. The ice is found in columns formed by water falling from above and congealing as it falls. These columns are cut out in blocks and conveyed on pack animals to the Columbia river, and from thence are shipped to all the markets on the coast.—*N. American.*

The Michigan Indians.—The annual report of the Michigan Indian Agency shows the number of Indians in the State under the charge of the agency is as follows: Chippewas, of Lake Superior, 1060; Ottawas and Chippewas, 5120; Chippewas of Saginaw, Swan Creek and Black River, 1550; Chippewas, Ottawas and Pottawatomies, 232; Pottawatomies of Huron, 46; total, 8008; mixed bloods included. Division of sexes—3823 males, 4185 females. These Indians have organized into seventy distinct bands, each with its chief, and inhabit 179 frame and 821 log houses. They have erected over two thousand homesteads. The value of their personal property is placed at \$376,595, and they cultivate 10,772 acres of land.

THE FRIEND.

TWELFTH MONTH 14, 1867.

Some years ago we published in "The Friend," the epistle written by that eminent servant of Christ, Stephen Crisp, addressed to Friends concerning the times in which it was penned and those which followed; but some of our young Friends being desirous to have it again revived, we have concluded to republish it, and we give the first part in the present number.

The author was evidently a man of no common mind, and, as a faithful servant, was endowed by his divine Master with extraordinary spiritual gifts, which he diligently occupied for the salva-

tion of souls and the edification of the church. To those who are sincerely striving to be numbered among "an afflicted and poor people," whom the Lord has left in the midst of this generation, as He has in all others, and who, amidst their trials and discouragements, still trust in His name, Stephen Crisp's description of the workings of the unregenerate; his exhortations to faithfulness in maintaining the testimonies of the gospel as promulgated by those first called to the work of gathering and organizing the religious Society of Friends, and his words of counsel and encouragement to stand undismayed amid defection and disesteem, come with a freshness and power that give proof of their being the product of a "Scribe which is instructed unto the kingdom of heaven, * * * which bringeth forth out of his treasure things new and old."

There are various agencies employed and a great deal being done within the limits of our religious Society in the present day, ostensibly for the purpose of increasing a knowledge of christian truths, and we often find very strong language made use of to set forth the power of these instrumentalities and the extraordinary manifestation of divine favor attending their exhibition, almost irresistibly creating a fear lest the increase of show should be indicative of and proportionate to the decrease of divine unction; as the grandeur of the edifices for worship, and the gorgeousness of their decorations are said to keep equal step, with the decline of vital religion.

But in this and other epistles of S. Crisp, as well as in similar writings of our early Friends, there are a depth and savor, which, in treating of sacred things, accompany the teaching of those only who speak from practical experience, of what their eyes have seen and their hands handled of the word of life. However unfashionable and even distasteful the writings of the early members of our religious Society may have become to the more knowing ones in the present day, and however great disesteem may be manifested for them as expositions of christian doctrine, they contain a depth of religious experience, and a wealth of instruction in righteousness, that should commend them to every sincere seeker after a practical knowledge of the spirit and life of the gospel dispensation and the work of regeneration. It is true that they all speak the same language as to the necessity of heartfelt repentance, the divine origin of saving faith, and that it is indispensable to experience the baptism of the Holy Ghost and fire, before the floor of the heart can be cleansed and a preparation known for the work and service of the Head of the church; thus exhibiting the life of a christian as a scene of conflict and humiliation. But they no less strikingly set forth the unfeigned mercy, the wisdom and strength of Him who called their authors to glory and virtue, who equipped them to make war in righteousness against the man of sin, and made them more than conquerors over their internal and external enemies; thus warning, inciting and wooing their readers to strive, as they did, to enter the strait gate and walk in the narrow way.

We are persuaded that as the members of our religious Society come to the same practical knowledge of the transforming power of the Spirit of Christ in the secret of the heart, that those sons of the morning brightly exemplified, and only as they are made partakers of it, will they experience a settlement and stability in the right way of the Lord, and know individually and collectively, what it is to be members of the mystical body of Christ, and employed by Him to extend his kingdom of righteousness and peace in the earth. But if we go on substituting form for substance,

and while highly esteeming the faithful support of christian testimonies, seek to build up by agencies which in the hands of other professors have failed to lead into the way of the daily cross, we may be led back to the house of bondage, and the language prove as applicable to us as to a people formerly, "Why gaddest thou about so much to change thy way? thou shalt also be ashamed of Egypt as thou wast ashamed of Assyria."

We would then encourage all our readers to make themselves familiar with the early literature of the Society to which they belong; in which they will find the doctrines of holy scripture clearly expounded and practically illustrated, answering to the teachings of that measure of grace bestowed on each one; and from which they may learn the blessedness of obeying the injunction, "Stand ye in the ways and see, and ask for the old paths, where is the good way, and walk therein."

SUMMARY OF EVENTS.

FOREIGN.—The *Paris La Presse* of the 7th says, that the conference will not meet at Munich, as at first proposed, but in Paris. The envoys of the various Powers resident in Paris, will represent their respective governments in the conference at the House of Commons, on the 7th inst., Lord Stanley said he could not see that any good would result from the conference on the Roman question, without a previous agreement as to the basis upon which the deliberations should be conducted. The British Parliament adjourned on the 7th inst., to meet on the 13th of December month, 1867.

The Fenian agitation continues. On the 8th inst., demonstrations of sympathy and respect for the men recently executed, took place in Dublin. It is estimated that 50,000 men marched in the Fenian procession, which was quiet and orderly.

The Italian Parliament assembled in Florence on the 6th inst. The Italian government has granted universal amnesty to the adherents of Garibaldi. The Prime Minister, Menabrea, has assured the Parliament that Italy could only gain possession of Rome with the concurrent consent of France and the other European Powers, and that it would be impossible to effect that object by force.

In the French Corps Legislatif, on the 5th inst., Minister Rouher made a speech in defence of the French policy on the Roman question. He admitted that the unity of Italy was desirable, but in accomplishing it Italy should never go to the extreme of taking possession of Rome by force.

Bombay telegram gives a rumor that the King of Abyssinia had ordered the English prisoners in his custody to be executed, but the rumor needs confirmation. A most disastrous cyclone recently occurred in India. At Calcutta the loss of life and property was very great. It is estimated that in Calcutta and its neighborhood alone about 1000 persons perished, and 30,000 huts and habitations were destroyed.

Mexican advices to the 29th ult. have been received. Peonage has been abolished in Mexico. The condition of the Mexican treasury is said to be improving. Mexico has declared war against Guatemala. The exclusive right to build a new railroad between Vera Cruz and the City of Mexico, has been granted to the old company of English capitalists, for twenty-five years.

The following were the quotations of the 9th inst., London.—Consols, 92 13-16. U. S. 5-20's, 70 15-16. The Liverpool cotton market quiet, prices unchanged. Flour off dull. California white wheat, 15s. 2d. per 100 lbs. Red western, 13s. 6d.

UNITED STATES.—The President's Message. In the annual message sent in by President Johnson at the commencement of the present session of Congress, the President reiterates the objections heretofore urged by him against the Congress and its reconstruction, and urges especially against that feature of it by which colored persons are allowed to vote. He says it will demand a strong standing army and two hundred millions of dollars annually to maintain the governments proposed to be established in the rebel States, by the aid of the negro vote.

The Finance of Office bill has, he says, greatly disorganized the revenue and treasury systems, and almost destroyed official accountability. Under such a rule the President cannot perform the duty assigned him of seeing the laws faithfully executed. Enormous frauds are now perpetrated on the Treasury, by which fortunes are made at the public expense. Some of the taxes are

so laid as to present an almost irresistible temptation to evade payment, as the great sums that officers may win by connivance at fraud, create a pressure which is more than the virtue of many of them can withstand. This evil, if not soon abated, threatens the service with total ruin and disgrace.

The President urges the withdrawal of the greenback currency as rapidly as it can safely be done, in order that a resumption of specie payments may be brought about at an early day. The attention of Congress is earnestly invited to a thorough revision of the revenue system, so as to make the impost bear most heavily on articles of luxury, leaving the necessities of life as free of taxation as may be consistent with the real wants of the government economically administered. The President urges a large reduction in the number of articles taxed, and that retrenchment, reform and economy should be carried into every branch of the public service.

A brief statement of the general facts of the reports of the War, Pension, Indian, Postal, Naval and Agricultural Departments follows, and then ensues the statement of our foreign relations. In reference to the Alabama claims, Mr. President, having already proposed arbitration, because it has hitherto been accompanied by reservations and limitations incompatible with our rights, interests and honor. He dwells at some length upon the great importance of securing a naval post in the West Indies, and says that he has endeavored to obtain such one, and that he has negotiated a treaty with Denmark for the purchase of St. Thomas and St. John's.

The Public Debt.—The Secretary of the Treasury states that the total debt of the United States on the first inst., amounted to \$2,939,382,572. At the same date there was in the Treasury, \$100,690,645 in gold, and \$37,475,119 in currency, which if deducted would leave the net amount of debt \$2,501,205,252. During the Eleventh month the debt increased \$9,701,302.

Congress.—On the 7th inst. the House of Representatives finally disposed of the impeachment question. On the vote being taken on the resolution "That Andrew Johnson, President of the United States, be impeached for high crimes and misdemeanors," the resolution was disagreed to, yeas 57; nays, 168. A bill introduced by the Committee of Ways and Means suspending the authority of the Secretary of the Treasury to make any reduction in the currency by retiring or cancelling United States notes, was passed, yeas 128; nays, 32. The Committee of Ways and Means introduced a bill providing that all cotton grown in the United States after the year 1867, shall be exempt from internal tax. After debate the bill passed with only 25 negative votes. In the Senate many bills and resolutions have been introduced, and speeches made on various subjects, but no action has been taken. The Senate has agreed to strike out the word "Honorable" which has hitherto been placed on the journal before the names of Senators. The Senate bill striking out the word "white" from all laws and charters of the District of Columbia, also passed the House of Representatives.

Philadelphia. Mortality last week, 25. Of consumption 13, 23 of inflammation of the lungs, 25. The temperature of the Eleventh month, according to the record kept at the Pennsylvania Hospital, was 47.79 deg., the highest during the month 79°, and the lowest 24.50 deg. The amount of rain 2.94 inches. The mean temperature of the three full months of 1867, has been 37.85 degrees, the mean temperature of the average of the full temperature for the past 78 years.

The South.—Further returns of the South Carolina election leave the result on the Convention still in doubt. The contest is close, and the official returns will be necessary to settle the matter. General Canby has issued an order regulating taxes for the support of the South Carolina State organization during the coming year.

The Virginia Reconstruction Convention met in Richmond on the 4th inst., and elected Judge Underwood President.

The Alabama Convention, on the 5th inst., adopted a new constitution for the State by a vote of yeas, 67; nays, 10.

The Georgia Reconstruction Convention met on the 9th inst., and organized temporarily. Two hundred and two delegates were present, including twenty-two colored men.

New York.—Mortality last week, 386.

The Markets.—The following were the quotations on the 9th inst. *New York*.—American gold 136½. U. S. sixes, 1881, 112½; ditto, 6-20, new, 107½; ditto, 10-40, 5 per cents, 101½. *Superfine State flour*, \$8.25 a \$9.15. *Shipping Oil*, \$9.90 a \$10.90; *California flour*, \$12.50 a \$13.50; *St. Louis*, \$11.30 a \$15.50. *No.*

2, *Chicago spring wheat*, \$2.37; *amber Penna.*, \$2.40; *white California*, \$3 a \$3.05. *West Canada bar*, \$1.70 a \$1.75. *Western oats*, 80 a 81 cts. *Rye*, 1½. *Western mixed corn*, 1.38 a 1.40. *Middling upland cotton*, 16½ a 17 cts.; *Orleans*, 17½ a 18 cts. *Philadelphia—Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. *Fine*, \$1.70 a \$1.80. *Old yellow corn*, \$1.40 a \$1.43. *On* 65 a 73 cts. *Clover-seed*, \$7 a \$8. *Timothy*, \$2. *Flax-seed*, \$2.45 a \$2.50. *The arrivals and sales of cattle at the Avenue Drove-yard* reached about 2,300. *Superfine flour*, \$7.50 a \$8.35, extra, family flour, \$8.50 a \$14. *Prime red wheat*, \$2.50. THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XLI.

SEVENTH-DAY, TWELFTH MONTH 21, 1867.

NO. 17.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,
PHILADELPHIA.

Age, when paid quarterly in advance, five cents.

The Moderate Enquirer Resolved.

Enquirer. I hear great rumors and reports of a people called Quakers, risen up in these last days: thou tell me what sort of a people they are? and by whom they were raised up? to what end?

Resolver. I believe thee, that great rumors and reports thou hearest of them; but know this that generality of the reports which are reported of a people mixed with untruths, therefore have sense a little, and by the Lord's assistance I endeavor rightly to inform thee.

They are a people that fear God above all the lies of the earth, and that do worship him in their own way, or in spirit and in truth; they do love God above all, and their neighbor as themselves. They were raised up from death to about eight or nine years ago, and since the '52 they have much multiplied and increased for the blessing of the Lord hath been, and to day doth rest upon them; and by Him, who eth them to multiply, were they raised up for very end and purpose, to praise and magnify the name in the earth who is God over all, blessed ever, and to publish his living truth abroad, his salvation might be known unto the ends of the earth, and therefore hath he manifested his almighty power in them by which the world shall be returned.

Enq. Thou speakest strange things of them, though I knew that thou spoke the truth, I would me one of them, for unto such a people I do to be united.

Res. Thou now seemest to wonder, but if I tell part of the dealings of the Lord with them declared in thy hearing, then thou wouldst be astonished; but peradventure thou art one of them that cannot believe it though men should are it unto thee. And whereas thou sayest, if I knew that I spake the truth, thou wouldst me one of them, for unto such a people thou rest to be united, &c.; but consider it is not any matter to become one of them in truth, to be united to them in the spirit; yet it is any matter to come among them and to conform to them; but before thou become one of them united to them, thou must be turned from darkness to light, from the power of Satan unto grace, and then thou wilt become as they are, and as they are, thou wilt be also, and then thou come to receive the desire of thy soul as they do.

Enq. Thou thyself gives a good report of them, but I hear otherwise abroad in the world; where one speaks well of them, there is an hundred that cries out against them, and their errors and blasphemies and damnable doctrines.

Res. My testimony is true which I give of them, for I am one that hath perfect understanding of the dealings of the Lord with them, and am very frequent among them, and far be it from me to extend beyond the truth in any particular, or to fall from my testimony which I could seal with my blood, if thereunto called. And what if thou hear thousands in the world exclaiming out against them, esteeming them not fit to live upon the earth; this may the more confirm thee that they are of God; for if they were of the world, the world would love them, and if they speak of the world, the world would hear them; but because the Lord hath chosen them out of the world, therefore doth it hate them, and cry out against their doctrines and opinions, and doth suppose them to be erroneous, blasphemous and damnable.

Enq. No, no, but I only tell thee what I hear of this people, I myself do not say that they are such, but I would gladly be informed of the truth of the things reported of them, for it is a good sign to me that all men speak evil of them, it is so much the more apparent that they are of God, for His people were always hated of the world.

Res. These are but words springing forth of their persecutors and backbiters; they will not speak them to their face, when they are present to answer for themselves and for the truth. But tell me couldst thou with Moses rather suffer affliction with such a people, imprisonment, spoiling of thy goods, loss of thy good name and reputation, and be bitten with the priests' mouths, to be deprived of thy liberty and estate, and to be separated from thy wife and children, kindred and relations; wouldest thou suffer this for the Truth's sake as these people are ready to do when thereunto called?

Enq. But I hope we need not be so severe and strict, and so wilful as to leave our wives, and children and callings; for dost thou not know, that he that doth not provide for his family is worse than an infidel?

Res. Thou canst not be too strict in goodness; but thou mayest be too wilful and perverse in wickedness, and too faithless in trusting God to provide for those that He hath given, and in that particular thou mayest be as an infidel thyself, or as one of the Gentiles, which seek after things pertaining to this life, saying, What shall we eat? or what shall we drink? or wherewithal shall we be clothed? But by taking thought they cannot add one cubit unto their stature. Now if thou come to the light wherewith Jesus Christ hath enlightened thee, it will bring thee to the faith of God's elect, by which the just doth live, and then thou wilt come to provide things honest in the sight of all men, and to be diligent in the creation, serving the Lord in thy place and calling, where-in thou art to abide, and not voluntarily to leave thy wife and children without providing for thy family that which is honest and decent and fitting; otherwise thou wilt be condemned by the light in

thy conscience, which is a swift witness against all wilful perverseness and perverseness, both in Jew and Gentile.

Enq. But I would be further informed concerning these people called Quakers: I would have thee tell me how they came to have that name.

Res. After that the Lord had visited them in everlasting love, and convinced them of His eternal truth, then did He manifest His eternal power among them, which made the strong man to bow himself, and the keepers of the house to tremble; by the operation of which power the bodies of some of these people came to be shaken as David was; and this being apparent unto many spectators who despised and wondered at the workings of the power of the Lord; these despisers and wonderers did from hence give this people this name, so that thou may take notice that it was the generation of scornors that gave it to them.

Enq. But as touching their worship and the manner of it, what is it? read they? sing they? or pray they in their meetings? or deny they singing and praying, as is reported of them.

Res. Their manner of worship doth differ very much from the world, and they that are of the world can take neither pleasure nor delight in it. For when they come together they wait on the Lord in His light, it may be sometimes two or three hours in silence, and sometimes it happeneth that in less space than one hour some of them may be moved to speak more or less to the edifying of the rest in the most holy faith. But their worship consisteth not in words, but in spirit and in truth, and in the light of Truth they read their own conditions, which light doth open unto them the mysteries of the kingdom. And for singing and praying, they do both with the Spirit and with the understanding; but the formal singing and praying of the world which is not in the Spirit nor with the understanding, this they do deny, for they see that God is not honored by it, and that which dishonoreth Him they disown; but that which exalteth and honoreth Him, alone to that their souls are united.

Enq. But that doth seem very strange unto me, that they should sit some hours together in silence; had they not better read, pray, and sing, that they might thereby get the motion of the Spirit by exercising themselves in sacred devotions?

Res. It seemeth not strange unto thee alone but unto thousands more who cannot apprehend that which they are made partakers of in silent meetings, in the which they witness the workings of the power of God, which raiseth the life that is immortal in them, upon which they feed, and by which they come to be nourished up unto eternal life, so that the motions of the pure spirit of life they feel daily, which is not obtained by bodily exercise which profiteth little, neither by self-performances which avail not. But by waiting in the Light of life, there are the motions of the spirit of the Lord known, and there is the sacred devotion which is acceptable unto the Lord, and that devotion which is out of the Light is not sacred, but imperfect and unholy.

Enq. Thou speakest so promiscuously when thou speakest of the Light of life that I cannot comprehend thee; wilt thou therefore tell me if it be the same Light of which these people speak so much? and tell what that Light is and where I may find a measure of it? for I would willingly comprehend it.

Res. If my words be obscure and promiscuous to thee when I speak of the Light of life, it is because thy understanding is dark; nevertheless I shall endeavor to speak to thy capacity and understanding. The Light of which I speak is the selfsame of which these people speak, and is the same that John the Baptist bore witness of, and the same of which the prophets, by whom God spake unto our fathers, prophesied and foretold; and He who is the light of the world acknowledged it when He was come into the world, whose name is Immanuel, which is by interpretation God with us; and they that desire the presence of the Lord to be with them, they must come to the light which cometh from Him whose name is Immanuel, and they that believe and walk in His light shall come to have the Light of life, a measure of which thou hast in thy conscience, which shows thee thy sin and transgression which separate from God; and if thou turn thy mind to it, thou wilt find it a swift witness against thy lusts and earthly desires and vile affections, and against all manner of evil whatsoever. But this I would have thee to know, that it is in vain for thee to go about to comprehend it, for it shineth in darkness but the darkness doth not comprehend it.

Enq. Is there not great contention and much dispute betwixt these people and busy-minded men about the Light. * * *

Res. Yea, for they meet with many of these busy-minded men that seek to intrude into the knowledge of high things, who, by their sensual wisdom seek to comprehend this incomprehensible Light, and the more they strive the more they puzzle themselves. * * * But the truth is these people will many times avoid the questions and genealogies of these unreasonable men because they see them to be unprofitable and vain, and that doth very much torment them.

Enq. Why are they not given to disputing? for if the truth be on their side they might, through disputing, overcome their opposers and instruct them that willfully oppose themselves, and so do much good thereby; might they not?

Res. There is so much disputing in the world which is altogether unprofitable, that it is a mercy they are no more inclined to it; for what good can there be brought forth by it, seeing that by the generality of disputers the Holy Scriptures are not a little wrested and perverted, the name of God too much dishonored, and many precious hearts disturbed and grieved. * * * But to that of God in the consciences of their opposers they seek to be made manifest, that by that they might be overcome which will convince them of the truth which these people bath on their side, and by turning people to that of God in them, they do much good, for as men come to be brought to that, they come to be brought off from disputing, to the life of that which disputers dispute upon.

(To be continued.)

African Diamonds.—A Cape of Good Hope letter says that the people living in the neighborhood of Colesburg are in search of diamonds. A number of these precious stones have already been found, some of them of considerable value. The first diamond was picked up by a little girl at Hopetown. Her father is a laborer on the farm of Schalk van Niekerk. She took the diamond to her mother, and the latter, thinking

it only a pretty stone, returned it to the child to play with. Niekerk happened to see it glitter, offered to buy it of the girl, but she gave it to him, saying laughingly, who ever heard of selling a stone. He took it, and it proved to be a diamond worth \$2,500.

The Coliseum.

BY S. W. BROWN.

Arches on arches! as it were that Rome,
Collecting the chief trophies of her line,
Would build up all her triumphs in one dome,
Her Coliseum stands.

The grand old ruin called the "Flavian Amphitheater" or "Coliseum," built in the days of Rome's pride and glory, is the largest, most interesting, and most characteristic of all the ruins of the ancient city. I saw it by daylight and by moonlight, from within and from without, from below and from above, from near and from far, and its majestic walls seemed more and more imposing every time I visited them.

The Coliseum was commenced by Vespasian in A. D. 72, dedicated by Titus in A. D. 80, and finished by Domitian in A. D. 82. It was built chiefly by the labor of captive Jews who had been brought to Rome by Titus, no less than twelve thousand of them toiling for ten years in its erection. This vast amphitheater is elliptical in form, being six hundred and fifteen feet long, five hundred and ten feet broad, and, where perfect, one hundred and sixty-four feet high. The external circumference of the wall is over seventeen hundred feet, inclosing an area of five acres of ground. The wall rises in four stories, and in four different styles of architecture; the lower story being of the Doric order, the second of the Ionic, the third Corinthian, and the fourth Composite, while above all is a broad cornice. The building had no roof, but the people were protected from the rain or the burning sun by a large awning called the "velarium." In the center is an open oval shaped space called the "arena," which is two hundred and eighty-one feet long and one hundred and seventy-six feet wide. Surrounding the arena is the "podium," a marble wall eighteen feet high, to prevent the wild beasts engaged in the sports from escaping. Sweeping entirely around the amphitheater and reaching from the podium to the third story of the outer wall, were tiers upon tiers of marble seats, each one in full view of the arena below. These seats would accommodate eighty-seven thousand spectators, while the various aisles and galleries furnished standing room for twenty-two thousand more, thus virtually "unpeopling Rome" whenever there were games of more than ordinary interest.

The arena of the Coliseum, now so silent and solemn, was once the scene of the most terrible and bloody encounters that ever gratified the brutal passions of men. At the dedication, which lasted one hundred days, five thousand wild beasts were forced to destroy each other as a grand entertainment. Under the seats are the dens in which lions, tigers, and other ferocious beasts were kept half starved, that they might tear each other to pieces on some great holiday. But for beasts to fight with beasts was not enough; men must fight with wild animals. (1 Cor. xv. 32.) These men were armed, and fought hard, generally coming off victorious. Even this did not satisfy the people; they thirsted for a sight of human blood, and condemned criminals, or captives taken in war, were thrown unarmed among the hungry lions and tigers. The most popular exhibitions given in the arena were the contests of the "gladiators," or swordsmen. There were two classes of these, the first of which consisted of captives,

slaves, and criminals, who were compelled to fight while the second consisted of citizens, who, after much training, fought voluntarily for the amusement of the people. The passion for these games was once so great that knights, senators, the emperor, and even women, fought in the arena. The "Capitol" I saw that world-renowned statue the "Dying Gladiator," representing one of the poor wounded wretches in the agonies of death. There he is carved in marble, the drooping form reclining upon one arm, the fatal gash in the breast, from which great heavy drops are oozing, the frame gradually sinking and the life ebbing away, bringing to mind the words of Byron:

I see before me the gladiator lie;
He leans upon his hand; his manly brow
Consents to death, but conquers agony;
And his drooping head sinks gradually low,
And through his side the last drops ebbing slow
From the red gash, fall heavy, one by one,
Like the first of a thunder-shower; and now
The arena swarms around him—he is gone!

It was thrilling to stand within that wonderful structure, where once a hundred thousand Rome gazed with delight on the strifes and agonies man and beast as they fought and died—"but ere to make a Roman holiday." But more affecting of all was it to be where hundreds, a perhaps thousands, of christian martyrs—men, women, and children—"of whom the world was not worthy," suffered cruel torments and met a violent death rather than deny Christ. There, in A. 107, St. Ignatius, bishop of Antioch, was thro to the lions, which quickly devoured his body, leaving only a few bones for the christians to gaff and bury. Ah, had those early confessors well complied with the demands of their persecutors paganism instead of christianity might have been our lot to-day. When the Emperor Constantine professed christianity these persecutions came to an end, and no more martyrs fell the wild beast of the Coliseum, though gladiatorial games prevailed for near a hundred years after Rome came a christian city.

After the prohibition of games the Coliseum was abandoned to the assaults of time and weather and to the caprice of man. For many generations it was plundered for material out of which to build private and public works.

From its mass

Walls, palaces, half-cities have been reared,
Yet out the enormous skeleton we pass
And marvel where the stones could have appeared.
Hath it indeed been plundered, or but cleared?

These ravages continued till the year 1744, w the building was consecrated to the memory the christian martyrs, since which time it has been carefully guarded, and extensive repairs h been made to keep the walls from falling.

The Coliseum is now a Popish sanctuary. around the arena are Romish altars, and in center is a rude wooden cross, which the popes sursure you will secure to the person who kisse many days of indulgence. Strange to see th tokens of Christian faith in the place once dicated to blood! Strange to see the walls built pagan hands consecrated to the worship of G Popery has stamped its "image and superscription" on all the ancient ruins of Rome. The Mamertine prison is in the hands of superstit monks; the statue of the emperor, which adorned Trajan's column, has been changed; Peter holding the inevitable keys; in the ocombs the simple cross has given place to crucifix; and over the bronze doors of the Panon is written, "Indulgences, plenary, daily, perpetual, for the living and the dead."

I visited this ruin by day, and was deeply

used with its calm repose and solitude. Plants growing in the crevices of the walls, shrubs rising in the galleries, the grass was green, the flowers were blooming on the moss-covered sward, all in peaceful contrast with the bloody scenes once witnessed there. But my last visit was in the night. A bright full moon poured its scintillating light over the walls, increasing the majesty of the scene.

I stood within the Coliseum's walls,
'Midst the chief relics of almighty Rome;
(A noble wreck in ruinous perfection)
And thou didst shine, thou rolling moon, upon
All this, and cast a wide and tender light,
Which softened down the hoary austerity
Of rugged desolation, and filled up,
As 'twere anew, the gaps of centuries.

—Christian Advocate.

An Epistle to Friends.

(Continued from page 122.)

A second fruit that was brought forth from the good root, was unity and love one towards the other; which blessed be the Lord, is preciously served in and among many to this very day; and are so sensible of the divers operations of thine in them, to be all by one Spirit, that they still kept of one heart and mind, given up fully to serve the Lord in singleness of heart in our generation; and are in this good work as neighbours and encouragers of one another.

Notwithstanding the enemy hath been exulting busy, to lay waste and destroy this blessed altar also, and that under divers pretences, which the Lord still discovered by his own Light and Spirit in his people, who have singly waited upon him; but many have been his spies, sometimes using and preparing vessels to rise up in the hypocrisy and sensual wisdom, and to traduce and bring in corrupt and evil doctrines, to try who would not sound in the faith, that they may draw aside into a heat and zeal for something which had not its root in the Truth, and which, that abode in the Truth could not own, but judge and condemn in the name of the Lord. When such saw, they took therewith occasion striving to propagate and promote that which they saw withstood; so having lost subjection to the spirit of Truth in themselves, which would have kept them in unity in the body, and having lost and laid by their subjection to them that love over them in the Lord, they then grew stubborn and wilful, and proceeded in more zeal for that which stood in opposition to the Truth, than they did for the Truth itself; and these sometimes have prevailed, to the subverting whole households, and have turned several from the faith to simplicity that is in the gospel, who, as well as those that subverted them, have lost the fellowship of the saints, and the savour of life, either in themselves or others. And then the enemy persecuted them, all are dead to the life but themselves: and so they grow to have a tickling joy in what they do and say, in obedience to that perverted and singular private spirit, and so grow up to speak evil of dignities, and are unruly, and will not speak against heaven, and them that dwell in the firmament of his power. But alas! when my soul pities them, when I see how they sport themselves with their own deceivings; when the day of the Lord is among his people, when both and doth make them and their spirit manifest, and their fruits also have made them manifest.

Another way that the enemy seeks to break the unity, and dissolve the bond of amity, is by sowing seeds of jealousy and prejudice in the hearts of them in whom he can get an entrance; that so

they may cease from the true and unfeigned love, and that upon a pretended reason, because of this or that which is supposed or imagined, in the evil parts in themselves against others; giving heed to evil thoughts or surmises, which break forth many times in whisperings and tale-bearing; which though the thing supposed to be evil, were really so, yet this is not to be allowed or given way to among you, but to use plainness one towards another, and single-heartedness; and to shut out the evil-one in this his subtle appearance also. Oh! dear Friends, remember how the Lord hath dealt with you, and deal you so one by another. He hath not sought occasions against you, but hath long borne and suffered, and exercised much patience and tenderness towards you; yet plainly reproving the evil in you, and not treasuring it up against you. Oh! Friends, be like-minded one towards another, that the enemy of your peace and concord may be defeated, and you preserved entire to one head, even to Christ Jesus; that ye may be one, and the name of the Lord may be one among you; and that which tends to the making cold your love, may be judged in all; and so brotherly love will continue with you to the end.

Another way which the enemy works, to scatter and to bring from this unity, is, by leading some who have believed, into some sin and iniquity, which the body, (that are in the Truth), are constrained to appear in judgment against for the Truth's sake; and yet notwithstanding the party so sinning, being above the witness in themselves, which would bring them to own the judgment of the Spirit of Christ in his church, they exalt themselves above the judgment, and seek to gain to them such whom they can enter by their words and complaints, to take part with them against the judgment, and those that passed it. Such were those whose words did eat, (the apostle said), as a canker, of whom the believers in those days were to be aware; for commonly such as have gone from the power that should have kept them clean and upright, they will also turn against the power in those that abide in it, especially if they be drawn forth to reprove and rebuke them. But let all such know that is not the way to be renewed; and let all that take part with any that work iniquity, know, that they do but defile their own souls thereby, and do but rend themselves from that body which they cannot prosper out of. And therefore, dear Friends, beware of joining with that in yourselves or in others, which the power goeth against, let the pretences be what they will; for that which doth evil, will always be apt to sow evil complainings of others; and such as are in the unsatisfied murmuring against judgment passed upon them, are much to be feared; for they thereby render themselves to be the more guilty, and yet the further from repentance. But, dear Friends, watch in that which gives you a living feeling of the living body, which is the church, that in all things you may demean yourselves as true members of it, serving one another in love, and submitting yourselves one unto another for the Lord's sake, that in all plainness and singleness, as becometh the Truth, you may seek to preserve the unity which the enemy of Truth and peace doth envy; so shall ye continue to strengthen one another's hand in every good work; and this shall tend to the weakening of the hands of our enemies, who seek to divide you, that they might rule over you. Many other designs doth the wicked one try, daily to break and divide, more than can now be named, or here inserted; but they are all out of the light, and if you be in it, you will see them, and that will preserve you; for it is one, and did make us one, and

will keep us to be of one heart and mind to the end, if we abide in it.

8. The third good effect which Truth did work in the beginning in them who did truly receive it, was zeal and faithfulness to God, in the bearing testimony to what was manifest, though through great sufferings, in which as Friends abide in the root, they do daily increase in power, to fulfil the same testimony; for the mercy of the Lord doth engage them, and his answer of peace in the midst of their trials, doth arm and encourage them, and they do hold out to the end. And for such, the Lord hath always made a way, better than they could have made for themselves. Yet the enemy hath in this matter also been very busy, and hath prevailed with some under divers considerations or rather consultations which he hath propounded unto them. But, O Friends, be ye all watchful, and take heed lest any of the testimonies of Truth be laid waste; for that which leads to be weary of bearing witness to the Truth, and to lay it waste, the same will lay thee waste, and bring thee into such a state, as thou wilt want the Truth to bear witness for thee; and though it be hard for flesh and blood, (which hath no kingdom but here), to fall into the hands of unreasonable men, yet it is a more fearful thing to fall into the hands of the living God. And therefore let all lukewarm ones, who are neither hot nor cold be awakened, and all that have gone backwards, be warned to return to their first love; else the Lord will come against them, and the day hastens that will divide such their portion among hypocrites, except they repent.

But to touch at some of the reasons or arguments, which he that abode not in the Truth himself, useth to draw others into this kind of treacherous backsliding.

First, He appeals to some to persuade them, that their former testimony was borne more from an imitation of others, than from a work of the power of God in themselves; and that now, they not finding the thing required of them, they may leave off their testimonies, or may do such things as they have denied formerly: this snare doth the enemy make use of in these days. But mark, who it is that he hath caught with it; none but such who sometimes were low in their minds, and dare not grieve the Spirit of God in themselves, nor others, but for the Truth's sake, could give up all things rather than their testimony; but in time growing careless and loose in waiting, lost that subject state, and grew high and exalted in their minds, above the cross that should have crucified the betraying wisdom; and so having lost the true exercise of the power, and the feeling of the excellency and worth of the Truth, they knew not the requirements of the Lord; and the earthly mind got up, that placed a greater esteem upon earthly things, than upon things that are eternal; and so things that once thou offeredst up to God, thou takest again into thine own hand, and so robbest the Lord, and growest careful about outward things, as other Gentiles are. And to cover thy shame therein, the enemy then tempts thee to belie the power that once wrought in thy heart, and made thee afraid to act against the light, or to deny the testimony for God in such things as was manifest, and then sayest, thou didst it by imitation; but thou shalt know thy covering is too narrow, in the day that hasteth upon thee.

(To be continued.)

Telegraphic Lines.—The total length of the telegraphic lines of the world was, according to a German statistician, at the beginning of the past year about 45,000 German (180,000 English)

miles, of which 11,325 were in the United States, 6,062 in Germany, 4,916 in Russia, 3,998 in France, 3,484 in Great Britain and Ireland. The Prussian Government has recently announced that it will extend the telegraphic system to every town with a population of 1,500. This carried into effect, and she will have the most complete telegraphic connections of any country in the world.

The Jews in Europe.—Their Social Progress and Status.—"In the twenty-seventh report of the Episcopal Jews' Chapel Abrahamica Society, for visiting, corresponding with, and relieving the temporal wants of believing and inquiring Israelites, it is stated that there are at present about 20,000 Jews residing in the Holy Land. From the commencement of this century an unquenchable thirst after knowledge has also manifested itself on the continent among the Jewish people. Colleges, universities, and higher schools are attended proportionately by a much larger number of Jewish than of Christian students throughout Germany, Austria, and France. In Prussia, seven times more Jews than Gentiles devote themselves to the higher branches of knowledge, arts, and sciences. The fields of polite literature, journalism, arts, and sciences, are filled with Jewish aspirants. Some of the best literary, political, and scientific periodicals have been, and still are, edited by Jews. Some of Germany's most conspicuous poets are Jews. Some of the most celebrated painters, engravers, medalists, musicians, and composers are Jews; while there is scarcely an university in which one or more chairs are not occupied by Jews, and many more by believing Jews. In England, in France, in Belgium, in Holland, in the kingdom of Italy, and in some of the minor states of Germany, the Jews have been entirely emancipated. In France and Belgium the officers of the synagogue are paid by government. The Jews in Poland, who have hitherto groaned under much oppression, have obtained great privileges. They are permitted to buy real estates all through the kingdom; they may live in any part of the country; their testimony is received in every court; Jewish children are admitted to all schools; and the Jews are allowed to open schools of their own. Then those countries and towns, from which the Jews have hitherto been excluded, even to our days, open now the gates to them. The last number of the 'Univers Israelite' mentions four facts which show the constant progress of liberal ideas on matters concerning liberty of conscience and worship. The landgrave of Homburg has abolished an obnoxious oath. At Vienna, measures for the suppression of the Ghettoes of Lemberg and Cracow are under consideration. At Warsaw the administrative council of the kingdom has resolved to grant to the Jews the right of holding all functions and offices. In Turkey the Sultan has decided that the Catholic prelates, the Greek orthodox bishops, and the Jewish rabbis, shall sit in the courts of justice by the side of the cadis and muftis" (Galignani's Messenger).

A black cloud makes the traveller mend his pace, and mind his home; whereas a fair day and a pleasant way, waste his time and that steals away his affections in the prospect of the country. However others may think of it, yet I take it as a mercy that now and then some clouds come between me and my sun, and many times some troubles do conceal my comforts; for I perceive, if I should find too much friendship in my inn, in my pilgrimage, I should soon forget my Father's house, and my heritage.—*Lucas.*

THE LAND OF REST.

"There remaineth therefore a rest to the people of God." Heb. iv. 9.

There is a land no mortal eye hath seen,
With living streams and pastures clothed with green,
It needs no sun, or moon with silvery light
To shine by day or cheer the lonely night;
Rest were in glory—seated on His throne
The Lamb's effulgence giveth light alone,
Around that Throne the white-robed angels stand
Each bears a palm of victory in his hand,
And there amidst the bright angelic throng
Are those so dear to us, and mourned so long.
The young, the innocent, the aged who died—
Rest were in their Lord, forever glorified.
O! thought ineffable, O! visions of the blest,
That these no more with us are now at rest.
Onward we press through life's rough, dreary road
To meet these loved ones in their bright abode;
With eyes of faith we sometimes may descry
These glorious mansions hid from mortal eye.
The gates of pearl! the city paved with gold!
Eternal wonders which thy saints behold.
Enter ye blood-washed ones, your Master calls
To blessed scenes within her precious walls,
O! city of the living God, O! land of light and love,
A holy rest remaineth for thine elect, above.

Richmond, Ind., 1867.

NOTHING BUT LEAVES.

"Nothing but leaves!" so the Saviour said,
And then he blasted the fruitless tree;
And I ponder his curse with trembling dread,
Lest just such a word he might say of me,
I have heard his name from my early youth;
And my outward homage his cause receives;
Yet his judgment upon my life, in truth,
Might render the verdict, "Nothing but leaves!"

"Nothing but leaves!" though the ground was choice,
In the Lord's own garden the tree was set;
And loving parents, by life and voice,
Gave cheerful care to its nurture, yet
Thought of rapid growth, and of comely form,
No answering fruit their toil retrieves;
The blossoms fell off in the first spring storm,
And autumn found on it "Nothing but leaves!"

"Nothing but leaves!" yet if only a tree,
Must be now cut down for the winter's flame,
How small a matter the cause would be!
On a senseless stock we can lay no blame;
But the barren tree as a type must stand,
And no consistent proof my mind relieves
From the fear of hearing, on His left hand,
The destroying sentence, "Nothing but leaves!"

"Nothing but leaves!" yet the Church of God
Her open door kept ever in view;
And faithful preachers proclaimed aloud
His fearful wrath, and His mercy too;
And the showers of grace as dew came down,
And the Spirit called, who His life has known,
How marvellous the blessing!—
And still my returns are "Nothing but leaves!"

"Nothing but leaves!" and I might have won
More hearts than my own to taste His grace;
But the world's gay rounds my feet have run,
Ever prone to the broad and downward ways;
Had I long since entered his harvest-field,
And now filled my arms with gathered sheaves,
What happy reflections my life would yield!
How fearful the contrast, "Nothing but leaves!"

"Nothing but leaves!" If it has been so,
And a fragment still of life remains,
Great God! Thy renewing mercy show,
I plead by a dying Saviour's pains;
May my thoughts be changed, may my life be new,
While every power of heart believes,
And holy influences clearly show
That I give no longer "Nothing but leaves!"

—Presbyterian.

Striving against sin in the part wherein sin's strength lies can never bring victory. But, there is power in the death of Christ; power to bridle the tongue and the passions; power to bridle prejudices; yea, and to cut down that in which these things stand.—*I. Penington.*

Original.

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 125.)

A few memorandums, probably belonging near to this period, are as follows:—

No date. "The name of the Lord is a strong tower. The righteous runneth into it and is safe." How often must the care-worn and weary spirit look unto this 'tower' as a most desirable and sure habitation, wherein the shafts of temptation cannot reach them, nor his deadly bludgeon destroy.

"How is it possible that such frail erring creatures as we all are can be so insensible, so indifferent to the only pursuit, the acquisition which alone is productive of true peace. How often I find cause to bemoan my slowness in this important work. I have seen enough of the van of worldly pleasures and pursuits to warrant conclusion, peace is not in them."

No date. "Deep poverty of spirit has been a sorrowful experience for several days past. It is a comfortable assurance that no misconduct of my own was the cause, I could support it with much composure, resting in the belief suffering necessary to show me how entirely insufficiently I am to apply in my own strength any measure to the only source of Help. The chastisements of the Great Refiner have become in measure dear to me; because entirely convinced I am only purged through judgment. My petitions are frequently raised, that the work may be carried on by whatever means. Infinite Wisdom may fit. Spare not the creature, oh Father of Mercies, but purge me thoroughly. Subdue every self desire, every earthly taint, that so, through the merits of Thy dear Son, I may finally obtain inheritance among the purified spirits that surround Thy throne."

No date. "How greatly superior to any human consolation, is the comfort the Apostle speaks of in 2 Cor. i. 4, as the result of a more effectually chastened and tutored by the reproaches of the Spirit. These alone know in their deep privations, who is indeed 'The Father of mercies and the God of all comfort.' Who it is that comforteth them in all their tribulations, to enable them to sympathize with all the afflicted, a comfort which is in any trouble, by the comfort wherewith we ourselves are comforted of God. And if this pure impulse and incentive the good deeds of the heart were more carefully sought unto and heeded, more effectually engaged into our every day conduct and converse, how much more powerfully should we incite others, the almost irresistible appeal of example, show forth the effect of our faith and the hallowed sequence of our fellowship with the Father mercies and the God of all comfort."

30th. "It has been some time since my heart has been thus occupied, and I feel weak this evening in the attempt; but believe nevertheless will be better for me just to remark, that I have not felt that quietness and settlement this afternoon that is desirable to me. It may be that mind has been too much under the influence of outward things. Not enough centered upon the unchangeable good which is always to be sought after, and its influence abode under so far as it is obtained. So far, did I say: there is no restriction nor limitation in the promises of our omniscient Lawgiver. 'Seek and ye shall find.' As fervent enough in spirit? Careful as I ought to be to seek unto Him, who will be sought unto with knowledge and ability to perform His will as manifested. Oh! for more simple, childlike endeavors—passiveness, pure passiveness." No

ing will he withhold from him that walketh up-
 ily. Well, I do earnestly desire and crave
 ity, from this moment more fully to devote
 self. To leave the opinion of the world, which
 so rapid and changeable, and trusting my all
 Him, realize at length the end of my faith."
 To date. "How beautifully is the religion we
 ously adapted to every grade of understanding:
 low, as well as high: to rich and poor alike: to
 weak of intellect as well as to the towering
 and that scales all heights. All have under-
 ndering enough to yield themselves to the govern-
 of another, and it is this that is called for.
 ly on give me thy heart." "Obey my voice."
 are the requisitions thou needest. Do not
 thy reason to its verge to investigate abstract
 es, but *yield thyself to me* and I will teach
 thee. The illustrious I. Penington says, 'all our
 izon lies in a gift; and if a gift, then it is
 ething communicated, and not a natural pro-
 it of the human mind. And if a gift, then it
 be sought after—to be waited for. It is this:
 urrender ourselves wholly to the teachings of
 Holy Spirit inwardly communicated: to have
 dependence on ourselves, or on devices of our
 : to adhere to what it teaches: to forbear what
 withdraws from; and the spiritual character
 be perfected; not of ourselves, nor by our-
 es, but by something in us, but not of us: it
 is the grand secret; and for want of this it is
 re so continually lingering in the outer court,
 eing upon a morality which wants the main-
 ing—the Spirit of God."

he correspondence continues:—
 To date. "Thy short letter, my dear —, was
 the less acceptable for bearing the language
 suffering, and something like the complaint of
 id: 'I am shut up, and I cannot come forth.'
 ous dispensations are trying to the faith and
 nce indeed; but if a part of the cup is to be
 ok, because of abiding with our dear Master
 His temptations, to which thou refers, then all
 be well. I thought in thy allusion to under-
 ing the operations of the fire again and again,
 it hardly seemed so in my case, but a con-
 tal burning. But I do not doubt its all being
 ecessary; though flesh and blood seem well nigh
 ily to faint and to fail under the state that
 has allotted. But I am reminded that 'Ebene-
 ' have been raised, and I have no doubt will
 in be, and that perhaps too from some of the
 uest and most halting, and trembling of the
 I. I want us to endeavor, as much as possible,
 eep our eyes on the Hand that saves; that so
 he machinations of the enemy may be defeated,
 he eventually overcome; and too much dis-
 agement guarded against, because do we not
 the Power remains; and that it is above all
 powers of darkness, whether the agents be
 or devils; and that preservation on the right
 and on the left is its attribute; so that a
 umering of hope arises with the desire, that, in
 midst of all, we press on towards the 'mark
 the prize.'"

(To be continued.)

Light in Denmark.

ome two years or more ago, a Friend at one
 of our city meetings noticed a serious looking
 nger in attendance, with whom he entered into
 versation—and whom he invited to his house.
 found him to be a native of Denmark, a man
 somewhat liberal education, who had studied
 icine, and had been convinced by the Spirit
 uth of certain religious principles, which he
 and to be in accordance with those professed by
 Society of Friends. For some matters grow-

ing out of his dissent from the established church
 of Denmark, (the Lutheran), he had been sen-
 tenced to a year's banishment; and leaving his
 wife at home, he came to America to spend his
 time. The Friend had several interviews with
 him, and as the termination of his period of ban-
 ishment approached, suggested that he should
 send for his wife and settle permanently in this
 country. He declined the proposal, stating that
 he believed he had a Divine call to promulgate
 among his own countrymen those blessed truths
 of which he himself had been convinced—and
 accordingly returned to Denmark, choosing rather
 to encounter the persecution which he knew
 awaited him, than to shrink from the line of duty
 marked out for him. After his return some letters
 passed between him and his Philadelphia friend,
 from one of which the following extracts are taken.
 Some slight grammatical corrections have been
 made, but the reader will still notice a want
 of familiarity with the idioms of the English lan-
 guage. This, however, need not prevent him
 from appreciating the honest sincerity of the
 writer, his clear perception of the spiritual nature
 of true religion, his willingness to endure per-
 secution for the cause sake, and the interesting
 character of the statements presented. In reading
 it, I have been reminded of the early rise of our
 Society in England, and desires have been felt
 that nothing may be permitted to mar the good
 work that has so evidently been begun, but that
 it may increase and prosper.

"In the prison at Aalborg in Jutland, Denmark.
 MY DEAR FRIEND:—I received thy letter of
 28th of Eleventh month, 1866, and I bring thee
 hereby my hearty thanks therefor. It hath been
 a very troublesome time for me in the last year,
 but the Lord has strengthened me, and given me
 power and patience to bear the burden and cross
 in the footstool of my Saviour, so I cannot say
 anything other than that he does everything well;
 yes, he does it well altogether. In the last twelve
 months I have only been in my home sixty-one
 days, the other days have I been of the mission
 and of the voyage to America and return, and one
 month from the day I arrived from America to
 my home, 20th of Sixth month to 20th of Seventh
 month, I was in prison, and now I have to be here
 again for three months, from 10th of First month
 to 10th of Fourth month, 1867. The first time
 I was in prison was for an article in a little book I
 have given out about the baptism and supper,
 the priest ordination, the confirmation, and the
 preaching over the dead in the State church. The
 rulers condemned me to one month in prison,
 and to pay forty-eight rix-dollars, or twenty-four
 dollars, in fine, but I was poor and have nothing,
 so they got nothing. After this they fined me
 for what they call priest money or priest duty. I
 do not believe it is right to pay money to a religion
 I am not believing in, so the policeman came
 and took away something from my wife and sold
 it by auction. I wrote an article in one of my
 small tracts about this robbery, and the text was:
 'Fell among the robbers,' (Luke x. 30.) in this
 article I wrote something about the world's wor-
 shipping idols, and the robbery from the children
 of God, and that a child of God could not swear,
 or use weapons, or fight in the war; and for this
 cause I be judged to three months in prison.
 Well my dear friend that is the way to get the
 truth to victory in the world; we must suffer for
 it. Never is the kingdom of God coming to the
 folks that are in darkness and the shadow of death,
 without trouble and persecution, and I am glad
 that I am found worthy to bear the burden after
 my Saviour Jesus Christ. I know it will be a

blessing for my dear poor friends here in Denmark
 after this time. Every body can see I suffer for
 the pure Truth and for the Lord's sake, and such
 a time is a good time for the Gospel, till victory
 over the hearts. If it was my lust to go away
 from the persecution, so would I pray thee to send
 me money for me and my family, that we could
 come to Philadelphia, but that is not it. I do
 not want to go away. I want to stop here, now
 the Lord commences to bless my work in His
 field, and to use the weapon he has given me with
 his spirit and word.

In the last year, 1866, the Lord has given me
 mercy and grace to preach the gospel three hun-
 dred and five times in very large meetings in the
 houses and in open air, and that is in nine months
 alone. Two months, (from 19th of Fourth month
 to 20th of Sixth month,) I was of the voyage from
 Aalborg to Chicago in Illinois, and return, and
 one month I was in prison. I have given out,
 (published) 31,000 copies of twenty small tracts,
 and distributed them nearly altogether, and fifty
 new Testaments I received from Robert Alsop in
 London, as a gift to the poor believing Friends
 here in Denmark. I have had over two hundred
 sick persons in cure, and except few, they are all
 healed, and only three small children died of
 small-pox. The Lord hath blessed my work
 abundantly, His mercy endureth for every, His
 holy name be praised from the sunrise to the sun-
 set, of all His saints.

Here in prison I have written a book about
 true christianity and anti-christianity, (John iv.
 20, 24, and Apostle Acts 17,) and worshipping
 idols of the blind world that is living in the flesh
 and never know God. The field and harvest are
 very great my dear friend, and the laborers are
 few, very few. I am alone in Denmark to preach
 the gospel as the spirit of God gives to preach it,
 without men's commandments; and it is a strong
 work for one man to fight against such a corpus
 of thieves and robbers, that will make another way
 and another door than the Lord is; (John x.)
 I am alone against all the priests and rulers, and
 the world that is overcome of the devil. But the
 Lord is my strength, my light, my refuge, He is
 my victory. I have not been forsaken one mo-
 ment in these battles, and I do hope He will not
 leave me alone. I preach that the children are
 not sinners before God, and that the children's
 baptism cannot burn the soul anew; and that the
 covenant the Lord makes with His children is
 not such that a priest can make a covenant with
 a little baby in such a form and ceremony. I
 preach again the doctrine that the so called
 Lord's supper cannot give forgiveness from sin,
 and that it is not the Lord's body, and not His
 blood, as the priests teach the people, and that
 the people are deceived with all these false doc-
 trine. The children of God have no use for hired
 preachers. These the Lord will use as laborers
 in His congregation, these will He himself re-
 ward. They shall give freely as they have re-
 ceived freely. Our Lord baptizes us himself; He
 gives us his own supper in the living word and
 with his spirit, and we have no use for such thing,
 that is only a shadow of the true thing. The
 Lord himself is every thing and gives us every-
 thing. He discovers everything for the upright
 in the heart, and he does not hide the secret thing
 from his beloved. He has given us His Son and
 He gives us all things with Him. His name be
 praised and glorified for ever of His children.

The poor Friends here in Jutland have bought
 a simple house for my family. It has cost £100,
 or nearly \$500 and we pay only twenty-five dollars
 rent yearly. There are three small rooms and
 a prayer meeting room twenty feet long and four-

For "The Friend."

teen feet broad, and the Friends are gathered together twice a week to silent prayer, and sometimes my dear wife Johanne Bartholine, preaches the gospel from there. In Welle there is this fall built a prayer-meeting room on a house top by a butcher, Soren Peter Sorensen, that is thirty-two feet long and twenty-four feet broad, and in the same room are many children of God, baptists, methodists, and of the States church gathered together, very often to silent prayer, and worshiping of God in Spirit and in Truth.

The people are very poor. Some receive four to eight cents a day for the work they do for the farmers. Over seventy Friends are going away to America, some intend to go away in the spring. We are over 2,000 in Denmark that are believing in the Friends' doctrine, but we cannot have a congregation because we do not believe we shall swear, and go in war, and pay to the States church. Every one there would be joined to such a congregation would be fined and put in prison; that is the reason the rulers fine me and put me in prison; but we can go together as often as we like and worship the Lord as we like. It would be called a complaint of rebellious against the government if we were organized in a congregation. In the same prison is a baptist, Soren Honsen, sitting for the same cause. He has written against child baptism, and they punish us for blasphemy. There has been a Friend in prison and took eighty days bread and water, and now he is put in the cell prison for three years because he will not be a soldier.

The day I was put in prison I was owner of 14s. or one and a quarter dollars for my wife and two children. Now the Friends here have given my family some potatoes, pork, wood, coal, &c., and we get half a dollar a week in money, coffee and tea, &c., and I get some butter and bread here in prison, because the food here is very small. When I am finished here we have nothing, (10th of Fourth month.) If there were some Friends in Philadelphia that would help our poor Friends here with some good tracts and some New Testaments, and perhaps so that I could get published some of these small books I have written here in prison, I would be very glad. I know the Lord has many dear children in Philadelphia, and when one member is suffering they suffer all together. We are many that suffer here in Denmark, and are longing after much more light. If the Lord would send us some laborers in the large field, and great harvest! There is a great weakness in the nation, and the people are asking for the living bread, and the running water. Oh my dear friend, pray for us that we may get power to overcome the darkness and get grace to give the hungry bread. We are sitting as a widow that has no husband, we are as an apple-tree in the thick forest. There is more blessing by giving as by taking. Blessed are the merciful for they shall obtain mercy, (Matt. v.)

I bring my best love to every Friend in the congregation. Remember me in your prayers. I have a great work to do, but I am believing in the Lord, he will help me and my poor country people. I am thy truly thankful friend,

MOSES ABRAHAM SOMMER.

I wish we had Robert Barclay's book in the Danish language. I have one copy myself I have got by Endre Dahl from Stavanger, who visited me last summer, but they are very dear, and the poor Friends have not the means to buy such a book."

Telegraph Fac-similes.—M. Field has brought out to this country a number of very interesting specimens of the system of telegraphing now in operation between Paris and Lyons, and Paris

and Bordeaux, by which exact copies of the message are produced at either extremity of the lines solely by mechanical means. The message is written on prepared paper, covered with a lead-colored surface, which is a non-conductor of the electric fluid. The writing, or drawing, in the ink furnished for the purpose, changes the points touched by it to the opposite electrical character. The pendulum is swinging at each end of the circuit in unison. Its upper end is divided into points—say, like a fine-toothed comb. The message being passed over these at one end, sends a current to correspond with the writing or lines, and produces an exact copy of the original upon the prepared paper held to the vibrating pendulum in the distant city. Thus a fac-simile of writing and signature is furnished without any skill of the operator. A drawing of the likeness of a thief or absconding clerk is reproduced with minute faithfulness. Patterns of machinery, patterns for bonnets, hieroglyphics, messages in Chinese, or in an unknown tongue, are copied with as little trouble as the simplest letters of a familiar alphabet. Some notices of this have been given in foreign journals, but no mere verbal description can convey a full idea of the wonderful process. The Hibernian who insisted, some years ago, that the telegraph operator should forward his photograph over the wires to his sweet-heart, was only a little ahead of his age, since that can now be done without the slightest trouble, provided the likeness be taken on the proper material.—*N. Y. Jour. Com.*

For "The Friend."

"Let your moderation be known unto all men," is the injunction of the apostle to a body of Christians in his day, and at no period of the world's history has it been more applicable than the present, and to no body of Christians who should more especially take heed thereto than we, whose profession and high aim are certainly greater than that of others; let each one of us, then, be engaged in a close self-examination to see whether we are really the humble, self-denying people we profess to be. Have not the last few years given alarming evidence that there is a great effort making by many to lower the true standard of right? trying to persuade themselves and others that there is no need for us to be any longer a peculiar people; and whilst they assert that the inconsistencies of many who are holding conspicuous places amongst us is their excuse for deviating from that plainness in dress and manners which have always characterized us as a people, are they not opening a door where the tide of worldly fashion rushing in will be difficult to close? and we shall be found "turning again to the weak and beggarly elements from which we have been thus far in a measure happily exempt. We must with deep sorrow acknowledge many inconsistencies amongst some who, whilst they have been guarding with great assiduity some points of minor importance, have been too regardless of the "weightier matters of the law," and the lustre of whose christian love and charity has been allowed to become somewhat dimmed through want of proper exercise. But let us remember that He who said, "These ought ye to have done," added, "and not to leave the other undone." My heart often yearns toward the precious youth whose faces are turning Zion-ward, and who are sometimes ready to exclaim in their bitterness of soul, "who shall show us any good?" and I would entreat you to wait low as at the feet of Jesus, and as you are thus humbled before Him, and a willingness to be gotten in you to be in all things fashioned according to His liking, you will be brought clearly

to see the beauty and simplicity of the truth professed by us, and what now seems to you unwarrantable restriction, will be found to have been dictated by the Spirit of Truth. Let each one of us, then, with our eye closely fixed upon Christ our leader, be found inquiring, "Lord wilt Thou have me to do," and if the answer should be only "to stand still and see the salvation of God," be willing to obey, knowing that the cause is the Lord's He will take care of it; only duty is, in childlike obedience to follow Him without turning to the right hand or to the left, or being overmuch cast down because of the heat of the times, for the "Lord's hand is not shortened that it cannot save, neither is His ear grown heavy that it cannot hear," but "for the sighing of needy will I arise, saith the Lord."

Twelfth month, 1867.

For "The Friend."

Feeling a lively interest in the prosperity of the Boarding School at Westtown, and very anxious that it should continue to be watched and cherished, as has been the case from its establishment to the present time, I have felt much engaged to make some selections and extracts from letters of valued fathers and mothers who have been gathered to their everlasting rest, expressive of their deep heartfelt religious exercises on behalf of the school, and of their hope that the school would be a blessing to the world. This is a part of the heritage of our Heavenly Father which has often been replenished with the dew of heaven, as many living witnesses can testify at this day. That it will still be carried on according to the original design of its founders, and so continue to draw down Divine blessing upon it, is the desire in making these extracts, believing they will prove encouraging and instructive to those dear Friends who devote much of their time and energies in the labor of conducting it, in whatever capacity it may be.

Twelfth month, 1867.

"From an apprehension of religious duty, Thomas Scattergood spent the summers of 1806 and 1807 at Westtown Boarding School, sometimes assisting in teaching, as well as in the care of the pupils. He was very fond of the school of children, and deeply interested in their eternal welfare; he freely mingled with the pupils, participated frequently in their amusements, and gained their confidence and affectionate regard, and enabled him to exercise an important and valuable influence upon them. His religious counsel was also very strengthening and encouraging to the teachers and others, who found him a true sympathiser in the arduous duties of their important stations. A Friend who resided at the institution at that period, speaking of the services there, remarks that 'he was concerned to enter closely into the care, the exercises, trials under which the caretakers were treading; and very useful and beneficial were labors not only in their schools and private lectures, from which he was seldom missing, but in their religious meetings also, as many of us there in that day can testify, to their great comfort. From my distinct remembrance of the gospel labors, I then believed they were ours, and now at this day can say, I believe they have been crowned with success in many instances.'"

"He was greatly favored and enlarged in testimony in their religious meetings, many times the tendering and contrition of the minds of the present who were of susceptible feelings; he was often favored in supplication with access to the throne of grace, to the comfort

ng of every contrite soul. Ah! those opportunities cannot be forgotten."

is interest in the institution continued to the of his decease. After returning from these ast time in 1806, he addressed a letter to the ers through one of their number, from which following extracts are taken:

The plan thus sent me met my approbation, immediately my thoughts were turned toward he thoughtfully exercised teachers; and I in my heart, go on precious servants as you began, and doubtless you will prosper. Your on and work is honorable, and no doubt res on my mind but that you are watched over cared for by the great Shepherd of Israel, said, "feed my sheep." This is your employ; our hands be strong in the work, and resist hose discouragements, both within and with- which at times, very likely, assail you. I am a stranger to your exercises, having been sen- dipped with you. Yet you will believe me I say my mind was exercised, feelingly so, plunged into most or all your trials, when you, and how precious comfortable was the fragment of my pilgrimage there filled up. y comfortable moments I enjoyed; many ant prospects were opened respecting the ing of the church out of Babylon; and I have that day, said in my heart, Oh that there many schools erected for children's guarded nation. As I have told you, your work is trable, so I believe a precious reward awaits, iving up the prime of your days to perform

It is an easy thing in the sight of the Lord sometimes of a sudden, to enrich for little of faith, and labors of love. I frequently at you with sweetness, and send this little nger, desiring it may prove, in some de- an encouragement to you all, on both sides e house, to continue in the way of your n duty, continuing to be, according to pre- sibility, your affectionate and sympathizing el,

"THOMAS SCATTERGOOD.

First mo. 6th, 1806."

(To be continued.)

THE FRIEND.

TWELFTH MONTH 21, 1867.

is one of the dangers besetting those who themselves called on to point out departures what they believe to be sound doctrine or ively sanctioned practices, to be too eager to t errors which they apprehend corroborate own cherished opinions, and substantiate the y promulgate, while they easily overlook, raps unconsciously, facts and circumstances, h might modify, if not altogether abrogate, conclusions honestly, but too hastily arrived at, matory of the things or parties disapproved. ave endeavored to keep this danger in view, o calling the attention of our readers to any ements published or occurrences narrated, ing— as we believed—danger to or defection o the faith, the testimonies, or long established s of Friends; of which, we are sorrowfully nced, there have been many, within the limits o beloved Society during a few years. f the spirit and motives of the actors in these ges we are not called on to judge, and could believe they understood the principles of fids, and were really desirous to uphold them, ould take a different view of the strange way hich they misdirect their efforts. But where

so much that is invaluable and dear, is believed to be at stake, and many are trembling for the safety of the Ark of the Testimony, it becomes a duty, that a journal like "The Friend" should lay before its readers, from time to time, evidences of the revolution that appears to be going on; and while expressing its own convictions, in a right tone and spirit, endeavour to encourage those who cannot unite with the serious innovations so frequently exhibited and commended, to seek for ability to withstand their general adoption among us.

From the first introduction into our religious Society in this country of First-day schools, as a means for inducing the members, older or younger, to study the contents of the Holy Scriptures, that they might engage in illustrating and attempting to explain and expound one to another, and to others, the sacred truths recorded in them, we have had strong fears lest they would prove to be an instrumentality of no little efficiency to produce, in those engaged in them, an unauthorized estimate of the place occupied by the old and new Testaments, and to destroy a just apprehension of the alone qualification for correctly understanding and applying the truths relating to salvation contained in them. Not because our valuation of the scriptures is below their own declaration of being "able to make wise unto salvation through faith, which is in Jesus Christ;" or that we see any thing in the doctrines or testimonies held by Friends which will not bear the severest test by which; nor yet that we thought any of our members could become too conversant with their contents, but, beside other reasons, principally because we reasonably supposed that among the young or the inexperienced taking part in conducting these schools, and engaged in expounding the meaning of the text, there would be not a few, who had experienced little or nothing of the fulfillment of the scriptures in themselves, and who would therefore be "unstable and unlearned" in divine things, and thus liable to wrest, not only "things hard to be understood," but also "other scripture" to their own hurt and that of their hearers.

As the movement has been progressively developed, and we have had an opportunity to read the published accounts of the working of these schools, and of the opinions inculcated in various meetings of their teachers and conductors, our fears have not been removed. On the contrary, we think it is becoming apparent, that,—however good the intentions of their originators, and however anxious some connected with them may be, to ward off the evils they see attending them—they are cultivating a self-active disposition, a reliance on outside instruction and performances, and a hurtful coalition with members of other religious denominations; all calculated to impede the growth and stability of those engaged in them, in the cross-bearing religion which Friends have ever professed; and weakening their attachment to many of the testimonies of the gospel held dear by the Society.

These remarks are not intended to apply to those First-day schools, where a few Friends may have collected together the ignorant and neglected children of the poor or degraded, in order to teach them to read and write; simply reading to them portions of the scriptures, or some other good book, and inculcating habits of virtue. But such are not the schools now common within the limits of most of the Yearly Meetings, which send their most influential conductors to annual conferences held to devise aids for making their teaching attractive.

We have received the "New Bedford Mercury"

of the 22d ult., containing a report of the proceedings at its general sittings, of what it styles the "General Conference of the Sabbath School Teachers of the Society of Friends in America;" and we think no thorough Friend can rise from the perusal of it without participating, in some measure, in the fears and views which we have just expressed. How nearly the report is correct we of course, cannot say, but it carries with it evidence of care and truthfulness in the details given. We suppose our copy was sent by one of the delegates, and as the report contains no allusion to any discussion on the subject of plainness of dress and address, which we are informed took place, we infer it has been revised and approved before its publication. The conference was made open to all who chose to attend, and the names of several of the "clergy" are given, as participating in the proceedings. From the names of speakers given, it appears that most of them are acknowledged ministers in our religious Society. We present a few of the opinions inculcated, as indicative of the effects which we have alluded to, and from which Friends have reason to fear.

In allusion to the expression of the chairman, that "Love of God is knowledge of his truth;" one observed, "He would not speak disparagingly of the enlightening power of the Holy Spirit. This, if we ask, we may always have to direct us, to enlighten us and enable us to teach others."

A member who illustrated the necessity of building on Faith, and drew on the black board "a house" "on the only true foundation, Faith," declared, "It is only those who have been delivered from the bondage of sin, who have to contend with sin, folly and the devil."

The chairman said he believed, and it had been proved, that black-boards were a great help in imparting the gospel truth. Drawing a picture and presenting it in all its simplicity, is of far more value than all the verbal lessons that can be given."

After some styled in the paper "Reverend," had spoken, a female minister said she "was gratified in hearing so many of the clergy: this encouragement from the earnest followers of the Lord was what was needed."

In discussing the question "How can the interest of the members of our religious Society be more generally enlisted in the subject of scriptural instruction?" a member observed, "Music, which is restricted by this Society, he thought was an instrumentality that should be used. Music was of much importance in this line, and should not be adjudged by the Society. Object lessons were also of value. He further claimed that the books of fiction which were in the libraries, had a better influence over the young, than all other books that were published."

"The chairman granted that books of fiction had a great influence over the young, but he thought the utmost care should be taken in their selection."

A female minister "quoted from the old and new Testament several verses where the phrase 'singing praises to the Lord' occurred. Our Society does not object to singing with the Spirit and the understanding. Nothing in our Society condemns singing; but it does condemn singing in preaching. It is beautiful to hear children singing the pretty hymn,

"Who shall sing if not the children,
Did not Jesus die for them?" &c.

And we as a Society do not condemn singing, but we do object to it with our preaching."

Another minister said she was engaged in a mission in that city, and they could not "go on with their work, unless there is something done

in this direction," &c. "We have no desire to introduce instrumental music in our devotions; but if a Friend wishes to express his sense of the love of God by singing, who shall say nay?"

Another "was in favor of singing, particularly when it came from the Spirit."

What the ripened fruit promises to be, he that runneth may read.

The Lives, Sentiments and Sufferings, of some of the Reformers and Martyrs before, since and independent of the Lutheran Reformation, by William Hodgson. Philadelphia. J. B. Lippincott & Co., 1867.

We have received from the publishers a copy of a work with the above title and imprint. Having had time to give it but a cursory inspection, we are not prepared to speak decidedly respecting its merits, but so far as our examination has gone, it appears to bring within ready appropriation much valuable and interesting information, respecting a number of men who made their mark on the age in which they respectively lived, by stemming the tide of false doctrine and evil practice, and striving to promulgate a purer faith, and recall the people to conduct and conversation more consistent with christianity.

The Author says in the preface, that he appeared to him, "It might not be unacceptable to many serious readers, to have spread before them in a simple and unpretending manner, and clear of extraneous matter, such a sketch, as the scanty materials now extant may permit, of the lives, examples and sentiments of some of the sincere-hearted followers of the Lord Jesus, from the nineteenth century downward, who having been taught more or less in the school of Christ, and faithful to the degree of light vouchsafed through the thick darkness, have been measurably enabled to discern the difference between genuine and fictitious religion, and made willing, at the hazard of their lives, to testify before the world against the falsities and corruptions which had crept in, so far as their eyes had been anointed and opened to perceive them." The book is a duodecimo, containing 465 pages, well printed and neatly bound.

SUMMARY OF EVENTS.

FOREIGN.—A Paris dispatch of the 15th, states that the general conference on the Roman question has been abandoned, the leading European governments having finally declined to take any part in it. It is also taken place in the Italian Parliament in relation to the recent events at Rome. The Liberal members assail the ministers bitterly. It is thought that the Parliament will repeal the vote of 1861, declaring Rome the capital of Italy.

Dispatches from Massowah report that the British expedition had advanced a considerable distance into the interior of Abyssinia, but at the last accounts the troops were suffering from a scarcity of water. Four thousand Egyptian troops joined the English expedition at Massowah. The latest accounts represent that the English captives, in the hands of the king of Abyssinia, were still living.

The mail steamer from Rio Janeiro brings intelligence of another battle in Paraguay. The Paraguayan forces, under command of President Lopez, had gained a decisive victory over the invaders. Lopez attacked the Brazilian camp and carried it by storm, taking 2000 prisoners and several pieces of artillery. The total loss of the Brazilians in killed, wounded and prisoners, amounted to 4000 men.

Ferocious disturbances continue. Public funeral ceremonies in honor of Allen, Gould and Larkin, who were lately executed, were to be held in many of the principal cities of England and Ireland on the 15th, but they were forbidden by the government, and the authorities in every place prevented the attempts made to carry them out. A daring attempt was made on the 13th, to release Colonel Burke, a Fenian prisoner recently arrested, who is confined in Clerkenwell prison, London. Powder was placed beneath one of the prison walls, and was exploded, it is supposed, by Burke's confederates. The whole

side of the wall was blown into the air, and many of the adjoining buildings were injured. Several persons were killed by the explosion, and about forty others badly wounded. Burke remains in custody and denies all knowledge of the cause of the explosion. He has since been removed to a place of greater security.

Advices from China mention a new and more serious outbreak near Peking. At the last accounts the rebels were marching on the capital.

The great Powers of Europe have addressed a note to the government of Turkey, asking that the navigation of the Dardanelles be made free to the shipping of all nations.

The two small islands of St. Thomas and St. Johns, have been sold to the United States by the King of Denmark, and it is reported that the United States government has re-opened negotiations for the purchase of the island of St. Peter, which was formerly in the possession of the Danish government. Earthquakes in the West India islands and the contiguous shores of Honduras and South America, have been of alarming frequency of late.

Organized bands of brigands are numerous in Mexico, and robberies are of common occurrence in all parts of the country.

A London dispatch of the 16th states, that on the previous night attempts were made to set fire to several warehouses in the city. The incendiarism is supposed to have been the work of Fenians. In consequence of these attempts, a large number of special police have been appointed.

Consols, 92½ U. S. five-twenty's, 71½. Breadstuffs quiet. Uplands cotton, 7½d; Orleans, 7½d.

UNITED STATES.—Congress.—The Senate has passed a bill to give the families of deceased soldiers the bounties to which the deceased would have been entitled. The committee on Territories has reported a bill in reference to affairs in Utah. It prohibits polygamy under severe penalties, provides for the organization of the militia, and the selection of juries, &c. The President, in a long message to the Senate, explained his reasons for the suspension of Secretary Stanton. The Senate has received a petition signed by thirty thousand citizens of Kentucky, asking that the right of suffrage may be granted them. The House of Representatives has passed a joint resolution extending for two years the time allowed to railroads in Michigan and Wisconsin, to entitle them to lands, but providing that their roads shall be completed in 1872. A resolution censuring the President is recommended for the repeal of the act of Kentucky, and declaring that there is no doubt of the right restoration of the rebellious States, was adopted 111 to 32. The House refused, 55 to 83, to declare that only such loans as were directed by law to be paid in gold should be so paid, and that all not so directed should be paid in lawful money.

Washington.—According to a census just taken, the whole number of families in Washington is 20,049, consisting of 105,831 individuals, of whom 73,957 are white, and 31,874 colored.

South Carolina.—Official returns from nearly all the districts in the State show, beyond doubt, that a sufficient cause has been cast to insure the calling of the Convention.

Philadelphia.—Mortality last week, 207. Of consumption, 24; inflammation of the lungs, 10; croup, 10; old age, 7.

Milwaukee.—Eight hundred and fifty buildings have been erected in this city during the past season, at a cost of \$1,000,000. The state improvements for the same time have cost about \$500,000.

Texas.—In this State, 56,666 white, and 47,430 colored voters have been registered; about 7500 persons applied and were rejected.

Alabama.—General Pope has ordered an election to be held in this State on the 1st of December next, for the ratification of the State constitution.

Florida.—It is stated that Florida has voted for a Convention by about 1500 majority. Of 45 delegates chosen, 27 are white and 18 colored.

Mississippi and Arkansas.—General Ord has issued an order stating that the people have voted in favor of Convention being held, and directing the Convention to assemble at Jackson, Miss., and Little Rock, Ark., on the 7th of next month.

The Exports.—The domestic exports of the United States for the quarter ending 10th mo. 1st, were in value upwards of \$94,000,000, an increase of \$12,000,000 over the corresponding year.

The Indians.—A party of Sioux arrived at Fort Laramie on the 7th, to make peace. They reported that the main body of the Sioux are not disposed to treat until the forts in that country are abandoned.

Tennessee.—The bill repealing all laws which disqualify colored persons from holding office and serving

on juries, has passed the House of Representatives. It will probably pass the Senate.

Heavy Robbery.—A New York dispatch of the 15 says: "About ten A. M., to-day, as the messenger of the Great Western State of New York was passing the William street, near Wall, having in his possession a satchel containing exchange checks to the value \$1,000,000, a sleigh containing three men drove up stopped beside him. The three men jumped out, seized the messenger by the throat, and held him, while the other two were on his hands and knees, grasping. They then leaped into the sleigh and drove rap away."

Railroad Disaster.—On the 11th inst., a fearful accident occurred on the Vermont Central Railroad, Northfield, by which fifteen men were instantly killed and thirty others seriously injured, some of them to be supposed, fatally. A train containing from 70 to 80 workmen who were employed in repairing a bri which had been recently burned, by some forgetful or want of care, was backed off the abutment into the river below, a distance of sixty feet.

The Market, &c.—The following were the quotations for the week ending on the 15th inst. American gold, U. S. sizes, 1881, 111½; ditto, 5-20, new, 107½; 10-40, 5 per cents, 106½. Superfine State flour, \$3 a \$9.25. Shipping Ohio, \$9.90 a \$10.80; California, \$12.50 a \$13.50; St. Louis, \$11.60 a \$15.00. White Michigan wheat, \$3.15; No. 1 Milwaukee, \$3.00; No. 2, \$2.85. Canada barley, 60 cents. Old rye, \$1.75. Western oats, 84 cts. Western mill, 65 cts. \$1.40. Cotton, 15½ a 16½ cts. Cane sugar, 11½ cts. Philadelphia.—Cotton, 15½ a 16½ cts. Super flour, \$7.50 a \$8.25; extra, \$8.50 a \$9.25; family flour brands, \$10 a \$14. Prime red wheat, \$2.57. Rye, \$1.70 a \$1.72. Old yellow corn, \$1.25. Western yellow, \$1.33. Oats, 65 a 73 cts. Clover seed, \$7 a \$7.75. Timothy, \$2.65. Flaxseed, \$2.00. Beef cattle were in demand and prices better. Sale 2000 at the Avenue Drive-yard at 9 a 10 cts. per gross for extra, 7 a 8 cts. for fair to good, and 5 cts. for common. Sheep were in demand at an advance of 10 cts. at 6 cts. for extra, 5 cts. for fair to good, 4000 sold at \$10 a \$10.50 per 100 lbs. net. Chicago No. 1 wheat, \$1.92 a \$1.93; No. 2, \$1.84. New 84 cts. Oats, 56 cts. Rye, \$1.48 a \$1.50. Cincinnati.—No. 1 red wheat, \$2.55 a \$2.60. No. 1 spring wheat, \$2.20. New corn, in the ear, 86 a 87 cts. Oats, 68 cts. Beans, 13½ a 14 cts. Lima, 16 cts. \$6 dressed, \$7.50 a \$8. St. Louis.—Yellow corn, 40 cts. \$2.10; choice winter, \$2.65 a \$2.75. Corn, 97 a 98 cts, 77 a 79 cts. Rye, \$1.55 a \$1.70. Baltimore.—Prime red wheat, \$2.65. Yellow corn, \$1.20 a \$1.25, 71 a 75 cts.

NOTICE.

A suitable Friend and his wife are wanted to charge of the Farm and Farm-house at Westwood the 25th of the Third month next.

Early application is desirable, and may be made to Aaron Sharpless, West Chester P. O., Pa. John Benington, West Chester P. O., Pa. Joshua B. Furs, London Grove P. O., Pa. Jacob Roberts, Paoli P. O., Pa. Twelfth mo. 18th, 1867.

RECEIPTS.

Received from Jas. A. McGrew and Morris Cope \$5.00, each, to the 1st of Nov. 1867, \$10.00. From L. N. J., \$2. to Nov. 17, vol. 42; from Lydia Mead, O. M., \$2. Morlan, Agt., to No. 52, vol. 41; from Al Wood, N. J., per H. Wood, \$2. to No. 52, vol. 41.

NOTICE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the name of the Committee for the gradual Civilization and improvement of the Indian natives at Tennesseas, C. raugas Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph B. Knapp, No. 783 So. Second St., Phila. John M. Knigh, Chester, Pa. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co., Joseph Scattergood, 413 Spruce Street, Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FORT LARAMIE, (SOUTH DAKOTA), NEAR THE RAILROAD. Physician and Superintendent, —JOSEPH H. WOOD, M. D. Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other member of the Board.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

OL. XLI.

SEVENTH-DAY, TWELFTH MONTH 28, 1867.

NO. 18.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

An Epistle to Friends.

(Continued from page 131.)

Another temptation that the enemy presenteth at though thou art convinced what to do, or thou shouldst deny, yet the trials are so hard on so many, and persecutors was worse and on, so that thou shalt not hold out to the end; where he can get entrance with this bait, he hath causeth an evil heart of unbelief and willing to arise, which takes away even the strength which the Lord did give; and so feeble doth enter the mind, and a spirit of bondage cometh thee to fear again. And then comes the trial in thy heart, whether thou shalt stand the power of God in the obedience, or whether thou shalt fall under that power that ariseth against God and his truth and people? And in this trial thou hast a subtle enemy, using many devices to betray thee, and a part in thyself, not yet satisfied, that is ready to say, pity thyself, pity thy wife, pity thy children, and pity thy relations; and it may be sometimes, are all as so many instruments of Satan to seduce thee, and lead thee to darkness, that thou mayest not see so great a deity in thy bearing up thy testimony, nor so great a danger in the contrary as indeed there is. O! Friend, at such a time as this, where is any help but in the Lord? Where canst thou find a Saviour, but in that light which gives distinction of the several voices? Now it is for thee to remember, that if thou walkest in the flesh, thou must and shalt surely wither and die. In this time flee, flee to the Lord, with his strength to feel thy strength but renewed to present, and take no care for strength next year, next year, or next trial; for God is God, and his strength, and will be the same to thee in all trials as in six, if thou believest and waitest in him in uprightness. And therefore fear not, but trust in the Lord, all ye that have known his power, and let not in the enemy of devils, by the door of carnal reasoning, but shut; and rather consider, how the enemy makes thee as a rejoicing among his own children, and strengthens that hope in them, of overcoming all others, as well as thee; which upon curst, and shall be confounded. And under, that if thou lettest fall thy testimony, thou hast once borne for the Lord, thou shalt the heart of the righteous sad, and maketh travail through that testimony the harder for them, by reason of thy encouraging their ad-

versaries by the hope aforesaid. And whatever thou dost, they must go through to the end, who will inherit the crown of immortality.

And again consider, it may be that thy backsliding, or cowardly drawing away the shoulder, may prove a discouragement to others, and they may stumble in thy stumbling, and fall with thee, and never be able to rise, and so thou bringest their blood also upon thee. Oh! remember also that servant of the Lord, who could say, Psal. cxix. 157, "My persecutors are increased, but my heart doth not decline thy testimonies." That was a noble spirit becoming the soldiers of Christ, yea, though persecuted by princes, as he saith, ver. 161.

Dear Friends, let your minds be stirred up to be zealous for the Lord, in this the great day of controversy with darkness and its power. Who hath God to bear witness to his name if you fail? Among whom hath he made it known as among you? Who have given up themselves to the Lord as you have done? Well, blessed are they that keep covenant with the Lord, for they shall see his glory.

One more subtle snare of the enemy in this matter is in my heart to mention, that is this, viz. to persuade thee for once to do that which the light hath made manifest thou shouldst not, with a purpose afterwards to be more faithful. Oh! Friends, in the name and fear of the Lord, I exhort and warn you all to take heed of this, for this will prove but a false confidence, thou wilt find this kind of going out of the guidance of Truth, to be a dear outgiving to thee; for if ever thou dost return, it will be very hardly, and with bitter anguish of soul. Oh! do not tempt the Lord on this wise, lest it do prove impossible upon thy sinning willingly, to renew or restore thee again by repentance; thou wilt have thy pottage, but wilt lose the blessing, though thou mayest seek it with thy tears; for while thou watest out, behold thy way became hedged up, and the thorny nature got up in thee, and so thou art debarred and fenced out from enjoying thy former state; sin being entered, death soon follows. Oh! remember Samson, who when he had disclosed a token of a Nazarite, in which state he stood in covenant with God, yet thought to have shaken himself, and to have gone forth in his strength, as at other times, but was mistaken, Judg. xvi. 20, for the Lord was departed from him, though he knew it not. And so, though thou hast known the Lord's presence and power in thy vessel, yet take heed of letting in that treacherous spirit, to lead thee to unfaithfulness, and to betray the least of thy trusts and testimonies committed to thee, though it be but for once; for thereby thou wilt render thyself unworthy to be found a witness of his power another time; for the Lord will leave that vessel, and often doth, and chooseth other vessels to manifest himself in, that will be more true and faithful.

So, dear Friends, in true and tender love I have laid these things before you, that ye might all be stirred up and provoked to love and to good works, that ye might abound in the grace committed to you, and none of you who have known the Truth,

might be entangled with the wiles of your subtle enemy; and that you that have begun well, might not lose the things that you have wrought, but might persevere in well doing, till ye have finished your course in peace. And, Friends, this is the joy and delight of those that labour among you in the Lord; and hereby are our hands strengthened, and our hearts refreshed, when we do find ye such as we desire ye should be, even steadfast in the Truth; and then also do you find us toward you such as ye desire we should be, even a refreshing in the fellowship of life unto you, and our God comforts us together, in the mutual joy and comfort of his Holy Spirit, working in us and you.

And, Friends, I am the more drawn forth at this time to visit you with an epistle, because the Lord hath given me some sight of his great and dreadful day, and workings in it, which is at hand, and greatly hastens, of which I have something to say unto you, that ye may be prepared to stand in his day, and may behold his wondrous working among his enemies, and have fellowship with his power therein, and may not be dismayed nor driven away in the tempest, which will be great.

And as concerning those succeeding times, the spirit of the Lord hath signified, that they will be times of horror and amazement to all that have, and yet do reject his counsel. For as the days of his forbearance, warning, and inviting hath been long, so shall his appearance amongst those that have withstood him, be fierce and terrible; even so terrible, as who shall abide his coming? for the Lord will work both secretly and openly, and his arm shall be manifest to his children in both.

(To be continued.)

Hurricanes in the West Indies.

Although the intelligence received here a few days ago by cable from Havana, of the entire submersion of the island of Tortola during the late hurricane in the Caribbean Sea, lacks confirmation, there is no doubt that that tornado was one of the most terrible and destructive of those severe storms which periodically sweep over the West Indies. The Danish island of St. Thomas seems to have experienced the greatest fury of the hurricane, which, although lasting only four hours, caused a fearful destruction both of property and life.

The island of Tortola being to the northeast of St. Thomas, and not more than thirty miles distant from that place, the hurricane must have struck the former just about the same time that it burst upon the latter. Its course was from east to west; for after leaving St. Thomas it swept onward to Porto Rico—the northern coast of which island is in the same latitude as St. Thomas—where it made sad work; and then crossing the Mona Passage between Porto Rico and Hayti, about sixty miles in width, it struck the southeastern end of the latter island, and travelling along the coast fell upon Santo Domingo—situated directly in its track—leaving a large portion of that city in ruins. Its fury must have been spent in the wide extent of country between Santo Domingo and Port-au-Prince, otherwise the latter city would have suffered as well as the

and proved a watchword to him through-
out. He said of himself, that ever after he en-
tered to put a double guard on that side where
he had been tempted to err; and his friends re-
joiced of him, that he never was in company
with things were related to the disadvantage of
him, without endeavoring to bring forward
some quality or action of the absent one,
which might counteract the unfavorable impres-
sion.

To the end of his days he appeared to be
rather unusual love for his friends.
Who is there of us that may not derive instruc-
tion from this incident? Do we see in one, of whom
little much may reasonably be expected, from
profession and position, some weakness of flesh
and spirit, some indiscreet act, ungarded expres-
sion or wrong feeling—let us be careful how we
be such an one. We need not throw away
judgment, and confound right and wrong,
let us look into our own hearts. How many
things are we sensible have found entrance

into them? We may be conscious of an earnest desire
to be obedient disciples of Christ, and can
back at favored seasons when our hearts have
been lifted up in aspirations to God for his help
and presence, and we have been favored with the
spring and contriving influences of his love;
and we not also remember that we have often
in that we had these treasures in earthen ves-
sels and that through unwatchfulness or unfaith-
fulness, we have done many wrong things? We
think it very unjust for one, who had seen
and conducted some things of which he did not
approve, to conclude that all our apparent efforts
promote the cause of righteousness in ourselves
and others, were mere hypocritical pretences. Let
us judge others in the same spirit which we
wish them to judge us. The truth is, that
we expect others to be more perfect than our own
conduct would warrant us in doing; and when
some frailty showing itself, we are too much
disposed, and are in danger of forming a more
favorable opinion of them than we ought.

How beautifully does that experienced servant
of the Lord, Isaac Penington, caution us against
being offended with those who fall into tempta-
tion. "It is of the infinite mercy and compassion
of the Lord, that his pure love visiteth any of us;
and it is by the preservation thereof alone, that
we stand. If He leave us at any time, but one
moment, what are we? and who is there that pro-
tect Him not to depart? Let him throw the
stone at him that falls.

And the Truth itself, in the living power and
love, there is no offence; but, that part which
is not perfectly redeemed, hath still matter for the
operation to work upon, and may be taken in
hand. Let him that stands take heed lest he
fall, and in the bowels of pity, mourn over him
and for the restoring of him that is fallen. That
man is so apt to be offended, is the same with
which falls. Oh! do not reason in the high-
grounded, against any that turn aside from the
straight Guide; but fear lest the unbelieving and
unwise part get up in thee also. Oh know
the weakness of the creature in the withdrawing
of life! and the strength of the enemy in that
time, and the free grace and mercy which alone
can reserve! and thou wilt rather wonder that
any land, than that some fall."

J.

For "The Friend."

The editorial in the last issue (No. 16) of "The
Friend," seemed to the writer of this particularly
urgent and lively. And he would recommend
a careful perusal to those readers of the journal,
who have not already given it one.

There are times when duty calls to the closest

examination of ourselves, as in the sight of Him
from whom nothing can be hid. May each one
of us, without in the least seeking to turn aside
from what may appear to the fleshly part as the
sore operation of the "cherubim and flaming
sword," be willing to submit to a thorough search-
like to that conveyed in the language: "Search
me, O God, and know my heart; try me, and
know my thoughts; and see if there be any
wicked way in me, and lead me in the way ever-
lasting." It is high time we were aroused, "as
a man that is awakened out of his sleep," to the
lapsed state to which, little by little, viewed as a
whole society, we seem to be culminating. Surely,
unless the Lord interpose for our help and rescue,
we see not much hope of any other than a wil-
derness journey, like to that of the children of
Israel, because they had forsaken the Lord, the
fountain of living waters. Nevertheless, there
is no doubt, a remnant will be preserved. The
promise has lost none of its application or
sweetness: "I will pour in the midst of thee
an afflicted and poor people, and they shall trust
in the name of the Lord." While, it is to be
feared, that now, no less than when the Apostle
wrote, "They are not all Israel, which are of
Israel," yet doubtless there are more than the
"seven thousand" in our community, who have
not bowed the knee to the image of Baal, and
whose mouth hath not kissed him. May the feet
of these be firmly stayed the full and appointed
time in the very bottom of Jordan; and may the
cry of their souls to the Lord of Sabaoth be, that
in almighty kindness He will be jealous for His
land and pity His people.

The concluding paragraph of the editorial al-
luded to, reminded of the following from the pen
of a ready writer in 1844, inciting also to the
perusal of the deeply interesting narratives and
journals of our early Friends.

"An unhappy characteristic of a religion of
sentiment and speculation is, that as it has its
life in excitement, in proportion as it prevails,
the calm and simple narrative contained in the
journals of our own Friends become flat and dis-
tasteful, and are forsaken for more highly wrought
and exciting expressions of devotional feeling.
This change of taste, I think, does great injustice
to those excellent writings. To my mind they
are among the most instructive and edifying of
religious compositions. They are more free, as a
class, from cant, from affectation, from exaggera-
tion, than any other religious autobiographies.
Their very nakedness of the ornament of style,
constituting what some esteem their dullness, is
closely connected with their highest merit. Each
one of them is the faithful record of a new ex-
emplification—varying with the individual's
temperament, intellect, previous history and condition
in life—of the power of the Holy Spirit to conform
and to mould all these opposing elements to its
own blessed purposes, and proving by the uni-
formity of the result, in so many various and
opposite cases, the reality and the efficacy of that
Divine Power to which they bear testimony."

N.

Twelfth mo. 17, 1867.

For "The Friend."

Selections from the Unpublished Letters and
Journal of a Deceased Minister.

(Continued from page 123.)

Second month 24th, 1836. "I can feel sym-
pathy with thee, in thy solitary and lonely sittings,
and at times almost rejoice that the dispensation
is permitted, believing it is a baptism, few who
attain the right path, miss of realizing. The Pro-
phet speaks of it as the result of 'bearing the

yoke.' 'It is good for a man that he bear the
yoke in his youth; he sitteth alone and keepeth
silence because he hath borne it upon him'; he
putteth his mouth in the dust, if so be there may
be hope.' And may we be willing to submit to
every turning of the Divine Hand, resting assured
that the most humbling dispensations are per-
mitted in mercy, and are no further urged upon
us, than is necessary to destroy some selfish pro-
pensity, or some deep-rooted error, inconsistent
with the purity and holiness that should dwell in
our hearts, unmolested by opposing tenants. Were
only one bright page of sunshine ever before us,
we know it would oppose a pressing after that
state, contra-distinguished from a love of what
shaltains most in this world; and our contracted
vision can see that the spirit of higher origin, can
only find place, as our mental visions of happiness,
earthly happiness, are deeply shrouded.

"I note thy expression of satisfaction with the
sacrifices thou hast been strengthened to make,
and surely it ought to be enough for us to realize
in measure, the consolatory assurance: 'Behold I
have accepted thee in this thing also;' and to
know the beision of peace, resting as a cloud of
promise, to guide to a continuation until the offer-
ing is completed. Was it not that He who dis-
penses, in perfect wisdom, oft repeated trials, was
pleased also to temper them, and to manifest at
intervals the Light of His countenance as a ray to
cheer and to strengthen us, I doubt whether our
weakness could long endure so trying a situation,
wherein all hope was shrouded; but blessed be
His holy name, He condescends to our necessities,
and shows us, that no state is so hopeless, but His
mercy can reach for our rescue; no dispensation
so proving, but the strong tower of safety is shown
us, as a sure hiding place, and a strong stay in the
day of trouble.

I believe thou hast little knowledge of our
cousin J. M., but his excellence has doubtless
awakened an interest, however limited your ac-
quaintance. In addressing a class in our meeting
a few weeks since, he insisted on the necessity of
obedience to the requirings of duty, and told us
he could testify from experience that the 'Lord's
ways are ways of pleasantness, and His paths,
peace.' Some of his latter communications have
been remarkably impressive, prophetic and per-
sonal; almost inducing the fear that we were shar-
ing his last labors; witnessing the last bright gleam
of the expiring taper, most brilliant e'er gone.

"The consumption has carried off several of
the younger part of our members, and ought to
warn the remainder, that time is uncertain; and
induce anxious watchfulness with regard to doing
the work in the day-time. The spirit of procras-
tination operates sorrowfully to the disadvantage
of too many. The love of trifles interferes to re-
tard immediate obedience, and we delay, looking
forward to a time when obedience will not so
much cross our inclinations; when the remarks of
our associates can be more easily borne; and their
laugh evaded. But ah! 'tis a sorrowful compro-
mise with a spirit that will not always strive with
us, nor regard the excuses we must make in ex-
tenuation of our conduct. I feel myself the truth
of these remarks, and while I lament them, can
scarcely hope for better days, knowing my weak-
ness."

"With similar ones in this connexion, the fol-
lowing memorandum—doubtless penned while in
the school of preparation for more active religious
service, even to "instruct His people"—conveys
indeed a low account. Nevertheless it seems not
right to withhold it and them, inasmuch as deep
provings, painful baptisms, and great tribulations
are so manifestly a part of the high and holy way

unto life eternal, that they can never with safety be avoided. So truly is this the case, that well might we query, "He that hath not suffered what doth he know?" of that experimental acquaintance with the Lord Jesus which qualifies either for communion with Him, or to speak to the heart? The faithful servant or hand-maiden must be taught to endure hardness, and faith-proving conflicts; that so through self-abasement and true humility they may learn to know and love Christ in the fellowship of His sufferings being made conformable to His death; as also to count nothing too near or too dear to part with for the sake of Him who bought them with the price of His own precious blood; and who chooses all His in the furnace of affliction.

Flesh and blood in catering for their much loved ease and indulgence, may seek to avoid these tribulations, and to find a less rough and thorny path—like the one the untutored Indian is represented to have seen—leading around the flames of that thoroughly cleansing baptism of the Holy Ghost and of fire, which in some stage of the progress, must attend the heaven-bound christian traveller. But while He, our divine Lawgiver, and the ever-present Sufficiency of His people has declared "In the world ye shall have tribulation, He has also invited to look to Him for saving help, in the associated consoling promise, "*Be of good cheer; I have overcome the world.*"

2d mo. 1836. "In vain do I attempt to fix my attention on reading of whatever description: my mind seems altogether inimical to quietness, and I know not a state of rest. Wandering and unsettled: a busy fancy is ever at work even while I detest its operations. Why is it so? I am weary—weary of striving against so much inward corruption; and am at times endeavoring to disengage myself from so hard a task-master. If a good end is to be effected by it, may it continue. I only desire a clean escape from the trying besetments that as chains and fetters fasten me to this low earth. Truly it is winter with me: no pleasing prospects shed a light over either the present or the future—all alike is gloom; and the language of the Psalmist often arises as applicable, 'I am shut up, and I cannot come forth;' the pleasant things are 'put far from me, and mine acquaintance unto darkness.' But although such feelings are embodied in words by the sweet singer of Israel, and the friend of God, yet his case and mine are not parallel. His heart was surrendered to serve his Master and to promote his cause in the dignified position he was called to; and to qualify him to instruct his people, was perhaps the occasion of the baptism he encountered. My lot is lonely and obscure, with comparatively but few temptations; and though followed by that merciful Hand which was early manifested, I go halting and lingering; keeping above the true witness, and with a fearful rebellion withholding (I fear) the total offering of an undivided heart. I mourn my deficiencies and sometimes venture to implore strength effectually to combat the opposing barriers. But with shame be it recorded, I know not that I make any advancement. I often ponder very seriously my forlorn situation, and almost fear I can go no farther, I am so weak, and vile, and worthless: so unable to resist the insinuations of the enemy, who is active as ever he was to work out his own ends; and my faith is sometimes almost ready to fail, fearing that under some guise or other, he will obtain possession, and my lodgment will again be in the situation of the worldling. Oh! that I may be favored to escape, and know an overcoming of the sins that so easily beset me. I have in former days realized the truth of the declaration that 'Our Redeemer is

strong;' but a different dispensation (if it be a dispensation) now presses heavily upon me: certainly a darker one I never knew. Day and night I bemoan my obduracy, and petition for preservation; but if not forgotten in anger, I care not. I can endure chastening, I had almost said joyfully; believing that in no other way can I know a redemption from the pollution of this vile nature. I would desire strength to pray for complete submission to the requirings of duty, humbling, and proving, and agonizing as they may be; for I feel and know that there is yet much within struggling against the exposure my profession leads me to. I feel it warring with better impulses, and I know that unless the compassionate Being who first lured me from the path of sin and hell, condescends still to strengthen and to animate to perseverance, I shall faint in the way, and become an outcast from the mansions of holiness He has prepared for His followers."

(To be continued.)

For "The Friend."

Henry Kirk White.

Henry Kirk White was born at Nottingham, the 21st of Third month, 1785. He was of humble parentage. His father, John White, was a butcher in indigent circumstances. A system of rigid economy was practised in the family, and Henry in early life became acquainted with the privations attendant upon poverty.

When very young he acquired a fondness for reading, which being indulged, grew into an absorbing passion, to which he made every thing else subservient. He was accustomed, (said one of his sisters,) to sit for hours in his little chair with a large book upon his knee, entirely unconscious of what was going on around him.

When he was seven years old he wrote his first composition, a tale of a Swiss emigrant; but being a diffident child he did not show it to his family. Some writer has said, "the consciousness of genius is always at first accompanied with diffidence: it is a sacred, solitary feeling: no forward child, however great the promise of his childhood, ever produced any thing truly great."

At the age of fourteen he was placed at a stocking loom, his parents having decided that he should follow the hosiery business. His aversion to this employment was extreme, and he could not forbear frequently telling his mother how unhappy it made him, to think of spending years of his life "in shining and folding stockings;" he said "he wanted something to occupy his brain," and begged permission to follow one of the learned professions. His importunities at length overcame parental reluctance, and at the close of the year he entered the office of Goldham and Ensfield, attorneys and town-clerks at Nottingham. He applied himself to his new duties with such industry and alacrity as seemed to leave little time for other occupations. But being advised to pursue the study of the languages, he resolved to devote his spare time to their acquisition: and he made such rapid progress that in less than a year he was able to read Horace with tolerable facility, having besides made considerable advancement in Greek. So precious had his leisure moments become, that he habituated himself to declining Greek nouns and verbs on his way to and from his place of business: and he continued to the close of his life in the practice of studying during his walks. To Latin and Greek he soon added a partial knowledge of the Italian, Spanish and Portuguese languages. Nor did the sciences escape his attention; with astronomy, electricity and chemistry, he made himself thoroughly acquainted. Of his reading he thus writes to a brother:

"The plan which I pursue in order to subdue disinclination to a dry book, is this, to begin tentatively to peruse it, and continue thus one hour every day: the book insensibly by this means, comes pleasing to me; and even when read Blackstone's Commentaries, which are very dry, lay down the book with regret."

His nights as well as his days were now given to study: he even refused to take his meals with the family, lest his attention should be divided from his books. But such severe mental discipline began to affect his health, and caused anxious mother much solicitude.

About the eighteenth year of his age his opinion underwent a great change. His equanimity had delighted to speculate upon mysteries hid from the beginning, and for some time, if deistical in his principles, he was very skeptical. One of his friends hearing of the unsettled state of his mind, sent him Scott's "Force of Truth" with the request that he would give it a perusal. When Henry commenced reading book he declared that he could soon write an answer to it; but being queried with some time respecting the progress he had made in his revision of the work, he acknowledged that the arguments presented in it were unanswerable, because they were founded upon "the eternal Truth. The doubt and darkness by which he had surrounded passed away, to be succeeded by humble yet confiding trust in his Redeemer. Pride and self were humbled in the dust: an sincere was his desire to be made in all things conformable unto his Maker's will, that he ready "to give up all acquisitions of knowledge, and all hopes of fame, and live in a wilder, unknown, till death, so he could insure an inheritance in heaven."

About this time he became a contributor to *Monthly Mirror*, where his productions soon attracted the notice of one of the proprietors of paper, through whose encouragement he was induced to prepare some of his poems for publication; hoping that the proceeds might enable to go through college. He had long looked with envious eyes towards the universities; little expecting, however, that his desire would be gratified. But of late a deafness with which he had been afflicted from childhood increased so far as to render it improbable that he would ever attain to eminence at the bar. Added to this attachment to his profession had, since his aversion, greatly declined; and feeling an ardent desire to promulgate the truths of that religion so heartily embraced, he looked to Cambridge as the means of qualifying himself for the church.

A volume of his poems was issued from the press in 1802, but it met a very cold reception especially from reviewers, who criticised it severely. In relation to one of these strictures he writes a friend: "The unfavorable review of my author, has cut me deeper than you could thought: not in a literary point of view, but affects my respectability. It actually represents me as a beggar, going about gathering money put myself at college, when my book is worth and this with every appearance of candor.

review goes before me wherever I turn myself and I am persuaded it is an instrument in the hands of Satan to drive me to distraction."

(To be continued.)

The hardening of the heart is like the hardening of ice. When the water begins to freeze will not bear the weight of a pin, but after a few hours or some days, it is capable of sustaining the heaviest pressure.

Selected.

HE LIVING—THE LIVING; HE SHALL PRAISE
THEE."—Isaiah xxxviii, 18.

Health is a jewel dropt from heaven,
Which money cannot buy,
The light of life, the body's peace
And pleasant harmony.
Lord, who hath tuned thy outward man
To such a lively frame as I
Renew my heart in holiness
To praise thy sacred name.

While others in distresses lie,
Bound in affliction's chains,
I walk at large, secure and free
From sickness and from pains:
Their life is death; their language groans;
Their meat is juice of gall;
Their friends but strangers, wealth but want;
Their houses prison-walls.

Their earnest cries do pierce the skies,
And shall I silent be?
Lord, were I sick, as I am well,
Thou shouldst have heard from me:
The sick have no cause to pray,
Than I to praise my King:
Since nature teaches them to groan,
Let grace teach me to sing.

I see my friends, I taste my meat,
I'm free for mine employ;
But when I do enjoy my God,
Then I myself enjoy:
Lord, thou dost keep me on my feet,
Direct me in thy ways,—
O crown thy gift of health with grace,
And turn it to thy praise.

The Moderate Enquirer Resolved.

Written in the behalf of the brethren, in vindication of the Truth, by W. C.

(Continued from page 120.)

It appears by Sewell's history that this tract was written by William Caton, in the year 1657. It was probably extensively circulated by our Friends during the times of persecution—as passed through several editions. Parts of it have been transcribed in the belief that they would be interesting, and perhaps instructive to some of the readers of "The Friend."

It is very true, the scriptures are much wrested by disputers, but pray thee tell me, what these people hold of the Holy Scriptures? It is reported they deny them, is that true?

No, they do not deny them, but do read and peruse them above all books; and they do affirm that they are able to make a man wise unto salvation, through faith that is in Christ Jesus. They also hold them to be a true declaration of the things which were most surely believed upon the saints of old. And further, they say that the Holy Scripture was written for their edification, that they through patience and comfort of the scripture, should have hope. This with much more they affirm of the scripture, the life in which they witness manifested in them.

All this is good; but is there any man here that hath the same spirit the Apostles had, the same light, life and power now to be enjoyed which the saints in former ages witnessed?

I tell thee, whosoever have not the same gift by which the apostles were guided and led, they are none of His whom the apostles served and owned to be their Lord and Lawgiver, Jesus Christ, who is the same to-day, yesterday and forever, and they that are His, of His fold and of His priesthood, they have unity in His light, in love as the apostles had fellowship; and they are led and guided by the same Spirit that revealed things which had been hid from all ages and generations unto the apostles and saints, and they are preserved in that power which gave the saints victory over the world, and they live in the life of

immortality which was made manifest in the saints of old, so that the same light, life, spirit and power is now made manifest among the saints; and to the truth of this these people can set their seals, who are made partakers of the same according to their measure.

Enq. Hath not every one of them received according to their ability, and are they not in several states and conditions?

Res. Yes, some of them have received one talent, some two, some five, and they boast not of that which they have, because they have received it from Him who is the giver of every good and perfect gift. Their conditions are also divers, for there are fathers, young men and babes among them; and some there are who do not yet witness the birth brought forth, which is begotten by the Immortal Word of life. Now he that is the strongest among them will bear with the weakest, and he that is the greatest among them will be come servant to the least; and when one among them is overtaken with a fault, they that are spiritual do restore such an one with the spirit of meekness; for sometimes they that are weak among them do that which the witness of God in them alloweth not, and to the witness they consent, which convinceth them of the evil that they do through weakness, which their soul hates; and a law in their members they find which warreth against the law of their mind, by which they are sometimes brought into captivity to the law of sin, so that they cry out as Paul did in his warfare, "O wretched man that I am," &c. Yet herein they find comfort, that with their minds they serve the law of God, though with their flesh, in which no good thing dwelleth, the law of sin. These are such as are not yet come through the law, nor to the end of the warfare, but find daily the flesh lust against the spirit and the spirit against the flesh.

Enq. Well, is not that a good condition? Did ever any saint come further in this life? Or are any of these people made free from the law of sin by any other law?

Res. The time of the warfare must be known and passed through by as many as come to be made free through Him who is the end of the law for righteousness' sake, and he that is faithful to the Lord in the Light which brings to the warfare, the same will bring him through the warfare, yea, to the law of the spirit of life in Christ Jesus, by which some of the people are made free from the law of sin and death; and this the saints witnessed, in whom the righteousness of the law was fulfilled; through which they are come unto Him who is the end of the law and the prophets, by whom they are made free from the law, that being dead wherein they were held, and they become dead to it by the body of Christ which was made a curse for them to redeem them from the curse of the law, so that now they are no more under the law but under grace.

Enq. But what do they expect to be perfect or free from sin in this life? What ground have they for this in scripture?

Res. That which is perfect is manifested in them, and by that they wait to be perfected, for perfection is that which they earnestly press after and have hope to attain unto the fulness of it; for they do believe that God would not command and require that of men, which could not possibly be attained. And by the blood of Jesus they hope to be cleansed from all sin, that being thoroughly sanctified and cleansed with the washing of water through the Word, they might be presented to Him a glorious people, not having spot or wrinkle or any such thing; but that they might be holy and perfected forever. But this seems incredible

to many who are not yet come to the godly sorrow for sin that worketh repentance, but these people, whose eyes the Lord hath opened, do see a possibility in the thing, and they are not without faith but that they shall obtain it, and therefore they go on unto it; and will proceed if the Lord permit, who hath manifested that in them which is perfect, by which He will bring them, and hath brought some of them, to the perfection of purity, and to the beauty of holiness, where hallelujah is sung unto the Most High.

For "The Friend."

Friends Freedmen Association

Elizabeth Pennock writes from Yorktown, Va. 12th mo. 16th, 1867.

I have sat down to beg, and so let me tell thee the immediate cause. For several days it has been snowing fast and steadily; most unexpectedly the storm came upon us after a warm Indian summer-like spell and the people in the camp were not at all prepared in the matter of wood. I know many of them could not have been, even had they known of the coming of the storm, for they have no means of providing anything ahead; but they are suffering now. It was too bad to have school to-day and so I spent the morning in a tour through the camp, and the sights I saw there would make any one who had a good fire, feel renewed gratitude for the blessing. R. S. Dennis and I have done what we could, "but what is that among so many!" I suppose I visited 20 or 25 families, and found them in the most forlorn plight possible. So many depend on the wood they can chop and pick up and "tote" from the woods, and that means of supply is entirely cut off now, for they cannot possibly walk two or three miles through this drifted snow, and when they get to the woods all available wood is covered up. Now would it not be possible for thee to beg us a little money; even a few dollars would be most thankfully hailed both by these poor people and by me. I did dread exceedingly going out among them this morning, for I could do so little to relieve their wants, but I knew it was not the plan to let them freeze at our very door, as it were, and know nothing about them, so I went.

One old auntie said, "She had the last stick on the fire, if she was going to eternity the next minute," that was her way of showing me it was certainly the truth she spoke. I found very many who had borrowed a stick or two, and had no idea where the next would come from. Several were burning their fences, and others pulling down the slabs from the sides of their houses, already very leaky, and one poor old "granny" burnt her bedstead yesterday. They all seemed very glad to see me, and it went to my heart to think how little I could do for them. One old auntie said, "I have just been prayin' to God that I might see Miss Lizzie, and now here you is; it must have been the Almighty that sent you!" Another poor woman, well on to 100 years, who has only a little grandson living with her, had not one stick of wood all yesterday, cold as it was—this morning she had begged two sticks from a neighbor, truly a neighbor in the Bible sense of the word; and there with only the earth for floor, and not a single comfort save those two sticks of wood, she was thanking God for being so good to her. She says she believes He never will fail her in times of trouble. Oh I cannot tell one half I saw, but it was sad, very sad. If any of you can do even a little to help us, please do it, and your bounty shall be used conscientiously and carefully. I think I know that it will not be misplaced or untimely. Last winter we had quite a large fund

for such emergencies, but we have not a dollar now. We can buy wood as it stands piled up in the woods for \$1.50 per cord, and Baylor can haul it with the mule team.

For "The Friend."

In the *New Bedford Mercury*, from which the editor of "The Friend" made the quotations given in the last number, I found the following dream, which, whether dreamed when awake or asleep, conveys a lesson that Friends have need to give attention to, before it is too late, and seek Best Wisdom to guide them in solving the difficulty it presents. It appears to be narrated by one not a member of our religious Society, but who sees to what end its differences in faith are tending.

"Some weeks since, before I had heard of the Friends' Sabbath School Conference, recently in session in this city, I had a dream, in relating which I will 'nothing extenuate nor set down alight in malice,' but tell the dream as in my sleep 'twas told to me.

"I thought as I slept, that it was Sabbath afternoon, and that I would attend divine service at the Friends' meeting house on Spring Street. Approaching the meeting house at the appointed hour for the usual service, I was surprised to hear voices attuned to vocal music, and upon entering, I saw the Sabbath scholars with their teachers all standing, and with a large assemblage of men and women Friends closing the school, by singing some selections from singing books such as are used in other meeting houses, not of the Society of Friends. I was very much surprised at this, and taking a seat in the gallery, awaited further developments. Presently the meeting arranged itself for the afternoon service, and I noticed, particularly, that the younger Friends, and those who were dressed in gay attire, took the 'rising seats,' and occupied the body of the house, while the older Friends, and those more sedate, occupied the seats in the 'gallery.' After a short silence, a discussion was commenced upon the propriety of introducing the more modern forms of worship, and including, as devotional exercises, vocal and instrumental music. The affirmative was advocated with much vehemence by the younger people and those of gay attire, who very strongly urged the necessity of music as a means of developing the christian character, and advancing the interests of the church. Presently I felt constrained to speak in opposition to the prevailing expression, and addressing myself to those about me, exhorted them to hold fast to the tenets of the founders of the Society; and though it might be a cross to sit in silent meetings and wear plain clothes, still it were better thus, than to disregard not only their own teachings, but to entirely, by and by, lose sight of the example and precepts of Fox, Barclay, Penn and a host of other good men who have in latter days lived and died in the true Quaker faith. Others followed, and the discussion was closed by a Friend whom I will not mention, who spoke feelingly upon the subject, and referred to those who had by their example and teachings tended to promote discord rather than harmony among Friends; and expressed most emphatically his determination to stick to the old forms as taught by the founders of the Society, hoping the time would come when others of whom he spoke would see the error of their ways, and that with the wisdom of age they would be willing to quietly listen to their own inward teachings, trusting they would yet receive the true light, and follow the meek and lowly Jesus in the same spirit as did those old fathers and mothers of the church, whose example it should be their choicest pride to emulate."

From "The American Friend."
From Walnut Ridge.
Carthage, Ind., 11th mo. 22nd, 1867.

Ede. American Friend—I gladly accept your invitation to write an account of the "revival" in the limits of Walnut Ridge Monthly Meeting, and of its extension into other neighborhoods, especially because I know many distorted and exaggerated accounts of it have been circulated far and near, but when I come to put my hand to the task I find it very difficult to determine where and when the work commenced. I shall state the course of it as it appeared to human observation, hoping and praying that I may be preserved from giving even a coloring to anything that is not strictly consistent with the pure truth.

There is a school house called Temperance Hall, about seven miles north-west of Walnut Ridge, at which some of our members, including a minister and some elders, with others, had been holding "tract-readings" at various times during the past summer, and at which also a few persons, none of them ministers, representing three or four religious denominations, were in the practice of meeting occasionally, if not weekly, for the purpose of prayer. About the first of Tenth month last, the invitation was extended to some praying people somewhat more remote than those who had been attending, to come and help keep up the meetings, as they seemed to be in a dwindling condition. On Fifth-day evening, Tenth month 10th, two Friends who had not attended the meetings previously held went, and found but two others present, and the house not lighted. After waiting some time and discussing the subject together, they decided to light the house, read a portion of Scripture, and wait awhile together. Soon two women came, one of whom said her husband, (who had generally opened the prayer-meetings,) was away from home, but had exacted from her a promise to endeavor to keep up the meetings during his absence. In a sense of great weakness the meeting was opened, this woman and two other persons engaging in fervent prayer, that their neighbors might more to them be led to take an interest in such matters, and that the whole community might be awakened to a just sense of their dependence upon God, and their lost condition without a Saviour. This, I am told, was the drift of all the prayers that evening. There were nine persons present, and they seemed to have been surprised at the comfort and strength with which they were favored. Somebody had the courage to appoint a meeting, to be held on First-day evening following. When the time came, there were very few in attendance who had ever prayed publicly, and none who had been accustomed to the responsibility of opening and conducting the exercises of a meeting.

A considerable number of apparently thoughtless and giddy young people being present, an earnest and faithful young man feeling the weight of the new and solemn duty devolving upon him, called the meeting to order, and the services commenced. After they had been some time engaged in prayer and exhortation, a young woman who had been educated as a Methodist, and had professed an interest in religion, but had lapsed into indifference and carelessness, arose and acknowledged that she had been struggling with conviction ever since she had read the tract, "Now is the accepted time," at a meeting in the summer, expressed her love of the Saviour, and her desire to serve Him, and asked the prayers of her friends, or something to this effect. She was soon followed by a young man in similar exercise, who has had, at a subsequent meeting, to acknowledge that he was not sincere, but was hired by another, who wished

to witness the effect on the audience. Since he sought in sincerity, and found the reward of peace he has returned the money. About the same time, a young man, a member of our Society, under deep conviction, kneeled and began to cry mightily to God for the pardon of his sin. This appears to have been the first case of sin conviction, and penitence as was termed "mourning," and as the meetings progressed, many seats to be provided for the accommodation of sinners in order that their friends might find them, pray over and encourage them. Stimulated and strengthened by this evidence that their prayers were heard, those concerned in the meetings resolved to continue them night after night, when the Lord seemed so graciously to own them, as they were held with increasing interest at the school house a week.

The meetings having entirely outgrown the capacity of the school house, some were anxious have them held in a Methodist meeting house, Gilboa, near by, while others feared they would lose, in some degree, the character of unit meetings, and with this their power. They were moved, however, without apparent detriment. Some of the same Friends who had held the tract readings, and some others attended the meetings irregularly, and participated in the services in the Young Friends and children becoming deeply interested, attended in large numbers, going in companies of fifteen to twenty, in farm wagons frequently holding intensely interesting prayer meetings on the road, so that a number of them realized that "being in the way, the Lord is with them." About the close of the second week the meetings, several elders and other Friends being in attendance, mindful of the flock, of which the Holy Ghost had made them overseers and finding that a large majority of those termed "seekers" and "mourners," were members with them, were weightily impressed with a sense of the duty of the church towards its children. One of our ministers, who had a minute liberating his religious service abroad, and to appoint some ministers near home, had been impressed, she knew not why, with a sense of duty to hasten home a few days before, and had attended some of the meetings. A meeting was appointed in her name for the young people, to be held at Walnut Ridge on First-day evening, Tenth month, 27th, which was largely attended by our own members and those who had been attending the union meetings.

This meeting soon assumed that character, a abundant evidence was seen that the hand of the Lord was in it. It had been apparent during Scripture school and morning meeting, which had been seasons of unusual interest, that many of our young people had experienced a great change, and that a number of others were under deep conviction. At the close of this meeting a few men, mostly young men, lingered, and with some sympathising and praying friends, who gathered wrestled earnestly for the blessing for three or four hours, when all were ready to go on their way rejoicing. I allude to these cases particular not only because they were the first of the kind our meeting house, but also because some of them were very remarkable in the various stages of conviction and agonizing crying unto the Lord, and in the striking evidence that He inclined His ear and heard their cry, and has since deigned to visit some of those whom He then enabled to sing praises, by wonderful manifestations, to labor the salvation of others.

The revival being thus legally inaugurated our meeting house, other meetings were appointed by general consent, and the work has gone gloriously. Some things have been done, it

that seemed to shock the nerves of some dear ones, who tremble for the "Ark of Quakerism," in which all their hopes of salvation seem to be embarked, yet I have faith that it will be able to weather the storm. If it is not, I should almost say that it is shipped tenderly on the "Old P. Zion," that thus we might make all sure members conduct themselves in all our meetings as Friends are accustomed to do, the exercises are much distributed over the meeting, many seeming earnest to "thrust in the stick and reap," seeing the abundant evidence "that the harvest is ripe." There has never been a hymn sung in one of our regular meetings to my knowledge. Great openness being manifested by our denominations, and our working members being to have been clothed with renewed strength and earnestness, they, with large numbers of our "new converts," have co-operated in holding union meetings in various places, in all which the Divine blessing seems to crown their efforts.

The great work is going on, also in Spiceland, and other places. May the Lord continue to pour out abundantly of His good Spirit in the children of men, and may His word go on accomplishing that to which He has sent it;

His work and marvellous in our eyes, and to all who have tasted of the goodness of the Lord be established, strengthened and settled in the fear and love of Him.

DANIEL CLARK.

For "The Friend."

The Quaker Garb.—Obedience in Little Things. This is a lamentable fact to many faithful Friends, that there should be those in our Society, and among some who seem to be somewhat—being placed in the foremost rank—who have been seduced by the great deceiver and foe of man to account the testimony in respect to dress and dress—purchased and maintained through suffering, and ever held dear by this religious Society—as of too little importance to be at all regarded in the great work of Christian redemption. I believe far other. And would here express my conviction, that it is only through obedience to the day of small things—through self-denial in taking up of our daily cross to any and every thing that is of the world, or that the carnal mind takes pleasure in—that we can grow in faith, in holiness, or in stature in the incorruptible as it is in Jesus. It is a striking passage one of the Apocryphal writings, which we have will be sadly verified concerning all such faithlessly subject themselves to the reprehension: "He that contemneth small things shall be brought to nothing." Our divine Lawgiver's words are very apposite to the same grave error: "He that is faithful in that which is least, shall also be faithful in much; and he that is unjust in the least, is unjust also in much." The apostle Paul exhorted those addressed in his day: "Dearly beloved, I beseech you as strangers and pilgrims, to be free from fleshly lusts that war against the soul." And afterwards, seek, to turn from "the carnal adorning"—be the conformity to the world what it may—to "that which is not corruptible, even the ornament of a meek and quiet spirit, which is in the sight of God of great price," that the Lord of life and glory does require "the small cattle of our burnt offerings," and "all the tithes—those of mint, anise and cummin, no less than the "weightier matters"—be brought into His storehouse, is proved to be the fact that no one has risen to evidence, or the stability of a faithful standard bearer in our Society, who has ignored these apparently small and insignificant offerings; or who has not

in this respect as well as others, been made willing to be made a fool for His sake whose first lessons are humiliation, contrition, abasement, and self-denial; who Himself wore the seamless garment; and whose language through His prophet is: "Gather my saints together unto me, even those who have made a covenant with me by sacrifice," in whatever particular it be called for.

While we fully believe, that nothing short of whole-hearted obedience to the law of the spirit of life in Christ Jesus, can transform any, or set free from the law of sin and death, we claim that this law hath respect no less, as has been observed, to the smaller tithes, than to the larger. And that nothing can justly be accounted small, that tends to meekness and humble the heart unto the reception of the kingdom of Christ, which cometh not with observation; that prepares for the inspection of the faithful and true Witness; or for our acceptance in an eternity of endless joy and rest and peace.

John Barclay, who it appears had been dressing in conformity to the flesh-pleasing spirit of this world, and who wrote from a true and living experience, declares: "With regard to my present dress, and outward appearance, it is evident there is much to alter. That dress, from which my forefathers have, without good reason and from improper motives departed, to that dress I must return: that simple appearance, now become singular, which occasioned and still continues to occasion the professor of the Truth, suffering and contempt, the same must I also take up, and submit to the consequences thereof. Some may object to this, as if it were improperly 'taking thought'; but I differ from them, not in the rule itself about the anxiety bestowed on clothing, but about the application of that rule. It is right, if the vain customs, folly and fashion of this world, have insinuated themselves into any branch of our daily conduct, to eradicate them, with every one of their useless innovations, whatever trouble, anxiety or persecution it may cost us. But after we have once broken our bonds, we shall find a freedom from anxiety, trouble or thought, about our apparel, far surpassing the unconcern and forgetfulness which seems to deaden the spiritual eye and apprehension of the slave of custom." On the same subject we are pleased to meet with the following concurrent testimony from the printed journal of Hannah Backhouse, viz: "I am an enemy to costume for the sake of costume; but I am also persuaded that if we bear a consistent testimony against that which springs from vanity, decking the person with ornaments and changeable suits of apparel, and changing for the sake of fashion, we must fall into a very simple manner of dressing, and that very much of a uniform one, with the exception of those real improvements that tend both to ease and health, and which have nothing to do with conformity to the world for the sake of conformity. In following such a line of conduct, it is self-evident that we must differ from the majority. But as truth and righteousness have never yet been supposed to be with the multitude, common usage is no argument for the Christian; and if we differ from others by a consistent testimony against ornament and change of fashion, we must become singular, and it is this singularity which marks us Friends; and what we think founded on right principles for ourselves must also be so for our children. This is the reasonable view I take of our peculiarity of dress. Simplicity and absence of ornament is undoubtedly a Christian requirement; but the church may have requirements in one state of mankind that might not be necessary for her in another. Were the world not to lie in wickedness, as we know

it does, there would be no need for the protection that the mark of being a Friend is now known to be, both to our young men and young women. I am sure I would not lay any bonds upon our dear young people but those of the gospel; but I do believe that the more submissive they are to these the more they will value the principles and peculiar practices of the Society." The writer of this was witness to much remorse and suffering in the prospect of death, occasioned by a disregard, or want of faithful maintenance of this important testimony. The individual alluded to, in much godly sorrow for her deviation from the narrow way, asked for a pair of scissors, and, with her own hand, cut all the ruffles, and lace, and unnecessary trimming from her wearing apparel. And moreover said, she would willingly wear sackcloth along the street, if thereby the peace of mind she coveted, could but be obtained. The painful, humiliating experience likewise of the author on this interesting subject, is too well remembered not to cause sensations of fear and sorrow, when hearing this subjugating, yet indispensable discipline of the cross made light of, and by some almost ignored in this refined, and liberal minded age. In yielding to what was believed to be a divine requisition, in respect both to dress and address, and in which clearly called-for sacrifice, no by-way nor high-way, nor self-sought substitute of any kind could be found, the individual well remembers that if the right hand or the right eye had been demanded, or would have answered instead, it would at once have been yielded as the less trying, because less suffering and self-abasing sacrifice.

(To be continued.)

If a man cannot find ease within himself, it is to little purpose to seek it anywhere else.

THE FRIEND.

TWELFTH MONTH 28, 1867.

The readers of "The Friend" will find in the columns of the present number, a letter addressed to the editors of the *American Friend*, published at Richmond, Indiana, by Daniel Clark, who, we believe, is assistant clerk of Indiana Yearly Meeting. It purports to give some account of the "Revival Meetings" now, and for some time past, held among the members of our religious Society in some parts of that Yearly Meeting.

Various reports of these meetings and the extraordinary scenes enacted in them, have reached Friends here, many of which, we cannot but hope, are exaggerated; but we must not shut our eyes to the facts narrated in this communication, as well as to others received through equally reliable channels, showing that these meetings, with their "mourners' benches, their prayings, &c., &c., are much more hefting the faith and practices of the highly respected society of Methodists, than they are consistent with the principles and testimonies of Friends.

Judging by what is communicated in a letter received from a member of Indiana Yearly Meeting, the picture drawn by Daniel Clark gives but a faint outline of what frequently takes place at these "revival" meetings, exciting wonder, not merely that some "tremble for the Ark of Quakerism," but that any should give them countenance and support, and yet profess to be Friends.

Indiana Yearly Meeting having entered into correspondence with one or more of the Methodist "Conferences," has so opened the way for amalgamation of the members of the respective bodies,

and, in many places they have become so mixed in their First-day and "mission schools," that there is great danger of the characteristics of Friends, and of their meetings being altogether lost in several parts of the West.

Quakerism undoubtedly "will be able to weather the storm," be there many or few adhering to it, but how sad for so many professing it, who are braving the danger of making shipwreck of faith and a good conscience, while thinking to "ship it tenderly" on board what they choose to call the "old ship Zion."

SUMMARY OF EVENTS.

FORIENS.—On the 22d the alarm caused by the Fenians in England was subsiding, but the government was still taking precautionary measures to guard against expected disturbances of these deluded people.

The last dispatch received from Massowah reports that the British expedition against Abyssinia had reached a place called Senape, where water was plenty, and the natives friendly.

The authorities having received information that a quantity of nitro-glycerine had been secreted at Newport, supposed Fenians, the sheriff with a large police force, proceeded to the place of concealment in order to remove it. While thus engaged the substance exploded with a tremendous detonation, causing the death of a number of persons. The Sheriff and Town Surveyor were with him in view of the Fenian outbreak in England, and to prevent their repetition by summary measures, the Cabinet has determined to ask Parliament to suspend the writ of habeas corpus. On the 18th inst., Gladstone made a speech in Chester county, in the course of which he did not hesitate to ascribe the existence of Fenianism to the mismanagement and misgovernment of Ireland.

The Paris press has been placed under a more rigorous censorship. A St. Petersburg dispatch says, the policy agreed upon between France and Austria on the Eastern question, if persisted in will imperil the tranquillity of Europe. Belgium, Holland and Switzerland have been invited to France, to a customs union. The Emperor is said to have declined on the ground that she has already concluded a military and commercial alliance with Prussia. The bulletin in the Bank of France has largely increased. The bill for the reorganization of the French army has been before the Senate. Its adoption is necessary on account of the German situation and the revolutionary aspect of Italy. It was subsequently approved by a majority in both chambers.

A long and angry debate in the Italian Chamber of Deputies terminated on the 21st inst. The policy of the government on the Roman question was condemned by a majority of two.

The new constitution of Austria has been promulgated throughout the empire by Imperial decree.

Advices from Japan announce that the ports of Yeddo and Osaka will be thrown open to foreigners for settlement and commerce, on the 29th of First month, 1869. The Mexican Republic was opened at Mexico on the 8th inst., and President Juarez read his message in person. He refers in a complimentary manner to the action of the United States during the late struggle, and declares that all treaties with European powers are at an end. The most important part of the message is the surrender, by Juarez, of the Government of Mexico to the extraordinary powers he had assumed. A private letter from Minister Romero to a friend in Washington says: "I find matters here in a very satisfactory condition. I think we are now going to have permanent peace, and to consolidate our government. There is some opposition to France, but I think it will not embarrass the government very much."

Later details of the recent battles on the Parana, represent that Lopez, the Paraguayan general, after his first successes, was attacked by the allies and defeated with a heavy loss of men.

A Paris dispatch of the 23d says, that the governments of France and Italy have commenced negotiations for the abrogation of the Convention between them respecting Rome, with the understanding that any agreement they may arrive at in the matter shall be submitted to the approval of the other Powers of Europe.

In consequence of the adverse vote in the House of Deputies, the members of the Italian Cabinet have tendered their resignations.

On the 23d, Consols were quoted at 92 9-16, in London. U. S. 5-20's, 71 1/2. The Liverpool cotton market was dull. Uplands, 7 3-16d; Orleans, 7 1-16d. Broad-

stuffs dull. Red western wheat, 13s. 7d. per 100 lbs. California, 15s. 3d.

UNITED STATES.—Congress.—A bill to prohibit all further sales of public lands, except as provided for in the pre-emption and homestead laws, has been agreed upon by the House Committee on Public Lands. The bill to exempt cotton from taxation has not yet been brought up in the Senate, where it has been strongly opposed by some Senators.

The House of Representatives has passed a bill, introduced by the Reconstruction Committee, which modifies the Reconstruction acts so that a simple majority of votes cast for or against a State constitution may affirm or disaffirm a constitution. It is further declared that no officer of the army, cashiered or dismissed from the service by general court-martial, formally approved by the proper reviewing authority, shall ever be re-appointed to the military service except by a re-appointment, confirmed by the Senate, was passed, yeas 116; nays 34. On the 20th Congress adjourned to let me 6th, 1868.

Philadelpia.—Mortality last week, 262. Of consumption, 44; inflammation of the lungs, 23; old age, 9.

The Exports from the United States during the year ending 6th mo. 30th, 1867, amounted to \$334,474,118.

The Tax on Whiskey.—The Secretary of the Treasury, in compliance with a resolution of the House, transmitted to that body a communication showing the amount of tax collected on distilled spirits, from which it appears that in 1863 the revenue in round numbers was \$3,230,000; in 1864, \$28,500,000; in 1865, \$16,000,000; in 1866, \$29,200,000, and in 1867, \$28,300,000. Of the last named sum New York paid in round numbers \$5,500,000; Ohio, \$5,475,000; Illinois, \$785,000. It is believed the tax is not collected by more than one-fourth of the whiskey made in the country.

The South.—The recent report of the Freedmen's Bureau for North Carolina states that there are six thousand negro children in that State, twenty-five thousand of whom have been during the past year. There are one hundred and twenty-five thousand poor white children in North Carolina, but no such proportion of these go to school. In fact, seven-tenths of them can neither read nor write.

Major Horton, of Mobile, Alabama, has been tried for a violation of the Riot Bill by James C. Clark, Johnson, a negro, who was banished by him from the city. The mayor was found guilty and sentenced to pay a fine of \$250.

The Freedmen's Bureau agent in Louisiana reports that the number of laborers of all classes, male and female, in that State is 294,000, and the aged and helpless, 196,000.

The State Treasurer of Georgia refuses to pay money for the expenses of the reconstruction Convention, saying that he is bonded not to pay out any of the public moneys except on warrants drawn by the Governor. No application has yet been made to Governor Jenkins. General A. C. Gillen has been elected by General Ord to proceed to Washington, and represent to the President and Secretary of War the starving condition of the freedmen in a large number of the counties in Mississippi, owing to the ruin and bankruptcy of the cotton planters, and the absence of corn or the means to procure it.

Earthquakes.—On the 18th inst., distinct shocks of earthquakes were felt in portions of Canada and New Brunswick, and the States of Vermont and New York. In some localities the tremor of the earth was sufficient to cause great alarm. Earthquakes, though unusual in this part of the country, are not unprecedented. The great earthquakes in 1755, which destroyed the city of Lisbon, was felt along the coast of Massachusetts, where it threw down chimneys, injured houses, and opened fissures in the ground.

Railroad Disaster.—On the 17th a terrible calamity befell a passenger train, which ran between Cleveland and Buffalo. When near Angola, the two rear passenger cars were thrown off the track by the breaking of the flange of a wheel, and rolled over an embankment. One of them fell a distance of fifty feet, and caught fire from the stove. It is stated that out of fifty passengers only three escaped, the rest being killed or injured. A large number of persons were also seriously injured.

The Markets, &c.—The following were the quotations on the 23d inst. **New York.**—American gold 133 3/4. U. S. sixes, 1181, 1122; ditto, 5-20, new, 108 1/2; ditto, 10-40, 5 per cent, 101 1/2; Superfine Sugar, 24s. 8d. \$2.50; Shipping, 24s. 8d. \$1.75; St. Louis, extra, \$12.40 a \$16. Chicago spring wheat, No. 3, 32.22. Oats, 34 a 85 cts. Western mixed corn, \$1.39. Cotton, 1 1/4 a 1 1/4 cts. **Philadelphia.**—Superfine flour, \$7.50 a \$8.25; extra, \$9 a \$10.50; family and fancy brands, \$12 a \$14. Prime red wheat, \$2.50 a \$2.55.

California wheat, \$3.20. Rye, \$1.75. Old yellow corn, \$1.42 a \$1.43; new western, \$1.32 a \$1.33. Oats, 17 cts. Clover-seed, \$7 a \$7.75. Timothy, \$2.50. Flaxseed, \$2.45. The arrivals and sales of wheat, at the Avenue Drive-yard, reached 2100 bushels extra brought 9 1/4 a 10 cts. per lb. gross; fair to good 9 1/4 a 9 cts., and common 8 1/4 a 8 cts. Wheat 6000 the bushel at 53 cts. per lb. gross. Hogs, \$5.50 a \$6.00 per 100 lbs. net. **Baltimore.**—Prime red wheat, \$2 a \$2.70. Corn, \$1.25 a \$1.28. Oats, 75 a 78 c. **Cincinnati.**—No. 1 red wheat, \$2.50. New corn, in ear, 80 a 83 cts. Oats, 65 a 67 cts. Rye, \$1.58 a \$1.62. Dressed hogs, \$7.75 a \$8.50. **Chicago.**—No. 1 red wheat \$1.00; No. 2, \$1.35. New corn, 32 cts. Oats, 54 cts. **St. Louis.**—Wheat, \$2.60 a \$2.85 for pit to choice. Corn, 85 a 90 cts. Oats, 68 a 70 cts.

RECEIPTS.

Received, through Nathaniel Hall, from the members Harrieville Preparative Meeting, Ohio, \$50, for t. Freedmen.

NOTICE.

A suitable Friend and his wife are wanted to be charge of the Farm and Farm-house at Westtown, the 25th of the Third month next.

Early application is desirable, and may be made to J. C. Compson, Street, N. Y. Chester P. O., Pa. John Benington, Glen Mills P. O., Pa. Joshua B. Pusey, London Grove P. O., Pa. Jacob Roberts, Paoli P. O., Pa. Twelfth mo. 18th, 1867.

NOTICE.

A suitable Friend and his wife are wanted to superintend and manage the farm and the school of the Congress Street gradual Civilization and improvement of the Indian natives at Tunnessau, Cataraugus Co., New York. Friends who may feel this minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Phil John M. Kaighn, Camden, N. J. John W. Sharpless, West Chester, Pa. Richard B. Baily, Marshalltown, Chester Co., Pa. Joseph Scattergood, 413 Spruce Street, Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSSEPH H. WORME, M.D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

DIED, on the 20th of 11th month, 1867, JAMES E. MC in the 41st year of his age, an esteemed member, overseer of Plymouth Monthly and Particular Meeting Ohio. Upright in his conversation and dealings, a good example to his family and friends, meek and unassuming in his manner and deportment, a diligent attendant of meetings, and conversant to support the precious promises and testimonies in their purity and simplicity upheld by our worthy predecessors in the Truth. S. after being taken sick, he remarked that he did not that evidence of acceptance which he desired. So time afterward said to his wife, he felt very poor & destitute as to any good; seemed earnestly conscious of his calling and election made sure, and frequent during the progress of the disease, was enabled to supplicate for ability to work out his soul's salvation & fear and trembling before the Lord; and also to indicate for his dear family and friends, that they might find in a state of preparation for their great day of reckoning. He was desirous to attain to a state of peace resignation, wherein he could say he had no will of own, but desired his Heavenly Father's will might done. Near the close he supplicated that the Lord might be near and be his support through the dark veil of the shadow of death, after which he passed away a sweet and peaceful rest.

He was, on the 22nd instant, MARY R. FISHER, a beloved member of Woodbury Monthly Meeting, N. J., in the 81st year of her age. She was ever ready to visit sick and afflicted, and her warm, generous and sympathizing nature, led her to "rejoice with them that rejoice and weep with them that weep." She was, at the suddenly called, it is believed her "lamp was trim and burning," and that she has entered into rest.

PHILADELPHIA.

Price, when paid quarterly in advance, five cents.

An Epistle to Friends.

(Continued from page 137.)

secretly he shall raise up a continual fretting quish amongst his enemies, one against another; what being vexed and tormented inwardly, they will seek to make each other miserable, and delight therein for a little season. And then the traitor must be prevailed over, and the digger the pit must fall therein; and the confidence men have had one in another shall fail, and they will beguile and betray one another, both by word and strength. And as they have banded themselves to break you, whom God hath gathered, so shall they band themselves one against another, to break, to spoil, and destroy one another; through the multitude of their treacheries, credit or belief, upon the account of their own engagement shall fail; so that few men can count themselves, or what is their's, safe in the hand of his friend, who hath not chosen his unity and friendship in the pure light of the unchangeable Truth of God. And all the secret devices of the ungodly shall be brought to nought, by the means of some of themselves, or sometimes by impossibilities lying in their way, which shall make their hearts full of ever accomplishing what they have determined: and in this state shall men fret themselves for a season, but shall not be able to see the hand that turns them, but shall turn to fight against one another, and another, and a third thing, and shall anger, and reel in counsel and judgment, as drunken men that know not where to find the way; and when they do yet stir themselves up against the holy people, and against the holy covenant of light, and that which walk in it, they shall be more and more confounded; for these shall be aided with a little help, which all the ungodly do not hinder them of, to wit, the secret arm of the Lord, maintaining their cause, and raising up witnesses in the very hearts of their adversaries to lead their innocecy, Isa. 8. And this shall be the way that they shall be vexed, and vexed through hard bested. For when they shall be brought to their religion, to their power, or preferences, or friendships, or whatsoever else they have trusted in, and relied upon, shall have cause to curse it. And when they shall be brought downwards to the effects produced by all these things; behold, then trouble, and horror, and vexation takes hold on them, and drives them to darkness; and having no help but what is

earthly, and being out of the knowledge of the mighty overturning power of the Lord God Almighty, they shall despair, and wear out their days with anguish. And besides all this, the terrible hand of the Lord is, and shall be openly manifested against this ungodly generation, by bringing grievous and terrible judgments and plagues upon them, tumbling down all things in which their pride and glory stood, and overturning even the foundations of their strength; yea, the Lord will lay waste the mountain of the ungodly, and the strength of the fenced city shall fail: and when men shall say, we will take refuge in them, Nahum, iii. 12, 13, they shall become but a snare, and there shall the sword devour: and when they shall say we will go into the field, and put trust in the number and courage of our soldiers, they shall both be taken away; and this evil also will come of the Lord, and his hand will be stretched out still, and shall bring confusion, ruin upon ruin, and war upon war; and the hearts of men shall be stirred in them, and the nations shall be as waters unto which a tempest, a swift whirlwind is entered; and even as waves swell up to the dissolution one of another, and breaking one of another; so shall the swellings of people be. And because of the hardship and sorrow of those days, many shall seek and desire death rather than life.

Ah! my heart relents, and is moved within me, in the sense of these things, and much more than I can write or declare, which the Lord will do in the earth, and will also make haste to accomplish among the sons of men, that they may know and confess, that the Most High doth rule in the kingdoms of men, and pulleth down and setteth up according to his own will. And this shall men do, before seven times pass over them, and shall be content to give their glory unto him that sits in heaven.

But, oh! Friends, while all these things are working and bringing to pass, repose ye yourselves in the munition of that rock, that all these shakings shall not move; even in the knowledge and feeling of the eternal power of God, keeping you subjectly given up to his heavenly will, and feel it daily to kill and mortify that which remains in any of you, which is of this world; for the worldly part in any, is the changeable part, and that is up and down, full and empty, joyful and sorrowful, as things go well or ill in the world. For as the Truth is but one, and many are made partakers of its spirit, so the world is but one, and many are partakers of the spirit of it; and so many as do partake of it, so many will be straitened and perplexed with it; but they who are single to the Lord, waiting daily to feel the life and virtue of it in their hearts, these shall rejoice in the midst of adversity. These shall not have their hearts moved with fear, nor tossed with anguish, because of evil tidings, Psal. cxlii. 7, 8. Because that which fixeth them, remains with them. These shall know their entrance with the bridegroom, and so be kept from sorrow, though his coming be with a noise. And when a midnight is come upon man's glory, yet they being ready and prepared, it will be well with them; and having a true sense

of the power working in themselves, they cannot but have unity and fellowship with the works of it in the earth, and will not at all murmur against what is, nor wish nor will what is not to be; these will be at rest till the indignation passeth over, and these having no design to carry on, and no party to promote in the earth, cannot possibly be defeated nor disappointed in their undertakings.

And when you see divisions and parties, and readings in the bowels of nations, and rumors and tempests in the minds of people, then take heed of being moved to this party or to that party, or giving your strength to this or that, or counseling this way or that way; but stand single to the Truth of God, in which neither war, rent nor division is. And take heed of that part in any of you, which trusts and relies upon any sort of the men of this world, in the day of their prosperity; for the same party will bring you to suffer with them, in the time of their adversity, which will not be long after; for stability in that ground there will be none. But when they shall say, come join with us in this or that, remember you are joined to the Lord by his pure spirit, to walk with him in peace and in righteousness; and you feeling this, this gathers out of all bustlings, and noises, and parties, and tumults, and leads you to exalt the standard of Truth and righteousness, in an innocent conversation, to see who will flow unto that. And this shall be a refuge for many of the weary, tossed and afflicted ones in those days, and a shelter for many, whose day is not yet over.

So dearly beloved Friends and brethren, who have believed and know the blessed appearance of the Truth, let not your hearts be troubled at any of these things. Oh! let not the things that are at present, nor things that are yet to come, move you from steadfastness, but rather double your diligence, zeal and faithfulness to the cause of God. For they that know the work wrought in themselves, they shall rest in the day of trouble, yea, though the fig-tree fail, and the vine bring forth, and the labour of the olive-tree cease, and the fields yield no meat, and sheep be cut off from the field, and there be no bullocks in the stall, yet then mayest thou rejoice in the Lord, and sing praises to the God of thy salvation. Hab. 3.

And how near these days are to this poor nation, few know; and therefore the cry of the Lord is very loud unto its inhabitants, through his servants and messengers, that they would prize their time while they have it, lest they be overturned, wasted and laid desolate before they are aware, and before destruction come upon them, and there be no remedy, as it hath already done upon many.

Oh! London, London! that thou and thy rulers would have considered, and harkened and heard, in the day of thy warnings and invitations, and not have persisted in thy rebellion, till the Lord was moved against thee, to cut off the thousands and multitudes from thy streets, and the pressing and thronging of people from thy gates, and then to destroy and ruin thy streets also, and lay desolate thy gates, when thou thoughtest to have replenished them again.

And, oh! saith my soul, that thy inhabitants

would yet be warned and persuaded to repent and turn to the Lord, by putting away every one of the evil that is in their hearts, against the Truth in yourselves, and against those that walk in it, before a greater desolation and destruction overtake you.

Oh! what shall I say to prevail with London, and with its inhabitants! The Lord hath called, and he hath roared out of Zion unto them, but many of them have not hearkened at all, nor considered at all.

Well, oh, my friends! (and thou, oh my soul!) return to your rest, dwell in the pavilion of the house of your God and my God, and shelter yourselves under the shadow of his wings, where ye shall be witnesses of his doings, and see his strange act brought to pass, and shall not be hurt therein, nor dismayed.

Oh, my friends! in the bowels of dear and tender love have I signified these things unto you, that ye might stand armed with the whole armor of God, clothed in righteousness, and your feet shod with the preparation of the gospel of peace, and freely given up in all things to the disposing of the Lord, who will deliver us, not by might, nor by sword, nor spear, but by his own eternal invisible arm, will he yet save us and deliver us, and get himself a name, by preserving of us. And we shall yet live to praise Him, who is worthy of glory, of honor, and renown, from the rising of the sun to the setting of the same, now and for ever, amen, amen, saith my soul.

(To be continued.)

For "The Friend"

The Candle-Fish.

Few parts of the world are so abundantly provided in their season, with valuable fish, as the north-western coast of North America. The different varieties of the salmon family are there in great profusion, and appear to furnish to the Indian tribes residing in those parts a large portion of their subsistence. From "The Naturalist in British Columbia," we take the following account of the capture of one of the smallest of the salmon species, the Candle-fish, or Eulachon, as it is termed by the natives, (*Salmo Pacificus*, of Richardson.)

"The moon, near its full, creeps upward from behind the clouds; stars one by one are lighted in the sky—not a cloud flecks the clear blue. The Indians are busy launching their canoes, preparing war against the candle-fish, which they catch when they come to the surface to sport in the moonlight. As the rising moon now clears the shadow of the hills, her rays slant down on the green sea, just rippled by the land-breeze. And now, like a vast sheet of pearly naeae, we may see the glittering shoals of the fish—the water seems alive with them. Out glides the dusky Indian fleet, the paddles stealthily plied by hands far too experienced to let a splash be heard. There is not a whisper, not a sound, but the measured rhythm of many paddles, as the canoes are sent flying towards the fish.

"To catch them, the Indians use a monster comb or rake, a piece of pinewood from six to eight feet long, made round for about two feet of its length, at the place of the hand-grip; the rest is flat, thick at the back, but thinning to a sharp edge, into which are driven teeth, about four inches long, and an inch apart. These teeth are usually made of bone, but, when the Indian fishers can get sharp-pointed iron nails, they prefer them. One Indian sits in the stern of each canoe to paddle it along, keeping close to the shoal of fish; another, having the rounded part of the rake firmly fixed in both hands, stands with his face to the

bow of the canoe, the teeth pointing sternwards. He then sweeps it through the glittering mass of fish, using all his force, and brings it to the surface, teeth upwards, usually with a fish impaled, sometimes with three or four upon one tooth. The rake being brought into the canoe, a sharp rap on the back of it knocks the fish off, and then another sweep yields a similar catch.

"It is wonderful to see how rapidly an Indian will fill his canoe by this rude method of fishing. The dusky forms of the savages bend over the canoes, their brawny arms sweep their toothed sickles through the shoals, stroke follows stroke in swift succession, and steadily the canoes fill with their harvest of 'living silver.' When they have heaped as much as this frail craft will safely carry, they paddle ashore, drag the boats up on the shelving beach, overturn them as the quickest way of discharging cargo, relaunch, and go back to rake up another load. This labour goes on until the moon has set behind the mountain-peaks and the fish disappear, for it is their habit rarely to come to the surface except in the night. The sport over, we glide under the dark rocks, leap up the canoe, and lie before the log-fire to sleep long and soundly.

"The next labour is that of the squaws, who have to do the curing, drying, and oil-making. Seated in a circle, they are busy stringing the fish. They do not in any way clean them, but simply pass long smooth sticks through their eyes, skewering on each stick as many as it will hold, and then lashing a smaller piece transversely across the ends, to prevent the fish from slipping off the skewer. This done, next follows the drying, which is generally achieved in the thick smoke at the top of the sheds, the sticks of fish being there hung up side by side. They soon dry, and acquire a flavor of wood-smoke, which helps also to preserve them. No salt is used by Indians in any of their systems of curing fish.

"When dry, the candle-fish are carefully packed in large trails made from cedar-bark or rushes, much like those one buys for a penny at Billingsgate; then they are stowed away on high stages made of poles, like a rough scaffolding. This precaution is essential, for the Indian children and dogs have an amiable weakness for eatables; and as lock-and-key are unknown to the redskins, they take this way of baffling the appetites of the incorrigible pilferers. The bales are kept until required for winter. However hungry or however short of food an Indian family may be during summer-time, it seldom will break in upon the winter 'cache.'

"I have never seen any fish half as fat and as good for Arctic winter-food as these little candle-fish. It is next to impossible to broil or fry them, for they melt completely into oil. Some idea of their marvellous fatness may be gleaned from the fact, that the natives use them as lamps for lighting their lodges. The fish, when dried, has a piece of rush-pith, or a strip from the inner bark of the yypress-tree (*Thuja gigantea*), drawn through it, a long round needle made of hard wood being used for the purpose; it is then lighted, and burns steadily until consumed. I have read comfortably by its light; the candlestick, literally a stick for the candle, consists of a bit of wood split at one end, with the fish inserted in the cleft.

"These ready-made sea-candles—little dips wanting only a wick that can be added in a minute—are easily transformed by heat and pressure into liquid. When the Indian drinks instead of burning them, he gets a fuel in the shape of oil, that keeps up the combustion within him, and which is burnt and consumed in the lungs just as it was

by the wick, but only gives heat. It is by mere chance that myriads of small fish, in obedience to a wondrous instinct, annually visit the northern seas, containing within themselves the elements necessary for supplying light, heat, and life to the poor savage, who, but for them, must perish in the bitter cold of the long drear winter.

"As soon as the Indians have stored away a full supply of food for the winter, all the fish subsequently taken are converted into oil. If strolled down to the lodges near the beach, we shall see for ourselves how they manage it. The reserved for oil-making have been piled in heaps until partially decomposed; five or six fires are blazing away, and in each fire are a number of large round pebbles, to be made very hot. Each fire is four large square boxes, made for the trunk of the pine-tree. A squaw carefully piles in each box a layer of fish about three deep, and covers them with cold water. She then pours five or six of the hot stones upon the layers of fish, and when the steam has cleared away, as fully lays small pieces of wood over the stones, then more fish, more water, more stones, more layers of wood, and so on, until the box is full. The oil-maker now takes all the liquid from the box, and uses it over again instead of water filling another box, and skims the oil off as it flows on the surface.

"A vast quantity of oil is thus obtained; of as much as seven hundredweight will be made of one small tribe. The refuse fish are not yet done with, more oil being extractable from them. By against the pine-tree is a small stage, made of poles, very like a monster gridiron. The refuse of the boxes, having been sewn up in porous mats is placed on the stage, to be rolled and pressed the arms and chests of Indian women; and thus thus squeezed out is collected in a box placed underneath.

"Not only has Nature, ever bountiful, sent abundance of oil to the redskin, but she also provides ready-made bottles to store it away. The great seaweek, that grows to an immense size in these northern seas, and forms sub-marine forests, has a hollow stalk, expanded into a complete flask at the root-end. Cut into lengths about three feet, these hollow stalks, with a bulb at the end, are collected and kept wet until required for use. As the oil is obtained, it is stored away in these natural quart-bottles, rather larger bottles, for some of them hold ten pints.

"Some fifty years ago, vast shoals of eulachon used regularly to enter the Columbia; but, silent stroke of the Indian paddle has now given place to the splashing wheels of great steamers, and the Indian and the candle-fish have vanished together. From the same causes the eulachon also disappeared from Puget's Sound, and is seldom caught south of latitude 50° N."

Ivory.—We read that artificial ivory is being made in France, from a paste of paper-mache and gelatin. Balls formed of this material, though hardly a third of the price of the made from real ivory, are yet so durable and elastic, that they can be thrown from the top of the house on to the pavement, or violently struck with a hammer, without injury. With this paste, to which the name of Parisian marble is given, among other things, the finest and most complicated molding for ceilings can be made, capitals of columns can be constructed in color, so as to resemble the most valuable marble. Sulphate of baryta is sometimes added to give weight and a pure white color.

The Moderate Enquirer Resolved.

Written in the behalf of the brethren, in vindication of the Truth, by W. C.

(Continued from page 141.)

ing. How do these people understand the nature? Is there not strife and contention among them about the meaning of it?

es. By the same Spirit by which they were judged that spoke forth the scripture do these people understand it; every one of them according to their measures; and the Light in which they walk doth give them the same understanding of the Holy Scripture, which they had that spoke in the scripture, though many among them are ignorant of so large a measure as the authors of the Holy Scriptures had; yet that understanding which God hath given them by His holy Spirit, the same which holy men of God had, in its measure, so that they are far from striving and contending about the meaning thereof among themselves, for that which the Light opens to one is not contradicted by them that are in the Light, therefore they are at peace among themselves in unity one with another.

ing. Do these people condemn authority as is commonly reported, or are they subject to the power as the apostle commandeth us to be? es. That authority which is of God and from Him they do not condemn, and to the higher powers their souls are subject, in which the magistrates are God's ministers, and of this power to which their souls are subject they are afraid, neither are they subject because of the law only, but also for conscience sake.

ing. But they do not honor magistrates with bow and knee, as they ought to be honored, and that officers of magistracies that receive honor of another.

es. 'Tis true they do not bow before them as do men do, neither have they freedom thereof, the honor that pertains to a magistrate consisteth not in such trifling things. And I believe that cannot produce one scripture that will require that magistrates ought to be honored with bow and knee. That is but a mere compliment of vanity, a foolish fashion of the world which pass away.

ing. But hark; it is said of them that they are against gospel ministers, and are great railers against ministers and their maintenance. Is that true?

es. First I shall show thee what ministers of the ministry they own, and what maintenance they allow of. Secondly, what ministers and ministry they disown, and what maintenance they do not approve of.

First, such as are endued with power and wisdom from on high, and called to the work of the ministry immediately, having received gifts from Him who formerly gave some apostles, some prophets, some pastors and teachers, for the perfecting of the saints, and for the work of the ministry. As He calleth and chooseth who abide in His doctrine and give that freely which they have received freely: such these people do own, and for ministry. But railing against any they do not, and ministers that are so called and qualified before mentioned they do esteem very highly of for their works sake, and allow them food and raiment and all things that are convenient; and with these are ministers contented, even with that which they have of free gift from those unto whom they minister spiritual things. And so in peace and unity they live together.

Secondly, the ministers that they disown are such as run when the Lord hath not sent them, and do feed with the fat and clothe with the wool,

and make a prey upon the people, * * * who keep people ever learning and never able to come to the knowledge of the truth, who are out of the life of that which they preach to others. By whom the Holy Scriptures are wrested and traded withal; who are covetous, proud, heady and high minded, who preach for hire and divine for money, the love of which constraineth them to teach the people, and they that will not give them money or put into their mouths they prepare war against, and compel them by suit at law, and thus they rob their maintenance from poor people, whose goods they will take away by force. Now all such greedy, unreasonable, pretended ministers and their robbed maintenance these people do deny and disown.

ing. How comes it that so many of them are cast into prison, some whipped, and others banished from some places?

es. Thus it is, many of them have been moved of the Lord to go to steeples houses (which are called churches) and to speak unto the priest and people that which the Lord was pleased to lay upon them to declare. So some in authority, being then present, have sent them to prison for disturbing the congregation, as they said; and it may be have caused them to be whipped; others because they could not pay tithes to the hiring priests, because they could not swear, because they have not put off their hats before magistrates, for riding above five miles to meeting on a First-day, for speaking a few words in a street or market to people whom they have exhorted to fear the Lord, and for such like things as these are the most part of them, if not all, cast into prison. And some of them have been fined for standing covered before the judge, and have lain above a year or years in prison for non-payment of the fine, and some of them have been banished and sent away like vagabonds; and more favor is showed to malefactors by many in authority than to them. And all this they do patiently suffer for righteousness' sake.

ing. In their buying and selling how do they, are they of as many words as other men, or keep they to yea and nay in their communications?

es. To yea and nay, they keep, knowing that whatsoever is more cometh of evil. And when they have a commodity to sell they set a reasonable price for it, and do not exact upon the people. And when they buy a commodity they proffer a reasonable price for it, for the which they suppose the party may well afford it, and that which they judge to be the value of the thing, and so in a few words dispatcheth; and thus they abide in the doctrine of their Lord, who said, "Let your yea be yea, and your nay be nay."

ing. But men are so accustomed to many words in their dealings one with another, that I should think men will scarcely meddle with them in their affairs, if they will abate nothing of the price which they first set on their commodity.

es. 'Tis true it is usual among men to utter many needless words in their dealings, and to swear many grievous oaths, because they will not trust one another; but it is not the manner of these people to do so, neither have they freedom thereunto in the least, whereupon some of their customers have absented themselves for a season and have made trial of others, but not finding such fidelity in others nor such just and upright dealings by them, they have returned to this people and have made further proof of them, and have found their commodity to be good and substantial and well worth that which they gave for it. Whereupon they have brought other customers with them, and acquainted them with the condition of the people, that they would have so

much as they asked, and they were not given to many words. To the which people in process of time have well condescended, so that now where they are known, they are credited, and not extraordinarily provoked to superfluity of words by those that know them. And so they come to use men to that which they have been little accustomed unto, to few words in their buying and selling.

Henry Kirk White.

(Continued from page 143.)

For "The Friend."

Thus his plan for entering college was for the present frustrated: the disappointment was a severe one; but he was enabled to bear it, as permitted by an all-wise Providence, "to wear him from the world." "Ode to Disappointment," one of his most beautiful pieces, was composed in the freshness of his trial: submission to the will of his Heavenly Father is exhibited throughout the poem, but it shines most conspicuously in the last line:—

"I only bow and say, my God, thy will be done."

He had now lost considerable time, having for several weeks been absent from his employers: and as he was determined never to be satisfied with attaining only to mediocrity in his profession, he applied himself to his studies with increased assiduity. He would read till one, two, and even three o'clock in the morning: then throw himself upon his bed and rise at five to resume his work: not unfrequently the whole night was given to study: his anxious family foreseeing the effect such a course would have upon his frail system, tried to dissuade him from it, but in vain: neither entreaty, nor expostulation, nor tears availed to "check his desperate and deadly ardor." For some time his mother went every night into his room, to extinguish his light: as soon as he heard her approaching, he would hide his candle, jump into bed and feign himself asleep, then as soon as she had gone rise to his books. As the natural consequence of such unremitting application, his health entirely failed, and he had a severe attack of illness which gave to his constitution a shock from which it never recovered.

Upon his partial restoration to health, through the kindness of one of his friends, he was admitted a sizer at St. John's College, Cambridge. But it being deemed advisable for him to pursue his studies in private for a year, he went into Wintertown, where, despite the renewed entreaties of his family, he persisted in studying fourteen hours a day, and the result was another attack of illness.

At the end of twelve months he entered college, and was soon distinguished for his classical attainments. A university scholarship became vacant during his first term, and he was advised to declare himself a candidate for the vacancy. Every spare moment was now devoted to preparing himself for it: he read in bed, at his meals, and during his walks, and was often obliged to go to his instructor without having rest at all. Again he was taxed beyond his power of endurance, and again his strength succumbed to disease: so that he was obliged to withdraw his name from the list of competitors. The regular college examination drew nigh, for which he had to prepare himself by reading in two weeks what had occupied his fellow students the whole term. He was totally unfit to endure the excitement of an examination, but his tutors deemed it indispensable to his future success, for him to attend. He was kept up for a week by powerful medicines, and was declared "the first man of his year." But these honors were to cost him his life. He told

one of his intimate friends "that were he to paint a picture of Fame, crowning a distinguished undergraduate after a senate house examination, he would represent him as concealing a death's head under a mask of beauty." To the same friend he writes at the close of the examination: "In this place I have been much amused, and have been received in the literary circles with an attention which I neither expected nor deserved. But this does not affect me as it once would have done: my views are widely altered; and I hope that I shall in time learn to lay my whole heart at the foot of the cross."

He then went to London to recruit, and after several weeks' intermission from study he returned to Cambridge; but his health continued miserable: he had a hacking cough accompanied with fever; his nervous system was greatly shattered, so that his nights were spent in sleeplessness, and his spirits were greatly depressed. At length he was seized with a fit which threatened him with epilepsy. Wholly incapacitated for study he went again to London, where the bustle and excitement by which he was surrounded served only to aggravate his malady; and when he returned to college it was beyond the power of medicine to save him. His brother was sent for, but Henry was delirious when he arrived, and knew him only for a moment. The next day he sank into a stupor; and on the 19th of Tenth month, 1816, exhaled it is to be hoped, the trials and temptations of this sublimity scene, for a state of unmixed facility. He was aged 21 years and seven months.

Henry Kirk White was exemplary in the performance of his duty in the several relationships of life. He was a dutiful son, an affectionate brother, and a faithful friend. Being of a rather diffident and very reserved disposition, his intimacies were few; but when formed they were sincere and lasting.

The intense application which he gave to his studies in the latter part of his life, prevented him from cultivating his muse. He was cautioned against spending his time in writing poetry while he was going through college, lest it should interfere with his graver duties. The self-sacrifice it cost him to relinquish all attention to this, his favorite pursuit, is dwelt upon in the following extract from a letter to his brother. "I often cast a look of fond regret at the darling occupations of my younger hours, and the tears rush into my eyes, as I fancy I see the few wild flowers of poetic genius, with which I have been blessed, withering with neglect."

His poems were consequently nearly all written before the author was nineteen. Many of them are but fragments, and other pieces left in an unfinished state: but they display a profoundness of conception, a maturity of thought, and a fertility of expression rarely equalled in one of his years, and which gave a rich promise for the future; but, in the language of a great contemporary poet,

All his promise fair
Has sought the grave, to sleep forever there.
Oh! what a noble heart was here undone,
When science self destroyed her favorite son!
Yes! she too much indulged thy fond pursuit,
She sowed the seeds, but death has reaped the fruit.
'Twas thine own genius gave the fatal blow,
And helped to plant the wound that laid thee low.

A sincere love of God will make us thankful when our supplications are granted, and patient and cheerful when they are denied. He who feels his heart rise against any divine dispensation, ought not to rest, till, by serious meditation and earnest prayer, it be moulded into submission.—*H. Moore.*

MUSINGS.

Original.

Sitting alone in the shadow,
As the hours of twilight wane,
And the boughs of the weeping willow
Are drifted against the pane.

A feeling of sadness holdeth
My heart in its chilling clasp,
As I think of the moments passing
So swiftly, beyond our grasp

Backward, to-night, is rolling
The scroll of the Dying Year,
And the records stamped forever,
To memory's glance appear.

There are joys that came unbidden,
And hopes that were born to die;
There are times of aching sorrow,
And hours when the heart beat high.

There are Dead Sea fruits whose fairness,
With ashes mocked the taste;
There are scenes whose far off beauty,
On nearing proved a waste.

Resolves that soon were broken,
Regrets that came too late,
And idle dreams and fancies
Upon its passage wait.

As one who, leaving forever
The scenes of a foreign shore,
Where long with delight he tarried,
Mid friends he may greet no more,

Looks back o'er the curling billow,
Through th' haze of the ocean air,
And ponders each remembrance
Its valleys and mountains bear.

So I, on the year receding,
O'er the crested waves of Time,
Through the gathering mists of distance,
Look back to its morning prime.

And not the gloomiest shadow
Of its darker actions past,
Can wholly dim the lustre
By fairer moments cast.

For wreaths of home affection
Upon its bosom glow,
And Friendship's greener garland,
Is twined above its brow.

But has its onward passing,
With anguish of good been fraught?
Glowers there one better impulse!
One purer, holier thought?

Has there one step, though faltering,
Entered the surer way?
Sheddest the light of heaven
A warmer, brighter ray?

O, soul of mine! how lowly
Thy highest efforts seem!
Not one brave wing has fluttered
Beyond an earthly dream.

Not by aspiring only,
Never by faith alone,
Will the life-strifings of our being
Give forth a nobler tone.

The hand of strong endeavor
Must strike each wavering chord;
The willing, sought for Helper
Must prove temptation's guard.

A dirge-like note is sounding,
As the winds go moaning by,
And from my heart is breathing
An untrailing sigh.

If ever round me falleth
The New Year's waning light,
Oh! grant its record, Father,
Be purer in thy sight!

He that will keep close to God and not be withdrawn from Him, must watch to His Spirit, and know the leadings of it, else he will not follow the Lamb whithersoever he goeth."—*L. Penington.*

For "The Friend."

The Quaker Garb.—Obedience in Little Things.

(Concluded from page 143.)

Say not then, dear reader, there is nothing in dress; nothing in what are called our smaller testimonies; nothing in the obedience which is faith in Christ, in the day of small things. But rather, like Gideon in his trial of the fleece, prove the same by thy faithfulness to all that the Lord in His secret calls upon thee and knocks at the door of thy heart, makes known as His will concerning thee. Hereby wilt thou grow in the experimental and saving knowledge of Him, which is life eternal. And though the requisitions are sacrifices called for may at first seem to thee small yet when thy obedience and allegiance have been duly proved, more will be given to occupy with "To him that hath (the faithful in what is committed) shall more be given." And thus; obedience keeps pace with knowledge, that knowledge will be increased; 'till thou becomes, through the successive stages of christian growth, with His blessing upon thee, like the pillar in of Lord's house which is to go no more out. Remember that the great things of God have usually small beginnings. And that in the infinite higher relation which no man can approach unto our Heavenly Father deals with us, as we do with our children and fellow-servants. Do we not first test the obedience and faithfulness of these smaller requisitions, perhaps again and again repeated, before we proceed to the greater reliance and implicit confidence in and towards them which at length their often proved and well-trieved virtues may well inspire? Do not then, in the school of the Redeemer's holy discipline, give us to fleshly reasonings, neither expect the longer or more important lessons to be given thee, 'till the first has been exercised and well trained in the alphabet and more elementary parts.

It will not do for any to say to Him, who creates us for the purpose of His own glory, What dost Thou? But rather submit in all things—thou smaller as well as the larger—unto His divine and heavenly will and counsel. So did the wise of old. Faithfulness in little things has been significantly set forth from the beginning, as the pathway of hearts becoming disciplined to the cross of the dear Son of God to greater attainment in holiness. Does any one suppose, that if Moses had not obeyed the command to take his shoes from off his feet, because the ground whereon he stood was holy, he would have been permitted to have as was remarkably the case, the voice of the Lord out of the midst of the bush that burned, yet he not consumed? Or would Naaman, the leper have been cleansed, when turning away in a rag at the simple, humiliating remedy recommended by Elisha, if he had not done as thus prompted by his servants, "If the prophet, had bid thee do some great thing, wouldst thou not have done it? how much rather then (with true child-like obedience) wash and be clean." Was it not disobedience with respect to the apparently small matter of a Babylonish garment, some shekels of silver and a weight of gold, in the case of Achan, that caused the whole army of Israel to be driven before their enemies? And which ceased not; but continued to hinder and to weaken them, until the anger of the Lord was turned away by several tribes being searched, finally by family household by household, and man by man, and then guilty one was found, and slain with all his. Thine going round the walls of Jericho, as Joshua was commanded, bearing "before the ark seven trumpets of ram's horns," to be repeated once a day, for six days; when upon the seventh, the city was to be compassed seven times, at which the people

to "shout with a great shout," would seem, to the eye of the natural man, an insignificant way of giving a city given into his hands, with the thereof, and its mighty men of valor. The "Sabbath," as "a sign," under old covenant, was so strictly enjoined that the people of the Almighty to Moses was, "Ye keep the Sabbath therefore, for it is holy to you: every one that defileth it shall surely die to death: for whosoever doeth any work in that day, that soul shall be cut off from among his people." It was the three hundred of Gideon, and by lapping water as a dog lappeth, who sent to conquer the Midianites, "that lay in the valley like grasshoppers for multitude." "the cloud, in size, at, 'like a man's hand,' that o'erspread the heavens, and by a great tempest the drought of Ahab. Again, manna, or food with which our Heavenly Father fed His people, is represented to be about the size of coriander seed—"a small round thing, as all as the hear-frost upon the ground." At none then look with feelings of disdain or contempt, either on what our Father gives or holds, or that He requires of those, who, in obedience to their faithfulness in "a few things," maketh "rulers over many things." What stand in need of, is a giving up of our hearts severally to Christ Jesus, and relying on His power within us, saying, *Thine are we*; do it then wilt with thine own. It is obedience to Lord's will, whatever that will calls for, and fully abiding in Him, the Vine of life, that sustains the growing christian, and the fruitful one. While disobedience, in little things or greater, must ever benumb the spiritual faculties, and lead more and more to blindness and inability of heart.

We cannot tell what means Heavenly Goodness take, to batter and confound our natural wisdom—without which, nothing saving can enter—bring the heart into sweet humility and conformity to His holy will. But it has ever been in my opposed to creaturely reasoning, and the pretension of the outward fleshly eye. Our safety consists, in yielding the heart fully to the only attraction of the Lord's Holy Spirit, and willing to covenant with Him, the God of grace, by such sacrifices as He may choose and require at our hands. In this way clearness of vision and true discernment, will, in mercy, be bestowed; and ability afforded, not only to see what is required—to be quick of understanding in His fear—but to bind every sacrifice with cords, to the horns of the altar; and also to follow "meek and lowly" Captain of salvation in the He casteth up, even in the "path which no man knoweth, and which the vulture's eye hath seen." Thus will the stumbling-blocks, with letting, hindering things, that now so much mar the beauty of our Zion, be taken out of the way; the shout of a King will once more be heard in camp, and the Lord God will again dwell among us as in earlier days and as in former years.

Westtown Boarding School.

(Continued from page 135.)

rd mo, 16th, 1829.—"Thy account of your yesterday evening reading, and your good superintendent's exhortation, was interesting to me: the good opportunities we used to have in that room on that occasion; good counsel sometimes from the teachers; sometimes superintendents or committee, or other concerned Friends. That school has from its first beginning been, and is, I think, under the peculiar notice of Him who speaketh not by day and slumbereth not by night: filling the hearts of faithful servants with

a word in due season for the dear children placed there, and in many and various ways caring for it. Dear Thomas Scattergood's services there I do not forget, and hope none will who partook thereof. He spent two summers there out of concern for the school,—spent his time in the schools and with the teachers,—was capable of entering into feeling with them on all occasions; and was generally present in all difficulties, affording counsel, and strengthening the hands that were often ready to hang down, advising the children both separately and together; was very commonly with us at the time of collecting; I do afresh remember his labors in meeting and out. Dear Samuel Smith was also there in a similar way, though not at that time."

1840. "Thomas Kite's concern for you as expressed in the opportunity with the teachers, was relieving and very satisfactory to me: the advice good, sound, and adapted to the stations you hold. It reminded me of the concern of some who have gone before him, to the teachers at that time, and which I believe has been blessed to some. Oh I do want the right thing kept alive with all the caretakers of that school; for the committee to be least in charge; as this is the case, it will be blessed."

"Try to enjoy thy meetings, do not think 'how young you are to be placed before the children'; you are old enough, and if careful to seek Best Help, it will be found, and strength too in the needful time. I have felt greatly comforted and encouraged since my late visit to the school. It does seem as if our dear friend Robert Scott's view is correct. 'Heaven owns it!' (meaning the school.) If all who have the care unite in endeavouring to live so near the Source of life as to be able to help the good seed to grow in the hearts of the children, like giving 'bread' when they ask or need it, not a 'stone,'—a hard indigestible substance, void of nourishment. Ah! the charge to Peter was, 'feed my lambs'; Peter loved the Master: we may not all be called as Peter was, there are other ways in which his little ones are fed and nourished. Children are quick-sighted; a good example proceeding from a chastened sense of rectitude has a good effect; it is loud preaching."

1841. "You are now convened again and many consigned to your care. A great charge many of you know: may Best Wisdom direct."

"I noticed your care about some lightness in meetings. It requires much religious feeling in the superintendents and teachers to reach such light spirits, and it spreads if not arrested; I remember yet when I was a scholar, the labor of our good caretakers out of meeting on our behaviour in meetings. This labor from a right feeling, and sincere hearts, will be blessed to the children. So dear Friends, I would encourage you one and all to be faithful; suitable opportunities improved sometimes in private will be blessed. * * * * * Do mention your meetings and readings, it brings me so near; feel almost as if I were with you. I do exceedingly covet that your hands may not hang down with discouragement; be strong, be cheerful, be firm, for He who is with you is greater than he who is trying to work against you."

1842. "Do not be discouraged when you have trying cases among the children. If teachers labor after a right qualification to treat with them, not overdo with words or punishment. The wise king said, a few words fitly spoken are 'like apples of gold in pictures of silver,' such labor may never be forgotten, and prove availing."

"I do very much desire your preservation in the good and right way, which to the single and

simple hearted is not hard to find. That some difficulties and many things not altogether pleasant will, naturally to be expected, occur, among the children or between teachers and children, yet "wisdom is profitable to direct," and patience is a great help,—it removes mountains. Take some pains to understand the motives children have for acting; it does often very much lessen the fault or whatever it might be amiss; and then at other times, the seeming good actions of the more artful are discovered, and an opportunity is furnished to place judgment on those; thus they are helped. I feel more on this subject than I can write or speak of, but a word may be sufficient; having often felt my mind engaged for the help of my scholars even interschool hours: learning little by little the difference in dispositions, and noticing things, and treasuring them for use if ever wanted, enables sometimes to give privately a word of advice, caution or encouragement, and sometimes more publicly. And now I just remember what a dear Friend said to me when I was young, 'That teaching school was next to preaching the gospel.'

"Thomas Scattergood used to say, 'children were like a narrow necked vessel, quickly filled.' It is not good to pour in too fast or too much, it runs over and is lost."

"The circumstances with which the caretakers at Westtown are surrounded, is peculiarly trying, and anxious feelings are yours, yet be not too sad or anxious, 'do the best and leave the rest.' * * * * * To those of the dear children who feel willing to be instructed even to hear good reading, would I recommend the reading for their comfort and encouragement the 1st Psalm of David; indeed many comfortable promises are recorded to the humble, lowly ones, and they need not be ashamed of their concern to attend the 'reading'; and my heart's desire is, they may use the opportunity put in their power by their dear friends sending them to Westtown, and treasure up the good advice, and treasure up the good feelings, too, of their concerned caretakers, and the Committee Friends who visit them, and other Friends who come there. I know something about what I say; when I was young, not fifteen years of age, my feelings at that school I yet remember with gladness, and the labor of my concerned friends there, have been helpful on my journey, especially helpful, through the tribulated path of life."

"I feel interest enough in many of your cares and concerns to bring me there on my own account; but at present all I can do is, to desire for you; and that the work may be blest to the dear children. Do not give out, not one of you, from dear M. Jefferies down to the least of the helpers, who are looking to the only Helper, and it seems to me the work will be blessed; those who sow in tears reap in joy, this is often mercifully so."

(To be continued.)

For "The Friend."

"I tell you that he will avenge them [the elect] speedily. Nevertheless when the Son of man cometh shall he find faith on the earth?" Luke xviii. 8.

The foregoing declaration and query of our Saviour, follow the parable of the unjust judge, which the narrative states was spoken to this end, "that men ought always to pray and not to faint." This conclusion, so emphatically announced by our Holy Head and Bishop, coupled as it is with the foreshadowed impression which then rested on the Divine mind of the lack of simple faith in His protecting care and preserving power over those who in future days should be his "elect" according to the foreknowledge of God the Father

through sanctification of the spirit," has seemed to me to convey a deep and important lesson to this class in our Church in the present day of rending and confusion.

My beloved friends, are you not "Kept by the power of God through faith unto salvation?" And is not "the end of your faith, the salvation of your souls?" "Wherefore gird up the loins of your mind, be sober, and hope to the end for the grace that is to be brought unto you at the revelation of Jesus Christ," 1 Peter i. 2, 5, 9, 13. "For we are made partakers of Christ if we hold the beginning of our confidence steadfast unto the end," Heb. iii. 14. Are there not many trembling, doubting ones, who in looking back at the Egyptian darkness out of which they are truly sensible of having been called by the tender Shepherd in days that are past, yet now have to mourn at their oft renewed sense of the absence of the Bridegroom of their souls, and who under this feeling are ready to exclaim with David, "my soul thirsteth for thee, my heart and my flesh longeth for thee in a dry and thirsty land where no water is; to see thy power and thy glory so as I have seen thee in the sanctuary!" Let these recall the answer of Christ to the Jews, who asked why his disciples did not fast. "Can the children of the bridechamber fast so long as the Bridegroom is with them? but the days shall come when the Bridegroom shall be taken away from them, and then shall they fast." In the infancy of the believer's experience, the chief Shepherd carries the lambs in his bosom, and makes them daily sensible of his enfolding arms; but as they grow in his grace and strength, it is a part of his grand design that they should bring forth much fruit, "for herein is the Father glorified;" and to this end they must exercise the powers and gifts which He has bestowed. Instead of lying palsied and helpless on their couch of disease as hitherto, He bids them "take it up and walk." Was He, the celestial Bridegroom, any the less powerful and ready to support his disciples after his ascension than before? Then indeed they became the "offscouring of all things;" were afflicted, tormented, and some of them finally drank of the dreadful cup of crucifixion which he drank of; but how steadfastly grew their confidence, their zeal, their rejoicing, when they walked by faith and not by sight! We never read that the impetuous Peter again denied his Master, or that the faith and devotion of any of them waxed cold towards their now unseen Lord, great as must have been the contrast to them of association with him in his bodily presence, witnessing the rising of the dead, the lame to walk, and the blind to see, under his potent word, and that of scourging, imprisonment, weariness and painfulness in a cause which He was still able to carry forward by the simple fiat of his will, and without those humiliating obstructions, *if that had been his design*. Oh, then, let these remember for their consolation, that he has blest "those who have not seen him and yet have believed." That it cannot comport with his gracious object in giving his only begotten Son to die for them, that he should forsake and cast them off, after they have risen up at his call and embraced his free pardon. If they were objects of his unfathomable love while dead in trespasses and sins, how much more so when obedient children. "I have loved thee with an everlasting love, therefore with loving kindness have I drawn thee." "This is your victory over your faith." Let your cries still ascend night and day unto Him who first warned you to flee from the wrath to come, and who kindled that living flame in your souls, without which you must still have been cold and apathetic respecting

your eternal interests, "praying always with all prayer and supplication in the Spirit, watching therewith with all perseverance," and then you have his faithful word for it that He will "avenge you speedily" from all those harassing doubts and temptations which now so wound and distress you, in the progress of the destruction of the body of sin, which must be crucified with Christ, that we may walk with Him in newness of life.

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 140.)

Third mo. 6th, 1836. * * * "It is pleasant to hear thy willingness to submit to bodily suffering, combined with the necessary care to use the means placed in our reach to patch up these, our frail tenements, so as to endure the allotted trials; appreciate the blessings dispensed; with holy Help work out our soul's salvation; and finally, with lamps trimmed, and lights burning, be ready to receive the bridegroom at whatever hour He cometh. However destitute we may feel of mental energy, or religious fervor, yet to be enabled to say with the pious Psalmist, 'The Lord thinketh upon me,' is a state in no small degree favored. To possess His sensible care, and the consciousness that in all our afflictions and trials, the unseen Arm is extended for our help and encouragement, however low we may think ourselves, is surely enough to bend the heart in reverent thankfulness, and induce the desire to accept the humbling favor as we ought."

6th mo. 8th. * * * "I have not yet told thee of the pleasure we derived (would I could add profit) from the visit of the Quarterly Meeting's committee. All of them attended our meeting, and I cannot but think good will result from it. There have some been found in each of the Monthly Meetings to require care, and committees have been appointed to each to extend labor as circumstances may require. If the increased zeal towards the furtherance of religion within our borders be rightly directed, and call forth the blessings of the great Head of the church, it may continue to increase, and to prevail, until the dimness which has so long overshadowed us be removed, and the uprightness and integrity of early times be again permitted to characterize in this place, a society not only professing, but possessing the Truth as it is in Jesus. There is certainly nothing in the nature of the principles we profess, to cause us to be a declining people. *The fault is within ourselves*; and if we could only become willing, each one to seek at home, for the 'wrong things' that impede our progress heavenward, the fruits would become abundantly evident, and we should not only secure our own happiness, but by the powerful influence of example, lure our associates into the path of life; *safe, although narrow*."

"Our Quarterly Meeting we had pretty much to ourselves; at least, no strangers in the ministerial line. We do not share so abundantly in the labors of the anointed messengers, as you do, and should we not look for fruit in proportion to the care bestowed? It does seem to me your Quarterly Meeting is very abundantly cared for. We seldom hear from you, but some one is visiting among you, dispensing the good seed of the kingdom. Not that I speak complacently: *we have much to excite our gratitude*; and I think sometimes, our meetings held by ourselves, alone and in silence, are as comfortable and as greatly favored as any others."

7th mo. "I send thee the part of our 'Family Record' I understood thee to want. The wise

king tells us 'The day of death is better than a day of one's birth'; and I have not one doubt that those whose deaths I have recorded, have passed on to a blessed inheritance, and realize the truth of the assertion quoted; and I often think when oppressed with the doubts, difficulties and anxieties that in a greater or less degree attend us here, that those are indeed happy, who know an early preparation, and an early death."

"The work that no man can do 'for his brother is necessarily inward and beyond our control. We cannot arrest the Hand of Omnipotence, who most heavily laid upon us, nor presumptuously query of Him, why doest thou thus? It remains for us to bow in humble acquiescence and receive the effectual teaching of His word. He condescends to favor us; and throughout a purifying process, our strength is to sit still; listen to the intimations of duty; patiently acquiesce in the means appointed; and only seek the position that would constantly attend Thy will done. And if our faith was strong in the Lord and our obedience proportionate, we might avoid so much suffering and conflict, know every opposing barrier removed, and our hearts established and built up in His fear. We might, I am convinced, much earlier know him to appear; our joy; and having our hearts prepared for the reception of perfect purity, would therein know the abiding peace, that nothing earthly can destroy. But the world around us comes in for share, a large share of our thoughts, and care and attention. We see little that harmonizes with our own feelings, and in despite of the proofs of the unerring Monitor, we sometimes, I am feared, yield little by little, until the amalgamation is complete."

"I hope I have been favored to sympathize little with thee in thy lonely sittings. We should it appear strange to us that the just One who is visiting and teaching us, should, in the infancy of our heaven-born hopes, claim on hearts as His own. The lesson we are learning is new to us, and if we were allowed to direct our minds at pleasure to surrounding objects, we might in them lose that which is so essentially child-like, simple dependence on a Parent's care."

8th mo. 1836. * * * "We certainly ought, faithful watchmen, to seek to know, and carefully to follow the manifestations of duty, whether in great things or small; as it is *only* those who are faithful in the little, that are to be made rulers over more; and as it is only as we are concerned to yield implicit obedience, that we know an advancement in the way of righteousness, how should our fervent petitions ascend for the help of Him who knoweth our wants, and who alone can dispense the requisite aid for our sure progression. When the 'solitariness of Zion' is considered, with the few, very few who are concerned to build her waste places truly, an awakened mind must mourn over her desolation and with every feeling enlisted, covet that the Lord will yet have mercy upon her, and restore judges and counsellors as in better days. Oh that all on whom His chastening hand has been turned, may *patiently abide the necessary bayonets*, the conflicts, and temptations, and discouragements that may be permitted to assail them! Then might they realize the promise, 'because thou hast kept the word of my patience, I also will keep thee.'"

"I believe the narrow path of regeneration will ever be an arduous one; and how can we look to it to be otherwise. It is one in which our faith is often severely tested, and we gather experience but as we travel on. We may have the help of many bright spirits who have gone before, and we

sometimes read them to our encouragement; we do not often find our own strikingly depicted for the way is represented as through a land is not sown. Their example, however it may lure, but cannot usher us unto heaven, and we still find, that in our hearts we must for the eradication of wrong things! and thus we are often made to feel ourselves altogether engrossed with ourselves. The is an awfully important one, and with that action we feel drawn to 'commune' often on our own hearts, and to 'be still'; and how glorious is the assurance that the 'Comforter' in the Father has sent in the name of Jesus, only dwell with us, but the promise was 'be in you.' And if a mental Guest, ready times to give strength to resist the evil, closely should our dwelling be with it, in the enemy of all good is endeavoring to use his subtle baits, with this Spirit residing with us, we can resist him. Happy they constantly observe the watch tower, and abided in this invincible armor, repose in safety, every snare however willily spread.

I have many times this summer, thought very much of the dispensations of Providence, and it means I believe He often makes use of, to reduce to a guilty world their dependence on blessing. We hear from almost all parts of country, that the crops are much injured—in instances valueless. While we often hear attributed to local circumstances, or to an unfavorable season, the conviction often forces itself on me, 'The Lord hath done this.' Very freely do I refer to a complaint of the Most High, through one of His prophets: 'I have smitten them with blasting and mildew, yet have not returned unto me; and if a course of usefulness is abode in, and other greater trials be permitted, to show to a revolting and backsliding nation, that the Lord reigneth.'

(To be continued.)

Farming in North Germany.—In a contribution to the *Revue des Deux Mondes*, M. de Laveleye discusses the history and present state of Prussian agriculture.

Until 1833, Prussian farmers were not good cultivators, nor were their farms very profitable. A tradition, which can be traced back to the twelfth century, they let their lands lie every year in fallow. Those who planted potatoes and made hay were in an insignificant minority. But Stein and his coadjutors have changed all this. Since 1833 the two-year system of soils alternated with roots or seeds has become general in North Germany. As a result there has been an enormous increase of live stock. Farms are more thoroughly manured now than in the past, and the area of unproductive fallow has fallen from one-third to one-seventh of the arable

land. Not only has the live stock been increased, but the breeds have been improved. North Germany imports dairy cattle from Holland, English and Rambouillet, Southdown and merino sheep. Ploughs are not as common now as they were some years hence, but horse machinery is used on all the large farms. The price of land advanced one hundred and in some places two hundred per cent. Between 1846 and 1860 the farming population of Prussia increased by more than 1,000,000. That of France fell off in the same period more than 700,000.

M. de Laveleye explains this prosperity of North Germany as arising, first, from the general education of the farmers; second, from their education in their pursuit. Prussia alone maintains

four Royal Academies of Agriculture, at which, in a two years course, and for a tuition of not quite forty dollars a year, the student is instructed in political and rural economy, based on statistics in farming, and the management of trees and woods; in the mode of manufacturing sugar, beer, bricks and draining tiles; in mineralogy, geology, botany and chemistry, with experiments and excursions; and lastly, in mathematics, trigonometry, land surveying, practical mechanics, veterinary surgery, rural law, the history of their country and constitutional law. Excursions into the most interesting districts complete the programme.

There are also nineteen provincial schools of agriculture of a lower grade supported by the government, in which the instruction is usually given by some large farmer with the help of the nearest apothecary, veterinary surgeon and schoolmaster. Besides there are special schools for single branches; the care of fruit trees is taught in no less than one hundred and thirty-four. There is a curious class of itinerant teachers who "circulate from village to village, criticising the cultivation and giving advice about rotations of crops and the most suitable kinds of manure." The government supports seven institutes of organic and agricultural chemistry.

Private enterprise supplements the exertions of the State. There are five hundred and nineteen agricultural associations. These bodies have stated meetings, give exhibitions, and offer prizes. Other causes of the flourishing condition of Prussian agriculture are the hard working and frugal habits of the German farmer, and the great good fortune of Prussia in not having a large fleet, an ill-starred colony, and a Paris.—*Boston Post.*

For "The Friend,"

"Without Me ye can do nothing."

An oft repeated precept of one recently deceased, whose name and whose pen were intimately and instructively connected with the pages of "The Friend," was: "No action will conduce to our everlasting happiness, that is not the offspring of a heartfelt conviction of duty. Mere outside imitations of the best actions of the best men, will never advance the imitator one step nearer heaven."

The writer has mentally adverted to this truism, while reflecting upon the state of some in our wide spread Society, who, not having, it is to be feared, bowed to the cross of our Lord Jesus Christ—putting the mouth in the dust before Him; not having made a thorough surrender of royal Agag with the best of the sheep and the oxen, but spared them, in disobedience, it may be, to sacrifice unto the Lord when and where He did not appoint or require; who not being able to pronounce "Shibboleth" as at the passage of Jordan; and not having yielded the heart a whole burnt offering and sacrifice unto God through Jesus Christ, are not of the true lineage, and have not therefore entered by Christ the door. These, however actively engaged in what they may perhaps sincerely think and hope is the promotion of the kingdom of God and their Saviour, might perhaps find upon careful introspection and scrutiny, that they had not duly tarried at Jerusalem for the alone qualifying power; and that the ancient "woe" to which the apostle alludes as so indispensable, is not, or at least, is not enough manifest in their offerings to the people on behalf of some, nor in their zeal to be up and doing the much good on behalf of others. Can the branch bear fruit of itself except it be first engaged into, and abide in the vine? "No

more can ye," saith the lip of Truth, "except ye abide in Me." Again, "He that hath the Son hath life, and he that hath not the Son of God hath not life." The life of God can be no otherwise experienced than by yielding the life of the creature, or the life of the first Adam unto that cross which crucifies to the world, and that baptism which thoroughly cleanses the floor of the heart—being unto the death of the natural will. For "know ye not," saith the apostle, "that as many as are baptized unto Christ, are baptized unto his death?" Through patient endurance of the Lord's leavening, transforming operation in the heart, though comparable to the burning of an oven, and through the effectual working of His almighty power there, which abases self, and leads "into a land not sown," the child of earth, of folly, and of sin becomes changed into a child of light—an heir of God and joint heir with Christ; "if so be," continues the apostle, we suffer with him that we may be also glorified together."

There is no other way to be transformed. For

"Transformation of apostate man
From loof to wise, from earthly to divine,
Is work for Him that made him."

As the seed of the kingdom sown within, is that only which, nurtured in an honest and good heart, springs up and brings forth fruit, of the new creation in Christ Jesus, unto life eternal; so nothing short of this new plant unto righteousness—this regeneration unto holiness—can effectually reach to others, or gather any to the only safe refuge, the feet of the Saviour; where all must be brought, and be taught the truth as it is in Jesus, our everlasting Head, "without whom we can do nothing." Robert Barclay, that well instructed scribe unto the kingdom of heaven, saith: "All words and testimonies, preachings, prayer, exhortation, and spiritual counsel, if it be not from the life of the Son of God, it edifies not the body of the Lord Jesus Christ in love. Let us receive, (he continues) that which comes from the life of the Son of God; which is manifest amongst us, and shed abroad in our hearts. Let us watch and take care that whatsoever is not of this life may not appear, may not be manifest and made known among us."

Be assured it is no superficial, neither fault-finding feeling that prompts these suggestions. But I trust a real and sincere desire to be acquitted in the sight of the Searcher of hearts. The time must soon arrive when they who commit errors and they who expose them, must alike stand as suppliants for mercy at the same awful bar of unchangeable truth and justice. Neither is it with any feeling like to having attained; nor like wishing to discourage; neither like to saying, "Stand by thyself," &c. There can be no more settled truth than that the foundation of God standeth sure, having the eternal, unalterable seal, the Lord knoweth them that are His. While this foundation is reached and kept to, trials, and buffetings may abound, yet is the superstructure on the rock, Christ, but made more solid by searching storms, and assailing billows, which would try, if not destroy, edifices founded only on the sand.

What is feared is, the prevalence of a religion that lacks depth and life; a substitution which, while it may appear real to the outward eye, destroys not the man of sin. There can scarcely be any thing more calculated to turn aside, even those in the foremost ranks, and who seem to be established, than quitting, in the least degree, the little, lowly, and only safe ground, of faithfulness to these Divine and saving illuminations of the Holy Spirit, which the humble child of the obedience which is of faith, is favored with. Any

inferior dependence whatever, like to trusting to the will, or wisdom, or device of the natural man, will not stand. Any image, part of iron and part of clay, shall surely be broken by the stone cut out the mountain without hands. Any other reliance than the Lord alone, strengthened by child-like simplicity, meekness, and poverty of spirit, He will assuredly blow upon. The promise is a precious us: "If thine eye be single, thy whole body shall be full of light." Singleness of the eye unto Christ, the Captain of salvation, alone gives clearness of spiritual vision. Those who look to Him and Him only, "without whom we can do nothing" that will produce fruit unto life eternal, these He will lead safely and savingly—but ever through the many and great tribulations that accompany obedience to a cross, which crucifieth to the world,—unto that eternal crown of changeless joy and peace, where the Lamb shall lead unto living fountains of water, and God shall wipe all tears from the eyes.

THE FRIEND.

FIRST MONTH 4, 1868.

SUMMARY OF EVENTS.

FOREIGN.—Late dispatches from England say that the Fenians are still active in the country. Many disturbances are every day received by the authorities, announcing their movements, actual or contemplated. On the night of the 28th, a large body of men with blackened faces, stormed the Martello Tower, near Cork. They overpowered the guard and carried off a considerable quantity of arms and ammunition. The same effort was made to destroy the general Post-office in Dublin by means of Greek fire. The attempt was frustrated before much damage was done. Large numbers of letters have recently been received at the post offices in Dublin directed to prominent officials. Each one of these letters was loaded with explosive matter, designed to kill the person addressed. An individual who received one of these letters, was horribly mangled by the explosion which occurred when he opened it. In London thirty thousand special constables have been appointed and are now in service. The London Times calls attention to the grave public danger, and urges the provincial cities and towns to take measures of precaution. It is stated that the incendiary who fired the fuse at the Clerkenwell prison, has been arrested.

Dispatches from India announce the departure of General Napier from Bombay for Massowah, to take command of the British expedition now supposed to be advancing into Abyssinia.

It is reported that Turkey has offered important concessions to the Cretans, placing virtually the government of the island in their own hands.

Dispatches from China state that owing to urgent remonstrances and threatening demonstrations made by foreign Powers, the Peking Government has promised to treat shipwrecked sailors with humanity hereafter, and the Chinese government has guaranteed the promise that it should be kept.

The Austrian Reichsrath has passed the bill for the emancipation of the Jews.

The French government has decreed the departure of 20,000 more troops to Civita Vecchia. The unsettled condition of affairs in Italy causes much anxiety in Paris. The changes impending in the Italian government, it is feared, will place Italy in a menacing attitude toward France. Morebrea has declared his intention to dissolve the national Parliament now in session, on the 15th of First month, and make an appeal to the country, which another vote unfavorable to the ministry be adopted before that time.

There is great political agitation in northern and southern Italy. In Naples and in the vicinity of Piedmont it was feared the excitement might result in a rising against the authority of the government.

The session of the Spanish Cortes commenced on the 27th. In the speech from the throne, Queen Isabella pledged the support of the nation to the Pope for the preservation of his temporal power. The Austrian frigate Narvaro, having on board the remains of the late Mexican Emperor Maximilian, arrived at Cadix on the 27th.

A number of eminent Russian statesmen and diplomats are holding a conference in Petersburg on the Eastern question.

A dispatch from Havana says, the reports published in the American papers that the home government proposed to sell Cuba and Porto Rico to the United States, is not supported by advices from Spain. It is pronounced false by the highest authorities on the island.

A private letter from Romar, late minister of the State, dated March 12th, says that the prospects connected with Mexico, and he has not changed his opinion, that the Mexicans are to have a permanent peace, and a settled government.

The war which, for more than two years, had been waged between Paraguay on one hand, and Brazil and Argentine republic on the other, which is stated at length came to a close. The power of Paraguay became exhausted in the struggle, and President Lopez was obliged to yield to all the demands of the allies, including his own exile from Paraguay for two years. The free navigation of the Paraguay river is conceded, and the territory known as the Gran Chaco is to be given up.

Dispatches of the 30th state that the proposed conference for the settlement of the troubles in Italy, has not yet been abandoned. It appears that the great Powers of Europe have determined to ask the Emperor Napoleon the basis on which he proposes that the great should be discussed. The other, it is stated at length, 5-20's, 72's. Middling uplands cotton, 72's Orleans, 75's. Middling uplands, 15s. 2d. per 100 lbs. No. 2 red western, 13s. 9d.

UNITED STATES.—*The South.*—The President has removed General Ord from the command of the Fourth Military District, including the States of Mississippi and Arkansas, and General Pope from that of the Third District, which includes Alabama, Georgia and Florida. General McDowell has been directed to take command of the Fourth District, and General Meade that of the Third. These removals are attributed to the same motives that caused the displacement of Generals Sheridan and Sherman some months since.

The Louisiana Convention has adopted an article in the State constitution, making citizens of all persons, without any regard to race, color or previous condition.

General Canby has issued an order announcing that the Convention has been carried in South Carolina, and appointing Charleston as the place, and the 14th inst. as the day for its assembling.

The following is a statement of the registered voters in all the southern States except Arkansas:

	Whites.	Blacks.	Total.
Alabama,	74,450	60,350	164,800
Florida,	11,100	15,357	26,457
Georgia,	95,214	53,450	188,672
Louisiana,	44,732	82,907	127,639
Mississippi,	48,926	88,925	137,851
North Carolina,	103,000	71,657	174,717
South Carolina,	45,751	79,585	125,339
Texas,	56,666	47,430	104,096
Virginia,	116,000	104,900	220,900

555,838 673,669 1,269,517
Philadelphia.—Mortality last week, 254. Of consumption, 38; inflammation of the lungs, 22; croup, 11.

Miscellaneous.—A San Francisco dispatch says, that there has been a flood in the Sacramento valley as destructive as those of 1861 and 1862. The whole valley was submerged, and all travel was suspended. The American river was higher than ever known before. The levees at Marysville broke away, and the greater part of the city was overflowed.

A New York dispatch of the 26th says, yesterday morning a lad entered the office of the Superintendent of Police, and left a parcel, which he said had been given him to deliver by a gentleman at the Anson house. On the parcel being opened it was found to contain checks of the Bank of New York for three millions six hundred and eighty-three thousand four hundred and thirty-five dollars and sixty-one cents, being the amount taken from the bank messenger recently murdered at New York. The messenger's satchel contained a small sum in money which the robbers retained.

The steamship Raleigh, from New York for New Orleans, was burned on the 24th ult., about twenty miles off the coast of South Carolina. Eighteen of the passengers and crew were taken by a tug, and the remainder were supposed to have been lost, including Captain Mar-ban. Twenty-four persons are still missing; they were last seen in the boat or clinging to pieces of the wreck.

The total marine disasters on the lakes, for the past year, numbered 931, and were attended with a loss of 182 lives.

There are in Iowa one hundred and forty-three new-

papers, of which one hundred and eleven are Republican, twenty-seven Democratic, two temperance, legal and religious.

Director Delmar, of the Bureau of Statistics, reports the total authorized extent of railroads in the United States to be 54,000 miles, of which over 38,000, miles have been completed, the total cost of which was \$64,000,000.

There were 13,015 patents issued from the U. S. Patent Office, in 1867, being 3,515 more than in 1866.

There is now unbroken railroad communication from New York to the Rocky Mountains, a distance of nearly two thousand miles. A temporary bridge has been built across the Missouri river at Omaha.

The annual report of the police shows that during year ending 11th mo. last, 79,925,000 persons crossed the several ferries leading to New York city.

The Markets, &c.—The following were the quotations on the 30th ult. *New York.*—American gold 1 U. S. ships, 1881, 112½; ditto, 5-20, new, 108½; 10-40, 5 per cent, 10½. *Superfine State flour, \$ a \$9.15. Sipping, Ohio, \$8.50 a \$10.75; Calico flour, \$12.50 a \$13.75; St. Louis, \$12.25 a \$16.00. An Michigan wheat, \$2.85; white California, \$3.05 a \$3.05 West Canada barley, \$1.50. Western oats, 84 cts. 1 \$1.73. New western mixed corn, \$1.35 a \$1.37½; Jersey yellow, \$1.23. *Chicago.*—\$1.15 a 16½. *Philadelphia.*—Superfine flour, \$7.50 a \$8.00. Inner brands, \$9 a \$12. Red wheat, \$2.40 a \$2.42 white, \$2.30. Rye, \$1.70. Old yellow c \$1.42; new do. \$1.20 a \$1.22. Oats, 75 a 78 Clover-seed, \$7 a \$8. Flaxseed, \$2.45 a \$2.50. Arrivals and sales of beef cattle, at the Avenue Deyard were quite small this week, reaching only 5000. Extra sold at 9 a 10 cts. per lb. gross; fair to good 8 a 9 cts, and common 5 a 6½ cts. About 2000 sold at 5 a 6½ cts. per lb. gross. Sales of 5000 hog \$9.50 a \$10.50 per 100 lbs. net. *Chicago.*—No. 2 sp wheat, \$1.88 a \$1.90. Corn, 82 a 83 cts. Oats, 55 cts. *St. Louis.*—No. 2 sp wheat, \$1.85 a \$1.87. Corn, 82 a 83 cts. *St. L.*—Spring wheat, \$1.80; winter, \$2.50 a \$2.60. In the ear, 87 a 90 cts. Oats, 70 a 73 cts. *Baltimore.*—Southern red wheat, choice, \$2.70 a \$2.75. Corn, \$1.20. Oats, 70 a 73 cts.*

RECEIPTS.

Received from Wm. Blackburn, West Brownville, \$16.35, and from Hannah Darling and Geo. Black Salem, O, \$5 each, for the benefit of the Freedmen

A Meeting of "The Philadelphia Association of Friends for the Instruction of Poor Children," was held at the usual place on Second-day evening, the 24th, at 7½ o'clock. **MAK BALDWIN,** Philadelphia, 1st mo. 1st, 1868. *Cler*

NOTICE.

A suitable Friend and his wife are wanted to charge of the Farm and Farm-house at Westwore the 25th of Third month next.

Early application is desirable, and may be made to Aaron Sharkey, West Chester, P. O., Pa.; John Beington, Glen Mills P. O., Pa.; Joshua B. Pusey, London Grove P. O., Pa.; Jacob Roberts, Paoli P. O., Pa. Twelfth mo. 18th, 1867.

NOTICE.

A suitable Friend and his wife are wanted to su intend and manage the farm and family under the Committee for the gradual Civilization and improvement of the Indian natives at Tuscarora, Gragnus Co, New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Ph John M. Kaighn, Camden, N. J. Aaron Sharkey, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co., P. Joseph Scattergood, 413 Spruce Street, Phil

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSEPH H. WORTHINGTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

WILLIAM H. PILE, PRINTER,
No. 422 Walnut street.

PHILADELPHIA.

When paid quarterly in advance, five cents.

Scient Commercial Relations of the East.

BY WM. M. OSBORNE, A. M.

to ancient commercial relations of metropolis Tyre, were of a character so broad and alive, as to demand something more than a notice. It has been observed, in a preliminary article, that Tyre was remarkable for her use of cypress and oak, which afforded ample material for ship building, not only to the Tyreans, almost every nation, near and remote, and in any degree in maritime pursuits. Solomon employed the fir, which is supposed to be the cypress, for the floors and ceilings of temple; and it is represented as being extensively used for the sheathing and decks of ships. Cedars of Lebanon were universally employed mast, being remarkably straight, tall and spreading; whilst the oaks of Bashan afforded most serviceable timber for ribs and oars, and the art of navigation was then in its infancy, the universal ignorance concerning winds and without chart and compass, as the ancients were, made oars as indispensable to the Adirivator, as sails and steam are to us. It seems that the ancient Tyreans trafficked, in articles which were of absolute importance to the growth and prosperity of a nation, but in these things which were calculated particularly for ostentatious display, than to practical utility to the common people. These, "were fine linen and brocaded from Egypt," which were objects of coveted by Tyrean sailors, not only because of their fine texture and appearance, but as awnings for their numerous vessels. That finely dyed linen was employed for awnings and sails, will not appear incredible when we recall the magnificent appearance of Cleopatra's barge, as she went out to meet the Roman victor, Paul. Another item, was the decoration of vessels with ivory, brought out of the island of Tim. Ezekiel xxvii. 6.

In regard to *Chittim*, it appears to have been of large extent, very much like *Levant*, supplies to the cities and coasts of the Mediterranean. Josephus makes it Cyprus, others say to Macedonia, the Vulgate to Italy, some of the fathers ascribe it to the islands of Melian and Aegean seas. A brief allusion to articles of Tyrean commerce, with those states most intimately bound to this ancient polis, may not be without interest. "Blue

and purple, from the isles of Elishah." Ezekiel xxii. 7. Elishah was one of the sons of Javan, (see Genesis x. 4,) and located in a part of what afterwards became the Grecian Empire. "The inhabitants of Zidon and Arvad were thy mariners." (Ezekiel xxvii. 8.) It is clearly evident from this passage that while the Tyreans were devoted to commercial pursuits, the Zidonians furnished them with *mariners* to conduct their ships to remote seas and to distant lands. Arvad appears to have been the name of a Phœnician city, built upon an island of the same name, not far from the coast, founded according to profane history, by deserters from ancient Zidon. Other places are represented as engaged in commercial pursuits with Tyre; among which are Gebal, Persia, Tarshish, Tubal, Dedan, Haran, Asher, and Chilmah; from Tarshish came silver, iron and lead; from Javan, Tubal and Meshech, were obtained "the persons of men;" slaves from Caucasia; horses and horsemen were imported from Tagarmah, which doubtless was Armenia; ivory and ebony were brought from Dedan; emeralds, purple, brocaded work, fine linen, coral and agate, from Syria; wheat, honey, oil and balm, were imported from Judea; "wine of Holbon," and "white wool," were obtained from Damascus. "From Dan and Javin were imported bright iron, cassia and calamus; precious cloths, for chariots, were procured from Dedan; precious stones, spices and gall from Sheba and Raamah, and blue cloths and brocaded work from Haran, Cannah and Eden." It will be seen from the facts adduced, that a large proportion of the commerce of Tyre was in articles of luxury, though it was the great metropolitan depot of trade for both the eastern and western portion of the civilized world. Our attention is now turned, for a season, to note the extent in which the Jewish people were engaged in the commercial enterprises of those early times. It would seem that the idea of engaging in foreign traffic never occurred to them until the age of Solomon, and even then, the plan appears to have found few advocates, and for a long season after his death, was almost, if not entirely, abandoned. The Jews have ever been a distinct and peculiar people, living within themselves, ignoring all fraternal and national associations, and maintaining, as far as practicable, the distinct forms of religion peculiar to the immediate descendants of Abraham. The commercial predilections of Solomon were peculiar to himself, rather than to his nation, for in this respect he stands solitary and alone, among the numerous kings of this once powerful, but now despised and oppressed people. The scriptures give but a brief history of the commercial relations of Solomon, and yet no part of the Divine Oracle has given rise to more vague and chimerical speculations. The account is summed up in few words, viz: That a lucrative traffic was carried on between Ezion-Geber, Tarshish and Ophir. From the last two provinces were imported vast quantities of "gold, silver, ivory, apes and peacocks." Ezion-Geber, a city of Arabia-Deserta, was situated on one of the principal gulfs of the Red Sea, and seems to have been selected by Solomon, as a maritime depot for

receiving those rich products which were sent from India, and which made it at one time a city of considerable financial importance. Solomon must have conceived the idea, that by passing to the sea, and thence by vessels, the East would be much more easily gained than by the long, tedious route through Babylon and Persia, thus saving a vast amount of expense, to say nothing of manifold sufferings and dangers which a journey overland would necessarily incur. At the present day there remains the site of ancient Ezion-Geber, a dilapidated fortress, called *Akaba*, at the head of the Red Sea, and the usual rendezvous for pilgrims, on their way to Arabia, though it is not remarkable as a place of any commercial notoriety. "In the region of Akaba," says an eastern traveller, who visited the place in 1822, "there is not a single boat or water craft of any kind; the Arabs, in fishing, use only rafts made of the trunks of palm trees tied together." Ezion-Geber, like the commercial marts of Babylon and Petra, is only remembered among the cities that were, and but for its historic connection with the Holy Scriptures, would long since have been forever forgotten. A more important and much more difficult question for the Bible student to analyze is—Where was *Ophir* situated, to which the vessels of Solomon were sent for those vast quantities of gold and precious metals so lavishly expended in the construction of the Temple? A question deriving additional interest from the consideration that, to but few minds, it has never been satisfactorily answered.

The various opinions concerning this important question, may be briefly noted, we hope, with interest to the reader.

For "The Friend."

In the midst of the many and unwearied efforts of the adversary of Truth, to draw away the members of our religious Society from simply and faithfully following the Good Shepherd, and to entice them into by-paths which eventually lead far from the straight and narrow way in which only safety and true peace are found, it is consoling to remember the language of our Lord to Peter, when He thus addressed him, "Simon, Simon, Satan hath desired to have you that he may sift you as wheat, but I have prayed for thee, that thy faith fail not." He, who thus prayed for Peter, still liveth to make intercession for us, and we may also believe that as He knew then the designs of the evil one to sift His disciples, so He knows now all the varied stratagems with which he assails us, either individually or as a portion of the church militant. He has seen the efforts of the wolf "to steal, and to kill, and to destroy," and "to scatter the sheep:" separate them one from another, and from Him, draw them and drive them so far away from the Good Shepherd, that they shall not be able to hear His voice, and will therefore be in danger of following the voice of the stranger. He, who laid down His life for the sheep, not only seeth when danger awaits them, but we may humbly and reverently believe, that in unutterable love and mercy, He does condescend to intercede for their preservation and de-

liverance. May then our faith in Him as the Good Shepherd watching over the flock, and as our Intercessor with the Father be a little strengthened. But let us not take up our rest here; there is something for each member of the militant church to do, in order that we may individually and collectively witness preservation on every hand. Our Saviour said to His disciples, "Watch and pray lest ye enter into temptation; the spirit truly is willing but the flesh is weak." It is only as we dwell in a state of watchfulness unto prayer, of humble watchfulness, that we can be preserved from evil. Our enemy knows how to suit his baits to our several conditions, and to the different conditions of the church. He knows how to disguise himself as in sheep's clothing, so that unless we are walking in the Light, keeping very near to the Good Shepherd, we shall not be able to discern his approach, nor to distinguish that it is he, until he has robbed and wounded us and it may be driven us into the wilderness far from the fold of safety. Oh! then, how important that we be found watching,—watching unto prayer, walking in the Light, that Light, which not only maketh manifest "the hidden things of darkness," but also clearly points out the path of safety in which we may walk and not stumble. May our dear young Friends give heed to this, and turning away from the many distracting voices that are abroad, listen only to the voice of their dear Redeemer, and yield themselves to the humbling, contriving influences of His Holy Spirit. Then they will be prepared to offer the sacrifice of "a broken heart and a contrite spirit," and will experience the promise fulfilled: "Thus saith the high and lofty One that inhabiteth eternity, whose name is Holy; I dwell in the high and holy place, with him also that is of a contrite and humble spirit, to revive the spirit of the humble, and to revive the heart of the contrite ones;" and as His presence is thus with them, they will experience that greater is He that is in them than he that is in the world, and will be enabled, through Him, to make war in righteousness against the enemies of their own house, and be prepared in His time to lift up a standard for His cause in the earth. And let us all keep in remembrance where we must look for deliverance from the lapsed condition into which as a people we have fallen, not to any arm of flesh; for "Truly in vain is salvation hoped for from the hills and from the multitude of mountains; truly in the Lord our God is the salvation of Israel." Let our hope and trust, then, be in Him. "I will work and who shall let it?" was His language formerly, and His power is unchanged. He may permit the enemy to vaunt himself, and the foundation of our christian testimonies may be closely tried, but resting as we believe they do, upon the teachings of Him who remains to be the Rock of ages, they cannot be destroyed, and those who build upon the same immutable foundation, who not only hear the words of our dear Redeemer but also do them, these will realize, amid all the turnings and overturnings that may be permitted, that "The foundation of God standeth sure, having this seal, The Lord knoweth them that are His." And may we not hope that these, wherever scattered, will be brought near to one another in the fellowship of the Gospel, and that a remnant will continue to be preserved, who being willing to suffer with their dear Lord and Master, will also be made partakers of His consolations, and will be prepared to hold out the inviting language, "Come and let us go up to the mountain of the Lord and to the house of the God of Jacob, and He will teach us of His ways and we will walk in His paths." For "The Friend."

A Visit to the Summit of Grey's Peak.

The following description of a portion of the magnificent scenery to be found in our western territories, is extracted from a private letter, and may prove interesting to some of the readers of "The Friend."

"This mountain is about fourteen miles from Georgetown, Colorado Territory, and is widely known as being the second highest in the territory, its altitude being exceeded only by Mount Lincoln. It is located in the main or 'Snowy Range'—the great barrier dividing the Atlantic and Pacific waters. The melting snows of its eastern slope form the source of one of the branches of Clear creek, a tributary of the Platte river, and those of its western slope the source of Snake river, an indirect tributary of the Colorado.

"One mile from the base of the peak, on Snake river, are a few log cabins called Peru city; three miles further down the stream is located the city of Silveropolis.

"Last summer a visit to the peak was often projected and as often abandoned; but I concluded not to let this season pass without accomplishing it. Early one morning towards the latter end of Eighth month, three of us started from Silveropolis. At Peru city our party was increased by the addition of four others: one of them a woman—the first who had undertaken the ascent—she was provided with a mule, the nature of the country admitting of riding the first two miles; the rest of us were on foot.

"Nothing remarkable occurred during the ascent, and after a climb of three and a half hours the summit (near 15,000 feet above sea level) was reached.

"I hardly know how to commence a description of the magnificent panorama that here awaited us; the view is so varied, so beautiful, so sublimely grand that it seems almost folly for me to attempt to place it before thee. For hundreds of miles in every direction the eye wanders, and fills itself with the most beautiful in nature: thousands of mountain peaks, rivers, lakes, are seen at a glance, as you sweep the circle of the horizon. Looking over the few dwarfish mountains (about fifty miles of them) eastward, the great plains for many miles (apparently as level as a field) are spread out before you, the Platte river and various other streams bisecting them, being easily traced by the growth of timber that line their banks. Turning to the south 'Pike's peak' (about 100 miles distant) is, from its magnitude, a prominent feature; beyond it, 'Spanish peak' and the 'Ratton mountains,'—nearly down to New Mexico—while close at your feet lies the beautiful 'South Park'; its many lakes glistening like mirrors in the morning sun. North of us, 'Long's Peak,' (also near 100 miles off) stands like a majestic sentinel keeping ward over the north and middle parks. Starting from its western base, the 'Waikato range' (a mountain chain separating the north and middle parks, and stretching off in a north westerly direction) is followed till lost in the distance. These mountains conceal the 'North Park' from view, but the whole of the 'Middle Park' is seen; far beyond its northern limit (about 350 miles distant) rise the snow-capped peaks of the 'Hiutah Range,' the eastern rim of the 'Great Salt Lake' basin. To the south-west is presented the grandest of all views: for hundreds of miles the eye roams over a succession of snowy peaks, no park or plain intervening to break the sublime monotony; some two hundred miles distant Mt. Lincoln is readily distinguished. I thought as I looked at it—a great monarch among mountains

—that the hand of man can never erect a tri- so noble to honor the memory of our fallen les. "I have endeavored to give thee a brief out of this splendid view, altogether discarding hundreds of minor details. Each mountain, park; every river, lake and snow-drift—the showing a characteristic similarity—presents is of scenery that no other one possesses; is of itself a fit subject for minute description.

"Perhaps the best way to ascertain the full claim of anything to pre-eminence is to try it in contradistinction to others similar in character, and thus judge them. Hundreds of papers have been written about 'Mont Blanc' by a different people: all of them enthusiastically scribe its beauty and its grandeur. Our fellow-traveller is a native of, and has travelled extensively through Europe, having among other places visited and ascended this celebrated mountain. I asked her how the view from its summit compared with that from where we stood; her answer will probably give thee a better impression of greatness of our Mt. Blanc than my description. 'The view from Mont Blanc is beautiful, the site, is enchanting, I thought it was grand, oh! it is nothing to compare to this.'

An Epistle to Friends.

(Concluded from page 146.)

A POSTSCRIPT.

Dear Friends and Brethren,—I have a thing further in my heart to communicate to you, in dear and tender love, and in desire your preservation out of the snare of your adversary; and that is, to exhort you all to dwell in pure judgment of the Truth, which is a deliverance upon your glory; and let none bereave you of it, under any pretence whatsoever. But as you owe to a true feeling of the life in yourselves, to alone the certain judgment appertaineth, this life have freedom, and stop it not from seeing all that which is at enmity with the life tends to the hurting of the true plant of God. I have seen a harm hath come to many who parted with their judgment, and so have been unarmed, and the enemy hath prevailed them, (under a pretended tenderness), to permit or suffer such things as were hurtful to them; and others; and though the Lord hath given judgment and discerning in the matter, yet bereaved of that gift, and so by little and became beguiled.

Oh! dear Friends! consider these days are our times, and it is needful for every one to in that same eternal light to which you were turned, that by its righteous judgment ye be preserved from every thing in yourselves that appears contrary to that precious life of which have tasted. And when you have so done take heed that the enemy do not do that instrument, which, (through your watchfulness in the light,) he could not do without. A beware of that affected tenderness that tries to be tender to all, and pray for all, and mind good in all, and love all, and judge none leave judgment to God, &c. I say, heed the plausible words of that spirit, which being to save its own head from a stroke, would be of your judgment which God hath given; and is indeed truly his judgment, and is administered in his wisdom and power, cleansing and keeping clean his sanctuary such as have no judgment in their goings that they know not the true way of peace make them crooked paths, that he goeth in shall not know peace. Isa. lix. 8.

But some may say, was not Christ me- lowly? and ought not all to be like unto him?

is true, my Friends; but there is a difference between the Seed's suffering and its reigning, and are times for them both; and when it doth please God to permit the hour and power of darkness in the open persecutors, to exalt itself against seed and people by persecution, or such like; are led by his spirit to appear in meekness and quietness, as a sheep before the shearer. But it is this suffering bad and perverse spirits, appear under pretence of the Truth, and yet against the Truth, and enemies to its prosperity, being to exalt and set up another thing instead of the Truth? Such as these the Lord doth not require you to use only patience and meekness words; but if that will not reclaim them, they know the judgment of the Truth, and you must stand over them; for in this case the use of the exaltation of Christ is come, and God showing Truth with dominion over every false, and corrupt practice thereof.

And, therefore, dear Friends, eye the Lord in all things forth, and as you feel his life in you, to resist against any evil and corrupt thing or vice, use plainness, and keep sincerity, and not judgment backwards; for that which is willing to be judged, and cries out, judge none, all to God, &c., the same will take upon it to judge and rule, but not in the wisdom of God. And those that cry out so much for tenderness, and against Truth's judgment, the same are in most danger to be drawn out from the Truth, suffering in the spirit of Christ Jesus, if they ought to appear in the most meekness, to appear rough and wrathful in the striving fighting nature, and are most apt to be tempted to a spirit of revenge, as hath been seen by experience; for they that lose the exercise of why which all should keep dominion over, they lose that strength by which they should be enabled to suffer all things for the sake of Christ Jesus.

Dear Friends, in that which keeps out the Lord and the betrayer, all wait upon the Lord, you may have your armor on, and be fortified with the strength, with the might, and with judgment of God; and keep that under in a place, which under pretence of tenderness and forbearance, would make void the testimony of Truth, or make the offence of the cross to cease in any thing wherein you have been instructed from the beginning; that the Lord may behold your judgment established, and be pleased. And the Lord looked, and there was no judgment, and it displeased him; for thereby deceit is kept, which with it is to be kept down.

The Lord God of power and wisdom preserve you faithful, and fitted for every good word and deed; the strong to watch over the weak in singleness, and the weak to be subject to the strong in the Lord, that so the pure plant of righteousness may grow in and among you all, to his glory that hath called you; to whom be glory forever, amen.

S. C.

Earthquakes in Crete.—A letter from Canaan, principal servant in Crete, dated September 10th, says that several severe shocks of earthquake occurred in that town, causing great destruction and alarm throughout the town. The first occurred on Thursday, September 9th, at 10 o'clock. A trembling sensation was felt, causing buildings to shake; everybody rushed out of their houses; the heat was rather oppressive; though the water did not appear disturbed, the ground in the harbor were trembling like a leaf. The shock, which lasted four seconds, was felt throughout (not so severely) in the villages round about. Twelve hours afterwards a second and

much more violent shock was experienced, doing great damage to all the houses, roofs falling in and walls down in all directions. A Venetian arch, seventy feet high, was thrown over on its side to the westward entire, and two men were buried beneath.

The turbulence of the sea was so great that millions of fish were driven into Cana Bay, merchant shipping much damaged by the violent effluxes and influxes, mooring chains and hawsers snapped asunder, and the vessels carried together with great violence. Galvanic action took place between the sea water and the copper on her Majesty's ship Wizard's bottom, all weed and foulness, so common to the Mediterranean, was removed, and the metal (copper) burnished or brightened.

The shocks came from the E.N.E., and towards S.W. or W.S.W. Vibrations ten in a second. The air very dry and sultry preceding the first and second shocks. Compass very much disturbed.

The scene of havoc next day was terrible, every house in the place being more or less injured, numbers uninhabitable. The English consul's house is split down one side; Dr. Temple, a surgeon in the Turkish service, had all the walls of his house part company, doing much damage to those below. All along the quay the houses opened their tops and let the floors find their centres of gravity. In some parts the upper and first floors have all tumbled down.

Selected for "The Friend."

The Narrow way of the Cross Exemplified.

Before he (The Abbe De St. Cyran) began to build, he had counted the cost; and when he weighed the price, it was in the balance of the sanctuary. Hence he never sought an easy road to heaven; for he knew that *there is no such thing*. He recommended to others the road that he himself walked in, viz: the straight road mentioned in Scripture as the highway of the kingdom. He knew that Christ set us an example, that we should *tread in his steps*, and he therefore looked to Christ, and to none else. He knew that Christ pleased not himself, nor did he expect that the servant could find an *easier path* than his master. He had no new and ingenious contrivances to save men, without obliging them to take up their cross, their daily cross, inward as well as outward, and to follow their Saviour in the same narrow road which he had trodden. He had discovered *no new mode* of widening the narrow way; of lightening the daily cross, or of reconciling together God and Mammon. In this *modern science* he was profoundly ignorant. His systems were not traced on the mutable sand of human opinion; but they were engraven on the immutable rock of God (Himself). He conducted souls to God only by that *royal high way of repentance* evidenced by mortification, and faith evidenced by obedience, which all the patriarchs, saints, prophets, and martyrs had trodden before. Nor did he ever step aside where he saw the print of their footsteps, though it were a path rough with thorns, or even dyed in blood. Whilst most professors were laboring to mitigate the rule of Christ, he was solely taken up in seeking that *powerful help of the Holy Spirit*, which renews the strength of the fainting soul, like the eagle's; and enduing her with power from on high, shall, in truth, make the *most rigid practice* easy. Whilst others strove to accommodate the road to their strength, he, relying on God, sought from him strength, adequate to the difficulties of the way.—*Memoirs of Port Royal.*

For "The Friend."

"Hear, O Israel: The Lord our God is one Lord: And thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might. And these words which I command thee this day, shall be in thine heart: And thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up." Deuteronomy vi. 4-7.

This was the command of Moses, the Lord's servant, to the children of Israel, and it remains to be a Divine command to parents, and to all who are entrusted with the care and education of the rising generation; for it implies, that they are not to leave any opportunity unimproved to impress upon their tender and susceptible minds, that they should love the Lord their God with all their hearts, with all their souls, and with all their might; and this love to their Heavenly Father, would lead to loving their neighbor as themselves. Parents, if under the Divine law, would direct their children to listen to the voice of Him who called Samel, when their hearts like his, are not aware who calleth them; for we are sensible He calleth them at a very early age; which should convince parents of the importance of watching at their posts, in order to be qualified to direct them to take heed unto the light which reveals unto them the way in which they should walk, in order to become the Lord's dear children, and receive the blessing of preservation in the slippery paths of childhood and youth. If this was the fervent prayer of parents for their beloved offspring, how different things would be amongst us, with what sobriety and simplicity would they be brought up, what a savor would clothe their spirits; for we trust they would be of the number of those whom Christ condescends to bless.

Therefore it requires care not to lead their tender minds too fast on religious and biblical subjects, for the lip of Truth has declared, "I have many things to say unto you, but ye cannot hear them now. How like a tender shepherd He goeth before His sheep and lambs, and even carrieth some in His bosom, thus shielding them from having too much to bear, gently expanding their understandings to receive His unfoldings, as He did when opening the blind man's eyes to receive the clear light of day. And the apostle tells us, "Milk for babes, but strong meat belongeth to them who are of full age."

First-day schools should not be heeded in our Society, for every house should be a Bethel, and every hearthstone a school, to instruct the little ones in the way of life and salvation. Mothers especially should be able, by the key of David, to answer the questions which naturally arise in the infant, and more mature minds of their children. Such answers are lasting and impressive, and will revive in their memories when grey hairs are seen here and there upon their heads. Many at this time can call to mind the sweet counsel and advice of a beloved mother, during seasons of retirement in the domestic circle, which have proved, "like bread cast upon the waters."

If any feel their minds drawn to instruct the neglected, the outcast and forsaken, in suitable learning and reading of the Holy Scriptures, when their own religious duties and obligations do not conflict therewith, let them be faithful and keep on the watchtower, for they may prove instruments of good to those who may feel at times, as if no man cared for their souls, or as if there was no sorrow like unto theirs.

A New Material for Beds.—A new discovery has been made here, which is likely to make a revolution in mattress-making. There is dug

out of the mountains of the Sierra range a better material for beds than is now available in the markets of the world. It is fully equal to curled hair, and makes comfortable, useful, and healthful beds. A factory has been built on Little Bear river, about a mile from Dutch Flat, which is now employing a large number of men. The material manufactured is the soap root, which grows in unlimited quantities in that region. It is a bulbous root, enveloped in a very tough and supple fibre, resembling somewhat the husk of a cocoanut in colour and appearance, but nearly as tough as whalebone. The roots are dug chiefly by Chinamen, bound in bundles of one hundred pounds each, and brought on poles to the factory.—*San Francisco Herald.*

SYMPATHY.

Selected.

There is a plant that in its cell
All trembling seems to stand,
And bends its stalk, and folds its leaves
From each approaching hand:

And thus there is a conscious nerve
Within the human breast,
That from the rash and careless hand
Sinks and retires distrust.

The pressure rude, the touch severe,
Will raise within the mind
A nameless thrill, a secret fear,
A torture undefined.

Oh, you who are by nature form'd
Each thought refined to know I
Repress the word, the glance, that wakes
That trembling nerve to woe.

And be it still your joy to raise
The trembler from the shade,
To bind the broken, and to heal
The wound you never made.

When'er you see the feeling mind,
Oh, let this care begin;
And though the cell be ne'er so low,
Respect the guest within.

Lydia Huntley.

Selected.

THE SAVIOUR'S KNOWLEDGE.

"We are sure thou knowest all things."

Thou knowest, Lord, the weariness and sorrow
Of the sad heart that comes to Thee for rest;
Cares of to-day and burdens of to-morrow,
Blessings implored, and sins to be confessed,
I come before thee at thy gracious word,
And lay them at thy feet; thou knowest Lord.

Thou knowest all the past, how long and blindly
On the dark mountain the lost sheep had strayed;
How the Good Shepherd followed, and how kindly
He bore it home, upon his shoulders laid
And healed the bleeding wounds, and soothed the pain,
And brought back life and hope and strength again.

Thou knowest all the present; each temptation,
Each toilsome duty, each forbidding fear;
All to myself assigned of tribulation,
Or to beloved ones, than self more dear,
All pensive memories, as I journey on,
Longing for vanished smiles and voices gone.

Thou knowest all the future; gleams of gladness,
By stormy clouds and darkness veiled;
Hours of sweet fellowship and parting sadness,
And the dark river to be crossed at last.
Oh, what could hope or confidence afford
To tread that path, but this, thou knowest Lord.

Thou knowest, not alone as God, all knowing;
As man, our mortal weakness thou hast proved;
On earth with purest sympathies o'flowing,
O Saviour, thou hast wept, and thou hast loved;
And love and sorrow will to thee may come,
And find a hiding-place, a rest, a bome.

Therefore I come, thy gentle call obeying,
And lay my sins and sorrows at thy feet,
On everlasting strength thy weakness trusting;
Clothed in thy robe of righteousness complete;
Thou risest and refreshed I leave thy throne,
And follow on to know as I am known."

How Paper Collars are Made.—A correspondent describes the process of making paper collars and cuffs at a factory in Biddeford, Maine. The paper from which they are formed comes in large sheets of the required thickness. Some forty of these sheets are placed one upon another, and then moved under the die, which cuts through the whole, giving the requisite shape of forty collars. The paper is moved under the die again, and forty more cut, and so on to the end. The button-holes are next made. Some half dozen collars are placed under the dies, and the three holes cut in each instantly. Next the collars are placed one at a time under a die or mold, which impresses the stitching upon them and marks the line by which the collar is to be turned or doubled. The collars are then doubled or turned over, one at a time by hand, run through a machine which presses them, and they are finished. They are then packed in boxes of ten each, and ten of these boxes put in a larger one, when they are ready for market. The cuffs are cut with dies after the same manner as the collars, the button-holes cut by similar method, then they are stitched, and then packed for market. Three styles of collars are made—plain, enamel, and linen surface—the paper being finished in a particular manner for each of these different styles. The average size of necks is 14½ inches. Some collars are made 16½ inches long; but most are sold of 14½ 14 and 15 inches. The present capacity of this manufactory is 25,000 collars a day, but with a new cutting machine nearly ready its capacity will be more than doubled. Most of the work is done by females. Twelve hands are now employed, but in the autumn double this number will be required.

Westtown Boarding School.

(Continued from page 149.)

"I dislike for young girls to fall into an admiration for personal appearance, fixing up apparel to suit their feelings—I desire that without discountenance an increase of it at that school; it grows out of the naughty ones setting themselves up, and all that cannot imitate pretty well every way and in every thing, they are pointed at and ridiculed. It is a disposition that will not bend to the cross in anything, and will not let others bend to it, not even though it is the great concern of caretakers and committee to have all in the simplicity, and instead of this to improve their minds and to seek to get wisdom. I do mourn over these things in young persons; it is so great a hindrance to a growth in grace; it keeps the heart hard and naughty so that good cannot enter: I see no way but to lie low and cry mightily for the deliverance of the children of this people, that their eyes may be opened to see the things which belong to their peace, and for strength to stand against wrong things; that so they may not be carried captive by their soul's enemy."

"The school feels near my best feelings, am always glad to hear of every comfortable thing relative to that concern; my best love to its helpers, every honest endeavor of theirs will be blessed sooner or later. * * * It was in the first out-set a religious concern for the guarded education of our youth; I have desired it might be carefully kept in view by the Yearly Meeting's committee, the superintendents, the teachers and the officers of the house. It is a great strength to be all united in furthering this concern."

"We received the account of the issue of the case of illness. My mind had been buoyed between hope and fear: deeply did I feel for all interested, the caretakers there and her dear friends. Close must the bereavement have proved, and

caused no doubt deep searching for the cause why she who so lately gladdened the eyes of parents, should leave the family circle, for such good reason as obtaining school learning miles from home, and almost immediately on tiring fall sick, and though no doubt anxiously watched over and faithfully cared for, should be called on to pay the debt of nature, and be moved to her ever-enduring home. Oh! as my soul, may the Lord so bless the dispensation all concerned, that it may help prepare for some final wearing out of the strength of the poor mortal bodies, and through the gracious interposition of the blessed Redeemer, qualify an entrance into the mansions of rest, where I humbly trust this dear child, through the ab means, is safely landed."

"I was glad to hear of your good meeting, the school: they are among the rich blessing our Heavenly Father to the poor and needy."

* * * My late visit has seemed to bring all care-worn folks near in feeling. There is not a way but to learn to bear burdens, and to lay down to the root of the matter, that you may understand how things really are; for this sometimes are not as they seem to be. I do believe that faithful honest labor in that concern will have its reward; while superficial work may be compared to the servant who wrapped talent in a napkin and buried it in the earth."

"The School Committee met to-day, many: That is an interesting concern, if managed will prove a blessing to our children. I look back with great comfort to the days when I was a child there."

"We have nearly gotten through with the present concerns of this 'Place'—a deeply interesting concern: I have been comforted in finding united labor for the right order and discipline in this large family, though vigilance in those immediately interested is indispensable to support. * * * I desire that that Institution may be rightly cherished and rightly kept; this is always my concern for it."

"Since writing the above we have breakfasted, and at the close a few verses [of scripture] read, as usual, by James Emilen at the head of a long table of solid Friends (among whom I am unworthy to be) but as this privilege has been given (not sought by myself) I accept it gratefully; and return to the reading, it has seemed good each time. James is a spiritual minded man, one who strives to live near the root of life in himself, so that his movements are not superficial."

"I wish our every-day walk may be so good as to encourage the good in our scholars, and them on in the best sense. I believe there was a time of more need of careful, conscientious teachers of children; there is such a mighty current of custom and fashion that many young females are much carried away with it, to the great loss of school studies, time spent in visiting one another and every new 'fashion' about personal appearance examined. School-keeps increases in 'importance' in my view, as I advance in life: teaching them to read, write and cypher, &c., &c., are good things, but various other pertinent lessons are, or ought to be, learned in school."

"Dear Friends,—To all the rightly exercised teachers and caretakers of the school at Westtown."

I feel concerned for the right setting in the present session, and would encourage you in great charge to endeavor to join hand and in laying hold on wrong things, such as are proper and suitable to be allowed at Westtown. You will have some women Friends with whom they will help, and it will be best to mention

on such things, one and all, that have crept in rough some of the girls, such as fanciful plaiting of the hair, combing and fixing each others hair; the 'head' and 'worsted work,' and whatever else may have felt to you a burden. Do, my friends, try to seek for the right way, from now to time to have wrong things stopped, or let them not long wear the appearance of a friends' school; and it would truly be a great grief to honest-hearted friends in our 'early evening and further too; yea verily, further too, any innocent children as regard these fashions come there, and in trying to be like others, they range very much. Do all you can now while the committee are with you, and during the season, as wrong things appear, at once call on the girls, and with the help of dear S. Passmore, in a proper manner have it put away, or given up; it will save much trouble, and the comfort you will have in this honest discharge of duty as faithful watchwomen over a very precious part of the Lord's heritage, will be a reward. These creeping things, fashions, unsuitable fashions, may indeed be compared to the 'foxes which spoil the tender vines.'

"My dear friend.—I have often returned to our conversation a little before I left thy room to set at home, where we were speaking of the 'fancy work' made by the girls at Westtown. The specimens thou showed me were moderate, though I thought it better to let them do it, than excite feelings, which did more harm than the 'little foxes.'

"I thought it over and over, and if I had written under the fresh feeling, it would have been better done. Thy view of the subject I appreciated, but have not been able to make it fit in with that restraint over inconsistencies which friends recommend.

"I would by no means lay rude hands on these (many would think) innocent pastimes, and quite feelings worse than the 'little foxes'; yet, as —, is there not a way to do right things, lightly; preserve the feeling and yet convince the judgment?

"Thou doubtless remembers the conversation; but it over, and please call to mind, that if the 'little foxes' are suffered to hurt the tender vines, there will be no fruit. I want us, in our different moments, and very especially at Westtown, not to get into an easy, clever, will to look at, way of doing; keeping alive something which ought to be, and the sooner the better for us, if prepared to see to it.

"The heads of our mothers in the Truth, are how laid low, who did faithfully stand against the easy fancy work at Westtown; that, I remember; and we yielded, no doubt for our good."

(To be continued.)

Queen Victoria's Plate.—A London paper says the plate at Windsor Castle, for the use of the Queen and the court weighs nearly thirty tons, and that its value may be roughly estimated at £3,000,000. It is secured in stone chambers with vaulted ceilings which form part of the original building and are supposed to be thoroughly proof against burglars. Among the plate is a dish of solid gold made by order of George IV. which is worth £8,000.

As certainly as your Master's love is in you, his work will be upon you; His objects will be yours, and also His divine burden; and sometimes that burden will be heavy. "Be of good cheer, hold fast that which ye have; let no man take your crown."

The Suez Canal.

It has been asserted of late that this canal was completed; this is not correct. A letter lately received here from the distinguished engineer of the canal, the founder and president of "The Universal Company," M. Ferdinand de Lesseps, states that "the activity of the operation on the whole line of the works from Port Said to Suez gives assurance that all will be completed by the first of October, 1869." In the *Evening Post* for February 15th, of the present year, we gave a sketch of the plan and history of the enterprise, and of the opening of the Fresh Water Canal from Cairo to Suez. It is the completion of this important branch and feeder, which supplies fresh water to the town of Suez and to the workmen on the line of the great future highway, which has been confounded with the completion of the highway itself.

The following statements concerning the work we find chiefly in the September number of the *Journal de l'Union des deux Mers*; they show the present condition and prospects of the canal. These statements accord with those made by M. de Lesseps in his annual report to the stockholders in August last, and with his more recent communications.

At the northern extremity or beginning of the canal, the works at the new harbor of Port Said, on the Mediterranean, are very far advanced. There are chiefly two jetties, two thousand five hundred metres in length, between which the canal will admit ships drawing six metres. The French metre is 39.37 inches. From Port Said south throughout to Suez, the breadth of the canal is to be increased from the original plan of sixty to one hundred metres—about three hundred and twenty-five feet. M. de Lesseps reports that the steam dredges employed along the line exercise a force equal to seventeen thousand horsepower, or to that of the whole French steam navy. They lift out eight hundred thousand cubic metres per month, and consume in the same time twelve thousand tons of fuel.

An immense improvement lately made in these dredges, is the addition of troughs, seventy metres, or nearly two hundred and thirty feet, in length. The sand and mud are lifted into the trough by the dredge, and then a stream of water driven upon them forces them, in a half fluid state, to the farther end of the trough, from which they fall at such a distance as to prevent inconvenient accumulations on the banks of the canal.

The outlay still necessary to complete the canal is now estimated at one hundred million francs. The original estimate, made in 1855 by the most distinguished engineers of Europe was two hundred million francs, or forty million of dollars. The changes of plan and the obstacles of delay, caused to a great extent by the determined hostility of the British government, have more than doubled that sum. But the revenues now expected from the sale of lands guaranteed to the company on the banks of the canal, promise in themselves to yield a value double or triple the whole capital expended.

The transit service for small vessels, which has been now fully organized, has already gained for the company, during the first six months of the year 1867, the sum of 521,381 francs, or about \$104,275. These transports have carried across the isthmus 9,506 tons of merchandise and 20,132 travellers. This tonnage is rapidly increasing. Before July it was never less than 1,200 per month; but during the first ten days of July alone it amounted to 780 tons.

Curiously enough, the English, who have long

opposed the canal, are now the first to make use of it for war purposes. On the 30th of July inquiries were made at Paris, on account of the British government, at what price per head a thousand cattle could be taken across the isthmus by the light transports which now go through the narrow channel, and how many tons of merchandise per day the company could transport. In reply the charges named were twenty-seven francs per head for cattle and twenty-five francs per ton for merchandise. Very large supplies are expected to be shipped on account of the British government for the Abyssinian expedition. The Peninsular and Oriental Steamship Company have also entered into negotiations with the canal company for transportation.

In 1857, when Lord Palmerston was asked in the House of Commons whether the British government would use its influence at Constantinople in favor of the canal, he replied: "Her Majesty's government certainly cannot do so, because for the last fifteen years they have used all the influence they possessed at Constantinople and in Egypt to prevent the scheme from being carried into execution. It is a scheme hostile to the interests of this country, and to its standing policy in regard to the connection of Egypt with Turkey. The obvious political tendency is to render more easy the separation of Egypt from Turkey. It is also founded on speculations with regard to easier access to our Indian possessions."

In the same spirit he represented to the Turkish government that the construction of the canal "would place between Egypt and Syria a political barrier thrown up by foreigners, who would soon occupy the isthmus between the Mediterranean and the Red Sea; and hence questions of an embarrassing and dangerous nature would arise between the government of these foreigners and the Porte." The great railroad engineer Stephenson also opposed the work in his place in the House of Commons.

The English government indeed effected a suspension of the work in 1863, by persuading the Sultan, as suzerain, to refuse his sanction to the concession granted by the Pacha, unless the forced labor of the one hundred thousand fellahs were discontinued, the canal declared neutral, and the sovereign rights of the company abandoned in regard to the lands on the banks of the fresh water canal from Cairo to Suez. But this stoppage was eventually productive of great good by causing the introduction of the powerful steam dredges now used.—*E. Post.*

For "The Friend."

"Dearly beloved and longed for in the Lord," is a language which is felt very truthfully to arise toward the dear young people in our Society. Those to whom we should look for a succession of helpers and standard-bearers, in that noble cause which can engage our attention in this pilgrimage journey of life.

It is a source of much satisfaction, and even rejoicing, that the Lord is not only laying His hand upon one here and another there, but that not a few, it is believed, through His ever-present almighty power and love, are bowing in sweet contrition of soul to His yoke, and yielding themselves to the discipline of the cross of their dear Redeemer. These if faithful,—and may nothing ever be permitted to frustrate the work begun, or mar the vessel designed to become meet for the inscription of "Holiness unto the Lord"—these will become more and more crucified to the world, and, happy experience! know the world crucified unto them; and, as they continue patient under every turning and overturning of the Preparing

Hand upon them, will be fitted for usefulness, and called to fill honorable positions in the church of Christ. So that, serving their generation according to the will of God, they shall, through mercy, be enabled to effectually turn the battle to the gate; and finally to receive the end of their faith, even the salvation of their immortal souls.

By such, the following letter of William Lewis, written the early part of this century, will, it is believed, be read with interest and encouragement.

"To the daughter of an intimate friend, in her last illness.

'Very pleasant hast thou been to me,' said one in ancient times, concerning a much loved friend, between whom and himself, a recent and final separation had (in unerring wisdom) been permitted.)

May I not adopt similar language in addressing thee, my dear young friend, under the recollection of feelings excited in past intercourse; and say, pleasant, interestingly pleasant, hast thou been to my heart on several accounts. Whilst viewing thee, things past and present have been blended in my mind with impressive force, and as it has thus been, strange would it be, if *under present circumstances*, all within me capable of affectionate interest, were not awakened into deep and lively solicitude on thy account; which overlooking all that is limited by time, extends to the highest concerns, and embraces the solemnly pleasing contemplation of thy relationship to an heavenly Father, and birth-right in Christ Jesus (our common salvation) to his glorious and eternal kingdom. It would be strange, indeed, my dear friend, could I *now* be so indifferent respecting these thy great interests, as wholly to withhold the mention of them to thee in some manner; and now, whilst they are full in my view, with all the love my soul is enabled to feel, I beseech thee, let them be not only thy *chief* but *sole* concern—labor to introvert thy mind into such deep and solemn contemplation on them, as to swallow up all that is of an inferior nature; in which exercise (faithfully and patiently maintained) thy holy Redeemer, the light of all mankind, will not only discover to thee in what thy alienation from the divine nature consists, as a child of the 'first Adam;' but will also kindle in the ground of thy heart, fervent and availing supplications for restoration in him 'the second Adam,' by the *effectual working of his power*, as a 'quickening spirit,' creating in thee a 'new heart and a new spirit,' according to his promise, in adorable mercy, to all who truly humble their souls before him, and who, for his sake, renounce all that is earthly and creaturely. Oh how great the work! even for those whose first pursuits have not been of a gross kind, but whom, the soft and seemingly refined creaturely attractions have drawn and held fast. I wish it to appear so to thee, dear child! not to create dismay, but to make way for a conviction of the necessity of divine almighty assistance for its completion; that in this view of it, thou mayst turn to the Lord alone for help, and neither lean upon thine own understanding, nor on that of any other creature. Oh take heed of looking *without thee*! much danger is in it; neither let any person or thing engage much of thy precious time and attention; but when necessarily relaxed from deep exercise, peruse the Holy Scriptures; thy holy Redeemer's doctrines and commands will illuminate thy judgment; the precious promises contained in the prophets will cheer thy hopes; and the holy breathings of the Lord's servants in former times (particularly those of the 'sweet Psalmist' of Israel) will open to thy view the state

of mind into which *real religion introduceth*, and *what thou art called to aspire after*. There happens, I believe, a season to all the Lord's seeking children, when even things lawful, are far, very far from being expedient; happy then are they who, fully obeying their Master's call, whether to come up to Tabor's mount or to watch with him in Gethsemane's garden, escape the rebuke of 'Sleepest thou?' 'Couldst thou not watch with me one hour?' avoiding also the danger of falling into similar unfaithfulness to that of him who was brought even to 'weep bitterly.'

That thou mayest be of these obedient few, hath been and still is, my wish and desire, and in conformity thereto, some caution has appeared proper, in taking up any of thy precious moments personally, endeavoring to do as I have found it profitable to be done unto when under bodily afflictions, even to be left alone, to turn my face to the wall, and to pray to the Lord of mercy for his *all-sustaining help and comfort*.

Thus much then, and no further, in this way, except to assure thee, sweet offspring of my beloved friend! that with all the ardor my heart is capable of feeling, I pray for thy experiencing such purification in the present furnace of trial, as it is graciously designed to effect, that when unerring wisdom shall see meet to bring thee up therefrom, thy soul may be 'clothed in white raiment,' and thou be joined to the 'pure in heart' who 'see God.'

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 161.)

"Eighth mo. 28th, 1836. * * * It is truly cordial to feel that in the dreary waste of existence, there are those who are not ashamed to acknowledge, and evidence by conduct, that there is a *restraining principle to which our wills must bow*. That the opinion of the world is not to decide our course of conduct; and whether we obtain its smile or its frown, *our line of duty is the same*. I often lament in myself the proneness to conform to its maxims; and sigh for a place of utter seclusion, where its opinions would be uncared for and forgotten. There certainly can be no advancement in the path of self-denial while so much lukewarmness towards better things, and such a propensity for fleshly ease and shrinking from the cross, mark my conduct and feelings. They are sources of unceasing regret to me; and when I remember my unfaithfulness when strength to combat was signally evident, I scarcely dare hope I shall ever now obtain the mastery over my besetting sins, or hold the Truth other than in the mixture."

"My path is, and has been for many months past, dark and obscure; scarcely one ray of holy light has illumined it; and forbidden as I have felt myself to seek consolation in inferior sources, I have passed wearily on. But my heart freely acknowledges its justness. If sensible objects were allowed to be a source of constant relief, our hearts would centre in them; and the prime Source of consolation would be neglected and forgotten. Thou wouldst wonder at my insensibility were I to tell thee how cold and indifferent I feel, even when surrounded by those whose company used to be the most exciting circumstance; and I often conclude myself *most solitary* when thus associated. But why do I tell thee this. It seems almost an unreal picture, that I scarcely whisper to myself; and I don't know but a little pride prompts me to conceal my poverty, and in my every day conduct induces the smile of complacency, and the apparent interest in trifling subjects, lest the true state of my heart should be discovered."

"Thou tellest me the enemy is still busy, showing himself in his true character—a liar from the beginning." But thou hast certainly an omnipresent Helper, who can effectually lift thee standard against such an insinuation as thou mentionest. What abundant evidence has been granted thee that He who regardeth His children will be the most compassionate eye has manifested Himself for thy help: that He hath shown thee 'the path which no fowl knoweth, and which the vulture's eye hath not seen,' and has made thee know, that if thou abide faithful to His requirements, He will lead thee safely through this wide world, and in His own time take thee to Himself. Is not this enough to incite us to the most scrupulous care, lest we miss 'so great salvation' as become outcasts from the presence of Him, *what to know is life?* I have of late often meditated upon the eternity to which we are all fast hastening, and endeavored to weigh the awful import of the words 'ever and ever,' as connected with our abidance in the unseen world. When we can however feebly, realize the truth of certain retribution beyond the grave, it has a tendency to show in a true light the vanity of all this world can offer us, and the unspeakable importance of securing an interest in Him who has promised to be our guide even unto death."

"I was not disappointed to hear the account respecting —. How sorrowful that she is misled: it is to me an affecting instance of the weakness and fallibility of our natures. Oh that the furnace could be long enough endured to destroy the part appointed to death, that so many failures might be avoided in those who were perhaps designated as leaders to the people. The state of our Society really calls for mourning from the sufficiently alive to feel, and to know it as it is. The inroads of the grand adversary are sorrowfully evident, not only alluring the young an inexperienced from the path of safety, but even drawing down to the earth and fixing there, those of the priesthood. How applicable now the caution, 'cease ye from man;' for even those who we might have looked to as beacons and warnings, seem to have scarcely strength enough to stand."

"Tenth mo., 25th, 1836. * * * Ties that bind together the human family are certainly most amiable, when exercised under proper regulations. All that have in view the one grand object, and regard the intelligent creatures that people this vast ball, as alike objects of the regard and love of the Creator of all things cannot but bear upon their hearts the kindred recollection, these too are brethren. These, with myself, have talents committed to them, upon a right occupancy of which depends their everlasting well-being; and can I behold one of the listless and unconcerned, without feeling the mo anxious wish to awaken them to a sense of the danger; and point out to them the inevitable consequence of persisting in the neglect of the soul's best interests? Thus the ties of tender feeling binds us to our kind, and the higher claim each can have upon the other, is that we have *one Father*. All have not the same claims upon our affections; but upon that charity that 'suffereth long and is kind,' that looks with the eye of compassion on the frailties of another, prompts the sigh of pity, rather than the harsh voice of censure, all ought to draw faithfully a largely. Could we but persuade ourselves how little we know the motive that prompts the devotee are liable to condemn, it would certainly teach us to judge cautiously, if we dared judge at all and I think if we were but sufficiently acquainted with our own hearts, and seeking there the fau

and weaknesses that are so continually preying upon them, we should be more inclined to combat faithfully with the traitors within, than to be prostrating the business of Him who has said 'I will recompense.' How much a deeper indwelling of the Spirit of Truth is wanting among us, how many are the waste places of our Zion, and how little the prospect of a faithful succession of workers in the church. 'The ways of Zion do mourn, because so few come to her solemn feasts;' and must these desolations continue? Are there none to stand in the breach lest this favored people be destroyed? My hopes are firm, that notwithstanding the declensions and divisions that by occur among us, there will still be left 'a chosen generation.' Principles purely Quakerian, I believe, yet upheld in their primitive integrity, by those not ashamed of the scoff of the world, or the worldling's sneer. But it is as true now as when the lip of Truth declared it, that flesh and blood cannot inherit the kingdom: we must not expect to retain our natural, selfish will; 'old things must be done away' before we can be created new creatures in Christ Jesus. The natural man knoweth not the things of the spirit of God; and 'tis only as we become subdued to the powerful operations thereof, we can come to know the utter depravity that reigns within us, and can learn availingly to submit as little children, so that the good work can be effectually carried on, and we brought to see that our own efforts can avail nothing in so holy a cause."

(To be continued.)

Punctuality.—Method is the very hinge of business, and there is no method without punctuality. We want of it not only infringes on necessary duty, but sometimes excludes this duty. Punctuality is important as it gains time. It is like putting things in a box, a good packer will get away as much as a bad one. The exactness of it and which it produces is another advantage of punctuality. A disorderly man is always in a hurry, he has no time to speak with you, because he is going elsewhere; and when he gets there he is too late for his business, or he must hurry away to another before he can finish it. It was the maxim of the Duke of Newcastle, I do not do a thing at a time.—*Bright Workman.*

A Call to the Gallies.—"Let not the sun go down on thy wrath," says the Spirit; but much more does it in substance say, Let not the sun go down on thy indifference. "I would ye were often cold or hot," writes the disciple whom Jesus loved, and we are elsewhere in the volume recorded inspiration authorized to "be angry at sin not," but nowhere to be indifferent and sin not."

Christian courage is unflinching, and outspoken as unresenting.

THE FRIEND.

FIRST MONTH 11, 1868.

One number of "The Friend" has been prepared to its readers since the old year departed, and a new one has been ushered in. Without attaching undue importance to days and times, and an event is well calculated to invite to serious reflection every one impressed with a sense of the value of time, the purpose for which it is used out, moment by moment, to the living, and the rapidity with which it hasteth away.

The mind almost intuitively reverts to the more important events retained in the memory, mark-

ing for it most deeply the flight of that measure of life now finished and gone beyond recall. Our success or failure in the plans laid or the business pursued for providing things honest in the sight of all men; the loss of dear relatives or friends on whom we were accustomed to depend for counsel and aid, or from whom we derived a large measure of enjoyment; the consciousness of a due appreciation or the thoughtless reception of the manifold blessings daily bestowed; and above all, the progress made in the great work of salvation; each and all press for attention and may well be entertained for profitable reflection, stimulating to heartfelt gratitude for mercies past, and a righteous resolution to attend more freely and fully to the coming calls of duty, and to render more fitting returns for the continued undeserved benefactions of a long-suffering Creator; whether manifested in the gift of grace or gifts of material good. Generally we are more disposed to dwell on the good we may have lost, or striven for unavailingly, rather than to number the blessings we must acknowledge are still vouchsafed, and thus we allow our musings to take a direction more productive of gloom, if not of despondency, than provocative to love and good works.

In this periodical review, it may perhaps be good for all, but more especially for those who have reached or passed the meridian of life, to recall the associates of their youth or early manhood, and see how few who started with them on the journey of life, are still treading its devious paths. It may be the associates, beyond their circle of family relationship were comparatively few, and they loosely held and lightly cast off, but we apprehend there are not many who make the survey but must be startled by finding how small is the number left, of those with whom they were in some way connected, at the opening of their busy career; and though those who have been called away may not have exercised much influence for good, either by precept or example, on our course of life, yet their shortened probation should speak to us effectually to hasten our own preparation for the same undeniable messenger.

If thus in the wider relations of life, we are brought to appreciate the uncertainty of time, and how tottering and insecure are man's most firmly erected fabrics of temporal happiness, the retrospect takes a much stronger hold of the feelings should death have invaded our own domestic circle, and severed the tenderest though strongest ties of long cherished affection. Especially is this the case if he has removed the honored centre around which a loving family revolved in peaceful life, shining with the light of christian graces. Oh! then how may the softened heart, while it lingers with fond fellowship on the treasured memories of the past, recall the omissions of acknowledged duty, and the failures of even unfeigned affection—made heavier by the sad thought that regret and resolve are now unavailing to prove the depth of our reverential love for the departed—and how does the voice that issued from the lips now closed forever, sound in the mental ear, restoring the lessons of wisdom committed in former days to our keeping, but, alas! too often overlooked or forgotten; but which now we may resolve to apply to the future realities of life.

Where the advent of a new year leads to reflections analogous to these, both heart and spirit may derive benefit from conversing in thought on our relationship with the unseen world, and the necessity for uninterrupted religious culture, which are naturally connected with anticipations of, and resolutions for the future. As religious culture is greatly influenced by our intimate companions and our social relations, so it is hardly less affected

by our connection with and sincere interest in the religious Society to which we belong. Man without true religion is the creature of circumstances, but if he has bought "the pearl of great price," though he may feel the force of his surroundings, he has that which can raise him above their opposition and free him from their control.

Unless governed by the unalterable principles of Truth, our impressions and opinions will become subservient to the impulse of feeling, and thus we may habitually embrace things as being most conducive to our best interests, merely because they are agreeable to our inclinations. It is therefore a matter of great importance to appreciate fully the value of our religious profession, and also the advantages conferred by the associations it brings with it; for if the heart is cold, or indifferent to the religion we profess, our connection with those who really love and live up to it, will not be cordial and co-operative, and we will be at all times exposed to the danger of heart-burnings and alienations, which lead to estrangement and separation.

Men educated in the tenets of a religious society, or having embraced them from a belief in their truth, may, in the progress of spiritual enlightenment, see beyond its imperfect attainments, and be introduced into a higher and purer realization of Christianity; when, they may rightly leave the former for another denomination more congenial with their clearer views. But where any, from a boasted attainment of high toned charity, and freedom from what they are pleased to call sectarianism, affect to discard special attachment to the religious society with which they are connected, and to embrace with equal warmth the members of other denominations, it will be found, almost universally, to result from something wrong in their christian character, justly exciting distrust of soundness in faith or in the capacity to estimate correctly its operation and its fruits. Strong preferences for one's own religious society is no more incompatible with christian good will towards others, than is the concentrated love for one's own household inimical to a diffused interest for the whole human family.

If then we are firmly and intelligently united with the principles of the body with which we voluntarily remain connected, and have a just appreciation of the strength and help received from hearty and continuous association with others bound to those principles equally with ourselves, we will be sensitively alive to any innovations on the common faith, not only because we prefer what we believe to be the truth, to error, but lest they dissolve the bond which holds us one to another, and thus deprive us of the sympathy and aid, which, in meeting the trials of life, we have felt we so greatly need. Hence it will be felt important to guard against allowing a spirit of levity or recklessness to prompt us to censorious criticism, or to disregard even those things that may be considered as the exterior and lesser points of our christian profession; lest fault-finding may be converted into antagonism, and, while flattering ourselves with exercising a more enlightened and independent judgment, we find we have been betrayed almost insensibly into "all uncharitableness," and opposition to those not prepared to adopt our views, and with whom it may have been our desire in former time, to be united in the unity of the Spirit.

Observation, we think, might convince every unprejudiced mind, that, in the society of Friends, attempts at change in faith or practices, much more frequently originate from exterior influences than from conscientious convictions of duty; and that, supposing those things sought to be altered

Journal of a Deceased Minister.

(Continued from page 185.)

Eleventh mo. 30th, 1836. We have many exemplifications of an assertion of Him who dwells in the human heart in all its transformations: the light that is in these become darkness how it is that darkness." But may we, instead of looking too much at the conduct of others, double watch on our own hearts. The same subtle by that *has* drawn, and is drawing multitudes by the by-ways and crooked paths of an empty passion, is ever on the alert. His baits are easily spread, and there is always danger, unless steadily heed the commandment, "Watch and abide." We may see, and must lament the proneness of our erring natures to be drawn into evil; but I think there is greater safety in guarding our own hearts than in searching out the depth of evil that is concealed in the breast of another. "In the light there is safety," is often a healthful watchword; and at such a time as this when so many perilous circumstances call forth our interest, our doubts and our fears, solemn introversion may prove to us from many things that would only tend to scatter our thoughts from the stronghold of truth.

To date. * * * "Thou knowest in 'silence enjoy advantage,' and I doubt not thou many times feels it more conducive to healthful placidity, than association with indiscriminate visitors. 'Tis there may be danger of the mind's preying much upon itself—too prone to dwell upon its own weaknesses, and to indulge those discouraging reasonings which the enemy of all good is sometimes permitted to pour in as a flood. But little faith can be laid hold of, and the mind tends to resist him, by casting all the care upon the Arm which is able to save, the spiritual eyes sometimes more effectually open to see his delusions; when doubts, fears, and discouragements assail with an almost overwhelming force, the assurance 'He is able to save to the very uttermost,' becomes the mind as an anchor, and when looked upon cherished, may become our almost habitual strength. It is only as we resist these accusations of the grand enemy that his hold becomes weaker. 'Tis his pride to throw before us our easily pardoning sins, and to work upon our feeble reasonings to estimation that they have become too firmly

fixed for dislodgment, and that our firmest efforts never will effect our union with Purity and Truth; and 'tis very true our unassisted endeavors never can cleanse the mind from its bias to evil. And the merciful Being whom we serve, never has told us, that the strength and might are our own. He knows us altogether as we are, and has declared that 'without me ye can do nothing.' He requires of us simple and childlike obedience, and as we make it our care to submit in all things, 'He who sits as a refiner and purifier of silver' will evidence that His work in the human heart can be effectual, not only to cleansing from every distrust in His will, power, and might, but to make that heart a fit dwelling-place for the Spirit of Truth. I cannot but believe it is safer to urge our confidence in the Lord, who remains to be the 'strength of His people,' than to reason with these discouraging prospects that often cloud the mind: not that we are to look for a lengthened exemption from suffering; for the experienced apostle tells us he takes pleasure in infirmities, 'for when I am weak,' he remarks, 'then am I strong.' And a greater than he tells us, 'In the world ye shall have tribulations;' but what I mean is, that when we are tempted to doubt every thing, and believe we have made, or are making, no advancement in the way to the kingdom, it is best so far as we can, to rely in humble confidence upon a Saviour's love, and believe His power is as effectual as ever it is 'to bind up the broken-hearted, to preach deliverance to the captive,' and in the right time to loosen the prisoners and enable them to ascribe to His holy and glorious Name, thanksgiving, and high renown. Have we not cause to magnify that Love, which we cannot deny, has, in measure, staved in our view the alluring and specious promises of this world? 'Tis to me sometimes a source of unlimited admiration, that I should have been at all cared for; and most humbling is the reflection that I have so poorly co-operated with the designs of Infinite Wisdom. Love unbounded, unfathomable, must have been the Source of so many blessings, and however unable to estimate or appreciate it, feelings that words cannot express, must often swell the grateful heart, while the aspiration arises for ability to serve more faithfully and effectually the Fountain of every blessing."

"2d mo. 1837. * * * It is certainly desirable every member of our Society, should have some knowledge of the truths we hold; and although a research must lead to the perusal of writings lacking the polish of style and harmony of numbers that characterize modern productions, still, I cannot but think, the unadorned page, and simple phraseology, pointing to much good sense, sound reasoning, and genuine gospel faith and practice, must convince every unbiased reader, that the principles they contended for were pure. And now, when those principles are assailed on every hand, and denied as being obligatory in these days of advanced christian experience, those among us who value them according to their worth, and advocate them as worthy the assent of the successors of the wise and good, cannot but feel interested in their promulgation, and desire that more may

be willing to see and learn for themselves, that Quakerism, such as it was at the first, is unsullied christianity."

"You, of course, witnessed the beautiful auroral phenomena a few nights since: we observed it throughout the course of the evening increasing and waning in brilliancy; but a few minutes after ten was the most interesting period. The deep rose color first appeared in isolated streaks, and gradually diffused itself over the whole surface of the heavens, tinging the snow with a hue delicately resembling the bright arch above. It was singularly calculated to attract the admiring gaze; but I think not at all equal to the meteoric display some of us witnessed some years since." [On the morning of the thirteenth of Eleventh month, 1833.]

"3d mo. 22d, 1837. It occurred to me this morning, the necessity or desirableness of attaining a state of mind, so submissively corresponding with the will of Him who disposes events according to His pleasure, that we might accept His providences with perfect resignation, under the belief that they are righteous, and designed for some good end; and I firmly believe such a state of mind is the prerogative of the devoted christian. The tear of sorrow may course the cheek, and the sigh relieve a breast laboring under complicated discouragements; but these the weaknesses of our nature prompt; and they are often the overflowings of a full and feeling heart; but they contain no shadow of a murmur at the events a kind Father may direct, or permit to prove the constancy and depth of our love. Various are the ways of His working to teach us, what we must leave if we fulfil the ends of our existence; and many an humbled heart can acknowledge, when recurring to the onward trials, or inward besetments that have attended their path, that not one too much pang have been inflicted, nor one drop too much of the wormwood and the gall been infused into their cup. Love, divine love, is felt to be a source whence these tribulations spring, and we may trace throughout the long period of discipline to which we may be subjected, a motive tending to the same point; the salvation of our immortal souls. How gladdening then may be the reflection, that whatever our situation in life; however oppressed, or destitute, or burdened we may feel ourselves to be, if the fault is not our own, the path is still open before us: 'The Creator of all things,' may still be our friend; and if 'God be for us' what matter who or what is against us. We then have an unfailing source of comfort and consolation within, and however bitterly the storms of life may assail our little bark, still the anchor is sure. Winds and waves must beat in vain against it, because the promise is to the true disciple, 'Lo I am with you always, even unto the end of the world.' Tribulations await us here: they are part of our inheritance in this life, and the most favored must share them, but they are comparatively only 'for a moment,' and in the power of God we are engaged to set up our banners, will, according to the apostle, 'Work out for us a far more exceeding and eternal weight of glory.'

"We are sorry to hear of —'s increasing in-

disposition. 'Tis painful; you must feel it so; to witness a prop you are clinging too, gradually loosening its hold on earth; but our dependencies here are uncertain. Decay is deeply inscribed upon everything visible."

(To be continued.)

Sticklebacks and Their Nests.

The genus *Cottoida* (fish having mailed cheeks) has a great many representatives, common on Vancouver Island and the British Columbian coasts. The least of the family, the stickleback, is so singularly different from most other fishes in its habits, as to merit the first consideration.

In the months of July and August it would be difficult to find a stream, large or small, swift or slow, lake, pool, or muddy estuary, east and west of the Cascade Mountains, that has not in it immense shoals of that most irritable and pugnacious little fish the stickleback.

This pugnacity arises from intense parental affection: a love of offspring, scarcely having a parallel in the living world, prompting him to risk his life, and spend a great deal of his time in constantly-recurring paroxysms of fury and sanguinary conflicts, in which it often happens that one or more of the combatants gets ripped open or mortally stabbed with the formidable spines arming the back. Skill in stickleback battles appears to consist in rapidly diving under an adversary, then as suddenly rising, and driving the spines into his sides and stomach. The little furies swim round and round, their noses tightly jammed together; but the moment one gets his nose the least bit under that of his foe, then he pries his fins with all his might, and forcing himself beneath, does his best to drive in his spear, if the other be not quick enough to dart upwards and escape the thrust; thus squaring they fight round after round until the death or flight of one ends the combat.

I have often, when tired, lain down on the bank of a stream, beneath the friendly shade of some leafy tree, and gazing into its depths watched the sticklebacks either guarding their nests already built, or busy in their construction. The site is generally amongst the stems of aquatic plants, where the water always flows, but not too swiftly. He first begins by carrying small bits of green material, which he nips off the stalks, and tugs from out the bottom and sides of the banks; these he attaches by some glutinous material, that he clearly has the power of secreting, to the different stems destined as pillars for his building. During this operation he swims against the work already done, splashes about, and seems to test its durability and strength; rubs himself against the tiny kind of platform, scrapes the slimy mucus from his sides, to mix with and act as mortar for his vegetable bricks. Then he thrusts his nose into the sand at the bottom, and bringing a mouthful scatters it over the foundation; this is repeated until enough has been thrown on to weight the slender fabric down, and give it substance and stability. Then more twists, turns, and splashes, to test the firm adherence of all the materials that are intended to constitute the foundation of the house, that has yet to be erected on it. The nest or nursery, when completed, is a hollow, somewhat rounded, barrel-shaped structure, worked together much in the same way as the platform fastened to the water-plants; the whole firmly glued together by the viscous secretion scraped off the body. The inside is made as smooth as possible, by a kind of plastering system; the little architect continually goes in, then turning round and round, works the mucus from his body on to the inner sides of the nest, where it hardens

like a tough varnish. There are two apertures, smooth and symmetrical as the hole leading into a wren's nest, and not unlike it.

All this laborious work is done entirely by the male fish, and when the nest is completed and the eggs deposited in it, he keeps guard over it for six weeks (and sometimes a few days more). Enemies of all sorts, even the females of his own species, having a weakness for new-laid eggs, hover round his brimming nest, and battles are of hourly occurrence; for he defies them all, even to predatory water-beetles, that, despite their horny armor, often get a fatal lance-wound from the furious fish. Then he has to turn the eggs, and expose the under ones to the running water; and even when the progeny make their appearance, his domestic duties are far from ended, for it is said (although I have never seen him do it,) "When one of the young fish shows any disposition to wander from the nest, he darts after it, seizes it in his mouth, and brings it back again."

There are three species that come into the freshwaters of British Columbia, to nest and to hatch their young. Of these the tiny stickleback, though smaller in size than his brethren, is vastly more abundant. Sir J. Richardson speaks of it "as being common in the Saskatchewan, ranging as far north as the 65th parallel." So abundant are they in the lakes and pools about Cumberland House, east of the Rocky Mountains, that sled-loads are dipped out with wooden bowls, and used for feeding the dogs. I have seen cartloads of these tiny fish in a single pool, left by the receding waters after the summer floods, on the Sumass prairie and banks of the Chilukweyuk river. As the water rapidly evaporated, the miserable captives huddled closer and closer together, starving with hunger and panting for air, but without the remotest chance of escape. The sticklebacks die and decompose, or yield banquets to the bears, weasels, birds, and beetles; the pool dries, and in a few weeks not a trace or record remains of the dead host of fishes. In the smaller streams, a bowl dipped into the water where the sticklebacks were thickest, could be readily filled with fish.—*The Naturalist in British Columbia.*

Westtown Boarding School.

(Continued from page 157.)

The following letter was addressed to one on entering as a teacher at Westtown.

"In thinking of thee and thy prospects during the wakeful hours of the night, it seemed to me it might be allowable and perhaps more than allowable, to encourage thee to 'put on strength in the name of the Lord.' Thou art no doubt very sensible of the need of this in so great an undertaking, but it may be that the enemy may take advantage of times of poverty unduly to cast down and discourage; and although I think it is wisely ordered that our salvation should be wrought out 'with fear and trembling,' yet if we hold fast our hope and confidence firm unto the end, we shall experience a change of dispensation, and know of a truth the 'work of righteousness is peace, and the effect of righteousness quietness and assurance for ever.' I do not anticipate that thou wilt be exempt from pretty heavy burdens, inwardly and outwardly, such as will very properly lead thee often into thy closet to seek for a renewal of strength, yet I trust thou wilt also, both for thy own sake and that of others, be enabled, after such seasons to 'wash and anoint,' and endeavor both to be, and to appear as cheerful as an innocent gravity will allow. If thou should yield to undue discouragement, the enemy may then rob thee of that secret 'word in season' which will never be withheld at the needful time to such as

hope and wait for it. Therefore I would do to strengthen the weak hands and confirm feeble knees; say to them that are of a fear heart, Be strong; fear not," &c. * *

"I dare say there are many trials, peculiar to position at the school, but I have also had reason to think there was much to be thankful for being placed in a situation wherein we can see the good cause in our outward vocation, but lie in it to flatter and nourish selfish feelings, an constant opportunity to do a little good, if it only by diffusing the salutary influence of a example,—a devout and prayerful spirit,—affectionate interest in the best welfare of the friends 'laubs' entrusted to your care."

"I am not surprised to find thou felt so much for that dear child, I felt as though I would gladly take her in and give her a home amongst eternal Friends; but had my doubts about a situation being really bettered, in best things, being here. I felt about her much as thou hast expressed; as though the good Hand was leading her about and instructing her, and I thought very possible it might be best that she should main under the same special care, until the way opened with clearness for her to leave. I knowledge that the thought of her going to Westtown and being under the tender care and not of some of the Friends who reside there, and who visit it occasionally, did feel pleasant: I remembered what a most agreeable asylum Westtown became to my dear companion, when under great affliction and bereavement, and such I know has been to others beside her. It is a place where one may profitably enter as a teacher and school at the same time. Didst thou say any thing —, to encourage her remaining as she is, the right time is seen for her release: 'He believeth maketh not haste;' she may have important service in that land of captivity: 'I reward is with Him and his work before Him.' A succession of fruitful seasons may follow years of patience and hope."

"Full well I know how hard it is under pressure of bodily infirmity, still to feel a weight of responsibility resting upon the mind, without easy to put away. I fully believe divine compassion regards thee; thy sighs and thy tears even thy physical ailments are not unnoticed that I crave that thy strength may be renewed and revived by a sense of His mercy, and that thou mayest hold up thy head in hope. We said to be 'saved by hope,' and let us not suffer the enemy to rob us of this precious anchor to tossed and tribulated mind. * * *

"To 'know how to abound' as well as 'how to sow want,' I have often thought must be amongst the highest of christian attainments. To suffer with patient submission, and let it 'have its perfect work' in 'strengthening, establishing, and abiding' us, and to 'abound' with trembling humility, lest the enemy should insinuate some of his flattering delusions, and tempt us to think now all is safe—we shall never be moved, &c.; blessed is that which endureth temptations such as these and many, many others, for 'when he is tried he shall receive the crown of life.' 'The thing concerning me have an end,' said the dear Master, and we are not to suppose that 'the rod of the wicked shall always rest upon the lot of the righteous,' but that he shall in due time know his enemies to be subdued under him, and the cry of victory—the mark of holiness, placed upon his head. * * *

"We have heard of your recent trials at W. and have thought much about you. All our afflictions be thoroughly sanctified to us all, is the sincere desire of thy affectionate friend."

I hope I shall always feel a lively interest in welfare of those who have given up the world are endeavoring to tread the self-denying path. There is no doubt thy situation has its peculiarities; but it also has its peculiar advantages: one that thy field of labor leaves but little opportunity for spending time uselessly, and another that the tender objects of care are of that age that resolutions made now may be hoped to be durable. I would like to visit you more frequently than I can; but I cannot feel like doing any good by going more than I may be yielded too much to disarrangement. I have often felt for your young assistants, who have been willing to give up such valuable home-forts, and devote themselves to the service of society,—hope I may say, to the service of God.

Often do I remember the lively interest thy dear mother retained in thee till the last of her life, and if she was denied of the opportunity of doing much, the will no doubt accepted. I think the mantle of spirit has fallen upon some of her children, though she had the opportunity of laboring in the she felt so much concerned about."

It is often a comfort to me to think of thy fill the position thou dost, though thy constitution is feeble, yet it is not upon our own strength have to rely. He who said, 'I profess unto I die daily,' said also, 'I can do all things through Christ who strengtheneth me.' A deep sense of our own weakness is entirely consistent with a lively faith in divine help and power. I have no doubt thou hast mercifully excused—and more of this experience is what I need, and need to abide under.

I have been sorry to learn from one of the others, that the boys school is more unsettled than usual. Oh! for something to reach and subvert the untoward spirit of our too thoughtless youth! how sad to think of such liberality, such common favors of many kinds being bestowed upon our children, and they not appreciating them. I feel as me as though it was time to pray for them as with the heart of one man."

(To be continued.)

Story about Early Rising.—In the "Life of Josiah Quincy" is the following story of a passed by Judge Story on two of his friends related to the habit of early rising:

I have related, in telling my father's doings as a resident, how he never failed to set the sleepy ones an example of rigid punctuality at morning-chapel. He deserves the less credit for this, however, in that he had contracted, many years before, the habit of rising every morning before winter and summer, at four o'clock, so that he had been long astir before the prayer-bell rung its unwelcome summons. This excess in early hours, however, like every other excess, brought its penalty along with it. Nature would not be cheated of her dues, and if they were not paid in season she would exact them out of season. Accordingly, my father was sure to drop asleep, wherever he might be, when his mind was not actively occupied; sometimes, even in company, if the conversation was not especially arduous, and always as soon as he took his seat in his gig, or 'sulky,' in which he used to drive himself to town. It was good luck and the good nature of his horses that carried him safe through for so many years.

One day John Quincy Adams, who was added to the same temperate early rising, with all the same consequences, was visiting my father, who invited him to go into Judge Story's study-room and hear his lecture to his law class. Judge Story did not accept the philosophy

of his two friends in this particular, and would insist that it was a more excellent way to take out one's allowance of sleep in bed, and be wide awake when out of it—which he himself most assuredly always was. The judge received the two Presidents gladly, and placed them in the seat of honor on the dais by his side, fronting the class, and proceeded with his lecture. It was not long before, glancing his eye aside to see how his guests were impressed by his doctrine, he saw that they were both of them sound asleep, and he saw that the class saw it too. Pausing a moment in his swift career of speech, he pointed to the two sleeping figures and uttered these words of warning:

"Gentlemen, you see before you a melancholy example of the evil effects of early rising." The shout of laughter with which this judicial *obiter dictum* was received, effectually aroused the sleepers, and it is to be hoped that they heard and profited by the remainder of the discourse."

Communicated for "The Friend."

Mary Mendenhall, the notice of whose death appeared in a previous number of "The Friend," became a member of the Society of Friends by conviction in early youth, and for a number of years acceptably filled the station of an elder in Deep River Monthly Meeting.

During the last eighteen months of her well-spent life, she suffered from a cancerous affection of her face; and was wonderfully sustained by the same tender Hand that meted out to her this painful affliction.

The christian's Faith, Hope, Love, Peace and Joy, were attendants of her spirit. Her resignation seemed perfect: her cheerfulness unyielding. Her gifted mind remained unclouded to the last; and after articulation became rather indistinct, she bore a testimony to the value and importance of religious visits to families.

Almost the last words she uttered were an offering of fervent thanksgiving and praise for the many blessings bestowed upon her; and especially for the favor of a religious visit made to her by a Friend two years before; saying that all the precious, gracious promises he felt authorized to apply to her case, had been through mercy, literally fulfilled.

Once more her voice was heard, desiring that some cloth on hand should be used for clothing some orphan children: then, the last care removed—the last labor of love accomplished—the last lesson given to teach us how to live, she taught us how to die. She calmly lay about two hours in sweet, solemn silence, and gently fell asleep in Jesus: her spirit passing almost imperceptibly from the tabernacle of clay to the mansion He had prepared for her in that "city which hath foundations, whose maker and builder is God."

Smugglers and their Tricks.

The minute and thorough inspection of vessels and their passengers and employees, and the employment of trusty agents in all parts of the United States and the Canadas to ferret out smugglers and their confederates, has materially checked their illicit trade. Petty smuggling is confined mostly to the European and Havana steamers in New York city, particularly those from Havre, Brest, Hamburg, and Southampton. When a steamer is telegraphed at the Barge Office, the message is immediately transmitted to the Surveyor's Department. The revenue cutter, with fifteen or twenty inspectors on board, is awaiting the arrival of Deputy-Surveyor Webster and his special aids, who, by the way, are true disciples of "Lavater." The cutter steams out into the

bay, and by this time the expected steamer is abreast of the Battery. Following her to her lock, the inspectors are all landed on the wharf, with the exception of one of the aids, who, unperceived, has climbed over the side of the steamer, and is on board closely scrutinizing the passengers. He moves quietly among them, inspecting their general appearance, the expression of the face, the movements of their eyes, and the shape and cut of their garments, their carriage; in fact, nothing escapes his lynx-eye gaze. The purser furnishes him with a list of passengers, which he carefully inspects. He takes out his private memoranda, which he compares with the passenger list; after which he goes on to the wharf, and reports to his chief. On the pier all is confusion—the relatives and friends of the passengers are begging for permission to go on board. Letters of introduction from leading merchants, passes to the Collector and Surveyor, and even heart-rending tales do not avail the applicants. The rule is imperative. Some of the sons of Judea will not be reconciled; they importune until forbearance ceases to be a virtue, and they are politely but positively informed that persistence in begging will carry them off the wharf. Every thing being in readiness, the luggage is brought from the steamer and deposited in rows along the wharf, while the porters are continually bringing in more of it. Sea-chests, trunks of all sizes and shapes, from the modest old-fashioned black leather one of restricted proportions, to the mammoth brass-studded affair, (which would carry the effects of a Fifth Avenue dowager and those of her three fashionable daughters to Saratoga,) hand-boxes, portmanteaus, guitar-cases, a multiplicity of cases and umbrellas, valises, and suspicious black travelling-bags are piled together. After all the baggage is on the wharf, the inspectors detailed for the vessel while in port take charge, and seal the hatches. The passengers descend to the pier, and the inspection begins. Each passenger, before the examination, fills out a blank form, in which he enumerates the contents of his trunks. If there is nothing but his own wearing apparel, he certifies that there are no new or dutiable articles within.

Then commences the ludicrous scenes. The inspectors are affable and polite, and the passengers are treated with the greatest delicacy, if they create no suspicion. They are requested to unlock their trunks. The ready, easy manner with which many open them, without being called upon, produces a good effect, convincing the officer that they have travelled, and, therefore, understand the form. He gently passes his hand down the inner sides and under a few articles of clothing, shuts the lid, and chalks it "O. K." But you must not fancy yourself safe. Keen gray eyes are watching you from a distance, and noting if there is any expression of exultation. If one is nervous or irritable, he goes through another ordeal. He is suspected. His trunk is measured inside and out, the sides and top sounded, and a general manipulation takes place. If any thing dutiable or new is found, it is immediately confiscated, and becomes the property of Uncle Samuel. In the meantime the Deputy-Surveyor and his aids are taking a general survey of the scene of operations. One of the aids has his eyes on a large, heavy-looking man, who is wrapped up in a great coat. He walks like an invalid, and is attended by a friend who has met him on the pier. The aid thinks his garments fit him too "moochy;" he takes the inspector aside and informs him that after he (the officer) has examined his baggage he will stumble over his valise or bag. Of course, the large man with so much clothing on him will

stoop to pick up his baggage, which has been so suddenly and clumsily displaced, at which time the inspector must watch his back. The ruse succeeds; the back of his coat appears as if it covered a pannell of biscuits. Trembling with fear the passenger is taken inside the small office, and from under his coat is drawn a well padded vest containing fifty gold watches. He is now subjected to a thorough examination; his boot legs and heels do not escape their scrutiny. The heel of one boot is found to be hollow—off it goes, and inside are found snugly ensconced in cotton two brilliants worth \$2000. When entirely stripped of his superfluous garments he appears like a second "Calvin Edson."

Another victim has been selected, and he is called aside and compelled to undergo corporal examination. He is very portly, and tries to be jolly; he laughs boisterously, and informs the officer that he supposes he must do his duty. Underneath his shirt are hundreds of yards of costly lace, deftly wound around his waist. After the officers have denuded him of his smuggled undergarments, he looks more like a plucked fowl than a human being. Another man has passed the inspection, and his trunks are strapped to the rack of the carriage. He seems very much elated, and is in a great hurry. On his arm he carries a lap rug, which he seems to be very careful. As he is about to step into the carriage, the aid taps him on the shoulder, and accosts him familiarly. He asks him if he enjoyed his trip, and gives him a friendly poke in the ribs, by which he detects a rather spongy something about the waist. Of course an examination follows, and he turns out to be another "lace reel." The lap rug is ripped open, and found to contain more of the same precious material. *Point applique* and *Valenciennes* lace appraised at \$12,000. These three men are professional smugglers, who in all probability have made several successful trips.

Trunks resembling Noah's Ark, which some of the fair sex bring with them from Paris, must necessarily undergo a strict examination. They have so many boxes of bonnets and laces, such a multiplicity of "little goats" gloves, fine linen chemises edged with costly lace, collars, cambrics by the dozen, silks, satins, &c., also expensive presents of French manufacture, which they had promised to bring dear cousins Sophie and Amy, and many articles of *bijouterie* that they could only procure in Paris. The inspector who performs the unpleasant and disagreeable duty, stoops over the trunk, his face suffused with blushes. His manipulations are soft and delicate, handling carefully, as if he was afraid of its being defiled by his touch, he lays to one side all that are contraband. There is no rudeness, no assumption of authority among these gentlemen. Their affable manners favorably impress a foreigner arriving at our port, and it is a general remark among American tourists arriving home, that our custom house regulations are far superior to those of any other nation. The consignees of the Havana steamers have been greatly annoyed by the continued attempts of their employees to smuggle cigars; and recently they ordered the discharge of every one in the engineer's department of one of their steamers, detected by the revenue authorities. They have resorted to the most ingenious dodges, and consequently the steamers are examined from stem to stern. In the engineer's department they have concealed contraband articles in the flues of the boilers, under the coal. Smuggled articles have been taken ashore in the soiled linen, and under the skirts of women. In short, every possible device has been resorted to, whereby to elude the vigilance of the revenue inspectors, to cheat

the government, and to aggrandize at small cost the ingenious violators of the laws governing importations from beyond seas.—*N. Y. Tribune.*

THE WATERS OF LIFE.

"And he showed me a pure river of water of life, clear as crystal, proceeding out of the Throne of God and of the Lamb." Rev. xii. 1 and 17.

From out the Throne of mercy rise,
The streams of mercy rise,
The heritage of God to bless
With love which never dies.

Leave earth, and in the Spirit mount
To scenes of bliss above,
There drink beside the crystal fount
Of purity and love.

"The Spirit and the bride, say, come,"
Thou weary, thirsty one,
O tarry not, but hasten home
Where these clear waters run.

Come all, come freely, and partake
Of nourishment divine;
Thy Saviour calls, and for his sake
Thou canst have bread and wine.

Ye who have nothing, come and buy,
What earth can never give;
Ho, every one, "why will ye die?"
When ye may drink and live!

The streams of mercy ever flow
One glad refreshing river!
To these pure waters we can go,
And bless the Holy Giver!

Thus, He who has the power to save,
Pleads with us through the Spirit,
Leads us to streams in which to lave,
And all His joys inherit.

Selected.

NEW YEAR GREETINGS.

Rejoice, my fellow-pilgrim! for another stage is o'er
Of the weary homeward journey, to be travelled through
no more;

No more these clouds and shadows shall darken all our
sky;
No more these snares and stumbling-blocks across our
path shall lie.

Rejoice, my fellow-soldier! for another long campaign
is ended, and its dangers have not been met in vain;
Some enemies are driven back, some ramparts over-
thrown;
Some earnest given that victory at length shall be our
own!

Rejoice, my fellow-servant! for another year is past;
The heat and burden of the day will not for ever last;
And yet the work is pleasant now, and sweet the
Master's smile,
And well may we be diligent through all our "little
while."

Rejoice, my christian brother! for the race is nearer
run,
And home is drawing nigh with each revolving year;
And if some ties are breaking here, of earthly hope and
love,
More sweet are the attractions of the better land above.

The light that shone through all the past will still our
steps attend,
The Guide who led us hitherto will lead us to the end;
The distant view is brightening; with fewer clouds be-
tween,
The golden streets are gleaming now, the pearly gates
are seen.

Oh, for the joyous greetings! to meet and part no more!
For ever with the Lord and all His loved ones gone
before!

New metres from our Father's hand with each new
year may come,
But that will be the best of all—a blissful welcome
home.

"Time was, is past, thou canst not it recall,
Time is, thou hast, employ the portion small;
Time future is not, and may never be,
Time present is the only time for thee."

For "The Prin

The following remarks were made to a Friend a few years ago, by a man who was not a member but who was, no doubt, a religious character: "I admire your Society. The principle (doctrines) contains all of christianity that I have any idea of; but I am sorry to see that some of you are losing your badge, and I do not see if you can retain your principles and forgo your peculiarities: your marks of moderation, denial and difference from the spirit of the world. You are *lights*; the world should go to you, not you go to the world. You may gather them, but the world will scatter you."

Reformatory and Industrial Schools in England.—At the present time there are 64 reformatories in Great Britain, 50 of which are in England, and the remaining 14 in Scotland. Of these 39 are for Protestant boys, 17 for Protestant girls, 5 for Catholic boys and 3 for Catholic girls. A number of juvenile offenders under detention these schools on December 31, 1866, was 53 being an increase on the corresponding number on December 31, 1865, of 420.

During the year 1207 inmates have been discharged, of whom 938 were boys and 269 girls. Of these 69 emigrated, 155 went to sea, 20 entered, 33 were discharged on account of disease, as incorrigible or as having been reconvicted; sentenced to penal servitude, 34 (viz: 27 boys and 7 girls) died, and the rest are in various occupations in England. The total expenditure for the year ending December 31, 1866, £102,191 15s. 4d., and the receipts were £1 318 14s.

In the industrial schools at the same period 2566 boys and girls were detained, showing increase of 504 over the year before. In addition to these, who are lodged and boarded as inmates, above 2000 children attend as day pupils receiving instruction and being partly fed. The income of all the certified schools amounted £19,826 2s. 10d.

The Pall Mall Gazette says: "The probabilities are that in the course of the next few years the system of industrial schools will be sensibly extended. Of late the opinion has been properly gained ground that something ought to be done for the ragged and starving children who crowd the streets, and whose very condition implies criminal negligence or helpless poverty the part of their parents. Several experiments have been tried, and to a very great extent have all proved successful. It is impossible to visit any of the certified industrial schools in Middlesex, or such institutions as the Boy Refuge in Great Queen street, or the training-alms-house at Chichester, without seeing that the immediate good done is immense.

"There is no comparison between the condition of the boys at the institution and those of the streets. In the latter they are miserable themselves, a nuisance to all with whom they come in contact, and the chances are they become dangerous and costly members of society; while in the former they are comfortable and apparently happy, and give promise of turning out good citizens. The danger is that very poor parents should be so impressed with the comfort afforded to be found at these institutions as to neglect their children on purpose to have them sent there.

"The results of the three years, 1863, 1864 and 1865, are certainly satisfactory. In the years 2793 boys and 727 girls have been discharged from the English and Scotch reformatories. Of the boys 84 have died, and of the

17. This leaves 2709 boys and 710 girls accounted for. Of the boys 1931 (above per cent.) and of the girls 481 (above 67 per cent.) were known to be doing well; 104 boys (than 4 per cent.) and 104 girls (above 14 cent.) were reported as doubtful or indifferently; 894 boys (above 14 per cent.) and 60 girls (above 8 per cent.) had been reconvicted; while 104 boys (about 9 per cent.) and 65 girls (about 9 per cent.) also were unknown."

The Way.

For "The Friend."

the longer I live, the more I am convinced that the only way to the true place of waiting, will find the Lord is not in the whirlwind, earthquake &c. These elementary commotions are only signs, like the baptism of John, to *prepare the way* of the Lord. They must all pass by, and a calm be experienced, before we can hear the still small voice."

John's baptism did not cleanse the heart. He testified to one that was more mighty than he, and that was to lay the axe to the *root* of the tree of corruption, and destroy it all. Yes, "for this purpose the Son of God was manifested, that he might destroy the works of the devil." And he will finish transgression and make an end of sin in every heart that abides "the day of his coming." John was a "burning and shining light;" and, truly, it is said, were willing for a season to receive it in that light. Yet he was not the true light; many appear willing now to rejoice in that which is only outward, and take up their rest in that which is shadowy. Peter, it seems, did not for a while see clearly "to the end of which is abolished." He proposed to build a temple for Moses and Elias as well as for himself. We too, may incline to have that to abide in us, which should vanish away, and give place to the true light.

Here, I fear, is where we often miss in the way to the kingdom. We mistake the *preparatory* for the way itself. We take up our rest short of that sanctified "rest which remains for the people of God." Christ is the *way*, as well as light and life of men. But we must suffer in it to cleanse the heart and dwell in us, and we must dwell in him, before we are in the way to the kingdom of rest and peace.

Correct head knowledge of the way will not, of itself, place us in it. Pure and undefiled religion is a practical and heart-cleansing work; with each one, with the aid of the Holy Spirit, to perform for himself.

John's baptism did not reach the seat of corruption; nor will any thing that is *outward* ever do so. Will we then remain under "the weak and beggarly elements?" or will we not rather submit to the baptism that now saves us—"the word washing of regeneration, and the renewing of the Holy Ghost?"

This is hard to poor fallen nature—to that life which cannot inherit the kingdom of heaven. But his fan is in his hand, and he will *thoroughly* purge the floor of the heart if we unreservedly submit to him. He will make a clean separation between that which is light and chaffy, and that which is vital and substantial. But who may abide the day, or time, of his thus coming? or who shall stand when he appeareth in this way? (Mt. iii. 2, &c.)

In this fire of the Lord that burns as an oven (Ps. lxxviii. 6). How much it is needed! yet how few suffer it to be "kindled" (Luke xii. 49). It is not now, under the gospel dispensation, to be continually burning on the altar of the heart. It is there that spiritual sacrifices should be daily

offered up acceptably to God through Jesus Christ our High Priest and Lord. But we may have this heavenly flame "kindled," and it may burn well for a while, and yet, through unwatchfulness we may, like the foolish virgins, slumber and sleep, and suffer it to go out. And then, like Nadab and Abihu, we may offer strange fire unto the Lord and die. There was a heavenly fire, made visible then, which was figurative of that which is invisible now. They were under the outward dispensation; and in their outward sacrifices they kindled a fire which the Lord commanded them not, and they died outwardly. (Lev. x. 1, 2.) We are under the spiritual dispensation; and if we, in our spiritual sacrifices, kindle a fire from an earthly source, shall we not die spiritually, as they died outwardly? It remains to be "through much tribulation that we enter the kingdom of God." We would be willing to be baptized with the Holy Ghost, but not with the *fire*. This we too often shrink from. We do not *abide*, nor stand the fiery ordeal, when he sits as a refiner and purifier of silver. The sitting (according to our finite view) may appear too long. We do not abide the full time out. We are not sufficiently aware of the amount of impurity yet remaining to be purged from us. So we do not let patience have its perfect work. We do not experience a dying daily to "the lust of the flesh, the lust of the eyes, and the pride of life, which is not of the Father, but is of the world." Hence we are never "delivered from the body of this death." We turn away from the cup of suffering that our holy Redeemer drank of; and do not abide the baptism that He was baptized with: though like the two sons of Zebedee we may *think* "we are able."

When proving seasons come upon us, and the cross which He bore for us is laid upon our shoulders, then it is that the natural man gives way. And then it is that our cries and prayers should, in the closet of the heart, be fervent unto God, in humble faith and confidence that his power is above all the powers of the enemy; and that He, through grace, will help us. And if we hold out steadfastly unto the end, fighting the good fight of faith, we shall be enabled to overcome all and receive a crown of life, even here; and finally be made more than conquerors through him that loved us, and "gave himself for us, that he might redeem us from all iniquity, and purify unto himself a peculiar people zealous of good works."

But the bible "sets before us a *race*, and we must run, laying aside every weight," and casting off every hindering thing, if we would win the prize. "It sets before us a *battle*, and we must fight, arrayed in all the armor of righteousness, and resisting evil within and without," if we would gain the victory, and be crowned with immortal glory. But if we seek aright, strength will be given us equal to our need. Then "let no man's heart fail him because of the way." It is a plain way when once we find it, and give up to enter it. "The wayfaring men though fools," as to the wisdom of this world, "shall not err therein." Yet it is a straight and narrow way. None of the lion-like nature, nor that of the "ravenous beast shall go up thereon." "But the redeemed shall walk there; and the ransomed of the Lord shall return" to Zion in this way. It is the way in which the righteous of all ages have ever trod; and the only way that leads from death to life. And we have a merciful High Priest who has trod the way before us. He well knows our infirmities, and remembers that we are but dust. "He ever liveth to make intercession for us." If we follow him who is the light of the world, we "shall not walk in darkness, but shall have the light of life;" and we shall find that he gives grace to the hum-

ble. And it is to the humbling, contriving influence of Christ's baptizing spirit in the secret of the heart, that we must all come, if ever we are taught of the Lord, and feel that peace of God which passeth all understanding of the natural man. D. H.

Lotus, Ind., 12th mo. 28th, 1867.

A Wonderful Flower.—Dr. F. N. Otis, in a work called the *Isthmus of Panama and its Connections*, gives the following description of a wonderful and singularly beautiful flower, found on the line of the Panama railroad, in the vicinity of Lion Hill station:

"Along this section is found that rare variety of the Orchid family, the *Peristera elata*, known as the '*Espirito Santo*.' Its blossom, of alabaster whiteness, approaches the tulip in form, and gives forth a powerful perfume not unlike that of the magnolia; but it is neither for its beauty of shape, its purity of colour, nor its fragrance, that it is chiefly esteemed. Resting within the cup of the flower so marvellously formed that no human skill, be it never so cunning, could excel the resemblance, lies the prone image of a *dove*. Its exquisitely moulded pinions hang lifeless from its sides. The head bends gently forward. The tiny bill, tipped with a delicate carmine, almost touches its snow-white breast, while the expression of the entire image (and it requires no stretch of the imagination to see the expression) seems the very incarnation of meekness and ethereal innocence. No one who has seen it, can wonder that the early Spanish catholics, ever on the alert for some phenomenon upon which to fasten the idea of a miraculous origin, should have bowed down before this matchless flower, and named it '*Flor del Espirito Santo*,' or 'the Flower of the Holy Ghost,' nor that the still more superstitious Indian should have accepted the imposing title, and ever have gazed upon it with awe and devotional reverence, ascribing a peculiar sanctity even to the ground upon which it blossoms, and to the very air which it laden with its delicious fragrance.

"It is found most frequently in low and marshy grounds, springing from decayed logs and crevices in the rocks. Some of the most vigorous plants attain a height of six or seven feet; the leaf-stalks are jointed, and throw out broad lanceolate leaves by pairs; the flower-stalks spring from the bulb, and are wholly destitute of leaves, often bearing a cluster of a dozen or fifteen flowers. It is an annual, blooming in July, August, and September, and has in several instances been cultivated in the conservatories of foreign lands. In former times, bulbs of the plant could rarely be obtained, and then only with much labor and difficulty; but since their localities have become familiar to the less reverential Anglo-Saxon, great numbers have been gathered and distributed throughout different parts of the world, though their habits and necessities have been so little appreciated that efforts to bring them to flower usually prove ineffectual; if, however, they are procured in May or June, after the flower-stalks has started, when sufficient appropriate nutriment resides in the bulb to develop the perfect flowers, they can be safely transplanted, and will flower under the ordinary treatment adapted to the bulbous plants of colder climates. The bulbs, dried or growing, may be procured either at Aspinwall, or Panama, at from two to five dollars per dozen."

I question the greatness of any political talent that is not based upon integrity.—*Washington Irving.*

For "The Friend."

Is there an Easier or Surer Way to the Kingdom than that which we Profess?

Since reading the articles lately published in "The Friend," relating the movements of some under our name; I have been led to query why it is so. Whether those who are inclining to mingle with others in their ways of worship; think that our way is not active enough, or, that it is too narrow, I do not know. But it seems to me that the actions spoken of savor more of creaturely activity, than that spirit which said, "tarry at Jerusalem, until ye be endued with power from on high."

Feeling myself to be, as it were, a weak vessel, I wish to be cautious how I take hold of subjects that may be too great for me; and not to judge too harshly. Yet, I think I feel at liberty to call the attention of the younger portion of the readers of "The Friend," and others whom it may concern; to a serious consideration of these questions, to wit:—Does any religious denomination make such an high and holy profession as our own? Do not the principles of the gospel as held by Friends, enjoin a holy life and conversation? Not in being conformed to this world, but in being transformed by the renewing of your mind; that ye may prove what is that good, and acceptable, and perfect will of God; which will requires those who are willing to become christians, to live soberly, righteously, and godly in this present world.

In short, is not our faith one with that which was once delivered to the saints?

Our early Friends many of them, tried the faith and practice of most, if not all the denominations of their day, and found not that living rest and peace they were in search of. They saw that the religion of the great majority consisted in a great measure, of forms and creeds that they had received by the hearing of the ear only; and had not, like holy Job, come to see Him, who was, and is, and will be, the way, the truth and the life; which sight caused him to abhor himself, and to repent in dust and ashes.

Then, inasmuch as we believe, as the scriptures testify, that they who have not the spirit of God are none of his, and that without him we can do nothing; that the baptism that saves is not the putting away the filth of the flesh only; that the true supper is not the outward taking of bread and wine; and, that singing that is practised by most who engage in it, is not that heartfelt singing of praises unto God that is spoken of in scripture; will it be safe for us to lower our standard of faith to a level with those who have not yet seen beyond all forms and figures? Will there not be danger of losing our strength as Ephraim did, when he mixed with the people? Rather let us turn unto God with full purpose of heart, desiring that we may "know him the only true God, and Jesus Christ, whom he has sent." And if in mercy the saving knowledge is made known unto us, instead of letting go the profession of our faith, we can lovingly say unto others, "come have fellowship with us; for truly our fellowship is with the Father and with the Son."

The principles we profess will cause the heart to leap with joy whenever we see the true birth begotten in any, whatever their profession may be. It is proper so far as the right ability may be given to encourage the true mourners in Zion, whatever their profession, but I think not right to encourage them in those forms that will never make the comers thereunto perfect.

Fayette Co., Pa., First mo. 6th, 1868.

For "The Friend."

"Errors in the life breed errors in the brain, And these reciprocally those again."

"Good men," it has been said, "should be attentive to their health, and keep the body as much as possible the fit medium of the mind. Never overburden nature. Be moderate in your eating and drinking—the board lays more than the sword. Those who destroy a healthy condition of body by intemperance [either in eating or drinking,] do as manifestly kill themselves as those who hang, poison or drown themselves."

Because food is necessary to the sustenance of the body, much less has been said or thought upon the subject of excessive and improper eating, than upon that of intemperance in the use of ardent spirits. But while the former is a more general evil, it is at the same time as surely destructive of mental and physical health, sooner or later, as it is persisted in; though its effects may not be so immediately apparent. Yet how many instances of disease of body and mind do we behold, traceable to this cause alone, resulting often in entire loss of mental and bodily vigor; in a decay of spiritual life and christian zeal.

The *Halsted Observatory* at Princeton.—The Halsted Observatory, at Princeton, the cornerstone of which was laid June 25, 1866, by General N. N. Halsted, the principal donor, in honor of whom it is named, is now about complete. The structure on which the telescope is to rest consists of a cemented mass of stone, 28 by 31 feet, on a foundation of solid rock 20 feet below the surface of the earth. From this foundation the compact mass is built up about 40 feet high, slanting from the ground till it terminates on top in a level surface 13 feet square. On this tower are massive blocks of granite, rising 15 feet high, and forming a platform 2 feet by 44 feet in extent. On this again will rest a cast iron stand, some 6 feet in height, to support the telescope, thus making the whole affair about 41 feet above the ground. Around this solid base rises, nearly as high as the stand for the telescope, a stone wall 40 feet in diameter, octagonal on the outside, circular within. Six of these sides are pierced by as many windows, (one in each side), two of which are circular, while the remaining two and opposite sides communicate by respective doors with two stone houses connected with this, the main portion of the observatory, and which are for workshops. The ascent to the telescope will be through these smaller buildings, which are about half as high as the centre one, and which makes the whole structure 101 feet in length. On the side of the observatory is a beautiful brown stone tablet, on which is engraved "Halsted Observatory, 1867." When completed, the wall of the observatory proper will be corniced with handsome brown stone, on which will revolve a large iron dome, having sliding shutters inserted in it for the telescope. The telescope for the observatory will be made at Cambridge, Massachusetts, at an estimated cost of about \$40,000, probably more, and will be equal to, if not the finest in the world. The expense of the observatory building will far exceed that of the telescope. The observatory will, it is expected, be finished next summer. It will be some time, however, before the telescope will be made and ready for use.—*Newark Advertiser*.

How would many of our expressions be modified, did we know that they would be the last, we should ever be permitted to utter; and yet, time is as uncertain to us, as eternity is irresistibly certain.

For "The Friend."

Administering to the Necessities of Others.

One can hardly read the following touching relation from the Memoirs of Port Royal, without experiencing the arresting feeling and fest from the love of self, or that scarcely potent and debasing one, the love of lucre: of the world, we may overlook our obligation to the poor, and those who are ready to perish, far from being willing to deny ourselves, the piled up creature comforts by which we are surrounded, for the sake of those like to Lazarus pining in want as at our gates, some of us really resemble the rich man in the parable, who neglected of the crying needs of others, him faced sumptuously every day. These, still down satisfied with the good things of this life scarcely reflect, who put the query, "Am I brother's keeper?" neither think of that accountability which awaits each of us as stewards of the manifold gifts of God.

What richer promised blessing can any ask, or expect awarded here—representing care of the ever tender Shepherd for his poor than the following outpouring of the inspired Psalmist: "Blessed is he that considereth the poor: the Lord will deliver him in the time of trouble. The Lord will strengthen him on his bed of languishing: Thon wilt make all his bed in his sickness."

May we then be watchful over ourselves in this respect. And when appeals are made to, for help, think what little time we shall have which to act as stewards; and instead of shutting up our bowels of compassion against such, ever rather to place ourselves in their destitute condition, and thus and then query what should think right if the scales were turned, we were the poor and needy and destitute requiring sympathy or pecuniary help. Remember, too for our encouragement the example, in prosperity, of the patriarch Job: "I was a father to the blind, and feet was I to the lame. I was a father to the poor: and the cause which I did not I searched out." And also that Scriptural precept "With what measure ye mete it shall measure to you again."

The selection followeth:—

"Instead of all those frivolous works, by which the industry of other men is generally occupied and rendered subservient to the vanity or curiosity of persons in the world, it was equally as laudable and admirable to observe with how much industry, economy, and neatness, the noble Port Royal contrived to put together the scraps, or bring the least remnants into use, to make clothing for the multitudes of poor men and children who had nothing wherewith to cover themselves; and it was perfectly wonderful how, when in the midst of poverty, unjustly stripped of their property by persecutors, their indefatigable christian charity furnished them with a multitude of resources and ingenious contrivances to assist others. God, who seeth secret, knows how often their largesses have been poured out, with kind abundance, to the poor without their gates, when they have deprieved themselves of their own subsistence, and given their own bread, rather than deny others; God, who doth see in secret, shall assuredly day reward them openly. In all these respects, the M. Angeli que herself set the example to her sons."

She had a peculiar and admirable talent for nursing, consoling, and beneficially influencing the sick. She visited them, watched over them, and found time to render them the very meanest services, even with her own hands. Nor did

assist them in slight illnesses; far unlike the morality of the present day, her truly divine end led her to visit those equally who laboured with the most contagious disorders. The most common wounds, the most infectious diseases, the most malignant fevers never deterred from attendance; and she continually nursed as suffering under their influence herself. This was a very frequent observation of the M. Lique, that a true christian will have before eyes the danger of wealth, more than that of poverty, and the fear of superfluity more than of necessity.

For were these sentiments confined to the abbey they extended to the very lowest servants were attached to the house.

One of the carters of Port Royal, named Innocent, used always to eat the bran bread made for the dogs, in order to give his own portion to the poor. Being possessed of a little piece of land, he did it for four hundred lives; one hundred he gave to deliver a prisoner, and the remaining hundred he gave out to poor families in small allowances. One piece of land he kept in which, after his work was over, he used to go to himself; his friend, the miller of Port Royal, having ground it, and his sister baked it, gave it to the poor, as well as his wages, which he put in clothes for them. Perceiving his friends were spoken of, he begged a friend to come to him in his own name; but he refusing to do so, he then begged the nurse of Port Royal to keep his wages, and let them be put amongst the charities of the house.

After his work was done, he used to go into the house, and shutting the door, spend his time in prayer; pretending if any one came in, he would be surprised him kneeling, to look for something, though he had dropped it in the litter between doors. He also used to be very diligent in his scripture, and the nuns having given him a room of his own with a key, he used to go to himself up there, and copy out passages of scripture, that he might learn them by heart.

He repeated as he pursued his daily labor, they formed the subject of his conversation to his fellow-servants and with the poor. He went very thinly clad, and literally fulfilled the prophet's saying, "let him that hath two coats impart to him that hath none." One winter he passed all his shoes and stockings, having spent all his money, and having stripped himself of them to give to an old woman whom he saw as he was working in the fields. A gentleman one day, seeing him in this condition, told him "he was a great fool."

He asked him "where he had learnt to strip himself in this manner?" he replied, "in the scriptures." "You are an ignorant, stupid fellow," said the gentleman, "and misunderstand it."

He was the first poor person for whom you should care in the little property, and not leave yourself like a dog on a dunghill, in your old age, to starve for want." "Sir," replied Innocent, "with great animation, 'it is not wealth I supply our real wants, but Providence; we do not submit our desires to him, we are in the midst of wealth, not only suffer from poverty, but to be tormented by the multitudes of us ones. Death will come, and when it comes, the conscience would be more tormented by superfluity, than the body by want.'"

It is remarkable that Innocent *Fai* died just as he might after this conversation, having not a penny in his pocket, but assisted by the best of the six first physicians in France; he died not by hirelings, but by the recusers of the world; men whose education was in courts, and whose names on earth were amongst the princes

of the land, and in heaven who were enrolled amongst the saints. His funeral was attended with honor by a large community, whose numbers and whose names were equally calculated to bestow religious or worldly respect on his remains.

It is equally remarkable, that the gentleman who gave him advice, lived a long and worldly life; he died in a noble mansion-house, situated in his own magnificent grounds, in a splendid room, on a bed of down. But his family had flown from the scene of sickness. The tardy footsteps of the often called, and often vainly expected hireling, alone broke the drear solitude of his empty palace; and the physician pronounced his doom to the indifferent ears of strangers. Then he found that the hand of unattached servitude, which alone relieves the wants of the ungodly sick, is colder than that with which casual charity relieves the poor. But whether he died the death of the just, his nearest relatives did not leave their scenes of dissipation to inquire."

—*Memoirs of Port Royal.*

A Western Wonder.—The greatest wonder in the State of Iowa, and perhaps any other State, is what is called "Walled Lake," in Wight County, twelve miles north of the Dubuque and Pacific railway, and about one hundred and fifty miles west of Dubuque City. The lake is from two to three feet higher than the earth's surface. In some places the wall is ten feet high; width at bottom fifteen feet, and at the top five. Another fact is the size of the stones used in construction, the whole of them varying in weight from three tons down to one hundred pounds. There is an abundance of stones in Wight county, but surrounding the lake to the extent of five or ten miles there are none. No one can form an idea as to the means employed to bring them to the spot, or who constructed it. Around the entire lake is a belt of woodland, half a mile in width, composed of oak; with this exception the country is rolling prairie. The trees must have been planted there at the time of the building of the wall. In the spring of 1856 there was a great storm, and the ice of the lake broke the wall in several places, and the farmers were obliged to repair the damages to prevent inundation. The lake occupies a ground surface of two thousand eight hundred acres; depth of water as great as twenty-five feet. The water is clear and cold; soil sandy and loamy. It is singular that no one has been able to ascertain where the water comes from, nor where it goes, yet it is always clear and cold.

Selected for "The Friend."

Letter from John Thorp to Richard Reynolds.

Manchester 8th mo. 1, 1811.

My dear Friend,—It was very pleasant to me to receive a letter from thee, and such a letter in thy 76th year. I, who am seven years younger, feel the effects of old age both in mind and body; but let us not accuse ourselves, or listen to the accuser of the brethren, because our faculties and powers are on the decline. Meekness, humility, and patience, are a cure for all sores; our strength and powers are equal to all we have to do, or to all that is required of us. It is our departure from humble submission, and wanting to feel more of the fervor of devotion; not willing to live by faith, and possess our souls in patience, that is a fruitful source of much unprofitable anxiety. How much of this appears in the few diaries we have published; and I am persuaded in the experience of many pious people, who suffer greatly, because they are unskillfully taught to believe, that if it were not owing to some omission of duty

they would more frequently, perhaps always, (particularly in meetings,) be favored with these sensible feelings and enjoyments of heavenly goodness. Many, many, I believe, put on a much more painful pilgrimage, and experience many doubts and tossings, which would certainly be avoided by a wise attention to that holy precept, "in your patience possess ye your souls." To how many religious people might it be said by the blessed Master, as formerly to Peter, "O thou of little faith, wherefore didst thou doubt?" though it is by no means in our power to put ourselves into possession of those Divine consolations, that sometimes, in unmerited mercy, are vouchsafed. I wish to be thankful, truly thankful, to be favored to feel no condemnation. There is, I think, a great deal of comfortable instruction and truth in the remark, that "the christian's crown in this life is hid under the cross, that we cannot see it;" and doubtless laid up safely for us, when our warfare is accomplished. What cause have I to be thankful for this and a thousand other mercies; but to feel suitably thankful for favors, or compensation for our infirmities, is not at our command.

How earnestly do I sometimes desire a more fervent, sensible feeling of gratitude for favors I have not deserved, and repentance for all I have done amiss; but as I have said before, perhaps we may be too solicitous for these sensible fervors of devotion. My mind hath often been stayed and comforted, in recollecting these observations of an experienced christian: "Do not look for or expect the same degrees of sensible fervor; the matter lies not there; nature will have its share; but the ups and downs of that are to be overlooked; whilst your will-spirit is good and set right, the changes of creaturely fervor lessen not your union with God."

Farewell, my dear friend; may the Divine blessing comfort and support our declining years, and enable us to finish the little work that may yet remain for us to do; that finally we may be found worthy to enter into the joy of our Lord.—*John Thorp.*

Talking of Persons rather than Things.—There is with the young and old a prevalent and bad habit of talking of persons rather than things. This is seldom innocent and often pregnant with many evils. Such conversation insensibly slides into detraction; and by dwelling on offences, we expose our own souls to contagion, and are betrayed into feelings of pride, envy, and jealousy; and even when we speak in terms of commendation, we are sure to come in with a *but* at the last, and drive a nail into our neighbor's reputation.—*Bacon.*

As certainly as you have feeling you will have the pains of feeling. Expect to have your part with Jesus in His Gethsemane.

THE FRIEND.

FIRST MONTH 18, 1868.

Among the various modes of administering to the necessities of the poor in towns or large cities, there are few more unexceptionable, than furnishing daily supplies of soup. It is food of the most wholesome and nourishing character, adapted to almost all ages and appetites. There are eight or ten soup houses in Philadelphia, all of which we believe are now in active operation. Under the care of benevolent and judicious citizens, the money entrusted to them is, we have no doubt,

appropriated so as to benefit a larger number of the working class who find great difficulty in supporting their families, as well as the destitute poor, than the same amount would be likely to confer in any other way. An hour spent in one of these establishments may give an insight of the extent of want and distress now existing among large numbers of what are called the lower class, that could not be as easily obtained in any other manner. There is no plea for withholding money necessary to keep up the supply of soup on the score that it may increase pauperism, or the article furnished be made a bad use of. Care is taken to inquire into the circumstances of families making daily application, so that imposition may not be practised, and no one need grudge a bowl of soup to appease the hunger of the most degraded.

We can commend this charity to the liberal patronage of Friends in the city, and also to those in the country, who can give much assistance by the contribution of meat or vegetables.

SUMMARY OF EVENTS.

FOREIGN.—The reported submission of the Paraguayans to the Brazilians and their allies, proves to be incorrect, and accounts from the interior of Paraguay received in London by the last mail steamer from Rio Janeiro, show that the condition and prospects of the Paraguayans are better than they have been represented. All classes of the people appear to be enthusiastically devoted to Lopez, and make great effort to supply the army with men and provisions. President Lopez, in person, was in command at Humaita, and held the lines of communication with Asuncion and with Corupaqui uninterupted.

The bill for the reorganization of the French army is still under consideration in the Corps Legislatif. The article obliging every Frenchman to serve in the National Guard, has been adopted. On New Year's day, King William of Prussia, sent to the Emperor Napoleon a congratulatory message, which was returned by the Emperor in a conciliatory spirit. A much better feeling has prevailed since publicity has been given to this intelligence. Amiens and Terres have both elected opposition candidates to the Corps Legislatif.

Count Von Bismarck made a speech in Berlin on the 9th, which he has since the present political situation in Europe, and said a war with France this year was a phantom, and urged his hearers to dismiss all fears in the matter.

Menabrea claims that the Italian ministry as now re-constructed, will be supported by a majority of thirty-five members in the House of Deputies. The adjourned session of the Parliament was resumed on the 12th inst. Menabrea made a speech, in which he confined himself to the internal affairs of the country, and exhorted the members to unite with the government in resisting revolution and upholding the national credit and the liberties of the nation. He made no reference to the Roman question, or to the relations of Italy with foreign Powers.

A Petersburg dispatch says, reports have been received from Siberia of the discovery of rich and extensive gold deposits on the Amoor river. Great excitement prevailed, and the natives were flocking to the gold regions by thousands. Lord Stanley, acting upon the remonstrances of Turkey, has prepared a dispatch protesting against the alleged intrigues of the Russian government in Roumania. Nearly all the great journals of London have editorial comments on the subject of the discussion in the United States House of Representatives on the question of citizenship, and an abatement of British claims, and the acceptance of the American view of the matter is urged by the editors with singular unanimity. The Fenian troubles continue. Pigott, editor of the Dublin *Irishman*, has been arrested for printing and distributing works of a seditious character. The officers of the Irish Chief Justice's Court have been arrested. The authorities are now very active in searching out the leaders of the Fenian movement, and have made some important arrests. The Directors of the Atlantic Telegraph Company have issued a prospectus to raise £1,300,000, to purchase all the rights and interest of the Anglo-American Telegraph Company in the cable, and to set off the interest on the loan.

It is said that a more liberal and conciliatory policy will hereafter be adopted by Turkey in relation to the Cretans. A decree has been issued guaranteeing equal-

ty of rights in Candia, and also the suspension of the collection of taxes for two years.

A Paris dispatch of the 13th states, that the commander of the French army in Italy has asked the Emperor to permit the return of the troops to Rome, as their quarters at Civita Vecchia and Viterbo are overcrowded.

The following were the London and Liverpool quotations on the 13th inst. Consols, 93½. U. S. 6-20 71½ a 71½. Liverpool cotton market active. Middling uplands, 7½d. Orleans, 7½d. California white wheat, 16s. per 100 lbs.; Milwaukee red, 14s. 6d.

UNITED STATES.—*The Public Debt.*—On the first inst. the total amount of debt was \$242,232,253, at the same time there was a balance of \$154,200,600 in the Treasury, including \$108,430,253 in gold. If this be deducted, the net amount of debt will be \$258,125,603, which is \$6,919,852 more than it was a month previous. The debt bearing coin interest increased nearly \$500,000 during the month, and that bearing currency interest was reduced about \$31,000,000.

California.—During the year 1867, the exports from San Francisco amounted to about \$63,000,000 viz., in gold and silver \$40,500,000, and in wheat and other merchandise, \$22,500,000. The wool crop of the year amounted to nine and a half million pounds.

Alaska.—Late dispatches state that the weather at Sitka had been intensely cold, and but little snow had fallen. The best land in the territory is said to be on the Peninsula of Kenay, and General Halleck recommends that these lands be surveyed and brought into market as early as a possible.

Alaska.—Late dispatches state that the weather at Sitka had been intensely cold, and but little snow had fallen. The best land in the territory is said to be on the Peninsula of Kenay, and General Halleck recommends that these lands be surveyed and brought into market as early as a possible.

The Constitutional Amendment.—The following States have ratified the 14th article, which proposes to establish a new basis for the representation in the United States Congress, viz., Maine, Connecticut, New Hampshire, Tennessee, New Jersey, Oregon, Vermont, New York, Ohio, Illinois, West Virginia, Kansas, Nevada, Missouri, Indiana, Minnesota, Rhode Island, Wisconsin, Pennsylvania, Massachusetts, Michigan and Nebraska. Iowa has not yet acted on the subject. Maryland, Kentucky and Delaware have rejected the amendment.

Pennsylvania.—On the 30th of Eleventh month last, the State debt amounted to \$34,765,431. It was reduced \$855,621 during the past year. The State income exceeds the expenses.

Philadelphia.—Mortality last week, 229. *Mexican.*—At the close of 1867, there were 38,851 miles of railroads in operation in the United States, and the total cost of roads and equipment was estimated at \$1,655,483,820.

The number of public schools in Pennsylvania is 13,435; they are attended by 787,343 pupils. *Mexican.*—At the close of 1867, there were 38,851 miles of railroads in operation in the United States, and the total cost of roads and equipment was estimated at \$1,655,483,820.

The Reconstruction Committee of Congress has agreed to report a supplementary bill repealing the power of the President to detail military officers, &c., and vesting the authority in the general of the army. The bill declares that there are no military officers in the territory of the United States, now out of the Union, that can be recognized as valid either by the executive or judicial power or authority of the United States.

State Conventions are being held under the Reconstruction laws, in several of the Southern States. There appears to be a good deal of stirring in the South, both among the freed people and the white inhabitants.

General Meade has issued an order removing Charles J. Jenkins, Provisional Governor, and John Jones, Provisional Treasurer of Georgia, for "having declined to respect the institutions of the United States, and to co-operate with the General commanding the Third Military District." On the 10th inst. General Meade addressed the Georgia Convention now in session. He said he considered it his duty to execute the laws of Congress. He could not question the validity of those laws, nor

would he allow them to be thwarted or resisted, except by the Convention to go on conscientiously and diligently with the work before it.

The Markets, &c.—The following were the quotations on the 13th inst. New York. American gold U. S. sizes, 1881, 1890; ditto, 5.20, 1865, 107½; 10.40, 5 per cents, 102½. Superfine State flour, \$3.20. Shipping Ohio, \$10.50 to \$10.75. St. Louis, \$16.25. No. 2 Milwaukee spring wheat, \$2.45; California, \$3.08. Canada barley, \$2.10; State, Western oats, 87½ cts. New western mixed corn, a \$1.35. Middling uplands cotton, 16½ cts. *Philadelphia.*—Superfine flour, \$7.50 a \$8.25; finer \$8.50 a \$14. Red wheat, \$2.50 a \$2.55; choice \$3.20. Middling, \$1.65. Old yellow corn, new, \$1.15 a \$1.18. Oats, 76 a 78 cts. Clover \$7.50 a \$7.62. Timothy, \$2.75 a 3 cts. The arrivals of beef cattle at the Avenue Drive-yard, re about 1900 head. Extra sold at 10 a 11 cts. gross; fair to good at 9 a 9 cts., and common 6½ cts. per lb. Sheep were in demand at an advance of 5000 at 5 a 7 cts. per lb. gross. About 4500 sold at \$10.50 a \$11 per 100 lbs. net.

RECEIPTS.

Received from Edwin G. Copeland, N. C., \$4.18, vol. 41; from Thos. C. Battey, Jr., \$2, to No. 11 42; from Oliver Holloway, O., per M. M. Morlan, \$2, to No. 52, vol. 41.

Received per I. Hall, from the members and staff of Whiteland Preparative Meeting, Chester Co., Pa. and from Friends and others, Springfield Prep. Meeting, O., per Abner Woolman, \$22, for the 1st men.

GRISCOM STREET SOUP HOUSE.

(Between 4th and 5th and Spruce and Pine street.) Is now open daily, except First-day, for the disposal of soup, bread, meat, &c., to the necessitous poor. Contributions in aid of its funds are respectfully solicited. Vegetables, flour, and other articles in making the soup and bread, will be gratefully received at the house, No. 338 Griscom street; and donated money.

WILLIAM EVANS, Treasurer, No. 613 Market Street. THOMAS EVANS, No. 817 Arch St. First month 8th, 1868.

NOTICE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the of the Committee for the gradual Civilization of the prominent of the Indian natives at Tusnessau, Angus Co., New York. Friends who may feel minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., I. John M. Kaighn, Camden, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co. Joseph Scattergood, 413 Spruce Street, Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, —JOSEPH A. WATSON, M. D.

Application for the Admission of Patients is made to the Superintendent, at GRASSY BROOK, Philadelphia, or to any other Member of the Board.

DIED, at her residence in Chesterfield, Morgan Co. Ohio, on the 28th of Eighth month, 1867, SARAH of Fleming Crew, in the 48th year of her age, wife of Chesterfield Monthly Meeting. Her husband for many years manifested an interest in the affairs of religious meetings, both for worship and dis- cerning a concern for the welfare and prosperity of religious Society; yet when brought upon a bed of illness, and the prospect of dissolution before her, she permitted to pass the last moments of her life in the confidence that state of acceptance of Heavenly Father, which her soul longed for. Frequently, from many expressions which fell from her indicating the peaceful state of her mind, and her confidence in the mercies of her dear Redeemer, she felt comforted in the belief that her soul was peacefully entered into that rest which is prepared for the people of God.

WILLIAM H. FILE, PRINTER, No. 422 Walnut street.

Age, when paid quarterly in advance, five cents.

A Volcanic Eruption.

B. Dickerson, United States Minister to Nicaragua, in a recent letter to the United States Secretary of State, gives an interesting account of an eruption of a new volcano which he had the opportunity of witnessing. The account is as follows:

On the 14th of November last a new volcano rose up in Nicaragua, about eight leagues to the west of the city of Leon, on a crowded line of volcanoes running through the State parallel with the Pacific coast.

It commenced about one o'clock in the morning with a succession of explosions, which were distinctly felt and heard at Leon. These explosions opened a fissure through the earth, and, about half a mile in length, running from the old fissure in a southwest direction, away from between the extinct volcanoes of Las Pilas and Orotu, which are two of the numerous cones along the ancient fissures.

Before daylight on the morning of the 14th, was seen issuing from the new volcano in various places. The explosions continued irregularly during the whole time that the volcano was in a state of eruption; sometimes in rapid succession, at other times at intervals of half an hour. The rumbling sounds were heard almost incessantly. In the course of a few days two craters were opened on the new fissure about a thousand feet apart, the one at the southwestern extremity opening perpendicularly, and the other shooting out toward the northeast at an angle of forty degrees. The flames from these two craters daily increased in size and height, while the flames and slighter discharges were emitted from two or three other side fissures.

On the morning of November 22d I went to the new volcano, for the purpose of examining it more closely, though I had seen and heard it very early every day and night from Leon. The best view which I obtained of it on that occasion was from the daylight, from a mountain summit about five miles to the northwest of the fissure, and at an angle with it. The main crater, at the mouth of which I was, was actively at work, throwing out flames and half melted cinders through a circular orifice about sixty feet in diameter, which was constantly filled to its utmost capacity with the ascending smoke. A regular cone, built up entirely by the

falling cinders to the height of about two hundred feet, had already formed around the crater.

"The rim of the cone was white with heat, and the outside was red-hot for half-way down, while the remainder of its black ground-work was glittering with innumerable glowing sparks. It was puffing quite regularly about once a second, with a strong continued blast, which kept up a column of flame filled with flying cinders to the height of about five hundred feet above the mouth of the orifice. Irregular explosions occurred at intervals varying from ten to thirty minutes, increasing the force and volume of the discharges, and sending them far up into the rolling clouds above. The cinders went up in half-fused blazing masses, from one to three feet in diameter, and came down upon the cone hardened, striking with a clinking, metallic sound. After daylight the red appearance of the cone changed to a bluish black. The left hand crater was shooting out oblique discharges of flame and cinders of a similar character at an angle of forty-five degrees from the other, and evidently communicated with it about a thousand feet below the surface, the two craters being that distance apart, and both discharging simultaneously. This half-horizontal crater was about twenty feet in diameter.

"On the afternoon of the 27th, after a series of explosions which seemed to shake the earth to its centre, the volcano commenced discharging vast quantities of black sand and heavier rocks. The column of flame at night was considerably increased in height, and bright, meteor-like spots were seen ascending in the flames to the height of not less than three thousand feet. These were large spherical stones, four and five feet in diameter. The next morning the streets and housetops of Leon were covered with fine black sand from the volcano, and a vast, luminous cloud of raining sand overspread the whole surrounding country. The rain of sand continued until the morning of the 30th, when the volcano died away, apparently smothered by its accumulated eruptions. The sand now covers the whole surrounding country from the volcano to the Pacific, a distance of more than fifty miles to it. At Leon it is from an eighth to a quarter of an inch in depth.

"As we approach the volcano it gradually grows deeper and coarser. For a mile around the crater it lies in particles from three-eighths to half an inch in diameter, and about a foot in depth. Still nearer to the cone the sand increases to several feet in depth, and particles gradually increase in size until they become small broken rocks. Around the base of the cone, round, heavy rocks lie thickly scattered from four to five feet in diameter, but much the larger portion of them have broken into fragments. The cone, itself, is two hundred feet high, with a crater in the top two hundred feet in diameter and about the same in depth. The inside of the crater, the same as the outside, is covered with hard, broken rocks, generally less than a foot in diameter. A long ridge of black scoria leads out from the branch crater in a northeasterly direction.

"The slaggy, lava-like scoria which first issued from the main crater, is now principally covered

up by the hard plutonic rocks which came out from the profounder depths with the last discharges. The forest for leagues around is scarred and maimed by the sharp cutting storms of sand, and near the volcanoes the trees lie cut into numerous fragments, half buried under the sand and rocks.

"The volcano was an active and interesting sight for sixteen days, and now, in its repose, affords an ample and instructive field for the geologist. Indeed, no country in the world presents a more interesting study than the plain of Leon. Twenty volcanic cones are seen rising from it at a single view. Its soil is highly fertile, as finely pulverized and as evenly distributed as that of the valley of the Nile or the Mississippi; not however by water but by fire. It has literally been rained down from the volcanoes richly freighted with fertilizing materials.

"Humboldt regretted before his death that men of science had not more fully investigated this remarkable region of country, and it is sincerely to be hoped that it may not much longer remain neglected by them.

"The recent fall of sand has been followed by a shower of rain, and though but a few days have since elapsed, corn, cotton, and grass have grown more rapidly under its fertilizing influence than I have ever seen plants grow before. Some weeds and plants it kills; others it starts forth with renewed life and vigor.

"I send herewith a specimen of the sand, gathered at Leon before the rain, hoping that it may be analyzed.

"It may appear proper in this connection to call attention to the recent destructive storms, earthquakes and eruptions which occurred at and around the Island of St. Thomas during the same period of time which I have been describing, and which undoubtedly spring from the same general cause, as those earthquakes were distinctly felt at Leon."

Selected for "The Friend."

The By-paths, Crooked-ways, Wiles and Snares of the Enemy Discovered.

Now when the mind is turned to this divine heavenly principle, and the work of the Lord is begun, the same destroyer that brought man into bondage at first, and hath kept him in bondage, will begin to work cunningly, and endeavor to destroy the work of God begun in the soul; and that he may accomplish his end, he will go about every way, seeking an entrance, and will lay his temptations suitable to the propensity or inclinations of the creature. If the heart be bowed under a weighty sense of iniquity and many transgressions, through which sorrow and bitterness is great, the enemy will work in his transformings, and in appearance like the light, yet in nature contrary thereto. For, though the light gives the certain understanding of the inward state, and brings sorrow because of sin, and shows the mountain of iniquity, yet it begets a secret hope of overcoming by the Lord's strength. But when the enemy sees the soul bowed down, he often afflicts and brings it into unbelief of ever overcoming, thereby endeavoring to sink it into despair; knowing, if he overcomes, he still keeps

under his power, although in another appearance. But all who are thus exercised, waiting on the Lord singly, with the mind stayed in the light, will discover this snare; for, as I said, although the true appearance of God's heavenly light and grace brings a day of trouble, sorrow and anguish, yet that sorrow is not a sorrow without hope, but the enemy's working is to bring into a sorrow without hope, and to draw down the spirit into the chambers of darkness. When the enemy is discovered in this, and the soul through the love and power of God is comforted and refreshed, and raised up in a measure of living hope, then he endeavors to lead from the inward daily travail, that judgment may not be brought forth into victory; and so draw the mind into a false persuasion of obedience and diligence, when there is not an abiding in that which gives a true sense of its state. And as he would have been destroyed the hope that is an anchor sure and steadfast, so now he would beget a false hope and confidence, and bring out of the daily cross, through which the nature that hath alienated from God, should be destroyed. If the enemy be seen and overcome in both these snares, and the work prospers even until much be subjected, and through daily obedience to the heavenly power, much is slain, and the heart comes in good measure to be cleansed, and a good progress is made through the administration of condemnation, that is glorious in its time; and something of pure peace and heavenly joy arises in the heart; here again the enemy will be subtly at work, to betray, in persuading to sit down now, as if all were done; and thus lead from feeding on the tree of life, to feed on the tree of knowledge of good and evil, and to break the commandment of the Lord. At first he subtly draws the mind out to take a little liberty, and from that diligent watchfulness and fear it was in before. And if he can but prevail he will lead out of the innocent life, and by degrees open an eye they may see something in outward things that may affect the mind; and as he prevails gradually and hiddenly, the eye that was opened comes again, through disobedience, to be in some measure blinded; and here loss is sustained, even before the watchful is aware. And the working of the enemy is first, to cause such to make shipwreck of faith in a little measure; that is not to have the daily belief to stand in the power; the daily enjoyment of which, coming to be led by degrees, there will then be a turning from the power of godliness, into the form thereof. And although at times the power of the Lord may be felt in this state, yet there not being a daily feeling after it, the enjoyment thereof, as to true refreshment and consolation, is lost, and an image comes up in its place; and the enemy presents some objects to take up the mind, so that by degrees he may enter and defile it, and draw it from its true guide, so as to make shipwreck of a good conscience. If the enemy be discovered before he can so effect his work, as to bring death and darkness over again, and the power of the Lord breaks his snares, and gives a true sense thereof, through which trouble and anguish of spirit comes, here he will again transform and work as in the beginning, like the condemning power of the Lord, endeavoring to lead the mind into despair of ever recovering its former condition, and to draw it to look at him that hath stung, that so the remedy, the soul ransoming power of the Lord, may not be felt after nor looked at. But as there is a true regard to the Lord, and a waiting upon him in the way of his judgments, having the faith and confidence to stand in his power, the backsliding will be healed; and returning and diligently keeping in the light, the power of the Lord

will work over that which has endeavored like a roaring lion to destroy, and so lead on in the way again. But when deliverance is known from this deadly snare, and the work again goes on prosperously until the house be swept and garnished, and there is a passing from death unto life, and the ministration of condemnation being gone through and the spirit that ruled in the disobedient state cast out, and the openings of that which doth exceed in glory, the administration of the Spirit, is known; the enemy will again transform himself as an angel of light, and with all his power and strength, work by temptation on the right hand and on the left. For when there are openings to the understanding, and prophecies, and through the working of the eternal power joy springs in the heart, then the enemy will work secretly, to draw the mind out of the valley of humility; and if he prevails he will endeavor to lead into extremes, thereby to destroy the true birth, which is bringing forth, and so bewilder the mind, and hurry it through imaginary notions, to dishonor the name of the living God, and to destroy his work, which through sorrow and travail hath been brought forth. If he cannot prevail here, but the light of the Lord discovereth him, then will he be at work, to draw the mind from watchfulness and daily fear, and the liberty of the sons of God, which liberty is only to serve the Lord. For dominion being felt in some measure, comfort and consolation enjoyed, and praises raised in the heart to him that hath visited and redeemed, the enemy will be ready to draw the mind out of the stayed estate of meek and constant watchfulness in the light, thereby causing the creature prodigally to spend the portion, and to lavish out the enjoyment by running before the leadings and movings of the power of the Lord, to speak of the enjoyment, the prophecies and openings, not being led thereto by that power that first opened the heart; and here is an untimely birth brought forth, that will wither and come to nothing. Where the enemy cannot prevail by these snares and temptations, he will not cease, "who goes about as a roaring lion, seeking whom he may devour;" and how he may again get entrance; but lays his temptations according to the spirit, growth, capacities and inclinations of every one.

(To be continued.)

Selected for "The Friend." Advice to Sisters.

The following is extracted from the account of Elizabeth Rathbone in *Piety Promoted*, vol. 3d. "In the morning of the 27th, she said divers things respecting the children of her brother and sister Benson, and respecting the close and intimate union which she and her sister had been favored with. Oh! said she, how I wish that thy dear Abigail and Rachel may be thus united! Press it upon their minds. It is a point of importance for children of the same parents to cultivate a tender regard and sympathy with each other. It is difficult for the best chosen friends, to enter so intimately into the varied circumstances and difficulties that attend our allotments in life, as two sisters who seek to have the divine cement to strengthen the natural bond of union. My early friendships were carried too far, and on this account a weight of condemnation ensued; for I found that I had been planting heavens of my own; and earths of my own; and when the day of the Lord came, which burns like an oven, I saw all these pleasant pictures were to be destroyed."

If joys are transient to the world, sorrows are as transient to the Christian.

The following official statement of the mortal of the city during the year 1867 is furnished Geo. E. Chambers, Registrar of Births, Marriages and Deaths, and possesses considerable importance as showing a marked decrease in the number deaths, notwithstanding the natural increase population.

The deaths in each month, compared with 1866 were as follows:

	1867.	1866.
January,	1,576	1,414
February,	1,042	1,042
March,	1,094	1,011
April,	1,088	1,018
May,	1,260	1,260
June,	950	1,100
July,	1,795	1,795
August,	1,294	2,000
September,	1,012	1,012
October,	1,177	1,177
November,	871	1,011
December,	974	1,011
	13,933	16,933

Decrease in 1867,

In referring to this subject one of our daily, while computing the population of Philadelphia at not less than 700,000, and that the death has therefore been for the past year only about one in every fifty inhabitants, very justly remarks: "It is not probable that such a moderate mortality in a year can be found in any large city in the world. Philadelphia retains its character as the healthiest of all American cities."

Earthquakes in various localities at a distance were chronicled in our last month's report, at

time we have had reports of the same kind at stations nearer home. A Troy paper, of the 15th inst., states that during the day previous 'a strong terrifying convulsion of the earth had taken place in a region of country beginning at Mount Airy, in Canada East, and Belleville, Canada West, and reaching as far south as Troy and Albany, including large portions of Vermont and New York.' The writer then names several places where it had occurred, and gives a minute description of the shock experienced at each. In some localities houses were shaken and somewhat damaged.

It will be seen by the preceding exhibit that the quantity of rain which fell during the year 1867 exceeded that of 1866 by nearly fifteen inches, while the temperature has not only been warmer than that of the corresponding months of the year previous, but a little below the average of the past twenty-eight years.

The snow storm of the twelfth of the month the last year was a very severe one, making unusually good sleighing for so early in the season, and that of the last day of the year extended a considerable distance south of us. At Richmond it was six inches deep, while at Danville and for more southern portions of that State it reached a depth of twelve inches.

The following table, though not directly pertaining to the health of our city, is nevertheless possessed of considerable interest, inasmuch as it gives the number of convenient dwellings provided for our citizens and their families, and the means by which they are secured, and indirectly to the health and happiness of the community.

The following is a statement of the number of permits issued by the Building Inspectors for the erection of new buildings in the city during the last four years:

	1867.	1866.	1865.	1864.
January, . . .	19	41	20	79
February, . . .	80	63	29	86
March, . . .	164	267	189	125
April, . . .	504	253	156	180
May, . . .	263	184	200	257
June, . . .	656	399	130	174
July, . . .	341	337	167	140
August, . . .	386	313	283	141
September, . . .	550	298	280	138
October, . . .	447	305	263	145
November, . . .	268	278	213	87
December, . . .	99	70	94	49

Total, . . . 3777 2563 2024 1603
There were also issued in 1867, 1306 permits for alterations. J. M. E.
Philadelphia, First month 24, 1867.

It is often said that the anguish we feel, in the trial of these we love, arises from a mistaken view of this state of existence; could we always see the idea of its being merely a pilgrimage, should rather rejoice than weep when those whom we are fondly attached, obtain a man's place in that heavenly country where all tears are wiped away. Jesus wept at the grave of Lazarus; divine, compassionate Redeemer!

Death leaves us judgment finds us; for there is no work, no device, nor knowledge, nor wisdom in the grave whither we are all hastening. Some of us, apparently, with lengthening years. Then let us endeavor to use all diligence, to make our calling and election sure before we go hence; that so we may be amongst the many who have an entrance ministered unto, into the everlasting kingdom of our Father and Saviour Jesus Christ.—D. Wheeler.

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 162.)

"Fifth mo. 1837. I believe our Quarterly Meeting has occurred since I wrote thee. It was, as is often the case at —, without the notice of strangers; yet an interesting meeting notwithstanding. We have, I think, within ourselves, genuine worth, and talents occupied to the Master's honor. It is often to me a pleasant reflection, and I rejoice in believing it a true one, that our best interests are not dependent upon the activity and ministrations of man. Ye need no other teaching save as the holy anointing teacheth you, and whether we be many or few, solitary or in the midst of society, we have still this teacher to instruct, enlighten, and perfect in all true knowledge, if we are only careful to attend faithfully to what it would teach us."

The two following selections are from the journal.

"6th mo. 1837. I have felt this evening gratefully sensible of the abounding of that love which is unspeakable, and both ancient and new. Its hallowed influence has been remembered, which early measurably caused me to renounce the alluring things of this life; which showed me there was something more substantial than earth's best gifts; and as a crowning favor, strengthened me, in a little degree, to conform to its moitions. It has occurred to me that we are too apt to consider, not ourselves the favored by being thus awakened, but that we are conferring obligations on our Heavenly Friend by accepting His merciful invitations. Are we not too apt to consider some merit our due for sacrificing the plausible pleasures of this state of being? forgetting this,—His mercy does all for us, and that the end designed is our everlasting salvation. Oh! that all selfishness might forever be eradicated, and in true humility of heart the aspiration unceasingly ascend for childlike submission to that Divine power which I have to-day felt has done all for me, and to whom I could wish to consecrate every faculty of my heart, mind, and soul. Oh! this love, Divine love! what an element! I can fathom it."

"6th mo. 1837. I would thankfully commemorate the mercy that has dispersed the clouds of difficulty and discouragement, and shown me this day in an especial manner that there are no joys like those the believer participates in; no confidence like that resulting from faith in the Supreme Director of all things; and no hope comparable to the anticipations of the willing, obedient, and instructed participant in the promises of the Father. A degree of love, words cannot convey, has lived in my heart towards the Father of His people; and under its influence I have almost wished to drop these fetters of mortality, and soar to the soul's original element."

The correspondence continues:

"6th mo. 13th, 1837. Thy last letter was very acceptable to me, and touched a chord that very easily vibrates. There is a greater tendency in my disposition to weep with the sorrowful, than to rejoice with the happy and unnumbered; and perhaps because of this bias, I am the more ready to surrender my feelings to the flow of sympathy; but notwithstanding thy assertions were all to the contrary, I could not suppress the mental language, 'There is much life there.' It brought too, feelingly to mind a sentiment of thine in a former letter, that 'many fears with regard to one's self, was an evidence we were pressing onward.' I too at that time was altogether in darkness, and had forgotten, 'that help was laid upon One that is mighty, and able to save.' It seemed to revive a

little hope, and throw a ray of light where only gloom had long rested. Has not experience taught thee, that we learn the deepest and happiest lessons when surrounded by discouragements? I believe it has been so, and as thou endeavors to centre in resignation to the Divine will, and keep thy mind steadily turned to Him, in His own time, I doubt not, He will dispel the darkness, and show thee why He has afflicted thee. Perhaps 'tis a preparation for some sacrifice, that would have been hardly yielded to, had not his perceptible favor been withdrawn. I have often considered it one of the crowning blessings, that Infinite Goodness condescends to prepare the sacrifice, by weaning us from ourselves, and all created objects, that He may attach us more closely to Himself and cause us to feel His favor preferable to all else besides. 'Thy very truth there is nothing in these seasons for flesh to glory in. The mind apparently divested of its anchor, 'tossed and not comforted,' ardently longs for some little spot whereon to rest with some encouraging prospect; but alas! the Comforter seems altogether distant, and we have only to seek for patience to enable us to bear whatever is allotted. I believe there are those now, who like the prophet formerly, know what it is to 'sit alone;' and on account of the same knowledge,—because of 'Thy hand.' They feel, deeply feel, the corruptions of their own hearts, and the purity of that Being who is of purer eyes than to behold iniquity; and the warfare with their own feelings, and the anxiety to secure a resting-place beyond the interruptions of this conflicting scene, tinges every feeling with anxiety and fear, lest they miss the prize at last. And superadded are sometimes difficulties and discouragements from without, that tend to darken the scene, depress the feelings, and add to the load that before seemed heavy enough for the poor creature to bear. But 'tis well to remember, these are but for a moment, and as we seek diligently for best wisdom to direct us, casting our care upon Him who abundantly cares for all who seek unto Him in integrity, a way will undoubtedly be made where there appeared none, and strength proportioned to every conflict. Do not think these are mere words of course, and still consider thyself too much retrograding. 'Tis certainly right to forbear warming ourselves with sparks of our own kindling; and safest to remain poor, and apparently inanimate as to religion when the sensible influence of Light and Life is withdrawn; but we may yet endeavor to keep alive a little faith, and trust when the end allotted is answered, we may again be permitted to rejoice in the God of our salvation. I fully unite with thee in sentiment, that 'if we sincerely desire to experience true resignation to the Divine will in all things, we shall find that our most bitter cups will tend to our refinement, and furtherance in the way of life.' I sometimes gladly remember that 'much toiling' will not be likely to advance us in this only safe path. The work is not ours, and if we can only waive reasoning, and submit like little children, 'He is faithful that has promised.'

"We have had a very pleasant visit from S. Hillman. I felt strongly attracted towards her almost immediately; and can truly say, I love her. The passive obedience with which she seems to yield to her Master's requirements, frail and feeble as she appears to be, is an impressive lesson: but she has her reward. She acknowledges her return is in peace; and that she looks back on the arduous field of labor without one regret. She spoke very encouragingly and beautifully at our meeting, as well as in a more private company afterwards."

(To be continued.)

QUEEN CATHARINE IAGELLON.

To Queen Catharine of Sweden, all earthly senses were fading;
Unquiet were her slumbers, for her mind was ill at ease;
Though in her chamber lying, the service for the dying,
That morning had been chanted, to bring her spirit peace.

Then came the Jesuit father, and with a vain endeavor,
He sought to soothe the mournful queen, but nought could stay her tears;
For should the mass avail not, and the thought would come unbidden,
An awful Purgatory in her inmost soul she fears.

Now came the father nearer, and bending low above her,
Within the hushed and darkened room, he sought to whisper low;
But behind the crimson curtains, a listener stood unheeded,
Who heard the old Confessor's voice, as he spake in accents slow:

"Madam dismiss your terrors! there exists no purgatory!
A fee for the ignorant is all that it may claim;
Invented for a purpose, 'tis a fruitful source of profit
In the service of the Holy Church, and wielded in her name."

"A fable for the ignorant!" exclaimed the dying woman,
"If this be false what then is true?" and never spake again.

Oh! had that rayless darkness been illumined by the knowledge
Of the Blessed Saviour dying to save the souls of men!

Do we to whom the fulness of the Gospel has been given,
Who may count its choicest blessings around us every where,

Do we listen to the teachings of the still small voice within us,
That we may know the fulness of the Gospel power there!

In vain are all our boastings of a purer faith and better,
If our hearts are yet unquiet—with earth-born passions rife,
If we strive for earthly honors—if we live for worldly pleasure,
And leave the straight and narrow way that leadeth unto Life.

The above incident is related on the authority of Puffendorf, Swedish councillor and author of "The Law of Nature and Nations." The hidden listener was the princess Anna, daughter of the Queen, whose protestant predilections were thus confirmed. H.

THE CROSS.

Selected.

"Then said Jesus unto his disciples, If any man will come after Me, let him deny himself, and take up his cross, and follow me." Matt. xvi. 24.

The christian's badge of honor here,
Has ever been the cross;
And when its hidden joys appear,
He counts its gain, not loss.

He bears it meekly, as is best,
While struggling here with sin;
He wears it not upon his breast,
Ah! oo, it is within.

And if it bring him pain or shame,
He takes it joyfully,
For well he knows from whom it came,
And what its end shall be.

Only a little while 'tis borne,
And as a pledge is given,
Of robes of triumph, to be worn
For evermore in heaven.

The Worship of the Heart.—Christ Jesus requireth no rite or ceremonial worship of any, but that they give up their heart to Him. It is there, saith he, I would reign, it is there I would rule, and there I would be worshipped in spirit and in truth.

Franklin and the Mosquitoes.

"Better to bear the present ills of life,
Than fly to others that we know not of."

All human situations have their inconveniences; we feel those that we find in the present, but we neither feel nor see those that exist in another. Hence we make frequent and troublesome changes without amendment, and often for the worse. In my youth I was a passenger in a little sloop descending the river Delaware. There being no wind, we were obliged, when the ebb was spent, to cast anchor and wait for the next. The heat of the sun on the vessel was excessive, the company strangers to me and not very agreeable. Near the river side, I saw what I took to be a pleasant green meadow, in the middle of which was a shady tree, where, it struck my fancy I could sit and read, (having a book in my pocket) and pass the time agreeably till the tide turned; I therefore prevailed on the captain to put me on shore. Being landed, I found the greater part of my meadow was really a marsh, in crossing which to come up to the tree, I was up to my knees in mire; and I had not placed myself under its shade five minutes, before the mosquitoes and ear-wigs in swarms found me out, attacked my legs, hands and face, and made my reading and rest impossible; so that I returned to the beach and called for the boat to come and take me on board again, where I was obliged to bear the heat I had strove to quit, and also the laugh of the company.—Franklin's Letters.

For "The Friend."

There may be some amongst us, who withhold their sentiment, in our meetings for discipline, more from a fear of wanting the right qualification, the true anointing, than from less worthy motives; and while it would be wrong to put forth the hand unbidden, merely because the business of society should be done by somebody; it is important these should be awakened, and look to the Lord with desires that He would give them with strength; and also they be met and encouraged at the proper time, by those who are before them in active service. Individuals who have given evidence, for perhaps years, of a steady, quiet growth in best things; who have manifested firmness in their families, to uphold our precious ancient testimonies without wavering; who have, with a religious zeal, diligently attended all our meetings; can it be said of these, they have taken no part with us. When the name of such an one has been brought forward to fill a service in the church, it were well to be assured the ground on which unity is withheld is safe. They who feel they have not overcome all that is required of them in the struggle for the mark of the prize of their high calling; who fear self is not slain; who know the still small voice, but have desired to watch the Holy Spirit, may tarry too long, and be too slow to acknowledge qualification by acts of their own. These should be objects of tender care to the nursing fathers and mothers. They, no doubt, will be watched over by their Heavenly Father as they give not out by the way; though they may be mercifully favored with proving seasons, so as to come forward with weapons which they have proved. These may withhold more than is meet; but we have abundant evidence that it is not fearless, unasked zeal that is going to steady the tottering ark, but rather those that are walking about Zion, marking well her bulwarks and her towers of defence.

We may remember a servant of the Lord formerly, who, no doubt, had long been under the preparing Hand, for that which he was to be called to—perhaps unconsciously to himself—

who when called answered, "Here am I." B when the commission was given, under a sense its weight, how he pleaded to be excused; it uncircumcised lips, the faltering tongue; ah, little want of faith too; for he feared the people would not know the Lord had sent him. Not the Lord was angry with him and said his brother would meet him with gladness for his help, it was willing. Yet who ever walked with the blinding Israel with more faith, with less earth taint, than this same meek man Moses, whose question was: If Thy presence go not with us, let not go up hence. A. F.

Tall Trees in Australia.

Dr. Ferdinand Müller, Director of the Gardens at Melbourne, in a recent pamphlet up "Australian Vegetation," makes the following statements in regard to the dimensions of some of the vegetable productions of that remarkable continent. From these accounts it appears that the "mammoth trees" of California are no longer to be regarded as unique specimens of gigantic growth; and that they are even surpassed in height by some of the trees peculiar to this country.

Until lately the highest tree known was a *Eucalyptus* (*Eucalyptus* *collesces*) which is nearly 400 feet high, and into the hollow trunk of which three riders, with an additional passenger could enter, and turn, without dismount. Recently, since access has been gained to some of the back gullies of the mountain system, measurements have shown the existence of still larger trees. In the deep recesses of Dandenong a fallen trunk of *Eucalyptus amygdalina* was found 420 feet long, another specimen measured from the base to the first branch 295 feet, with girth at three feet from the ground of 41 feet, the circumference of a third tree of this species was found to be 81 feet at the height of four feet above the surface. In a different location a gigantic *eucalyptus* tree was measured 480 feet high. Dr. Müller states: "It is not at all likely that, in these isolated inquiries, chance has led to the really highest trees, which most secluded and the least accessible spots may still conceal. It seems, however, almost beyond dispute, that the trees of Australia rival in length, though not so densely not in thickness, even the renowned forest giants of California." "The enormous height, attained by not isolated but vast masses of our timber trees, in the rich deluvial deposits of sheltered depressions within Victorian ranges, finds principal explanation, perhaps, in the circumstance, that the richness of the soil is combined with a humid geniality of the climate."

I think it is often the case that such, as he been much made use of, and favored with his early gifts, are deeply plunged at the end of the pilgrimage; but this is a merciful and last blessing to prepare for the realms of bliss, and the girdle of the power of Truth will keep the elements, even the clothing of the Spirit of Jesus close around, that no nakedness may appear, strengthen the limbs to press onward to the good end, that crowns all in peace.—L. A.

By watering, He weareth the thick dole saith Job; so doth the tear of affection, which shed in meekness and submission, softens the heart's keenest anguish, until the dark cloud of grief dissolves into resignation to the Divine will, and is sanctified to the praise and glory of God.—D. Wheeler.

Westtown Boarding School.

(Continued from page 163.)

It is always desirable to feel that we are in proper places—settling and consoling to be—we are occupying just the niche designed for us—and we cannot always ascertain where it is without making trial of what is presented to the mind; which I am inclined to think this to thine with some degree of clearness, so that the present arrangement, my dear friend, will I rest pleasantly with thee. The duties I am are arduous, but I do think it a sphere for which thou art fitted. The moral training as well as religious impressions made upon many of the scholars at Westtown remain with them through and that they care in this respect may indeed be indebted both to thyself and thy youthful charge, the fervent desire of thy sincere friend, who knows how necessary it is to keep near the only source of true help, that we may be enabled, in the first place, to govern ourselves—experience in this, will greatly assist in estimating the laborers who may be using, for this end, who have not needed much—have just commenced their journey with feeble desires after good, and need encouragement. It is a nice matter to be able to stand boldly for the cause of Truth—give no place to the wrong, and at the same time risk not a hurt to the oil or wine.” With every disposition to urge thee in this work I close and remain thy friend.”

Oh how good is christian fellowship and sympathy. It is a pearl of no small value. * * * comforted in believing that I shared a sweet union of it with all the poor dear inmates at town in our recent visit there. I felt it no sacrifice to the flesh to leave a warm fire and turn out to ride more than twenty miles to almost open stage, with the thermometer zero; but have had no cause to regret it—yet got safely back, with taking but little cold and with you the burden of the affliction which was permitted to come upon you, and were by prepared to give a correct statement to many enquirers after the true state of the case.

I hope you are all striving to perform several honorable duties in watching over, instructing the lambs of Christ committed to your care; and that you feel at times the sweet reward of peace for so doing; it is an arduous duty, but a very dignified one if rightly appreciated.

I do not wonder at the burdens you have to bear in such a family. * * * There are different duties for the members to perform in the body, they are assigned to each by the all-wise Head. I cannot say to another, I have no need of you, nor others, I have no need of you, and He let the members every one in the body as it pleased Him, and hath tempered the body that there should be no schism in it, but members should have the same care one for another; that whether one member suffer all the members suffer with it. I believe there are not still preserved who are of this class, and a favor it will be to know the travail of spirit read from one to another, that we may all be strengthened into the oneness, seeing eye to eye, and love one another in the purity and fellowship of the blessed Truth. Faithfulness to our Divine Father, keeping a single eye to him, that we may give the pointing of his fingers, the gentle relations to duty, are essential to our own growth and preservation, and for the help of others.

Many are the means by which Satan is striving to lay us waste, both as individuals and as a church, but the Lord in mercy will defeat them, if we trust in Him alone and keep watchful

hour by hour, breathing to Him not to forsake us, but as he began the work in us, he would perfect it to the end. I believe thou art daily striving for this, and trust that the everlasting arms will be underneath and round about, to defend and strengthen thee to do his will in humility and fear before him, patiently enduring the stripping dispensations so as experimentally to know that without Christ thou canst do nothing. He knows when to return to us with healing in his wings, to put us forth and go before us in the service he appoints for us to perform; and even when we have done what he calls for if emptiness may be ours, it will be without condemnation, and a holy serenity will be at times felt. For the duties of thy station I trust thou wilt be endowed with wisdom from Him, and be a blessing to many dear children, which may be, in some cases, like bread cast upon the waters, that shall return after many days, and which will add to the peaceful reward.”

“I was glad to hear by —, in her recent visit to Westtown, that thou wert cheerful in the midst of thy cares, and that thy dear charge were much attached to thee. The capacity to bear burdens and to wash and anoint, concealing from others the sack-cloth that is often worn underneath, is derived from the invisible arm of the unslumbering Shepherd of his flock. He knows their tribulations, how high to permit the billows to rise, and with what force, to beat against their troublesome habitations, and who does say when he sees it is enough at that time,—peace, be still. Employment is exceedingly useful to the christian, especially in doing good by his daily avocations, both to others and for himself. Yours in that valuable school is peculiarly so, constantly instructing and cheering the sheep and the lambs, by well-regulated spirits tempered with gravity, and a proper share of sprightliness, slow to anger, and exhibiting the circumspect and correct deportment of the christian. The reward of peace and true happiness which you enjoy, is not only an important part of your reward, but it gives you the opportunity of showing to the younger ones, what the religion of the gospel does for its obedient possessors, and how much wiser and better they are for living under its divine influence and control. They that be wise shall shine as the brightness of the firmament, and they that turn many to righteousness as the stars for ever and ever. How many souls, devoted religious teachers may be instrumental in turning to their Saviour, so as to be made willing in the day of his power, to give themselves up to love him above every thing else, and to serve him with a whole heart, none of you know now. But should you through unmerited mercy be ranked among the innumerable multitude that surround the glorious throne, and there meet sanctified spirits, who have partaken of the good effects of your labor, and tears, and prayers, we may suppose it will add to your joy and crown of rejoicing—as among the angels there is more joy over one sinner that repenteth, than over ninety and nine just persons who need no repentance.”

“The visit to the school with you was refreshing to me—in whom, and in the objects of that valuable institution, I feel a lively interest; hoping as time goes on there may be a succession of caretakers, and members of the committee who will keep to the original concern, and conduct it under the guidance of heavenly wisdom, in conformity with the humility and simplicity inculcated by our christian testimonies.”

The way of tribulation, is the way of the kingdom; walk thou in it.

The Wonders of Seed.—Is there upon earth a machine, is there a palace, is there even a city, which contains so much that is wonderful as is inclosed in a single seed—one grain of corn, one little brown apple-seed, one small seed of a tree, picked up, perhaps, by a sparrow for her little ones, the smallest of a poppy or blue-bell, or even one of the seeds that are so small that they float about in the air invisible to our eyes? Ah! there is a world of marvel and brilliant beauties hidden in each of these tiny seeds. About an hundred and fifty years ago, the celebrated Linnaeus, who has been called “the father of botany,” reckoned about 8000 different kinds of plants; and he then thought that the whole number existing could not much exceed 10,000. But a hundred years after him, M. de Candolle, of Geneva, described about 40,000 kinds of plants, and he supposed it possible that the number might even amount to 100,000. Well, have these 100,000 kinds of plants ever failed to bear the right kind of seeds? Have they ever decayed? Has a seed of wheat ever yielded barley, or the seed of a poppy grown up into a sun-flower? Has a sycamore tree ever sprung from an acorn, or a beech tree from a chestnut? A little bird may carry away the small seed of the sycamore in its beak to feed its nestlings, and on the way may drop it on the ground. The tiny seed may spring up and grow where it fell unnoticed, and sixty years after it may become a magnificent tree, under which the flocks of the valleys and their shepherds may rest in the shade—*Rural New Yorker.*

For “The Friend.”

From a consideration of the State of the “Society of Friends,” at this time, it appeared to me that the following letter, from the once much esteemed Friend, Mary Peisley, might be conducive to lead some of our younger Friends so to ponder their path, as that they might be induced sedulously to seek the “good old way,” and by Divine help, to walk therein. It must be evident to all such as are serious, honest enquirers after Divine Truth, that the Society, and the principles and testimonies thereof, originated immediately under and from the “Great Spirit,” and that consequently the principles and testimonies must ever remain unchanged and unchangeable, as the Deity himself; and however the enemy, disguised as an angel of light, may prevail with some to introduce new systems, either by teaching or worship, however sincere and zealous, or though human learning may give its aid thereto, that there is no agency can be of any real and effective service, only as it has its rise in and from the Divine Spirit, which is communicated by measure unto any instruments, and has to be waited for in the silence of the mind. For even after the soul has been renewed, its new birth being from above, and not from any material source, (as different sects believe, as from outward water, bread and wine, and ministerial ordination or confirmation,) spiritual aid is absolutely necessary for true spiritual worship, and as it was with the Beaconites in England, when they left waiting in spiritual silence, they went to outward ordinances, so now these outward things follow as a matter of course. I feel also desirous to caution my younger Friends that the fire and heat by which they may warm themselves from the excessive zeal and great apparent sincerity of these devotees, do not and cannot exceed much of the same kind amongst even the Papists and others, who like Saul of old, prefer sacrifices of their own choosing, to the obedience required by God.

I may also add, that there are not any of our

testimonies that can be broken without endangering all, for they are an united whole; it is like a piece of machinery, that will stop if one part is wanting. Not only has it to do with oaths, war and superfluities of dress and address, but our good old Friend Wm. Penn, of excellent memory, durst not take off his hat even to the king, and that at the request of his honored father. May the youth of this generation become as peculiar to the Lord as our early Friends; then, and not until then, may they expect that remarkable and powerful blessing so eminently showered on their devoted predecessors. S. C.

Orleans Co., N. Y., First mo. 5th, 1868.

Letter from Mary Peisley, (afterwards Mary Neale), to her friend in Pennsylvania.

"Without the least design to lessen parental authority, or filial obedience, so far as they are either lawful or expedient, I would remark to thee, that divers parents of this age have bent their thoughts and desires too much to earth, to have a clear, distinct discerning of the times and seasons in a spiritual sense, and the sacred purposes of Him, whose wisdom is unsearchable, and His ways past finding out, by all the penetration of finite understanding, uninfluenced by his own eternal light, and even then we see and know but in part whilst here; but some of us have believed and seen in the visions of light, that the day of gospel light which has dawned will rise higher and higher; notwithstanding that some clouds may at times intercept its beauty and brightness, as hath been sorrowfully the case amongst us as a people, who have been highly favored. And though I have not the least design to derogate from the real worth of those honorable sons of the morning, who are made instrumental in a great degree to break down the partition wall, which carnal, selfish man had erected between the people and the Sun of righteousness, I am not afraid to say, and give it under my hand, that it was and is the design of God that his people in future ages should carry on the reformation even further than they did; and notwithstanding that a night of apostasy has come over us as a people, (as day and night succeed each other in their season and God keeps his covenant with both,) I am of the judgment that that day has begun to dawn, in which the Sun of righteousness will rise higher and with greater lustre than heretofore; and if those who are called of God to be sons of this morning, look back to the night, and to them who have slept and been drunken in the night, by sipping of the golden cup of abomination, as even to the latter day, they will frustrate the designs of Providence respecting themselves, though not respecting his own work, for it is his sacred determination to be glorious in heaven and glorified on earth, though those who would be called his Israel be not gathered. And I am of the faith that when the gospel has been first preached to them, as it is meet it should, that such as neglect to embrace it will be left, and the feet of the messengers turned another way, even to the highways and hedges, with a power of compulsive love which will prevail on the halt, the maimed and the blind, to come to the marriage of the King's son, and by coming they shall be made strong, beautiful, and lively, and not look back to those things that are behind, but press forward toward the mark for the prize of the high calling of God in Christ, following no men's example further than they follow him; and what if I say, in the faith which is given me, that God has designed to carry some of this generation in these parts of the world, higher and further in righteousness than their forefathers

were carried, even such as were honourable in their day; and therefore let them take heed that they limit not the Holy One of Israel, nor circumscribe the leadings of his blessed, unerring Spirit, by looking too much to the example of others; for this has been the means of stopping the gradual progression of many glorious, well begun reformation; instead of going forward, they have looked back, and even sunk below the standard of the first reformers. And such as will be the first reformers in this degenerate age, must differ in their trials from the sons of the former morning, and will find them to be of a more severe and piercing kind; theirs were from the world and such as they might justly expect from them (though not exempt from false brethren); ours will chiefly arise from those under the same profession, clothed with the disguised spirit of the world, and that among some of the foremost rank (so called) in society, and what if I say, (though my natural eyes may not see it,) that God will divide in Jacob and scatter in Israel, before that reformation is brought in his church which he designs. And now in regard to the matter proposed by thee, I shall answer briefly, that I am of the judgment that if thou standest single and upright in thy mind from all the false biases of nature and interest of things, stopping thine ear to fallacious reasonings, thou wilt find it more safe to suffer with the people of God, than to enter on or undertake doubtful things.

(Signed) MARY PEISLEY."

The Oyster Trade of Baltimore.—The Baltimore American says:

"The export oyster trade of this city is one of its largest industrial interests, and by it the city is benefited to a degree that is understood by but few. The business of canning Chesapeake Bay oysters, and sending them to all parts of the West, was inaugurated about ten years since, and soon grew to a maximum that for the past four years it has retained with but a slight variation. The exhibit of this maximum shows that a yearly average of 3,800,000 bushels of oysters is brought to the market. Of this number 2,895,000 bushels are taken in Maryland waters, and 965,000 bushels in Virginia waters.

"Next to Baltimore, the largest number of oysters are taken to New York, that city receiving an annual average of 1,050,000 bushels. Fair Haven, Conn., receives 700,000; Philadelphia, 400,000, and Boston 360,000 bushels. These figures apply only to oysters taken in Maryland and Virginia waters, the yield of the former averaging 4,880,000 bushels per year, and the latter 2,065,000 bushels, the aggregate being 6,945,000. There are about one thousand boats, of an average tonnage of fifty tons each, engaged in dredging for oysters for the Baltimore market, and supplying vessels for other markets. A tax of \$4 per ton on these boats per annum would produce a yearly revenue of \$200,000. The average quantity dredged by each one of these boats during the oyster season of six months is 4,746 bushels, which, at an average price of 45 cents per bushel, shows the average receipts of each one of these boats to be \$2,128.70 for six months, or \$354.67 per month. In addition to these sailing vessels there are over 1,500 canoes engaged in tonging for oysters in the inlets of Chesapeake Bay and its tributaries. From these figures an idea of the vastness of the trade may be obtained."

Our privilege is, to have our conversation in heaven; our heart and treasure fixed on what is eternal! Never let us live below it!

"Faithful in a few things."

The following account, from the Memoirs Daniel Wheeler, represents clearly when and how he began to grow in the Lord and in the knowledge of His will which is life eternal; or through obedience to the teachings of Christ in the heart—the school in which all must be taught, if ever effectually, the things that long unto their present peace, and eternal salvation. The more we co-operate with Christ through His holy power manifested within, we teach as never man taught; and the more faithful we are in what He calls to as "the first work" though it may seem but the humiliation of the cross in little things, the more we shall know of a growing up in Him unto the stature pillars in His house, as dear D. W. bears witness "which shall go no more out."

We particularly press the importance of *faithfulness in the day of small things* at this time because, it is believed, that not a few have been and are making themselves to be stumbling blocks to the weak, as well as dwarfs in religion; not also to causing in a greater or less extent "shipwreck of faith and a good conscience," want of obedience in what are looked upon the insignificantly small things of our burnt offerings;—but equally important, in proving subjection and sincerity of the heart, as the latter. For we, poor, short sighted, case-lori creatures, know not what means Heavenly goodness may choose or use to crucify the flesh with the affections and the lusts; or what to bathe and confound our selfish desires and carnal longings. But it has always perhaps been in me unlooked for by the outward eye, and in manner that tended most directly to the mortification of the natural will, which must be necessary to the cross in the great work of Christian redemption; to the subjugation of that earthly yoke which is foolishness with God; and to the restoration of lost and fallen man from a state nature to a state of grace.

The account alluded to is as follows: "Being made a partaker of the great privilege enjoyed by those who are of the flock of Christ, in being enabled to distinguish between the voice of a good Shepherd and that of the stranger, he earnestly desirous that obedience should be kept with knowledge. He waited *patiently* upon the Lord for instruction in his various steps, and being brought into a state of *deep humility and prostration of spirit*, he was made sensible that the only path in which he could walk in safety was that of self-denial. Much mer conflict was at this season his portion; but *peace* only to be obtained by an entire *submission of the will*; and in conformity with what he believed to be required of him, he adopted plain dress. He once recounted to a friend how different, the trial it was to him to put on different hats to that which he had been accustomed to wear; especially as in going to the meeting at Woodhouse, he generally met a number of his former gay acquaintances, whom he crossed on the way to their place of worship, which had himself previously been in the practice of attending. In this instance, it was hard to appear openly as a fool before men; he thought if natural life might have been accepted as a substitute, he would gladly have laid it down; this was not the thing required. He diligently examined his heart, and believed he clearly his Master's will in the requisition; and that was a discipline designed to bring him into a state of childlike obedience and dependence. In great distress he cried unto the Lord for help."

a passage of scripture was powerfully applied is mind.—“whoever shall confess me before men, him will I confess also before my Father which is in heaven.” His resolution was immediately taken—“he put on his hat, and with mind staid upon the Lord, set out to join his friends at meeting. *His difficulties vanished, peace was his covering,* and he was enabled rationally to know the fulfilment of that declaration,—“greater is he that is in you, than that is in the world.”—*Friends’ Library.*

Finger-Marks.—A few days since, a gentleman residing at Cambridge, employed a mason to do some work for him, and among other things to whitewash the walls of one of his chambers. The whitewashing is almost colorless until the gentleman was much surprised, on morning after the chamber was finished, to find on the drawer of his bureau, standing in the room, white finger-marks. Opening the drawer, he found the same marks on the articles in it, also on a pocket-book. An examination revealed the same finger-marks on the contents of his wallet, proving conclusively that the mason, with his wet hands, had opened the drawer, had the wallet, which contained no money, then closed the drawer, without once thinking that any one would ever know it. The thing, which chanced to be on his hand, did not at first, and he probably had no idea that the hours’ drying would reveal his attempt at detection. As the job was concluded on the afternoon the drawer was opened, the man did not come again, and to this day does not know his acts are known to his employer.

Children, beware of evil thoughts and deeds! All have their finger-marks, which will be sealed at some time. If you disobey your parents, or tell a falsehood, or take what is not your own, you make sad finger-marks on your conscience. And so it is with any and all sin. It is the character. It betrays those who commit it, by the marks it makes on the soul. Finger-marks may be almost, if not quite, colorless. But even if they should not be seen, or any of your days on earth (which is not likely), yet there is a day coming in which your finger-marks, or sin-stains on the character, will be made manifest.”

Never suppose that you can do what is wrong without having a stain made on your character. It is impossible. If you injure another, you, by the very deed, injure your own self. If you deny a law of God, the injury is sadly yours. Think of it, ever bear it in mind, children, that every sin you commit leaves a sure stain upon yourselves. Even should you be able to see, to your condemnation, at the bar of—*G. W. Lybrand.*

Oldest Wooden House.—The oldest wooden house in the United States is in Dorchester, to be a part of Boston. It was built in 1632, and is called the Minot House, from the name of the first owner. The house was occupied by General Washington and his body-guard for a few days during the revolution. The house is two stories high, and the outside has by no means a showy look. Its frame is of oak, either Irish or American, and the beams are as sound as ever: it is the whole frame, with the exception of the roof, is in a good state of preservation. The beams are oddly shaped and awkwardly arranged. The windows are in sight, and are finished off and painted, and the ceiling is very low. Indeed, it is not worth while to visit this ancient house.

The house is now occupied by a family who pay \$80 annual rent.

Sagacity of a Dog.—A friend of mine, while shooting wild fowl with his brother, was attended by a Newfoundland dog. In getting near some reeds, by the side of a river, they threw down their hats, and crept to the edge of the water where they fired at some birds. They soon afterwards sent the dog to bring their hats, one of which was smaller than the other. After several attempts to bring them both together in his mouth, the dog at last placed the smaller hat in the larger one, pressed it down with his feet, and thus was able to bring them both at the same time.—*Jesse’s Anecdotes of Dogs.*

THE FRIEND.

FIRST MONTH 25, 1868.

Such is the selfishness and arrogant assumption of man, that he easily forgets how small an atom he really is in creation, while he indulges a fond notion of his importance, and looks upon the earth as called out of nothing wholly for his use and benefit.

“Ask for what end the heavenly bodies shine,
Earth for whose use? Pride answers ’tis for mine.”

Seas roll to waft me, suns to light me skies,
My footstool earth—my canopy the skies.”

Created a little lower than the angels, man de-throned and debased himself by believing a lie, and refusing to obey his all-wise Creator, on whose bounty he is a constant pensioner. The earth shared in the consequences of his fall, and though made to supply him with food and raiment, yet is he obliged to reciprocate her kind offices by careful culture and diligent service; drawing forth the fruits of her storehouse by the sweat of his brow. She is only one among many planets with their satellites, which revolve around the great orb that sheds light and heat upon them, while the solar system itself is but one of the countless number of systems that make up the sum of the material universe. Rotating on her axis, she pursues her annual journey around the centre of attraction, in obedience to the forces impressed on her by Him who formed and bade her thus roll on, until his purpose shall be fulfilled. Thus though a whole in herself, she is but a member, and a very small member of the thronging host of heavenly bodies which are revealed as the material workmanship of the creative Word. All these, so far as we know, are subject to uniform and calculable laws, establishing an unbroken relationship between them, and holding each one rigidly to the timely performance of the part assigned it; to which laws all submit with unswerving obedience.

Many changes and convulsions may therefore take place in our terraqueous globe, which have no connection with or special reference to it, as the home of man, while he passes through the short scenes of his probation; though He who sees the end from the beginning, and adapts all things to the counsels of his inscrutable wisdom, may make use of the natural working of His laws, to punish his accountable, rebellious creatures, to remind them of their impotence and entire dependence, and to teach them to make Him their friend, who “looketh on the earth and it trembleth, who toucheth the mountains and they smoke,” and by whose decree alone the raging of the waves is stilled, and the waters shut up with doors and bars. Well for us is it, if, when He who “bath his way in the whirlwind and in the

storm, and maketh the clouds the dust of his feet,” lets loose the elements to overturn and destroy, we have accustomed ourselves to recognize his hand, not only in the mighty convulsions of nature, and to look to him for strength and support, cherishing a confiding trust that He will overrule all things, and cause the order of his providence to work for our good.

In our present number will be found an interesting account of the sudden eruption of a new volcano, which occurred in the Eleventh month last, near Leon, the capital of Nicaragua, in Central America, and was witnessed by the United States minister to that Republic. Mexico, and nearly the whole of South America, have at different times experienced remarkable and destructive visitations by earthquakes; the Andes, the great chain of mountains connected with the Cordilleras and the Rocky mountains of N. America, running along the whole western coast of Southern America, and being studded with active volcanoes.

The account now furnished may give us a correct idea of the manner in which volcanic mountains have been formed, they being generally of pretty regular conical shape, and composed of matter thrown up from the interior of the earth, and the summit usually terminating in a vast covecavity.

There has been an unusually large number of extraordinary convulsions, not only in different parts of the earth, but in the atmosphere in different latitudes, within the last four months, and as they were in some instances nearly simultaneous, there is not a little activity among learned and scientific men to ascertain the laws which regulate both, that so the connection which probably exists, may be traced between such diverse effects and a common cause. There is yet much to be learned respecting the laws of meteorology and its kindred sciences, and while our knowledge of the internal constitution of the earth is almost wholly conjectural, there seems to be an insuperable barrier to satisfactory and stable conclusions.

A violent storm of wind accompanied by rain, apparently commencing in the Gulf of Mexico, swept along the southern coast of our country in the Tenth month last, doing the greatest injury a little way north of the Rio Grande. By the time it arrived in the West Indies it had increased to a hurricane, doing great damage on the leeward islands but spending its greatest fury on Tortola and Saint Thomas, where hundreds of lives were lost, and property worth millions destroyed. Local causes doubtless added greatly to its terrific force within the limits of this group, for at the same time a series of earthquakes set in, which probably spent their greatest eruptive power somewhere north-west of the islands, breaking up the crust of the earth under the storm-heaved billows of the Atlantic. The concussion extended to the shores of the United States, the shock being distinctly felt in northern New York and Vermont. Mariners report that the velocity of the Gulf Stream was perceptibly increased, but how far that is a permanent change we do not know. Whether the violence which the whirlwind acquired while in the tropics, propagated the convulsions of the atmosphere so as to extend this same storm into Southern Asia, or whether there was some sudden extreme rarefaction or destruction of large portions of the atmosphere by electricity, connected with the tremendous eruptions of Vesuvius and Hecia, which burst forth but bear the same time, of course man’s limited knowledge cannot determine; but a devastating cyclone visited Calcutta, on the banks of the Hoogly, by which thirty thousand dwellings are said to have been destroyed, and more than a thousand human beings perished.

By-paths, Crooked-ways, Wiles and Snares of the Enemy Discovered.

(Concluded from page 170.)

ter the good work of God has been begun, the arm of his salvation hath been wonderfully revealed, to bring out of Egypt's darkness us, and hath given many signal deliverances from the destroying enemy, and has often fed the heavenly food, and caused the rock to water for the thirsty, and many turnings in the passage through the wilderness have been seen, the backslidings from a sense of the evil power, have been discovered, and that is a coming through the river of judgment, the mighty power of God drives out the enemy hath inhabited, where only Abraham's seed abode, and the war in great measure ceased, part of the good land is possessed and enjoyed, the land that foweth with spiritual milk and honey, and the fruit of the vine drunk of; here all the crooked, subtle enemy were working, did with outward Israel, causing Jeshurun to be fat, and then kick against the power, leading the mind through the enjoyment of that which is good, into ease, and to forget the foe that formed man, and brought him into the world, and lightly to esteem the Rock of salvation. Thus he leads the mind into a state of ease, and from the inward enjoyment of virtue, to set up idols in the heart, and to serve gods of gold and silver, and a profession without life and power. And into this condition the old enemy would lead a people, who in many ages had been the mighty works of the Lord, and his arm stretched out and magnified in the sight of their eyes for them; nevertheless, they departed from the Lord, and from the inward sense of his power. Now the spirit that was cast out and was in dry places, takes to it seven worse spirits, tyrants, tempters, prevails and enters, and the end is worse than the beginning. For in the beginning, although the enemy had his power, yet there was a sense thereof, and the soul was humbled, tender, and brought into true love, and there was a mourning before the enemy wanted the dominion; and this state of submission and brokenness of heart, in which the soul takes delight, in his boundless loving kindness, visited and caused his redeeming salvation to be revealed. But now in the other estate,

the mind is high, the heart fat and full, and at ease, and gone into the love of the world and the things thereof, through which there is an un-mindfulness of the Lord, who in the beginning was every day sought after, and diligently waited for; and the Rock, the Power, is lightly esteemed; for the estimation is of another thing. Here two great evils are committed at once, viz: The fountain of living mercies is forsaken, and broken cisterns hewn out, even a profession, that will hold no water, no durable refreshment, no durable joy, no durable peace nor consolation. The enemy has thus prevailed through many ages, to bring thousands from their enjoyment of God in the pure, tender and upright spirited state, which he effects through his workings and subtilty, and that gradually. His first step hereunto is, to bring out of the constant, daily watchfulness, and causing a little liberty to be taken to the carnal mind, and as it were imperceptibly, a certain enjoyment of sweetness therein, whereby a darkening of the sight comes over the mind, and so they are allured into more liberty. Sometimes his beginnings are to draw out of obedience in those things that were required in the day of small things, sometimes into many words, no more to be as a "doorkeeper in the house of the Lord," and so the enemy works to cause such things to seem small and indifferent, and thereby cause the offence of the cross to cease. Then the mind runs forth to make provision for the flesh to fulfil the lust thereof, either in meats, drinks, apparel, or such like, which the Truth in time past had made manifest, and the power of God, the cross of Christ, had crossed, and in measure led out of, into watchfulness and pure fear, not making provision for the flesh in any respect, to fulfil the lusts thereof, but drawing in practice, as well as in principle, into plainness, and out of all superfluities, admitting the creature to refresh nature, but not to feed the lusts. But yet the enemy works by degrees, subtilty and covertly to lead out of the liberty of the cross of Christ Jesus, the power of God unto salvation, into the liberty of the flesh, and hereby gets a farther entrance; working to draw the mind into many words in dealing, in commerce or converse, and into the love of the world, and though many times the answer of God may be felt in some measure, to draw out of the snare, yet the God of this world having by this time much blinded the eye, and darkened the understanding, there is not a sense of the power of the Lord in its workings, nor of the subtilty of the enemy. For the outward profession and conformity may be in a good measure kept to, under which the enemy may work undiscovered by the unwatchful, and so step by step, lead out of the power of godliness, until he hath slain the birth, which in the first days of tender visitation was begotten. Now there will be a growing high, and such will call the operation of God's power extremes and imaginations, and Jeshurun like, will kick, and turn against the power of God, for such are best contented with a likeness and image. Such love smooth things in the wisdom of the gifted man, that has lost his way, through erring from the power, not waiting upon all occasions to be guided thereby. So here is the itching ear,

and heaping up teachers to please self, and Jeebel is upheld; which error crept into the church of Thyatira; and in all ages they that went from the broken, tender estate, into the conditions before discovered, suffered and nurtured this Jeebel, who must be cast on the bed of torments, and all her children killed with death. All the working of the enemy, under every guise, is to slay that which was quickened, and to bring in a contentedness with an outside profession of the way of the Truth, light and life of Christ Jesus, the power of God unto salvation, whilst the heart has gone from the Lord, and embraced other lovers. Where the enemy thus prevails, in process of time he leads again into the world, from whence the arm of the Lord gathered; and the latter end of such is worse than the beginning. For having made shipwreck of faith and of a good conscience, the second death comes over, and such become twice dead, and as salt which has lost its savour, and are good for nothing, but to be cast forth, and trodden under foot of men. The preservation out of these by-paths, crooked ways, wiles, snares, and temptations of the enemy, is only in the true waiting and sincere abiding in the light, gift and grace of God, in which the daily revelations and manifestations of God's eternal power are known, and preservation in the daily acquaintance and experience thereof, which keep all truly low and tender, wherein ariseth an inward breathing and panting after the daily enjoyment of the life, power, and blessed refreshing virtue, which alone renew and increase the strength of the inward man; in which God Almighty preserve all the travellers Zionward to the end.

CHARLES MARSHALL,

Progress of Locomotion Since 1834.

When, in 1834 (says the *London Examiner*;) the Duke of Wellington despatched—Hudson to Rome to inform Sir Robert Peel that he had been called upon by King William IV. to form a ministry, it was thought a marvel that the messenger was able to complete his journey on the twelfth day after that on which he had left London. Bound on an analogous mission, a Hudson of the present day would give but a poor account of his journey if he said that he was occupied upon it even a fourth of that time. By the old roads the distance was a little under one thousand three hundred miles. By railway, the distance over Mont Cenis passage of the Alps is one thousand three hundred and fifty-five miles. In 1834 the cost of Hudson's journey was about £250. Had he occupied eighteen days instead of twelve, and travelled by the ordinary postal conveyances of the period, he would have paid about £30. The first-class fare between London and Rome now does not exceed £13.

The traveller who leaves London on any morning, let us say on Monday, at half-past seven o'clock, can reach Turin, seven hundred and ninety-nine miles, including a sea passage of twenty-two miles and fifty of ordinary road conveyances, across the Mont Cenis, as the chimneys of the Duomo are striking the quarter-before twelve on Tuesday night. When the Mont Cenis Rail-

way is open, the saving in the passage across the mountain will enable him to push on to Florence the same night, but until then he must repose at Turin until a quarter-before eight the following morning. Resuming his journey, he will be in the capital of Italy, three hundred and twenty-three miles further south, at eight that evening. The distance from Florence to Rome, two hundred and thirty-three miles, can be accomplished in nine hours and twenty minutes, in which are included frontier *visa* both of luggage and of passport. After a break of four hours he may start again for Naples, one hundred and sixty-three miles further than Rome and fifteen hundred and eighteen from London, and here he arrives at 6.30 p. m. on Thursday evening, three days and eleven hours from the time he left home. When the Mont Cenis Railway is completed the time will be shortened by nearly twelve hours.

In 1834 the *Malle Poste* journey from Paris to Marseilles took eighty hours, the roadway being distance five hundred and thirty miles. In 1867 we leave Edinburgh at seven o'clock in the evening, the next evening at six we are in Paris—six hundred and ninety-seven miles—and the following day at noon we are at Marseilles. Yet Edinburgh and Marseilles are one thousand two hundred and thirty-nine miles apart—our pace, including breaks and stops, has been thirty miles an hour while traversing the whole distance; exclusive of the breaks and stops, five-and-thirty.

Roughly estimated, the number of persons who travelled by mail and stage-coaches throughout the United Kingdom in 1837, the year before the partial opening of the railways between London, Birmingham, Liverpool and Manchester, was 2,688,000. If to these be added twenty-five per cent. as representing travellers with post horses, in wagons and canal boats, we have a gross total of land and canal travellers of about 3,360,000; or an eighth of the total population of the kingdom at that time. In 1865, the latest year for which the Board of Trade returns have, as yet, been issued, the number of passengers carried on railways (including an allowance of one hundred journeys for each annual ticket-holder), was 261,577,415, more than eight times the total population of the kingdom. The number of persons travelling on public roads to and from railways is believed to be fully as great as it was by roadway conveyances in 1837. In other words, land travelling in the United Kingdom has *de facto* increased nearly ninety fold in eight and twenty years. Comparing the population at the two periods the increase has been sixty-four fold.

The *N. Y. Evening Post* says, that according to the latest statistics there are about 53,000 miles of railway in Europe. Great Britain and Ireland have 13,382 miles; France, 9,899; Prussia, 5,483; Bavaria, 5,208; Austria, 4,001; Spain, 3,216; Italy, 3,040; Russia, 2,898; Belgium, 1,910; Saxony, 1,587, leaving about 3,300 miles for all the rest of Europe.

At the present time railways are completed for opening all over the world at the rate of about 10,000 miles per annum; or thirty-five miles for each working day throughout the year.

On Finding Fault.—Reprove not for slight matters; for such faults or defects as proceed from natural frailty, from inadvertency, from mistakes in matters of small consequence; for it is hard to be just in such reproof; or so to temper it as not to exceed the measure of blame due to such faults; they occur so often that we should never cease to be carping if we do it upon such occasions; it is not becoming the christian to seem displeased with such little things.

For "The Friend."

Adelphi Schools—Annual Report.

To the Philadelphia Association of Friends for the Instruction of Poor Children:—

In accordance with the usual practice of the Board at the close of each year, the Managers present their Annual Report: the schools under their care have moved on so regularly throughout the year that there appears but little to bring before the notice of the Association.

The Infant Department continues under the care of the same teachers as at the time of our last report, viz., Harriet C. Johnson, Principal, and Elizabeth B. Kennedy, Assistant; they appear to be desirous to keep up the good order and efficiency of the school; and there is manifested on the part of many of the scholars an evident desire after an advancement in learning. The class list is now 95, and the average attendance during the year has been 66; a decrease of three as compared with last year.

In the Girls' School, Martha T. Cox and Annie Pennell continue to fill the positions of Principal and Assistant, acceptably to the Board. It may be remembered that reference was made in the report of last year to the excellent condition of this department of the school; that high standard has been fully maintained, and the number of scholars in attendance increased, so that the usefulness of the school is probably greater than at any former period. The class list now numbers 64, and the average attendance during the year has been 45, an increase of three since last report. The number of scholars on the registers of both schools is 159, and the entire number of colored children who have attended the schools under the care of the association since they were first opened is 4143.

The course of study in both departments has continued unchanged; in the Infant School the simplest branches are taught, commencing with the alphabet, and it is an interesting sight to watch the efforts of the little children to learn their first letters. In the upper school, the studies are those which, it is believed, will be of practical utility to the girls, and consist mainly of reading, writing, spelling and defining, arithmetic, geography and physiology. The schools are opened in the morning by the reading of a portion of the Holy Scriptures, and it is the desire of the managers, that the teachers may, by attention to the gentle intimation of the Holy Spirit in the secret of their hearts, be qualified so to perform all their duties toward their charge, as to encourage in the children a growth in religious experience while aiding their advance in school learning.

Some monthly visits have been made as heretofore, by committees appointed for the purpose, and regular reports have been furnished by these committees to the Board, and read at the stated monthly meetings.

Our little library continues to be much used by the children, the number of volumes is 589—number loaned during the year 1231; it is worthy of note that none of these loaned have been lost while in the custody of the children. The number of books in the library is the same as reported a year ago; it would have been pleasant to the Managers to have purchased an additional supply, but the state of the treasury has not justified an unnecessary expenditure; the subject is commended to the notice of our friends, who may have in their possession books suitable for the purpose, which having once read they may be willing to present to the library. Books of Travel, Natural History, Biography, History, &c., and the large class of books known as "Juvenile," if un-

objectionable in their contents, would all be acceptable.

We believe the present is no time for the Association to abandon, or even relax its efforts for education of colored children; the view has been upheld by some, that there being provision made in the public schools for the education of this class, the continuance of our schools on the present basis is an unnecessary tax upon Friends. We believe this opinion results from a partial view of the case; it is a characteristic of colored race in our northern cities, resulting doubt from the oppression of many generations, shrink from observation, and keep as obscure as possible; we fear their children would not attend the public schools unless carefully looked after and encouraged to come, and such oversight interest could hardly be expected from the public school teachers. The colored people are accustomed to look to our religious Society as their friends and counsellors, and would feel the closure of our schools now as a serious discouragement at a time when they particularly need to be helped and encouraged. We cannot therefore see immediate probability of being able advantageously either to discontinue or reduce the schools, we would ask those who have heretofore so liberally contributed of their funds, to give yet again; leaving that this is a charity, where the contributions are beneficial alike to the recipients and the givers.

Signed by direction, and on behalf of the Board of Managers.

JOHN E. CARTER, Clerk.

Philadelphia, 12th month 27th, 1867.

Selected for "The Friend."

"There are some very poor families in our neighborhood,—not enough of victuals, or clothing. We have endeavored to do what we could, but it is insufficient. I am not asking help you, but I do ask nearer home. Some are generous, and some are right hard and close counting the heads of the families of being drunk &c., &c., and so excusing themselves from help."

children. I do not understand that kind of acting; if the best of us had just what *deserved*, it would be very little. We make cases by rating ourselves above our deserts, and it down self-satisfied, by our finely polished, and warm fires, and plentiful tables. I see the cries of the afflicted and poor in our hearts, reached the ears of the Most High, and would really tremble to be found using the part belongs to the poor."

An Extraordinary Case.

It is difficult to conceive a more extraordinary in all its bearings, than that of the late John Carter, a native of the town of Coggeshall, in the county of Essex, England, who, by means of his *brush alone*, executed one or two of the most beautiful drawings in existence. The following is correct, though brief, memoir of his life. He was the son of a common laborer at Coggeshall, in Essex, England, and, when a boy, received the limited education which parish schools, in places such as Coggeshall, usually afford; that is, says Carter acquired, in a very imperfect manner, the rudiments of reading and writing. He then became a silk-weaver by trade, which he followed up to May, 1836, when he reached the age of twenty-one years—the opening time, so to speak, of his most extraordinary career!

It is essential here to remark that, at this time, (May, 1836,) he had, from carelessness and bad habits, all but lost the very small modicum of learning formerly gained at the parish school; he neither read nor wrote, with any thing approaching to correctness; as to the art of *drawing*, signing of any kind, he had not the remotest notion, of either the one or the other.

May, 1836, Carter, in company with one of his dissolute companions, went to Holdfield, in the county of the late *Osgood Hambury, a well-known character of London*, for the purpose of stealing goods from the rookery on that estate, (this is the right time,) when he met with an accident falling from the top of a fir tree, not less than five feet high.

He was carried by his comrades home to him in a state of insensibility. The doctor was sent for, who pronounced that, though not actually dead (as his companions and wife had supposed), that he could not linger beyond an hour or so at most. He partially recovered, however, when he found that he had sustained an injury in his spine, which *entirely deprived him of the use of his limbs*. From that time forward, up to the day of his death, (which took place eighteen years subsequently, in 1853,) he was, physically speaking, never any thing other than a useless, imbecile, trunk, without power, or motion, or feeling of his limbs, or, indeed, in any part of his *save his head and neck*.

The powers of speech, sight, and hearing were fully preserved to him; otherwise he was, in all intents and purposes, as a dead man, utterly dependent for every want on the kind order care of his wife, who, to the day of his death, (which took place four and one-half years after the accident,) soothed and comforted under his trial with the utmost devotion. His friends also came to his aid, amongst whom were named, specially, the late Osgood Hambury and the members of his family, and the late and Meredith White, of Highfields, near Hambury.

About a year after the accident, a lady brought him a book to Carter, containing an account of a woman who, having lost the use of her hands, had amused herself by drawing by the aid of her mouth! This account interested Carter

intensely. From a careless, ignorant young man, he had changed into an earnest, devout, and, all things considered, a very intelligent being. He resolved to try and do the same, in the way of learning to draw with his mouth!

After long and persevering efforts, he managed to copy flowers and butterflies in water colors, but not long afterwards adopted a better style. His method was to sketch the outline very accurately with a pencil, then shade them in the manner of a line engraving, in India ink, with a camel's hair brush.

From the time of the accident till his death, he reclined upon a sort of couch, capable of being drawn hither and thither, and upon which he was moved about. Resting upon this couch, he had his paper fixed to a desk, which was placed almost perpendicularly before, and in close proximity to his face. With his head inclined towards the right side, and with his hair pencil between his teeth, he produced, by means of the motion of his neck, assisted by his lips and tongue, the most beautifully turned strokes, *rivalling, in fact, the greatest proficient in the art of drawing*.

It would, at first sight, appear incredible that the drawing which we have seen, and now more particularly alluded to, (A Rat-catcher with his Dogs) could have been done by any one not in possession of that very essential qualification to the production of such a work—"the use of his hands"—a qualification, however, which Carter did not in the smallest degree possess.

His method was, for his wife or sister—or whoever was in attendance upon him at the time—to fill his brush with India ink, from a palette, and place it between his teeth, when Carter would, by a curious muscular action of his lips and tongue, twirl the brush round with great velocity, until he had thrown off all superfluous ink, and brought the brush to a *very fine point*. He would then execute the finest and most wonderfully delicate strokes by means of the action of his neck, &c., as just stated.

His health prevented a close application to his art, though he learned to love it intensely; yet, of necessity, it was a work of much labor, toil and patience to him, a considerable space of time intervening between each stroke of his brush. All the latent energies of his mind, and faculties of body (crippled and confined though they were) appear, perforce, to have concentrated themselves in the sense of a wonderful sight, and a touch with the tongue so delicate as to be miraculous. From an ignorant worker in a factory, he became a great, self-taught artist, and that, too, under the most difficult and trying circumstances possible to conceive.

During his lifetime John Carter was an object of almost as great interest to the leading members of the medical profession of Great Britain, as he was to her chief artists. To the one branch of science it seemed surprising how a man in such a state of bodily infirmity should exist so long; to the other, a matter of even greater wonder how an ignorant man, totally unlearned in the very rudiments of art, dispossessed of every faculty apparently necessary for his successful prosecution, should yet, in spite of such overwhelming odds, rise, in the brief space of but a few years, to bear favorable comparison with the best living artists of his day! These facts may seem paradoxical—they are no less true.—*Late Paper.*

To applaud the possession of talent is absurd, and, like many other absurd actions, is greatly pernicious. Our approbation should depend on the objects upon which the talent is employed.—*J. Dymond.*

For "The Friend."

Selections from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 177.)

The following selections from the Journal are part of them without full date. They are supposed to belong to this period:

"3d mo. 1837. The unmerited favors conferred by an all-wise and all-merciful Protector and Preserver, can scarcely fail awakening in the heart of the recipient the humble acknowledgment, 'What shall I render unto thee for all thy benefits?' unceasingly dispensed. Truly His judgments are unsearchable, and His ways past finding out. In his inscrutable wisdom I believe He is often pleased to lend the partially awakened mind into unutterable depths of humiliation and abasement, to stain in their view every selfish attraction; and to create a thirst the polluted fountains of this world never can allay. And as we are made willing to submit to the refining process, to know the spirit of judgment and burning livingly to operate, a gradual insight is given us into the mysteries of the kingdom. We come to see and to feel that the bitter cups, the agonizing conflicts, the doubts, fears, and discouragements, have had an end assigned them, and that an Almighty hand has wrought for us, to make that end a result most happy, carrying out effects that will prove themselves of momentous import. It is only as we submit to the humiliating process unavoidably our portion, that we can attain a state of childlike submissiveness, wherein we become willing to do or to suffer as our lot may be. In a little strength imparted to-day, I would thankfully commemorate the mercy that is unfailing, and gratefully ascribe to the Author of every blessing, thanksgiving and praise. I have been brought patiently and calmly to acquiesce in a case wherein my nature has shrunk from submission, and with regard to my feelings, I can scarcely refrain acknowledging 'It is the Lord's doings.' I would earnestly petition for strength and ability to move in His wisdom; and at all times and in all seasons show forth the charity, forbearance, and propriety of converse and conduct that evidence a mind imbued with christian principles, and acting under their sway."

"3d mo. 10th. It is certainly a favor for which we should feel grateful, when ability to suffer the deprivations of inward tranquility is granted us; when out of the very depths of poverty, we can acknowledge 'tis well for us to suffer. I have felt this morning as if in possession of nothing to support and sustain the mental fabric, and yet satisfied these things must needs be."

"5th mo. 1st. I can scarcely forbear expressing the feelings of increased confidence and hope that have arisen, after a long period of mental gloom and spiritual poverty. I have enjoyed the privilege of attending our annual assembly, and the satisfaction and favor of feeling throughout a degree of that life, whose abounding must continue the crown and diadem of our religious assemblies. But intermingled has been the conviction, how little ability I felt to estimate the opportunity. The knowledge that little advancement in best things throughout the course of a whole year had been realized, was cause of mortification and sorrow, and heightened the fear that unfaithfulness and spiritual apathy were the cause. But however undeserving, I cannot suppress the attendant belief, that at this period I realize a strength, no human effort could give me, and that an Almighty hand is still underneath for my support; and with feelings softened, tendered, and full of gratitude, I have ventured to petition for strength to walk more and more conformably to

the will of Him, whose favor I sometimes feel dearer to me than my natural life."

"20th. It is cause of deep regret that the indulgence of a vain imagination still embitters many a thoughtful moment. Yet constant thankfulness possesses me, in that I feel mercy, unwearied, and unappreciated mercy still at hand, as a sower and comforter. I often lament my inability to estimate it as I ought, and the knowledge of my deficiency in this respect, teaches me many lessons of humility."

"5th mo. 25th, 1837. I have enjoyed an interval of almost total exemption from anxiety and care, and feeling this morning as if the cloud was again gathering around me, I have desired that the Arm of everlasting strength might endow me with the requisite portion, or at least a little portion of patience and resignation, not as a meed of merit, but of His abundant mercy."

The correspondence resumed :

"5th mo. 1837. — I expect has told thee more about Yearly Meeting than I could; and to enter again upon a detail, would only be as a twice told tale. I account it a high privilege to be permitted yearly to mingle with such a body, and to listen to the lively flow of exercises which prevail for the well-being of our Society, and its more permanent establishment on that basis which the storms and tempests and besetting cares, and beguiling pleasures of this life, can neither subvert nor destroy. I thought that throughout the several sittings, Best Help was evidently manifested, and the consoling assurance given, that notwithstanding our many short-comings and deficiencies, we are still a highly favored people, and owned by Him who has declared His gracious intention of continuing with His faithful followers 'even unto the end of the world.' This is a consoling assurance which I sometimes recur to with much pleasure, and with feelings of gratitude to that great Being whose promises are unfailing."

"W. K., and his companion J. E., and C. W. have just left us. The latter to return home; the others in the prosecution of their religious visit. W.'s communication to us was short, but embraced the duties we owe each to the other, and to our Supreme Head: suggested the healthful exercise of love, and the offerings most acceptable from man to his Creator. Offered us the encouragement that results from faithful, united exercise; and the promise given the two or three who were met together in His name. He had two meetings yesterday at —, as is usual there: purposes I believe reaching your neighborhood by the last of this week. He is not perhaps what would be termed an eloquent preacher; but those who are careful to occupy with the gift received, I think are equally acceptable, and perform their Master's work with an eye as single to His honor. S. Hillman has a minute to visit our Quarterly Meeting, the meetings composing it, and the families composing — Monthly Meeting. Thus after a long season of drought, it appears as if the heritage might be again watered; but whether or not any degree of fruit is the result of this gracious care of the great Husbandman from time to time extended, I am unable to answer. It is only reasonable to expect, that if such condescending care is slighted, our condemnation must be in proportion; and if we are finally lost, the blame must rest with ourselves."

"We were glad to hear that thou wast better. The dispensations of Providence are past the reach of our limited vision; and when under the pressure of affliction, it becomes us best to seek after the spirit of patient resignation, believing that if our own misconduct does not cause the multiplication of privations, they will tend to our ultimate good."

There are many inquiries after thee from thy friends here. Sympathy is a cordial drop in the cup of life; and the fellow-feeling of a friend a choice treasure."

(To be continued.)

CHANGE.

Change! restless change with nature's pulse is beating—
Her great, soaring, and eternal law—
A vast creation is this truth repeating,
And from its action life and being draw!

The calm, clear brightness of the noontide glowing,
Succeeds the beauty of the morning hour;
The softer light of evening's faint bestowing,
Fades in the shadow of night's darkd power.

The airs that fan the ethereal bow of summer,
Soon die in autumn's frost-bespangled hair—
The grand old woods through every sylvan murmur,
Whisper the changes Time has made them bear.

The clouds that form the embattlements of heaven,
Around the arch their varying course range—
To the bright army far beyond is given,
The power of constant, never-ending change.

Fair hills of earth have risen and descended—
Cities have sunk beneath the restless wave—
Man's mighty passions with all nature blended,
Through varying phases drift him to the grave.

The heart bath changes, from its hour of waking
To all the mystery of being, here,
To that still time when kindred hearts seem breaking,
In grieving sorrow round a burdened bier.

Though ceaseless dropping wears the rocks hard features,
We scarce can mark it as we pass along—
And day by day the impress on our natures,
We note but little in life's 'wandering throng.

But why should joys that strongly once allured us,
Have lost the glamour that of old they were?
And wherefore, now, we through the realms of Fancy,
Chase the same phantoms of the brain no more?

Though brightly round, the bluelets of existence
Have tossed the sparkling foam of pleasure high,
From deeper waters, and the wave of distance,
We smile to see them slowly melt and die.

A wall of sorrow breathed upon the dying,
A thought from lives inwoven with our own,
May rouse the spirit in dull bondage lying,
And waken inward a more thrilling tone.

Can we not all in glancing back discover
Some spot unfaded, some remembered day,
That stands a milestone by the road passed over,
From whence we bore an older heart away?

Ah! we are changing, surely changing ever;
We cannot linger, nor be still the same—
While thought and reason, weakness and endeavor,
Show forth by action in our mortal frame.

Farther or nearer, still our course is wending,
The change of heart in God's almighty plan—
The new creation, where His Light is sending
A ray of knowledge to the soul of man.

When far across the shadowy vale is streaming
The glimmering radiance of day's dawn decline,
Oh! may that change so glorious and redeeming
Sisters and brothers, be both yours and mine!

ON PRAYER.

Through the skies when the thunder is hurled,
The child to its parent will flee;
Thus amidst the rebukes of the world,
I turn, O my Father, to thee.

In vain would they bid me retire;
In vain would they silence my prayer;
'Tis eye-sight, 'tis life, I require;
I seek to be snatched from despair.

In this valley of sorrow and strife,
Prayer shall rise with my earliest breath;
It shall mix in the business of life,
And soften the struggles of death.

Original.

I was often sorrowfully concerned to observe the nomination of Friends to Quarterly or Yearly meetings, a disposition to make excuse. Believing those meetings were established upon the influence and power of Divine Wisdom, thought if there was a proper attention to the guidance of the same, Friends, would be directed in their nomination; that the great Lord of harvest would choose whom He pleased to employ in any particular service; and I thought there might be danger, in lightly and hastily making excuses, lest it should be disobeying the call of the Most High. It appeared to me, that worldly concerns had too much influence; that was considered whether it would be convenient or not. Now I know from my own experience that if an ear was open to listen to excuse enough would be presented against many services or duties, as attending week day meetings, or others, in times of business. But I saw or felt it was safest and best to have a single eye, have only one object in view, what the Lord required of me, than to look on temporal concerns whether it was convenient or not, but simply give up and leave the consequence; and I with humble thankfulness and gratitude acknowledge, the inconveniences or losses I might have apprehended would be the consequence, were considered into a comfortable sense of Divine approbation and an abundant reward of peace.—John Spiering.

Errors Excepted.—According to M. Buck statistics it would seem that the proportion of persons who misdirect letters does not greatly vary. In this country it is certainly considerable. I find the year covered by the report of the Postmaster General, the dead-letter office has had deal with the enormous number of 4,306,000 letters, of which, however, 1,500,000 were circulars and gift and lottery advertisements, directed more or less at random.

But not less than a million letters were misdirected during the year, without signatures, and misreferred, or so badly directed that the address totally unintelligible. These were destroyed more than a million and a half others—1,611,000—were restored to their writers by the care of dead-letter office. Thus it seems that at least, and a half millions of mistakes were made, in operation which one would think likely to entail the sufficient care of the writer, the addressing a letter.

Twenty-one thousand three hundred and fifty of these misdirected letters contained more to the amount of \$138,865; 13,770 others contained small sums of less than a dollar each, 21,262 contained bills of exchange, checks, &c., to the value of over five millions of dollars, and over 49,000 contained photographs, jewelry, &c. 5,469 persons made written application for lost letters, and 1,110 letters so applied for were found and returned.

It appears from the returns that in the year covered by the report, 278 letters reached dead-letter office for every 33,000 letters mailed one letter misdirected or illegibly directed every 119 mailed. In 1859 the proportion much greater, 381 dead-letters in every 33,000, and the proportion of errors has decreased every year since.

It is surely a curious proof of our liability to error, that in an operation conducted with great care, and always thought of considerable importance at the moment, so prodigious number of errors should be committed that amount to millions every year. If a man

Selected.

pose himself to have done with exactness any thing, it would be the right directing of a r. Yet one letter in one hundred and nine-mailed last year was so faultily sent that it left up only in the dead-letter office.—E.

Selected.

at Sheffield, on the 11th of 3d month; John berton makes the following remarks: Friends were exhorted to seek and know the for themselves, and to depend and wait on; which, it is to be lamented, is much wanting many places, both among preachers and members; an itching ear being in the r to hear something to divert and please, and the former a desire to speak, that the people not be not scattered; which is for want of self thoroughly mortified and slain, and from being a foolish play. Oh, may I, if it should be the Lord to qualify me to preach the gospel of peace and glad tidings, be preserved from forth without the true motion, and speak from former experience, without a renewed fiction, and witnessing Him who is the guide, to put forth; that God may be glorified, his people edified, and he that ministers be shed and have the answer of peace.—*And's Library.*

From "The Naturalist in British Columbia."

The Dentalium, or Money-shell.

may not be generally known that the Dentalium, or Money-shell, is used as an article of currency by the native tribes of North-west Amer-

genus of univalve shells, principally worthy mark for brilliancy of colouring, and susceptibility of taking a high polish, and usually desired covetries, has long been used as a medium currency. The animal living in the shell is a ropodous mollusc, and the money-shell belongs to a species well known in commerce as the sea monet, or money cowrie. This shell is money, the current coin in use by the natives of Siam, and various parts of Africa. The grand supply comes from the African coast, and the shells are collected by the negroes exported to various parts of the world. Just as a cowrie is used in other parts of the world, so the dentalium, in North-west America, is applied to a similar purpose.

The form of the shell, as its name at once suggests, is tooth-shaped; but the tooth, the resemblance to which has given rise to the name, is the holding-fang of a carnivorous animal; the holding-fang of the dog may be cited as a familiar illustration. The tenant of the shell belongs to the family Dentalidae.

The shell has an orifice at both ends, and the animal inhabiting it is attached to its calcareous base near the smaller opening. Eyes it has, but no any long tentacles or fishing-organs.

The food of these molluscs appears to be strictly animal character. Living, as I shall further explain, in the sand, they wage war on and usually devour small bivalves, foraminifera or small marine zoophyte that an unlucky despatch may chance to wash within reach of these voracious cannibals.

The habit of the animal is to burrow in the sand, the small end of the shell being invariably directed upwards, to live in water from four to eight inches in depth, and always to choose a sheltered spot near or arm of the sea as its haunt. The end of the shell placed close to the surface of the sand, allows the animal free scope to seize any unsuspecting wanderer that prowls near

The intrinsic value of the shell, as an article of barter, entirely depends upon its length; and the question as to whether the shell when procured shall figuratively speaking, represent a sovereign or a shilling, is calculated by the Indians in this way:—If twenty-five shells placed end to end measure a fathom or six feet in length, these twenty-five shells, when strung together side by side, are called a *hi-qua*. The squaws string them very neatly. A small bit of dried sinew, taken from the suspensory ligament of the reindeer (here called the caribou), is passed through the shell, there being, as I have already said, a hole at each end. These transverse pieces of ligament are made securely fast to two lateral or side-cords, which side-cords are fastened together at each end; so that the string of shells, when complete, is like a ribbon made of holding-teeth. The string is generally ornamented most elaborately with fragments of nautilus from the haliothis shell, and tufts of dry wool taken from the mountain-goat (*Capra americana*).

The short, broken, and inferior shells are strung together in the same manner, but in various lengths, and represent shillings or pence, as the string is either long or short, or the shells defective. All inferior strings, irrespective of either length or quality, are called kop-kops. The *hi-qua* represents the sovereign, the highest standard of currency, and, as a rule, would purchase one male or two female slaves. The value of the slave, estimating it by the sum paid in blankets for a slave at the present day, would be about 50*l*. sterling. Forty kop-kops equal a *hi-qua* in value, but various small bargains are made, and small debts paid, with kop-kops only, just as we pay away shillings, or lesser coin.

Since the Hudson's Bay Company have established trading stations along the coast, at the north end of Vancouver Island, and on the main rivers inland, both east and west of the Rocky Mountains, blankets and beaver skins have become money, so to speak, and the medium of exchange. If you bargain with an Indian in the interior to do any service, you agree to give him so many skins, either per diem, or as a fixed price for the work that is to be done; but in making this agreement, it is not understood that the employer must really pay so many heavier skins. What is meant is this—that the Indian gets an order from you on the trading-post of the Hudson's Bay Company, for goods equal to the value of the beaver-skins you contract to pay him.

But in early days, ere the red and white men knew each other, the dentalium was the only currency in use. It is quite clear, and also a very curious fact, that the *hi-qua* and kop-kop were known and used by the Indians of the interior at some distant period, although no trace of their use, or knowledge of the shell, exists among them at present; for in digging out some flint implements, stone beads, and other things I need not here enumerate, from the drift, I found numbers of dentaliums and round buttons made of the *haliothis* nautilus. The distance from the nearest seaboard was about a thousand miles, and the language spoken by these inland Indians quite incomprehensible to the Indians on the coast. But as I have more to say about the various tribes occupying North-west America, I shall here only explain the system adopted by the Indians to capture the money shells.

An Indian when shell-fishing arms himself with a long spear, the haft of which is light lead; to the end of it is fastened a strip of wood placed transversely, but driven full of teeth made of bone; the whole affair resembles a long comb affixed to the end of a stick with the teeth very

wide apart. A squaw sits in the stern of the canoe, and paddles it slowly along, whilst the Indian with the spear stands in the bow. He stabs this comblike affair into the sand at the bottom of the water, and after giving two or three prods draws it up to look at it: if he has been successful, perhaps four or five money-shells have been impaled on the teeth of the spear. It is a very ingenious mode of procuring them, for it would be quite impracticable either to dredge or net them out; and they are never, as far as I know, found between tide-marks.

For "The Friend."

"Without Holiness no Man shall See the Lord."

According to the Holy Scriptures, disobedience to the Divine command, brought sin into the world, and death by sin; for death was "the wages of sin" in the first place, and ever will be. And this death has passed upon all, "for all have sinned." Sin and death caused the separation between man and God, the fountain of life and purity. And man was shut out from the tree of life, and from the sacred enclosure and paradise of God. A flaming sword was then placed to keep the way of the tree of life, so that man in his sinful condition, which he had now inherited, could not partake of it and live. But life and immortality are brought to light by the Gospel. And "Blessed are they that do his commandments,* that they may have right to the tree of life, and may enter in through the gates into the city." And the promise is, "to him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."

Here, then, is a way in mercy provided for our escape from the present wrath, and from the wrath to come. And it is by *doing His* commandments, (not our own, nor the commandments of men; neither is it by hearing only, but by doing his commandments,) until a complete victory is obtained, and an overcoming is experienced, over all the evil propensities which pertain to the fallen nature, or to the first Adam, which is of the earth, and is "earthly."

We are by nature the children of wrath, and shall so remain, until that wrathful nature is overcome.

The mystery of iniquity doth abundantly work, and that which "now letteth, will let, until it be taken out of the way." That which caused the separation between man and his Maker, must be removed, before we can ever regain that blissful state from which we have fallen, and enter again in full communion with our heavenly Lord.

In order for this, we must pass (spiritually) under the cleansing and separating operation of that flaming sword, which turns *every* way upon the transgressing nature within, and destroys it all. For nothing impure or unholily can ever enter the heavenly enclosure. "But to him that overcometh," &c. Those have a right to the tree of life—to Christ, the bread of life. And he that eateth of this spiritual and heavenly bread, we are told, shall live forever.

In overcoming, we have need to "take unto us the whole armor of God." And "above all, the shield of *faith*, whereby we shall be able to quench all the fiery darts of the wicked." The weapons of our warfare will then be far from carnal; they will be spiritual; and hence "mighty, through God, to the pulling down of strongholds" of sin and Satan; first in ourselves, and then in those around us whereunto we are called. Until this overcoming is experienced, we should not only

* Not the outward Jewish commandments, but the inward and spiritual commandments to Christians.

fight the enemy of our souls, but we should learn to wrestle and fight in a way that we can overcome. For if we fight him in our own strength, he still overcomes us. While self remains alive in us, Satan still has ground to work upon.

We may fight and war, yet have not, because we ask not; and we may ask and receive not, because we ask amiss. (James iv. 2, 3.) So while we are striving "to enter in at the strait gate," we must strive under the influence of the right spirit. For it is said that "many will seek to enter in and shall not be able." And Christ says, in another place, "Many will say unto me in that day, Lord, Lord, have we not prophesied in thy name? and in thy name have cast out devils? and in thy name done many wonderful works? And then will I profess unto them, I never knew you: depart from me, ye that work iniquity." (Matt. vii. 22, 23.) Here appears to have been *workers*; and even those who thought they had done *many wonderful works*; casting out devils in his name, &c., but in it all, they were not known by Him whom they professed to serve.

"Be not deceived; God is not mocked; for whatsoever a man soweth, that shall he also reap. For he that soweth to his flesh, shall of the flesh reap corruption; but he that soweth to the Spirit, shall of the Spirit reap life everlasting." (Gal. vi. 7, 8.) The living God, dwells in living temples only. And it is the living only, who lovingly proclaim his goodness. The dead cannot praise him. They may speak of him from the letter, but the letter cannot give life. "The world," by wisdom knows not God."

The intellectual wit and smartness which seem increasingly to abound in the present day, is a very different thing from that spiritual intelligence which at times is eminently granted to the humble, prayerful christian believer. The one is from the earth, and is earthly; the other is from heaven, and is heavenly. And as a stream cannot rise higher than its fountain, so this intellectual acuteness, with all its boasted eloquence, can never raise the soul to God.

God is light and life, and unchangeable. And we must be changed from darkness and death, into his likeness again, before we can be fully reconciled to him. And nothing can produce this change, but the Spirit and power of Christ, or the grace of God operating on the willing and obedient heart. D. H.

Lotus, Ind., First month, 1868.

Cost of Armed Peace.

Europe is now one vast camp, and swarms with an expensive soldiery from the Ural mountains to the capes of the Atlantic, and the inlets of the Mediterranean. Not one nation has full confidence in the friendship of any other. If there is a State in Europe which, from its position, the character of its military geography, the strength of its natural and artificial obstacles, ought to feel the intense satisfaction of complete security, it is France. Combined Europe would find it almost hopeless to assail her; yet she thirsts for more soldiers, more armaments, more fortresses, and her action abroad stirs up doubt, apprehension, and, of course, counter armaments. If France would sit still, and mind her own affairs, her present host of soldiers would more than suffice her needs. At this moment she can put in the field five armies, each a hundred thousand strong; but a defensive attitude does not please her, and so her government demands the means of putting seven hundred thousand men in the field. Prussia, struggling to maintain her new gains, and found a real German Empire, is actu-

ally laying hands upon every effective male within her reach, moved thereto, partly by the influence of custom, but chiefly by dread of a coalition. Russia is fanning the fires of insurrection all through the East, and swelling to their full limit the enormous armies she has on foot. Eren Italy, all but bankrupt, chin-deep in deficits, maintains a public force; and Belgium, although styled neutral, in the language of diplomacy, feels bound to array scores of thousands more than she would need were it certain her neutrality would be respected. Austria trembles at every breath, runs forth to seek strange alliances, and spends on soldiering sums disproportioned to her means. When the cost of an armed peace is draining every exchequer, it is not surprising that capital should shrink back at the mere mention of loans.

In the middle of the nineteenth century, the military peace establishment of Europe consists of 2,800,000 men, while the war establishment rises to the awful total of 5,000,000. The cost of the peace array of the European States does not fall far short of £80,000,000 annually. Austria keeps on foot permanently 278,137 men, at a charge of £8,876,300; Spain expends £4,200,000 upon 234,420 men; France maintains 404,000 men under arms, and pays £14,000,000 for the luxury (?) Italy, out of her well-drained treasury, devotes £6,603,444 to an army 222,321 strong; the peace establishment of North Germany cannot now fall short of 300,000 men, the cost full much below £3,000,000. The huge Russian levy of 800,000 men extracts from the national chest £15,250,000; while our own regulars, militia, and volunteers, are maintained for the trifling sum of £14,569,279. These are the principal items in the dread account, and the smaller States complete the full tale. Eight nations spend on their soldiers and establishments £72,000,000. These sums represent the annual rate at which we insure an uncertain peace—a peace interrupted by three great wars in fifteen years, and now in extreme peril of a wholesale breaking up. But all this does not represent the total cost of the warlike machinery. Five States—Austria, Spain, France, England, and Italy—employ, in addition, 213,887 men for sea service, and spend upwards of seventeen millions on their navies. Including Russia and the smaller States, the total expenditure for military and naval purposes in Europe is not less than £100,000,000 per annum. The worst of it is, that when this vast outlay has been made, Europe is not one whit more certain of tranquillity, nor is any one of the several States assured that it will not have to fight for its life. That constitutes the "irony of the situation."

But when we have summed up the actual cost of this array by sea and land, the total still falls short of the enormous penalty levied upon the nations. Who can truly estimate the additional loss arising from the forced abstinence of two millions and a half of men in the prime and vigor of life from reproductive labor. Suppose we estimate their probable earnings, if employed, at only one shilling per diem, the total loss per week of six days is no less than £750,000, or £39,000,000 per annum. To this we should add the difference between their wages and the value of their productions, and, if we only double it, the total exceeds the whole revenue of France. If we were to set down £200,000,000 a-year, as the total loss to Europe in hard cash, and as a consequence of compulsory abstinence from labor, we should not be far wrong, especially if we include the evil effect of insecurity upon enterprise.

No wonder that governments require loans, that nations should vegetate for want of railways,

that capital should be withheld even where abundant. Here is the French Emperor proposing an elaborate plan for the spending of £8,000,000 upon parish roads, to be spent in ten years, to be repaid in ever so many more; yet, the other day, he did not hesitate to spend, it was £6,000,000, in less than ten weeks, upon war preparations, having for their object the evict of Prussia from Luxemburg. Russia stands much in need of roads and railways as Spain behold her expenditure on warlike agents; Prussia wishes to consolidate her power; and Prussia and Austria desire to conciliate their people, and seem to think huge levies of men money the best mode of accomplishing the in view.

The French Revolution bequeathed to governments the fatal legacy of the conscription. I readily method of raising large armies was speedily adopted, and one great obstacle of carrying war was removed—the difficulty of seizing men. Except in moments of national passion government could raise and pay for huge armies by voluntary enlistment. But now France has shown that a strong executive need only consider the effective male population the limit military enrolments. While the system of conscription exists, all proposals for dismissing absurd delusions, since a State, under that system may keep comparatively few men under arms and yet be able to lay its hands on triple number. No doubt a great deal may be said conscription; but it is not the least effective agent in augmenting the vast charges of an armed peace.—*Economist*.

True Repentance.—I recollect hearing or reading of a zealous, pious parish minister, who, during a twenty years' residence in his parish, had a regular account of the number of sick persons he visited during this period. The parish was thickly populated, and of course, during his residence many of his parishioners were carried to their graves. A considerable number, however recovered, and amongst these, two thousand were in immediate prospect of death, gave testimonies of a change of heart which in the judgment of charity would connect with everlasting salvation, supposing them to have died under circumstances referred to. As, however, the fact is best known by its fruits, the sincerity of the sick-bed repentances was yet to be tried and the promises and vows thus made to be fulfilled. Now out of these two thousand persons, only two—allow me to repeat it, "and only two"—by their future lives proved their repentance was sincere, and their conversion genuine. Nineteen hundred and ninety-eight returned to their former carelessness, indifference and sinfulness, and thus showed how little repentance is to be depended upon which is merely extorted by the rack of nature, or by the fear of future punishment.—*Late Pap*

A Visit to the Great Glacier of New Zealand.—An English paper has an account of a visit recently by the chief officers of the Geological Department to the great glacier on the west side of Mount Cook. The foot of the glacier which is but thirteen miles from the sea, is 1,100 feet wide. Neither the glacier nor the immense field of snow which feeds it is visible from the river until within a quarter of a mile of it, where the stupendous mass of snow and ice at once breaks upon the view. Below the glacier a cent moraine extends for several hundred yards consisting of debris of the rock, twenty feet underlain by ice and snow, through which it

able streams of water run, which are rent visible in round holes, caused by the givay of the ice and by cracks in the surface. The southern side has recently been a fracture of the ice and breach of the rock, had fallen in immense masses. The party led on the northern side, where the snow formed rounded hills, undisturbed by any s or fissures. The glacial matter is porous, presents tolerable footing; it is of a gray full of small dirt, with occasional stones, had evidently fallen from the surrounding

great peculiarity of this glacier is not only immense size, but the consequent fact of its tending to so low a level—640 feet above the level—instead of ending, as is usually the case at an altitude of some 3,000 or 4,000 feet, to the limit of perpetual snow, among Al vegetation. Here the green bush extends thousands of feet above the glacier, on the sides of the range in which the glacier has the deep narrow gorge. Not a single Alpine rewarded the research of the party, and the erature on the glacier was scarcely below on the flat below. With some ceremony party named it the Victoria Glacier. The ut of the peak of Mount Cook is found to be 32 feet.—*Late Paper.*

Animal Life.—One of the striking facts pering to animal life, and one which every tiller of soil has noticed, whether as a gardener, an artist, or more general farmer, is the great plicity of animal life seen in one season, an almost extinction the next year. The 1866 was remarkable for the great numbers of squirrels in Maine and other New England.

They abounded every where. Every had its squirrels, and every fence had their cupants. Last year we did not see one. 1866 the caterpillars covered the apple trees their nests. Last year we saw but a single

Thus, by a wise provision of an all ruling dence, these pests, which, if allowed to in from year to year unchecked, would prove destruction of every plant, like the waves of a are hidden "Thus far shalt thou go, and ther."—*Maine Farmer.*

There is no christianity without humility.

THE FRIEND.

SECOND MONTH 1, 1868.

There need be no stronger evidence how comy man's appetites may obtain the mastery his reason and his intellectual morality, while all thinks himself free to act, and capable to ain his good character and social standing, the habit indulged by a very large portion of the plighted community, of using some kind of alcoholic drink. Notwithstanding the al acknowledgment of the evil consequences temperance, and their continual exhibition to view, the rapid demoralization it produces, we certainty with which it undermines the al of those who are betrayed into it; although complaint is never stilled against the enormous hich it imposes on all classes of the commu. Directly or indirectly, yet dram drinking es to be practised by millions, secretly or openly, and is tolerated by all as an evil for the wit of man has not yet discovered a y that the public will allow to be long ap-

Man's appetites and evil propensities are born and bred with him, and flesh and blood have a stronger affinity for them than for any other relations whatever. Reason may essay to lay down rules for their government, but however admirably deduced from admitted truths, and nicely adapted to guide the judgment, while self retains its power, they are more likely to become subservient to the feelings they ought to restrain, than to urge the self-denying course of virtue. The history of the many attempts made to eradicate the sin and evils of dramdrinking, strikingly illustrate the impossibility of securing any great moral reform, by other means than the influence of vital religion on the hearts of the people, enlightening them to see the evil to which they are prone, bringing them to feel the duty to restrain their natural propensities, and by a superhuman agency, enabling them to perform that duty.

For many years the press has been largely employed in carrying information relative to the wickedness and wretchedness of intemperance into the homes of the poor, and in urging on the rich and the intelligent the obligation to give the powerful aid of their example in rooting out the vile custom of taking strong drink. Books have been written in various styles and widely diffused, the newspapers have teemed with cogent facts and reasoning, exhibiting to the view of all, the virulent power of this monster vice to destroy domestic peace, to substitute haggard want for plentiful industry, to corrupt the morals, to undermine all that is lovely and amiable, to drag its victims down to the lowest depths of depravity and crime, and finally to consign them to premature graves. Lecturers have traversed the country striving by fluent discourses and graphic descriptions, to act on the feelings of their hearers, so as to induce them to give a pledge of abstinence, and repeatedly a "temperance reformation" has been inaugurated and stimulated, until it has appeared to run through whole sections of the community almost like an epidemic, rejoicing many good men with the hope that the people had really become convinced of their folly, and were resolved to escape from its ignominious punishment. Legislative interference has been invoked, and in a few instances State governments have attempted to exterminate the denounced mischief by the strong arm of the law.

Much good has doubtless resulted from all these efforts, and the christian philanthropist can rejoice in their continuance and their extension. It must, however, be confessed with sorrow, that although they may have been blessed in individual instances, they have failed to reach the root of the evil. Some noxious weeds have been plucked up, but good seed has not taken their place. The means used have failed to bring the hearts of the people under the power of religion, by which alone a true sense of the vileness and wickedness of the habit of using spirituous liquors as a drink can be called forth, and a conscientious scruple against indulging in it be produced and kept alive in the heart. "Who can understand his errors? Cleanse Thou me from secret faults: keep back thy servant from presumptuous sins." Hence when the artificial excitement has cooled, and the natural reaction takes place, the people, having been acted on more by sympathy with a popular agitation than by conviction and repentance of wrong, have swung back almost to the other extreme, and drunkenness and debauchery have appeared to abound more than before the pledges to abstain were asked or given.

The late war was a powerful agency in promoting temperance, and we are now witnessing among its deleterious effects, a grievous deteriora-

tion in the moral character of the people. The developments made at Washington within the last two months by the Congressional Committee appointed to examine into the frauds committed on the revenue, in the tax to be collected on whiskey, as well as the statements made by the Commissioners and others, make a deplorable exhibit of the power exercised by the dealers in that article; showing how greatly they influence legislation; direct and profit by official patronage, and how almost impossible it is to find persons willing to hold the offices of inspector or collectors of this tax, who are proof against the bribery and corruption resorted to by distillers, liquor dealers and dram-sellers. It seems as though the whiskey interest aims at, and often succeeds in governing the whole country. It holds the powerful lever of enormous wealth in its hands, which it is ever on the alert to use for securing license to carry on unhampered, and extend unlimitedly its direful trade, involving the destruction of the bodies—and may we not say—the souls of men.

It is said that vices, like wild beasts, grow fond of those who feed them. Hence—confident of the support of the thousands who resort to them for the stimulus of alcohol, and of most of the politicians of all parties, who pander to their wishes in order to enlist their services in the frequently recurring electioneering campaigns—these vendors of liquid poison in Massachusetts, New York and Pennsylvania, where laws were passed a year ago which they consider inimical to their business, have not hesitated to declare publicly that all such laws shall be wiped from the statute books, and that they will not permit any interference that is likely to curtail their sales. As the class of men which is most helplessly under the influence of the keepers of taverns and grogshops, often hold the balance of power between the two great political parties, politicians, as has been observed, are ready to purchase their support and votes, by complying with their demands, though thereby they betray the moral and material interests of their other constituents.

Thus it may be said that in many parts of our country distillers, whiskey-dealers and dram-drinkers hold the reins of the government, and shape all laws that are deemed necessary to promote their own interest and purposes. While slavery was cherished cotton was king, but cotton has been dethroned and whiskey bids fair to mount the throne, and unless there shall be a more vigorous resistance to its encroachments, subject the people to its behests. In the three States named, the initiatory steps have been taken in the legislatures; bills for repealing the laws restricting the sale of intoxicating liquors have been brought forward, and from the tone of sentiment promulgated through the daily press, we infer such repeal will take place.

Although the whole nation is oppressed by taxation, and manufacturers of all kinds complain that they are unable to keep up under the burden thus imposed on them, yet it is publicly acknowledged that the tax on whiskey cannot be collected; the revenue from it is but one-fourth of what it would be if all distillers paid the tax assessed, and sales are daily made of it at prices far below the tax required by the law. This phase of the subject presents an interesting problem for our political financiers to solve, and could a statesman be found with intellect and christian courage sufficient to throw open to the light the intricate mazes of the dark and crafty combination, that now defies the ingenuity and power of the co-ordinate branches of our government, and devise a system by which this source of woe should at least be made to pay

the price charged on those who keep it flowing, he would make himself renowned and bestow a great boon on the country.

SUMMARY OF EVENTS.

FOREIGN.—The report which has been extensively circulated that Russia was sending troops to the southern frontier is untrue. The French government, in an official note, denies the rumor.

The French Emperor has forbidden the publication of Prince Napoleon's pamphlet on the subject of the foreign and domestic affairs of France. There is much popular disappointment at this unexpected decision of the emperor. The United States cabinet, under the command of Admiral Farragut, will remain at Toulon during the rest of the winter. The tone of the French press, as well as that of Prussia, is entirely peaceful. Ten of the Paris newspapers have been fined 1000 francs each, for printing illegal reports of the proceedings of the Corps Legislatif.

The French government has issued an official note, announcing the new army law, and arguing that, instead of being a war measure, it is a pledge of continued peace. It is said that a new French loan, to the amount of 750,000,000 francs, will soon be put in the market. A republican paper was soon to circulate in Paris on the 24th, but the copies were immediately seized by the police.

The Italian Minister Membrea, has addressed a sharp note to the Spanish government, called forth by the speech of Queen Isabella, at the opening of the Cortes, in which it was announced that Spain was ready to interfere for the defence of the Republic of Italy. Membrea informs the Spanish cabinet that Italy will not admit the intervention of any foreign Power, save France, in whose case such intervention is allowed only by special treaty. A bill, imposing a tax on incomes, has been adopted by the Italian Parliament.

The lower house of the Danish Legislature has approved the treaty for the transfer of the Danish West India Islands to the United States.

The Paris *Mondeur* publishes a letter from South America, which says that the communications of President Lopez at Humata are secure, and the attempt of the Allies to take that fortification by siege is hopeless. The cholera has broken out in Buenos Ayres, and specie payments have been suspended in Montevideo. The Fenian difficulties continue. Lord Stanley made a speech at Bristol on the 23d, in which he asserted that Ireland was never before in a more prosperous condition, nor had she ever been more disaffected. He thought the proposed church reforms ought to go over to the next Parliament, and that reforms in Ireland were more out of the question. George Francis Traun, who was arrested at Queenstown, was liberated after a short detention. Thomas Simon, sheriff of the island of Alderney, has been arrested and put in prison on the charge of being connected with the Fenian organization. The latest dispatches received from Abyssinia show that the British forces had yet made no advance beyond Senar. Intelligence of the condition of the British captives had been received in camp at Senafe. They were at Magdala, alive and well, but were carefully guarded to prevent their escape. It was feared they would be put to death when the king of Abyssinia should be informed of their capture. It is reported that the proach of the British king is confronted by rebels in his own dominions, and near his own palace.

The Spanish Minister of War has ordered 50,000 American rifles.

A late dispatch from the City of Mexico says, that President Juarez has ordered to Romero, late Minister of Finance. It was probable Romero would return to Washington for a short time, before entering upon his new duties. A Mexican fleet arrived before Campeche on the 19th of First month, and disembarked 2000 men, who would immediately march upon Mexico to suppress the revolution. The government of Mexico is about forming an alliance with the republics of Peru, Chili, and Bolivia.

Letters from Paris say the reports of the Prefects of the Departments in regard to the state of French feeling on the army bill, are quite unfavorable. They generally concur in the statement that the measure is decidedly unpopular.

A very heavy gale passed over the northern counties of Scotland on the 26th, blowing down houses, &c., and causing some loss of life. It was feared that the shipping on the coast must have suffered great damage. On the 27th convulsions were quiet at 9 1/2. U. S. 5-20's, 72. Middling uplands cotton, 7 1/4. Breadstuffs unchanged.

UNITED STATES.—Congress.—The supplementary act for the government of the rebel States, which passed the House of Representatives, is under debate in the Senate. The Senate Committee on Naval Affairs has reported in favor of selling the iron-clad ships of war. The resolution for the admission of Philip P. Thomas to a seat as Senator from Maryland, has met with strong opposition on account of his supposed sympathy with the rebels during the late war. The House bill to arrest the further contraction of the currency has also passed the Senate. Bills authorizing the Commissioners of the Freedmen's Bureau to distribute among the destitute poor of the South dedicated meats and vegetables not used during the war; and the Controller of the Currency to replace national bank notes which have been mutilated and destroyed—likewise passed the Senate. The House of Representatives has passed a bill for the sale of the arsenal grounds at St. Louis and Liberty, Missouri, and of part of the Fort Leavenworth reservation. Bills and resolutions on a great variety of subjects have been brought before the House.

Immigration.—The following gives the yearly arrivals of immigrants at New York for the last twenty years:

1849,	189,176	1858,	78,589
1848,	220,791	1859,	79,322
1847,	212,603	1860,	105,162
1851,	289,601	1861,	65,529
1852,	300,993	1862,	76,306
1853,	284,945	1863,	156,844
1854,	319,223	1864,	225,216
1855,	316,823	1865,	196,347
1856,	142,342	1866,	233,398
1857,	183,773	1867,	242,371

Total, 3,739,353
Of the immigration of last year 117,591 persons came from Germany, and 105,161 from Great Britain and Ireland.

Philadelphia.—Mortality last week, 252. Of consumption, 48; inflammation of the lungs, 25; old age, 10.

The present population of this city is estimated to be 220,000. During the past year about 7000 buildings of all kinds were erected, at a cost of \$5,000,000. The assessment of real and personal property amounts to \$192,249,644.

The Union Pacific Railroad.—The government commissioners report the completion of another section of the constructed road. The road is now ready for service to the five hundred and fortieth mile post west from Omaha, Nebraska.

Kansas.—The Kansas Legislature has memorialized Congress to prohibit by law the sale of large tracts of land to one person, and asking that the railroad companies owning lands reserved to Congress shall be forced to put them into the market.

The Indians.—The Indian chiefs in the vicinity of Fort Phil Kearney have pledged themselves to keep the peace and prevent all war parties until after the meeting of the Peace Commission.

The States.—The trustees of the Peabody fund for promoting education in the Southern States, have agreed to expend a part of the principal, as well as the accrued interest, during the current year, in promoting the object of the trust.

Conventions for reorganizing the States continue in session. The Arkansas Convention has passed a resolution asking Congress to continue the Freedmen's Bureau until reconstruction is completed. Also, resolutions asking for the improvement of the navigation of several rivers in the State.

The Georgia Convention asks Congress to authorize it to remove the Governor and supply the vacancy, and to send an official to remove all officers who are obstructing reconstruction.

Colonel Willard, in charge of the Bureau of Civil Affairs at Charleston, S. C., says in a recent letter, that crime is no greater in North and South Carolina than the courts are able to attend to, and that life and property are as secure as in the northern States. There are no indications of the war of races which it is sometimes said is approaching.

General Howard, in response to a resolution of the United States Senate respecting the reduction of officers and agents of the Freedmen's Bureau, and placing the duties in the hands of officers regular army, says that a large portion of the Congressmen from Tennessee and delegations from Kentucky and Maryland, have personally and in writing depicted the proposed changes, which they say will work injuriously against the education as well as other interests of the freedmen.

The Markets.—The following were the quotations on the 28th ult.: New York, American gold 141 1/2. U. S. 5's, 1881, 111; 104. 5-20's, new 107 1/2; ditto, 10-40, 5 per cents, 104. Superfine State flour, \$7.75

a \$9.25; California flour, \$12.25 a \$13.60; St. Louis \$12.85 a \$16. No. 1 Chicago spring wheat, \$2.50; 2, \$2.40 a \$2.43; No. 3, \$2.36; California wheat, \$3. Western corn, \$1.25 a \$1.30. Middling uplands cotton, 18 1/2 cts.; Orleans 19d. Philadelphia.—Superfine flour, \$7.25 a \$8. finer brands, extra, family and fancy, \$8.75 to \$9. Red wheat, \$2.45 a \$2.60. Rye, \$1.60 a \$1.65. N. yellow corn, \$1.12 a \$1.16. Oats, 76 a 77 cts. Clover seed, \$8 a \$8.75. Western mixed corn, \$1.25 a \$1.30. 29.0 a \$3. The arrivals and sales of beef cattle at Avenue Drove-yard, reached about 1500 head. Market was dull. Extra cattle sold at 9 1/4 a 10 1/4 lb. gross; fair to good, 8 a 9 1/2 cts., and common cts. per lb. About 8000 sheep sold at 5 a 6 1/2 cts. per gross. Hogs, \$10 a \$10.50 per 100 lbs. net. Cattle—No. 2 spring wheat, \$3.08. Corn, 81 a 82 cts. 55 a 56 cts. Rye, \$1.52 a \$1.53. Cincinnati—Winter red wheat, \$2.58; spring, \$2.25. Corn, 80 cts. Oats, 69 a 70 cts. Rye, \$1.58. St. Louis.—Crush choice wheat, \$2.55 a \$2.70. Corn, 88 cts. Oats, 67 to cts.

RECEIPTS.

Received from A. J. Hopkins, Pa., \$6, to No. 32, 41; from Mary M. Applegate, N. J., \$2, to No. 52, 41.

Received from Friends of Everesham Mont, Philadelphia, N. J., per Ezra Evans, \$65; from Friend, Flushing, O., per Isaac Mitchell, \$71; and from Friends of Pensylvania monthly meeting, O., per Aaron P. Dew, \$42.50, for the Freedmen.

NOTICE.

The Annual Meeting of the Auxiliary Bible Association of Friends of Philadelphia Quarterly Meeting, to be held at No. 109 North Tenth street, on Second evening, 10th inst., at 8 o'clock. The Women's Executive Committee is invited to attend. Philadelphia, 2d mo. 1st, 1868.

WESTTOWN BOARDING SCHOOL.

WANTED A TEACHER for the Second Department of Girls' School—one qualified to teach Arithmetic, Grammar, Natural Philosophy, &c. It is desirable to obtain one who can enter on her duties at once. Apply to either of the undersigned.

Benjamin M. Hacker, No. 316 S. Fourth St., Philadelphia. B. M. Allen, No. 528 Pine St., Phila. Susan E. Lippincott, Haddonfield, N. J.

GRISCOM STREET SOUP HOUSE.

(Between 4th and 5th and Spruce and Pine streets) is now open daily, except First-day, for the distribution of soup, bread, meat, &c., to the necessitous poor. Contributions in aid of its funds are respectfully solicited. Vegetables, flour, and other articles necessary for making the soup and bread, will be gratefully received at the house, No. 338 Griscom street; and donations by money.

WILLIAM EVANS, TREASURER, No. 613 Market St. THOMAS EVANS, No. 817 Arch St. First month 8th, 1868.

NOTICE.

A suitable Friend and his wife are wanted to assist and manage the farm and family under the management of the Trustees for the improvement of the Indian natives at Tusnessa, C. Angus Co., New York. Friends who may feel inclined to mind to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Philadelphia. John M. Kaighn, Camden, N. J. Aaron Sharpless, Philadelphia. John C. Glaser, Pa. Robert S. Bailey, Marshalltown, Chester Co. John Scattergood, 413 Spruce Street, Philadelphia.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients to the Asylum, to be made to the Superintendent, to CHARLES ELIAS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

DIED, in this city, on the 8th ult., MARY D. W. Ambrose Smith, in the 40th year of her age.

WILLIAM H. PILE, PRINTER, No. 422 Walnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

L. XLI.

SEVENTH-DAY, SECOND MONTH 8, 1868.

NO. 24.

PUBLISHED WEEKLY.

Two Dollars per annum, if paid in advance. Two
Dollars and fifty cents, if not paid in advance.

Subscriptions and Payments received by

JOHN S. STOKES,

116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

When paid quarterly in advance, five cents.

For "The Friend"

Practical Hints for the School Room.

When I was a lad I remember seeing two men in a wood,—one an expert, the other a novice. The expert had felled a tree, the first making a clean stump, sufficiently cup-shaped to insure its decay by retaining rain water; the other, by a rough, unsightly, jagged and splintered stump, the result of his own incompetency. And now we need the operation of lopping off the decayed branches from the trunk, leaving a smooth surface,—indeed he seemed only to cut the branch, and it would fly dismembered to the place where it grew, and quickly and easily was the whole job done. Not so with the novice, though more powerful and equally his companion: he backed and labored at his task; stroke after stroke was dealt to estimate bugbe, which seemed to spring from the axe, without being much affected by repeated blows, and the result was a rough, ugly, half-performed job. And why this difference? Simply because one knew just *when*, and *how* to apply his strength, and the other was unskilled, and the other was unlabored. This same difference we may see everywhere around us. But nowhere are we so much more to be regretted than in the school-room. The expert, skilful and conscientious teacher is almost invaluable in a community, and parents cannot measure his worth, though they are made the gauge of it. How should he be "trained up in the way he should go," and under the influence of an incapable, and perhaps indifferent instructor? And how many children become under such instructors, and how many are made the gauge of it. How should he be "trained up in the way he should go," and under the influence of an incapable, and perhaps indifferent instructor? And how many children become under such instructors, and how many are made the gauge of it. How should he be "trained up in the way he should go," and under the influence of an incapable, and perhaps indifferent instructor? And how many children become under such instructors, and how many are made the gauge of it.

I believe much improvement may be made in the school, and by parents also, who are not quite up to the work that is required of them. The man who wields an axe with a skilful arm may, if he sets about it with a generally become an expert. But if a teacher cannot, let him try something else, for he has mistaken his calling, and the results in

this case are so momentous that he should not hesitate to quit that field of labor. I believe there are many teachers who are fully equal to their duties and competent in every other respect, yet who fail to come up to the required standard for want of proper system in the school room. They may maintain excellent order, be thoroughly qualified as to knowledge, and able to impart their knowledge, and withal hard workers, yet for want of thorough system and a well devised plan of operations, they are unable to do half of what they might, did they possess these latter requisites. They should know *when*, *where* and *how* to apply their talents to the best advantage. A teacher with this knowledge, can do his *whole* duty with a school of fifty scholars, with more ease to himself and them, than another who lacks it can with half the number. In other words, proper system and a good plan of operations, will do more than half the work.

It would be difficult, perhaps impossible, to lay down any definite plan that would work well in every case; there are so many things to be taken into the calculation; as the number and age of the pupils, the studies designed to be pursued, &c. These will all, more or less, modify any plan; but still a general outline can be given somewhat as follows, always bearing in mind that certain parts of the day are best adapted to certain studies and recitations; also to avoid crowding many or difficult studies upon the same pupil, to be followed perhaps by a long period of rest or even idleness. The morning exercises should commence with something that requires but little immediate preparation, perhaps with reading; and while the teacher and one class are thus engaged, the other classes should prepare those lessons which require but little aid from the teacher, as etymology or plain spelling, (which latter should never be entirely omitted by any class in any school.) By the time these latter were recited, a short recess would come in to great advantage. From this the pupils would re-enter the school room fresh and ready for mathematical exercises on the blackboard, which should be given at least every alternate day, and to this end the school might be divided into two parts, which would alternate with each other, allowing half the school to recite each day. Mental arithmetic should also claim a large share of attention; this might follow the blackboard exercises, and alternate with them in such a way that every pupil might have some exercise either in it or at the blackboard every day. Then another recess or "noon" should be given, to be followed by some light recitation and a "study." This "study" should immediately precede (with a short recess intervening) the most difficult recitations of the day; for instance grammar, alternating with either philosophy, chemistry, or physiology, &c., according to the advancement of the pupil. These, as also mathematics and the languages, absolutely require the assistance of the teacher, and to these should the "study" mainly be devoted. Lastly, penmanship might close the day's work. If the number of pupils does not exceed twenty-five to each teacher, several short intervals will often occur between the recitations,

and these may profitably be devoted to the preparation of mathematics, which can be taken up at any time for a few minutes only, to better advantage than most other studies. In all cases where it is practicable the teacher should assist a class at once, and not each individual separately, thereby avoiding repetition, and saving time.

In most Friends' schools one day near the middle of the week is very properly broken in upon by the mid-week meeting; and there are certain studies which should come up about once a week, that day, therefore, should be devoted to these studies; for example, dictation, composition, lectures, map drawing, mechanical drawing and scripture recitations. A short lecture once a week, even without apparatus, will be found to interest and instruct quite young children much more than most are aware of, and will produce lasting impressions upon their minds. It is a defect in many schools of even the higher grades, that this mode of instruction is not more generally adopted, say once a week, all the year through. It would soon become an interesting, easy and profitable task even to the teacher, if set about in a regular manner, and made an indispensable part of the school duties.

The plan here laid down is intended merely as an outline or nucleus around which the ingenious teacher may weave a system that will aid him greatly in the arduous duties which devolve upon him. Many branches, not here mentioned, can easily be woven into it. It is entirely practical, and by means of something like it large schools have been conducted with comparative ease by one teacher. I would therefore recommend its careful consideration to all those interested in the important duty of educating our youth. A.

For "The Friend."

An Epistle to Friends: by Thomas Ellwood.

It is truly painful to witness, that lukewarmness and indifference are increasingly prevailing amongst a people—some of them in the foremost rank—that have been favored like this to people. Oh! that the Lord, in His tender mercy, would turn again the captivity of these by bringing into the littleness, the lowliness, the fear and trembling state, even of continual watchfulness and dependence, which characterized earlier times. This would preserve no less from going before Him, without whom we can do nothing, than from loitering behind when the cloud does lift from the tabernacle, instructing to go forward. The remembrance of two correlative and very important truths become our fallen and fallible state: one the humiliating sense of our own unworthiness and nothingness: the other our Savior's infinite condescension and long-suffering mercy—being mighty to save and to deliver. His sacrifices are no less now than ever, "a broken and a contrite spirit;" while His Spirit of Truth alone leadeth into all truth. Wait ye therefore on the Lord, and watch unto prayer.

These remarks are designed but to introduce the subjoined epistle of Thomas Ellwood, which is thus alluded to in vol. 13 Friends' Library: "In 1686, Thomas Ellwood published a general

Epistle to Friends, in which he endeavored, with affectionate earnestness, to check the tendency to division and declension which had then manifested itself in the Society; exhorting his fellow members to maintain a *true consistency of conduct*, and to guard against the *injurious effects of a worldly spirit*, as follows, viz:

"Dear Friends, unto whom the gathering arm of the Lord hath reached, and who have known, in your several measures, a being gathered thereby into the heavenly life, and are witnesses of the preserving power, by which you have been kept faithful to the Lord, and regardless of his honor; unto you, in an especial manner, is the salutation of my true and tender love in the Lord; and for you, as for myself, are the breathings and fervent desires of my soul offered up, in the one Spirit, unto him who is your God and mine, that both you and I may be for ever kept in the fresh sense of his tender mercies and great loving kindness unto us, that therein our souls may cleave firmly unto him, and never depart from him. For, friends it is a trying day, a day of great difficulty and danger, wherein the enemy is at work, and very busy, setting his snares on *every side*, and spreading his temptations on *every hand*; and some, alas! have entered therein, and are caught and held therein, for whom my soul in secret mourns.

"And truly, friends, a great weight hath been upon my spirit for many days, and my mind hath been deeply exercised, in the sense I have of the enemy's prevailing by one bait or other, to unsettle the minds of some, unto whom the arm of the Lord had reached, and in some measure gathered to a resting place; but not *abiding* in that pure light, by which they were at first visited, and to which they were at first turned, the understanding hath been veiled again; the eye, which was once in some measure opened, hath the God of this world insensibly blinded again, and darkness is come over them, to that degree, that they can now contentedly take up again, what in the day of their conviction, and in the *time of their true tenderness*, they cast off as a burden too heavy to be borne. O my friends! this hath been the enemy's work; therefore it greatly behoves all to watch against him; for it hath been for want of watchfulness, that he hath got entrance into any. For, when the mind hath been from off the true watch, in a secure and careless state, then hath he secretly wrought, and presented his fair baits, his allurements or enticements by pleasure or profit, to catch the unwary mind. And hence it hath come to pass, that some, who have come out fairly, and begun well, and have seemed in good earnest to set their hands to God's plough, have looked back, and been weary of the yoke of Christ, and have either lusted after the flesh pots of Egypt again, or turned aside into some by-path or crooked way in the wilderness, and thereby fallen short of the promised good land.

"But you, my dear friends, in whom the word of life abides, and who abide in the virtue and savor thereof, ye know the wiles of the enemy, and the power which subdues him, and the Rock in which the preservation and safety is. So that I write not these things unto you, because ye know them not; but the end of my thus writing is, to stir up the pure mind in all *upon whom the name of the Lord is called*, that we all may be provoked to watchfulness against the workings of the wicked one. Therefore, dear friends, hear, I beseech you, the word of exhortation, though from one that is little and low, and through mercy sensible of it, and who hath not been accustomed to appear after this manner; but the wind, ye know, bloweth where it listeth.

"Friends, call to mind the former times, and remember the days that are past and gone, when the day of the Lord first dawned unto you, and his power seized upon you. Ye know how weighty and retired the spirits of Friends then were; how grave and solid their deportment and carriage; how few and savory their words, tending to edify the hearers; how great a fear and backwardness was in them, to enter into familiarity with the world's people. O friends! that was a good day, and that was a safe state; for fear begets watchfulness, and watchfulness is a means to prevent danger. Therefore, all Friends, keep in the holy fear, and therein watch against the enemy, that he entangle you not, nor hurt your spirits by a too near familiarity, and intimate conversing with the people of the world; for therein, I assure you, lies a snare.

"For though it be both lawful and necessary, and in some cases also useful and serviceable to the Truth, to converse with them that are without; yet if any Friend should adventure in a frank and free mind, beyond the limits of the pure fear, to entertain familiarity with the world's people, the spirit of the world in them will seek an entrance; and, if not diligently watched against, will also get an entrance, and bring a hurt and a loss upon him or them into whom it so gets. For being once entered, it will insensibly work, and dispose the mind to a condescension to and compliance with the people of the world it converses with, first in one thing, then in another; in words, in behaviour, &c., *little things in appearance*, but great in consequence, till at length an indifference gets up in the mind, and the testimony of Truth by degrees is let fall. But while the pure fear, is kept to and dwelt in, the watch is always set, the spirit is retired and weighty, and an holy awfulness rests upon the mind, which renders such converse both safe to the Friends, and more serviceable to them they converse withal.

"And, Friends, not only in your conversing with the world's people, but in all your conversation and course of life, watch against the spirit of the world; for it lies near to tempt, and to draw out the mind, and to lead back into the world again. You know, Friends, that at the first, when the visiting arm of the Lord reached to us, he led us out of the world's ways, manners, customs, and fashions; and a close testimony, both in word and practice, was borne against them. But how hath this testimony been kept up, and kept to, by all who have since made profession of the Truth! Ah! how hath the enemy, for want of watchfulness, stolen in upon too many, and led out their minds from that which did at first convince them, into a liberty beyond the cross of Christ Jesus! and in that liberty they have run into the world's fashions, which the worldly spirit continually invents to feed the vain and airy minds withal, that they may not come to gravity and solidity.

"Thence it hath come to pass, that there is scarcely a new fashion come up, or a fantastic cut invented, but some one or other, that professes Truth, is ready with the foremost to run into it. Ah, friends! the world sees this, and smiles, and points the finger at it. And this is both a hurt to the particular, and a reproach to the general. Therefore, Oh! let the lot be cast; let search be made by every one, and let every one examine himself, that this Achan, with his Babylonish garment, may be found and cast out; for indeed he is a troubler of Israel."

(To be continued.)

We ought no more to let the world take possession of our mind during life, than at the hour of death.

The Valley of the Jordan.

The *Saturday Review*, in an article on "The Natural History of the Bible," makes following interesting observations:

"What may be called the key to the scheme of life which is peculiarly characteristic of Palestine is the 'Ghor' or Jordan Valley. See here a deep chink or ravine ploughed down into the bowels of the land, which separates Western Palestine from the country east of Jordan and collects into itself the rainfall from the lands and hills on either side:—

"From the rise of that mysterious river, rocks of the Anti-Lebanon, the valley steeply deepens. It pauses awhile in the high Lal Merom, the modern Huleh, just south of Her and below the city of Laish or Dan, not far from the later Casarea Philippi, where it collects wide basin the contributions of many affluents. Thence it descends rapidly to the second hal place in its career, the Sea of Galilee, linked ever with our holiest memories. Deepening as it proceeds, the river breaks from the south end of the lake to enter on the third stage of existence, plunging in a strangely tortuous course with windings so infinitely multiplied that it creases a distance of 60 miles to 200, while fixed within the narrow trench of its lower tier rarely more than two miles wide, which form edge of the Ghor, or 'Plain of Jordan' of Jews. The upper terraces reach back for some miles to the enclosing hills. At length, as the valley deepens, the Jordan becomes, in the Sea, a long pool, forty-two miles long, and twelve to sixteen wide, 1,292 feet below the level of the sea, the deepest depression on the surface. It is this deep furrow which has of the marvellous variety of climate, products scenery which are the characteristics of the land and has for many centuries separated the hills and fortunes of the country on this side, as that on the other side Jordan. The Jordan, unique among rivers in its origin, its lonely course and its gloomy termination.

"What the Nile is to Egypt this singular is to the land of Judaea—a 'sparkling sea' writhing in a barren desert, with only here there an oasis of deepest green.' Unlike the Nile, however, it draws its tribute from countless sources during its course, and yet never yields up its den to the sea. There is no more curious phenomenon in physical geography than that of balance between the acquisitions of the Jordan and the evaporation from its surface which the Dead Sea at so unvarying a level. Variations as are traceable belong at least to the prehistoric times. It is, however, the singularity which exists in the superficial character of the narrow region of Palestine that the country as unique in the whole compass of geography, and tends to explain the hold it has succeeded in maintaining over the mind and feelings of the most widely contrasted races. As Dean Stanley has effectively pointed out, it presents on its very face a kind of epitome of the natural features of well-nigh every continent. It seems made to furnish the 'natural history' of a history and a literature which were destined to spread among nations familiar to the varied climates and imagery. Within a space smaller than Wales, nature has here presented aspects of a tropical, an Eastern, and desert Northern climate—of waving corn and date and rock, of pasture and forest; the life of an Arab Bedouin tribe contrasted with that of an English people and of seafaring cities. On this coast we find maritime plains of surpassing beauty, where frost is unknown, and where

ant drainage from the hills, with the copious dews from heaven, precludes all risk of drought. In the hill country, instead of the corn of the plain, the terraced slopes had, in their place, their staple growth in the vine, the fig, and the olive. Here it was that the great of the population gradually formed their settlements.

In the earliest historical period, the days of the patriarchs, as Tristram reminds us, these settlements were not yet formed, but the primeval forest still covered the hills, affording covert to wild beasts, and modifying the temperature of the land. During the Israelitish period these forests decay by degrees to the artificial culture of the olive. The olive formed the chief delight and pride of these teeming gardens, but it has since disappeared under the desolating breath of anarchy that has swept the land since the days of the man of sin. Under the pressure of maintaining a dense population, the country has also become a bare of wood. Where now are the forest of the north and the wood of Ziph? the lair of the lion and the covert of the bear, even on the naked hills of Benjamin? Where is Kirjath-Jearim, the city of forests? As late as the Crusades we find a pine wood on the hills between Jerusalem and Bethlehem. 'Now it would be no difficult count the trees in Western Palestine.' On the few patriarchal cedars that survive, doomed to fall speedily under the axe of the moderns.

Even the ancient glories of Lebanon are swept up by scanty groups. In the Lebanon the mulberry and the silkworm have in times replaced the ancient culture of the olive. Israel. On the higher grounds, as upon the hills, the fruits, flowers, and plants, are of an arid character; and the bear still lingers among the rocks. In the plain of Gennesaret, and in the marshes of the Huleh (Merom), in the course of the Jordan, we find acres of rice, which is now wholly extinct in Egypt. Palm still waves richly along the river's banks as in the days of Josephus, and the thorny or jujube (*Zizyphus spina-christi*), a tropic plant, the oleander, and the tamarisk, fringe the river banks. As we reach the plain basin of the Dead Sea, these products are gathered into five separate oases—the oasis of Shittim and of Jericho, the little bay of the Wady-Zuweirah and the Ghor-es-Salt, the ancient waters of Nimrim. Here in winter the temperature ranges from 60° to 80° in the day, and in March, melons ripen in the open air, and indigo is largely cultivated. The Tristram remarks, in these favored regions, the climate is tropical, being Indian or Equatorial in type. The Indian collared turtle (*Testudo scripta*) mixes with the common turtle (*Testudo graeca*) elsewhere also haunts the Dead Sea; there a night-jar, a peculiar sparrow, and a cat, while a beautiful little sun-bird, or *Nectarinia*, often mistaken for a humming-bird, flits about the shrubs. The butterflies, too, resemble those of Nubia and Abyssinia rather than those of the upper country. Such are the vast differences brought in this narrow strip of country by various causes. There is the ever-encroaching desert on the one side, and on the other the freshness of the sea; the hot winds of the south, the east wind of scripture, and the cold from the summits where the Highest gave like wool, and 'scattered the hoar frost as dandelion seed,' and 'casteth forth his ice like morsels.' All is the enormous difference in level of the land, from the Jordan Valley (sunk 1,300 feet below the sea line) to the maritime plain, and to the highland centre 1,500 feet above

the sea, up to the northern peaks 12,000 feet high, covered with perpetual snow.'

For "The Friend."

Bearing Testimony.

As two individuals, whose appearance was that of consistent members of the Society of Friends, were waiting at a passenger depot in one of our large cities, for the time of departure of the train, they were accosted by a stranger, who informed them that he was a minister among the Methodists, though there did not seem anything about him, to indicate to a casual observer that such was his position. He spoke approvingly of the care of Friends in maintaining a christian simplicity in dress, and lamented the change which had taken place among his own people in that respect. In former times, a professor of religion among the Methodists might be distinguished from a mere man of the world by his plain and simple appearance, but he thought they had become ashamed to bear this mark of distinction, which had been an open testimony of their allegiance to the cause of religion. Now there was little difference to be seen between those who were members of a religious society and those who were not.

Do not these remarks contain a useful hint to some of our own members—and in connection with them, may we not profitably remember the caution given by our Saviour to those who are ashamed of Him before men? J.

How "Learned Birds" are Trained.

Those who have seen exhibitions of trained canaries and other kinds of birds have no doubt often wondered how the little creatures were taught to perform their amusing and frequently difficult or complicated tricks and manoeuvres. A correspondent of a Hartford paper, who is evidently well acquainted with the process, writes a pleasant account of the modes of training these birds.

There is as much variety in disposition and power of adaptation among birds, says this writer, as among human persons. One bird, for instance, may show a natural aptitude and fitness for ladder performances, another for drawing a wagon, still another for firing a cannon, and a fourth for rope walking. These little idiosyncrasies of the bird have to be consulted, and the training governed by them.

Careful and constant experiment and great patience are the chief requisites in the trainer. A canary that new goes gravely up and down a ladder at the word of command, in one of these exhibitions, was tried for more than a year before it showed an aptitude for learning anything. On the other hand, an Australian parakeet which draws the little carriage containing two other birds, and harnesses and unharnesses himself at the word of command, has only been in training a few weeks.

The means adopted by the trainer to make this bird put his head through the collar, and draw, are ingenious. Parakeets have a natural inclination to bite anything that is held out to them. The trainer takes advantage of this propensity, and having placed him between the shafts of the miniature barouche, presents his finger just outside the collar. Instantly the bird runs his head through and seizes the finger. The trainer disengages it, and the little bird starts on a home run for its cage, drawing the wagon. A little experience teaches him to disengage his head before reaching the cage, in time to prevent bumping, and he hops through the door in triumph. The

lesson is repeated till the bird learns what is expected of him, and performs his duty unaided by the finger.

A similar system is pursued in teaching the canary or sparrow to fire off the cannon. He is first taught to hop upon the little bar which drops the match on the touch-hole. The next step is to accustom him to the smoke. The last and most difficult is to give the little winged artilleryman the needed steadiness under fire. This requires the greatest patience and innumerable repetitions, but is learned at last.

The tricks of rope-walking, feigning death, drilling and other feats are taught in a similar way. The great and only considerations being unwearied patience and uniform kind treatment. The birds are well fed; there is no appeal to hunger, nor are they, nor indeed can they be, punished in any way.

White mice are also trained in this manner to perform several amusing feats. They are induced to climb poles or ropes by placing them at the foot, with their heads in the right direction, and then gently pinching their tails. They are led to carry a flag in their mouths by presenting the staff before their mouths repeatedly, till finally the mouse expects to find a little staff ready for him at the top of the pole, and so takes the one he finds lightly inserted there and brings it down.

Any bird or mouse may be trained to some one feat perfectly, but it is seldom or never possible to teach the same one two or more tricks, its small brain being unable to remember one without forgetting the other.—*Late Paper*

Selected for "The Friend."

Diversions.

Among the striking characteristics of the present day, are the instability and love of excitement which pervade the minds of the people. Many even among the professors of religion, seem to be "lovers of pleasure, more than lovers of God," looking abroad for sources of gratification, and eagerly pursuing anticipated pleasures, instead of endeavoring to secure from the present hour as it passes, those tranquil enjoyments which are the fruit of well doing, and to cultivate that retirement and mental introversion, in which we may profitably commune with our own heart and be still. One of the effects of this state of unsettlement is the great increase of public amusements and pastimes, which has latterly become so obvious; for, as "the eye is never satisfied with seeing, nor the ear with hearing," so when the mind is let out to seek gratification in these vanities, the desire for them increases with the indulgence; and it is constantly requiring new objects to please the senses, and to fill the aching void which they leave behind them. Often, after having run the giddy round in the vain pursuit of pleasure, there is a secret sense of bitter disappointment, and a consciousness that these empty trifles cannot satisfy the longings of an immortal mind, designed for nobler and purer enjoyments.

We apprehend that many of the lectures and readings, with other kindred exhibitions, are of latter time so mixed up with improper associations, that parents and others have need to be on their guard, lest in going themselves, or allowing their children to attend, they should be promoting a dissipation of mind, and an exposure to harmful influences, the consequence of which may be lasting and injuriously felt.—*Philadelphia Yearly Meeting Advice.*

Seek after christian holiness, as a miser hunts after gold; nothing is so small on which he does not gain some profit.

COMFORT.

Selected.

"We know that all things work together for good to them that love God, to them who are the called according to His purpose."

O how many hours of heaviness
Has the Master dealt around!
And how many broken spirits
Has He tenderly upbraid!

O how often to refresh us,
Warmly beams the sun of life,
Chasing from our brows the frowns
Gathered in its gloom and strife.

Thus it will go on forever,
Till the end of all things here;
Till our Lord to glory call us,
In His presence to appear.

Should not this spirit strengthen
To rejoice, be calm and still?
And to follow where He leadeth,
Let Him lead thee where He will?

All things work for thy salvation;
If indeed thou art His friend:
Tarry but a little season,
Only wait until the end.

So the bitterest, as the sweetest,
Serve alike to lead to heaven;
Nor thy voice alone shall praise Him
For the cross that once was given.

Doubtless rugged heights arising,
Fill thy heart with deep alarms,
But when thou canst not surmount them,
Christ will bear thee in His arms.

Only journey ever onward,
Farther on the homeward way,
Ever with an eye uplifted
To the clearer realms of day.

Fearless thou mayest tread the valley,
All in shadow though it be,
When the open blue of heaven
Shines beyond the gloom for thee.

Hymns from the Land of Luther.

WAITING AT THE GATE.

Selected.

"I'm kneeling at the threshold, weary, faint and sore,
Waiting for the dawning, for the opening of the door,
Waiting till the Master shall bid me rise and come,
To the glory of His presence, to the gladness of his home.

A weary path I've travelled, mid darkness, storm and strife,

Bearing many a burden, struggling for my life,
But now the morn is breaking, my toil will soon be o'er,
I'm kneeling at the threshold, my hand is on the door!

methinks I hear the voices of the blessed as they stand,
Singing in the sunshine, in the far off sinless land,
Oh would that I were with them, amid their shining throng,

Mingling in their worship, joining in their song!

The friends that started with me, have entered long ago,
One by one they left me struggling with the foe,
Their pilgrimage was shorter, their triumph sooner won,
How lovingly they'll hail me, when all my toil is done.

With them the blessed angels that know no grief or sin,
I see them by the portals, prepared to let me in,
Oh Lord, I wait Thy pleasure, Thy time and way are best;

But I'm wasted, worn and weary, Oh Father bid me rest!"

A Watchword.—May the friends of Christ and his holy cause stand firm in a patient, persevering testimony against every innovation, whether in doctrine or discipline; and by the steadfastness of their faith, the purity of their lives, and the meekness and humility of their spirits, evince that while they dare not strive to carry party views and schemes, they feel themselves constrained by a sense of religious duty, earnestly to contend for the faith once delivered to the saints.—*Journal of Richard Jordan.*

Selected for "The Friend."

In speaking of his companion's service in one of the meetings for worship, John Pemberton says:

He was led to expose the ignorance of those who concluded there was no worship performed, or profit experienced in meeting together, *unless some minister preached*, and who were ready to admire at, and censure us for sitting in silence. This was not confined, he said, to those of other societies, but included some that profess with us, who never were baptized by the one eternal Spirit, which creates anew and translates from darkness to light; but are contented to remain in the outward court.—*Friends' Library.*

For "The Friend."

The following account of a wolf-chase is taken from John S. Springer's "Forest Life and Forest Trees:"—

"During the winter of 1844, being engaged in the northern part of Maine, I had much leisure to devote to the wild sports of a new country. To none of these was I more passionately addicted than that of skating. The deep and sequestered lakes of this northern State, frozen by intense cold, present a wide field to the lovers of this pastime. Often would I bind on my trusty skates, and glide away up the glittering river, and wind each many streamlet that flowed on towards the parent ocean, and feel my very pulse bound with joyous exercise. It was during one of these excursions that I met with an adventure, which, even at this period of my life, I remember with wonder and astonishment.

I had left my friend's house one evening, just before dark, with the intention of skating a short distance up the noble Kennebec, which glided directly before the door. The evening was fine and clear. The new moon peered from her lofty seat, and cast her rays on the frosty pines that skirted the shore, until they seemed the realization of a fairy scene. All nature lay in a quiet which she sometimes chooses to assume, while water, earth, and air seemed to have sunken into repose.

I had gone up the river nearly two miles, when, coming to a little stream which emptied into a larger, I turned in to explore its course. A firud hemlock of a century's growth met overhead, and formed an evergreen archway, radiant with frost-work. All was dark within; but I was young and fearless, and as I peered into the unbroken forest that reared itself to the borders of the stream, I laughed in very joyousness. My wild hurra rang through the woods, and I stood listening to the echo that reverberated again and again, until all was hushed. Occasionally a night-bird would flap its wings from some tall oak.

The mighty logs of the forest stood as if nought but time could bow them. I thought how oft the Indian hunter concealed himself behind these very trees—how oft the arrow had pierced the deer by this very stream; and how often his wild halloo had rung for victory. I watched the owls as they fluttered by, and held my breath to listen to their distant hooting.

All of a sudden a sound arose; it seemed from the very ice beneath my feet. It was loud and tremendous at first, until it ended in one long yell. I was appalled. Never before had such a noise met my ears—so fierce, and amid such unbroken solitude. Presently I heard the twigs on the shore snap as if from the tread of some animal, and looking around I discovered myself to be the object of pursuit. My energies returned. The moon shone through the opening by which I had entered the forest, and considering this the best

means of escape, I darted toward it like an arrow. I was hardly a hundred yards distant, and swallow could scarcely excel my desperate flight as I turned my eyes to the shore, I could two dark objects dashing through the undergrowth at a pace nearly double that of my own. By a great speed, and the short yells which they occasionally gave, I knew at once that they were much-dreaded gray wolf.

I had never met with these animals, but, from the description given of them, I had but pleasure in making their acquaintance. Unfathomable fierceness, and the untiring strain which seems to be a part of their nature, render them objects of dread to every benighted traveler.

'With their long gallop, which can tire
The hound's deep bawl, the hunter's fire,'

they-pursue their prey, and nought but death separate them. The bushes that skirted the stream past me, as I dashed on in my flight. The outlet was nearly gained; one second more, I would be comparatively safe, when my pursuer appeared on the bank directly above me, and rose to the height of some ten feet. There was no time for thought; I bent my head and dashed wildly forward. The wolves sprang, but miscalculating my speed, sprang behind, while the intended prey glided out into the river.

Nature turned me toward home. The flakes of snow spun from the iron of my skates and I was now some distance from my pursuer when their fierce howl told me that I was the fugitive. I did not look back; I did not sorry or glad; one thought of home, of the embraces awaiting my return, of their tears if I should never again see me, and then every atom of mind and body was exerted for my escape. I was perfectly at home on the ice. Many were the days I spent on my skates, never thinking that one time they would be my only means of escape. Every half minute an alternate yelp from my pursuers made me but too certain they were close by my heels. Nearer and nearer they came; I heard their feet pattering on the ice nearer still, I fancied I could hear their deep breathing. Every nerve and muscle in my frame was stretched to the utmost tension.

The trees along the shore seemed to dance in the uncertain light, and my brain turned with its own breathless speed; yet still they seemed his forth with a sound truly horrible, when involuntary motion on my part turned me of my course. The wolves close behind, unable to turn, slipped, fell, and went on far ahead, their tongues lolling out, their white tusks gleaming from their bloody mouths, their dark shaggy breasts flecked with foam, as they passed me their eyes glared, and they howled with rage and fury. The thought flashed on my mind that by this means I could escape them, viz., by turning aside whenever they were too near, for they, by the formation of their feet, are unable to run on ice except on a right line.

I immediately acted on this plan. The wolves having regained their feet, sprang directly toward me. The race was renewed for twenty yards; the stream; they were already close on my heels when I glided round and dashed past my pursuers. A fierce growl greeted my evolution, the wolves slipped upon their haunches, and went onward, presenting a perfect picture of helplessness and baffled rage. Thus I gained nearly a hundred yards each turning. This was repeated two or three times, every moment the wolves becoming more excited and baffled; until, coming opposite the house, a couple of stag-hounds, alarmed by the noise, bayed furiously from their kennels.

volves, taking the hint, stopped in their mad-
er, and after a moment's consideration, turned
back. I watched them 'till their dusky forms
appeared over a neighboring hill; then, taking
my skates, I wended my way to the house,
feeling better to be imagined than de-
ed."

For "The Friend."

Notions from the Unpublished Letters and Journal of a Deceased Minister.

(Continued from page 186.)

Sixth mo. 14th, 1837. Reading, the most
valent in itself, does not always incite in us
things most desirable. And I always feel it best
at times to retire patiently inward and wait
the immediate dispensation of the balm I seek.
Books were our constant companions and sought
always in intervals of mental poverty, we
d feel like to forget the prime Source of
comfort. There are times when they may cer-
tainly please pleasantly and profitably; and there
are seasons too, I think, when every consolation
such sources is withheld; and the mind
n to seek within for its requisite support.
Law written in the heart, is a lesson often to
undied; and the self-denial involved in the
order of our wills to accept the food best for
a part of the christian discipline, profitable
always pleasant to the natural will. The
ures present us with food adapted to various
ions of the mind. David knew the fluctua-
of feeling that belong in common to the
ened soul. His hopes sometimes were of the
est cast; he had only to rejoice and sing;
but there were intervals when he too,
what it was to suffer the absence of faith-
ful: 'Will the Lord cast off forever? Will
favorable no more? Are his mercies cold
forever?' Such are the mournful interroga-
of one who is significantly termed the
nd of God; and he too seemed aware of their
; but this, he says, 'is my infirmity'; and
interbalance it, he wisely determines to 're-
over the years of the right hand of the Most
' And I feel an ardent hope while writing,
by abiding steadily faithful to the promptings
ty, and suffering thy heart to be thoroughly
ed by the operations of the Spirit of Truth,
mayest find that help is indeed laid upon
that is mighty and able to save. It is worth
at deal of suffering to be able to realize the
the true christian lives in. Love, and
real charity are its foundations; and nothing
is allowed an inmate that would hurt or de-

th mo. 25th, * * * We have very many
spread before us of the uncertainty of time;
we could learn from them properly to ap-
te the passing moments, it might stand to
and when all the exciting circumstances of
life will appear in their true colors. How do
I wish that chastened seriousness might
he place of levity; and that we might evince
by our conduct and conversation, that the
was staid upon an anchor, which outward
ordly variations can neither reach nor dis-

I remember thy dear children while I am
g, with affectionate earnestness; not that I
anything now to lay to their charge, but that
very wish for them is, to become useful and
tent members of a Society that needs, deeply
such acquisitions, and that thereby they
remote and shed a healthful influence among
youthful associates, and gladden the hearts
r parents and friends, by a decided settle-
ment on the right side; the side of truth and of
ousness."

"9th mo. 15th, 1837. Autumn has again re-
turned; and it might in its recurring periods bring
to mind that our summer is passing, and that ere
long the winter of age will be upon us: a winter
as it respects the mortal part, that knows no spring.
But our concern ought to be with the immortal
and spiritual; and if we duly regard the lessons
that are sufficiently given us; properly estimate
the importance of working while our day lasts;
we may observe and realize the approach of the
closing season, with a calm, undisturbed trust.
The frosts of age, of care, or of sorrow, may blight,
and cause to fall from us the green leaves of
earthly hope and confidence; and as they deaden
and rustle in our path, so far from causing us to
sigh over their faded beauty, we may regard them
only as the harbingers of a better hope.

"S. G. with his companion J. B., accompanied
by —, came here very unexpectedly Second-
day morn. He had an appointed meeting yester-
day, and went to — to attend their meeting
to-day. S.'s minute, I believe, embraced only the
meetings composing our Quarter. He appears
fresh and lively in his Master's cause—green in
old age. It is pleasant and encouraging to meet
with those who uphold Quakerism on its primitive
basis; those who are not turned aside by the bias
of fleshly reasoning, and who are content to min-
ister of the ability immediately given."

"9th mo. 17th, 1837. I feel no capacity for
rejoicing with the unburdened, and those who
draw their short-lived pleasures from the polluted
fountains of this world: my spirit often turns from
such, heavy and sorrowful. But to the heart,
mourning over its own sins, and bowed under a
sense of its infirmities, and almost wearied with
the conflicts, and difficulties, and fears, that assail
it at times almost to despair—with these I desire
to be united in the closest fellowship; and some-
times venture to rejoice in the feeling, as at least
one little evidence of remaining life.

"I discover the scroll written 'within and with-
out with mourning,' is still spread before thee,
and that thou art almost ready to sink under the
weight of discouragements that surround. But
thou wilt not forget it has been the christian's
portion in all ages of the world. David says, 'I
was brought low, and he helped me. He brought
me up out of an horrible pit, out of the miry clay;
and set my feet upon a rock, and established my
goings, and has put a new song in my mouth,
even glory to our God.' Doubtless this highly
favored servant often knew what it was to be
brought to sit in dark and desolate places; and
with human weakness he at such times deeply
deplored his state, lest the gracious ear was closed
against him, and regarded not his groanings; but
we find he soon had to acknowledge to better
hopes: he always came to see the Lord was his
rock and refuge, and to rejoice in Him as ever
worthy to be praised for his mercy and his truth.
When reduced to the very depths of wretchedness,
and our faith ready to fail, I know such assur-
ances sometimes fall coldly and heavily on the ear.
Unless applied by the Physician of value we feel
no union in them, comparable to the weakness
and desolation that reigns within; and 'tis doubt-
less best we should be thus taught in the school
of Christ. We must be drawn from a dependence
on ourselves, or on visible objects, if the 'life of
Jesus' prevail in us to its full extent. We can
only thus become as weaned children, and attain
that state so desirable, that resolves everything
into the pleasure of Him whose counsels are in-
scrutable. 'I, even I, am He that comforteth
you.' 'Who art thou that thou shouldst be afraid
of a man that shall die, and of the son of man
that shall be made as grass?' We see much in

scripture, corresponding with the intimations im-
mediately received, tending to draw our depend-
ence from all but the availing teacher, and show-
ing us the folly of being turned aside from our duty
by the fear or the favor of man. Indeed I some-
times almost conclude, that if we were concerned
to keep inward, and to fix our trust on the Spirit
of Truth which is indeed near all of us, sacrifices
would be prepared with a readiness we scarcely
dare anticipate, and our love to our Lord and
Master entirely prevail over the fear of man.
'Love,' the wise king tells us, 'is strong as death';
and under its influence, when we feel that our
peace with Him lies in our obedience, the chas-
tened and measurably corrected spirit almost bows
in submission, and wishes at least to adopt the
language 'Not as I will, but as thou wilt.'

"Thy fears respecting thyself seem urgent: but
thou knowest, my dear —, 'when the weeds
seem wrapped about our heads,' and every consola-
tion hidden or withdrawn, that even then we can
do nothing for ourselves; *patient submission, void
of all activity, only becomes us*; and as we thus
submit ourselves with childlike simplicity, learn-
ing obedience by the things which we suffer,
doubtless in the right time, light will rise out of
obscurity, and beauty be given thee for ashes, the
oil of joy for mourning, and the garment of praise
for the spirit of heaviness. If, in the unfoldings
of Infinite Wisdom, thou discoverest the prepara-
tion for a still stronger test of thy obedience and
love, yield, I entreat thee. Show thyself strongly
on the Lord's side, and forever discard 'shrinking
from duty's' call, or throwing in thy own reason-
ings in opposition to the clear manifestations of
the Spirit that cannot err. I do not for a moment
doubt a strong Arm is underneath for thy sup-
port, and that He who graciously awakened thee
to see the beauty of holiness, is still very near
thee to uphold, and succor, and sustain. Silence
then all creaturely reasonings, and throw thy care
upon Him, who through the mouth of his prophet
has queried, 'Who is he that feareth the Lord,
that obeyeth the voice of His servant; that walketh
in darkness and hath no light? let him trust in
the name of the Lord, and stay upon His God.'"

(To be continued.)

**Coal Mining and Mining Accidents in Eng-
land.**—An English Blue Book reports that 320,
663 men and boys are employed in 3,192 coal
mines in England and Wales. The coal brought
to the surface in 1866 was slightly in excess of
100,000,000 tons. One serious accident takes
place for every 117,537 tons, and one life is lost
for every 67,877 tons so raised throughout the
kingdom; but this average is the mean between
widely divergent extremes. The East Scotland
collieries give 190,625, and those of South Dur-
ham 129,826 tons of coal for every life they take.
West Scotland and the midland counties of Eng-
land stand pretty nearly on a par at 131,000
tons per life.

In Northumberland and North Durham, where
the seams are more fiery than any others, the rate
is one life lost for every 108,725 tons. In North
Lancashire it is one to 98,173, and in South
Staffordshire one to 94,495. In Monmouth and
South Wales the proportion is between 74,000
and 75,000, while the rest of the districts show
a diminishing yield per life, till we get to North
Staffordshire, where it is 30,387, and winds up
with Yorkshire, where it is only 22,235.

Our Lord declares he will come as a thief in
the night, in a day and hour when he is not ex-
pected. How awful will the summons be, "Stew-
ard, give an account of thy stewardship."

For "The Friend."

Beavers in Maine.

Although this animal has long since disappeared from the thickly settled portion of the United States, east of the Mississippi, yet they are still occasionally found in sequestered regions, even in the older States; a few years ago it was reported that beavers were yet to be met with in the comparatively little known mountainous portion of northern New Jersey, and the following account of their existence among the numerous lakes and wild mountain country of central Maine, has recently appeared in the *American Naturalist*. The statements are made by Henry Clapp, an experienced hunter and guide of Brownsville, Piscataquis County, of that State.

"I have caught seventy beavers. Have killed seven from one house, and left one or more. I killed five from another house, and opened the house, which was about four feet across on the inside, and two feet high. It was oven-shaped. There was but one room in it, and I never saw a house with more. The houses are sometimes round, sometimes oblong. The house is made of brush thrown into a pile, and covered with mud and sticks. The room is eaten out of the brush; that is, the brush is in a pile, and the room is made by gnawing out a part of it. The passage way is a ditch passing downward and forward into the water, and is covered with brush and mud. Right on the top of the house is a part of the roof where there is no mud on the sticks, thus leaving the wall open enough there for ventilation.

"The beaver makes his pond to enable him to bring and store his food, which is the bark of white birch, yellow birch, mountain ash, swamp maple, poplar, and willow, and perhaps some others. They throw their brush over their passage way, so that the top of it is in the water; that is, the butt of the bush is over the passage way, and the twigs of the top in the water. They cut down the trees, which are for food, and stick the butts under the brush, leaving the tops to float. If the tree is larger than one and a half inches, or two inches at farthest, the beaver cuts off the top, and drags it and the stems to his house separately. I have seen the wood as large as five inches, and three or four feet long. Have seen a white birch felled by them four inches in diameter. In the winter they come up under the ice and gnaw their bark there. Gradually in such places air collects under the ice, which is, I think, what they breathe out when they are there. I have seen one stay under water seven and one-half minutes by the watch, and have heard from a reliable man of their staying twelve to fourteen minutes. The otter will kill young beavers. I don't know of anything else that destroys them except man. Their meat is excellent, and the meat from their tail is a delicacy.

"The Dam.—I will describe one dam. It was lately built. It was six rods long; not straight across the stream, but the middle was further down stream than each end. The groundwork was of small alders, cherry trees, and bushes. Nearer the top, trees from one to one and a half inches in diameter were placed on, the butt being hauled over so as to rest on the bottom of the stream below, and the top worn into the dam. On the upstream side it was covered with moss, mud, gravel, and rocks, and some of the rocks I judge would weigh fifteen to twenty pounds. The water dripped over the dam evenly the whole length. The dam flowed the pond above, which was a mile long. It was not at a narrow place in the brook. It had been built the summer before, and in the fall while I was there, I caught six beavers there, and think I caught them all.

There were seven houses in the neighborhood, but only one of them was new. I drove them from this to one of the old ones, and then to another. This last was a mile from their dam. They began to haul wood to it. I caught none at the new house, but two at the first old house they fled to, and four at the second. I frightened them from the new house by paddling around it in my canoe. It was on an island. They work on their house, putting mud and sticks on it, till freezing weather.

"I will describe another dam and settlement of beavers, on the Restigouche River, in the northern part of New Brunswick. The pond flowed was a mile long. At the foot of the pond was a dam five feet high. Four rods below was a dam three feet high which flowed back to the first dam, raising the water against it one and one-half feet. Three rods farther down the brook was a third dam, not more than two feet high, also flowing back to the dam next above. A rod or two below was a fourth dam, not more than one and a half feet high, which flowed the water back to the third dam. There were two beaver-houses on the pond. The new one, which was the one inhabited, was one-quarter of a mile above the dam. The old one was fifty to sixty rods farther up. I killed seven beavers here that winter (1852 or 1853). I cut the second and third dams down a little at the middle so as to have a running, open stream, and caught four others there during the winter.

"I never saw more than one passage way to a beaver-house, but it was said that there were several to this house. It was, by outside measurement, twenty-one feet across at the base; and we judged it to be ten feet high, but it had the appearance of being two houses joined together. The men who opened it said it had but one room, and nine beavers were in it. I don't think the beaver uses the tail much in swimming, but it makes much use of it in diving. In trapping, we take care not to drive the beavers away from the pond before it freezes; after it freezes they leave very reluctantly. We bait with swamp maple or mountain ash. We tie the trap to a dry spruce stake, which they will not gnaw.

"The beaver weighs from twenty-five to sixty pounds; the latter weight is very large. A good beaver-skin weighs from one to three pounds; price now \$2.50 a pound."

For "The Friend."

In Friends' Library, vol. 5th, page 334, the following interesting and instructive account is recorded in the life of John Griffith, which I concluded to transcribe for insertion in "The Friend."

"About this time I had a distant view of being called into the work of the ministry; my mind being at times wonderfully overshadowed with the universal love of God to mankind, in the glorious gospel of his Son, to such a degree, that I thought I could, in the strength thereof, give up to spend and to be spent, for the gathering of souls to Him, the great Shepherd of Israel; and that I could lift up my voice like a trumpet, to awaken the inhabitants of the earth. But I found all this was only by way of preparation for this important work, and that I had not yet received a commission to engage therein. A fear and care were upon my mind, lest I should presume to enter upon this solemn undertaking without a right call; it appearing to me exceedingly dangerous to speak in the name of the Lord without a clear evidence in the mind that he required it of me; which I then fully believed he would do in his own time, which was to be waited for. From this time until I was really called into the work, I frequently had, but especially in religious meet-

ings, openings of Scripture passages, with live operations of the Divine power in my mind; a sometimes with so much energy, that I have been almost ready to offer what I had upon my mind, others. But as, through an holy awe which dwelt upon my heart, I endeavored to try my offering the unerring balance of the sanctuary, I found was too light to be offered, and was thankful the Lord for his merciful preservation, in that had been enabled to avoid offering the sacrifice fools. But when the time really came that it was divinely required of me, the evidence was so indisputably clear, that there was not the least room to doubt; yet, through fear and human frailty put it off, and did not give way thereto. But how was I condemned in myself! The divinity sweetness which had covered my mind in meeting was withdrawn, and I was left in a very poor disconsolate state, wherein I was ready to forgive, and to covenant with the Lord, that if he would be pleased to favor me again in like manner, I would give up to his requiring.

"The next First-day meeting, the heavenly power overshadowed me in a wonderful manner, in which it was required of me to kneel down in supplication to the Lord in a few words. I gave way thereto, in the dread of his power, with fear and trembling. After which, my soul was filled with peace and joy in the Holy Ghost, and I was singing and making sweet melody in my heart to the Lord. As near as I remember, I was twenty-one years of age the very day I first entered into the great and awful work of the ministry; which was the 21st of the Fifth month, old style, 1734.

"I have found my mind engaged to be so much particular concerning the manner of my entering into the work of the ministry, to stand in way of caution and proper encouragement others, who may pursue the same; having in course of my observation, had cause to fear that some have taken the work of preparation, before hinted, for the thing itself; and to have proceeded very far, to their own great wrong, and the hurt of others, in bringing forth untimely fruit, which is exceedingly dangerous, and carefully to be avoided. Nothing is a sufficient guard to preserve therefrom but keeping a single eye, through the divine blessing, a fully considering what a great thing it is for us, and ashes to speak as the Apostle Peter directs: viz. 'as every man hath received the gift, even so minister the same one to another, as good stewards of the manifold grace of God. If any man speak let him speak as the oracles of God; if any man minister, let him do it as of the ability which God giveth.' The author to the Hebrews said: 'that no man taketh this honor to himself, but he that is called of God, as was Aaron.' So if whatever some may pretend to, and intrude the selves into, unless they are really called of God, they have no share in that honor that comes from God only.

"The church of Christ hath not been without its trouble from false ministers, neither in the primitive times, nor in ours. That excellent inspired liberty in which all who feel themselves grieved thereunto, whether male or female, speak or prophesy, one by one, hath been a still is, abused by false pretenders to divination; yet the liberty ought to be preserved inviolable, and other means found out to remedy this great inconvenience; which would not be difficult, were the members in a general way spiritually minded, rightly savouring the thing that be of God. Forward and unsolicited perances by way of ministry would then be exposed and suppressed, so as not to disturb the peace of the church."

A Steam Man.

The old adage which proclaims that "there's being new under the sun," has been daringly yet successfully refuted. Zadock Deddrick, Newark machinist, has invented a man; one moved by steam, will perform some of the important functions of humanity; that will, in direction, and at almost any rate of speed, wing after him a load, whose weight would be the strength of three stout draught horses. History of this curious invention is as follows: six years ago Deddrick, the inventor, who is now at twenty-two years of age, conceived novel idea of constructing a man that should give it vitality from a perpetual motion machine. The idea was based on the well-known mechanical principle, that if a heavy weight be placed at the top of an upright, slightly inclined vertical, gravitation will tend to produce horizontal as well as a vertical motion.

The project was not successful. However, by giving carefully the cause of the failure, preparing and perfecting the man-form, and by substituting steam in place of the perpetual motion machine, the present success was attained. The man stands seven feet nine inches high, the dimensions of the body being correctly proportioned, making him a second Daniel Lambert, by which name he is facetiously spoken of by the workmen. He weighs five hundred pounds. Steam is generated in the body or trunk; it is nothing but a three-horse power engine, those used in our steam fire-engines. The which support it, are complicated and wonderful. The steps are taken very naturally, and easily. As the body is thrown forward, the advanced foot, the other is lifted from the ground by a spring, and thrown forward by team. Each step, or pace, advances the two feet, and every revolution of the engine costs four paces. As the engine is capable of making more than a thousand revolutions a minute, it would get over the ground, on this calculation, at the rate of a little more than a mile a minute. As this would be working the legs, than would be safe on uneven ground, or road strewn with cobble stones, it is proposed to use the engine at the rate of five hundred revolutions per minute, which would walk the man at modest speed of half a mile a minute.

The fellow is attached to a common Rockaway gear, the shafts of which serve to support him in a vertical position. These shafts are two of iron, which are made fast, in the usual manner, to the front axle of the carriage, and are carried, so as to be joined to a circular support bar, which passes around the waist, like a belt, and in which the man moves, so as to go in any direction. Besides these motions, the man is arranged by which the figure can be thrown backward or forward from a very nearly forty-five degrees. This is done in order to enable it to ascend or descend all grades. The soles of the feet spikes or corks are fixed, so as to effectively prevent slipping. The whole is so firmly sustained by the shafts, and has so excellent a foothold, that two men are unable to move it over, or in any way throw it down. In order to enable it to stop quickly, it is provided with two appliances, one of which will, as stated, throw it backward from the vertebrae; the other bends the knees in a direct opposite to the natural position.

In upright post, which is arranged in front of the body, and within easy reach of the hands, sustains two miniature pilot wheels, turning of which these various motions and

evolutions are directed. It is expected that a sufficiently large amount of coal can be stowed away under the back seat of the carriage, to work the engine for a day, and enough water in a tank under the front seat, to last half a day.

In order to prevent "the giant" from frightening horses by his wonderful appearance, Deddrick intends to clothe it, and give it, as nearly as possible, a likeness to the rest of humanity. The boiler, and such parts as are necessarily heated, will be encased in felt or woollen under garments. Pants, coat, and vest, of the latest styles, are provided. Whenever the fires need coaling, which is every two or three hours, the driver stops the machine, descends from his seat, unbuttons "Daniel's" vest, opens a door, shovels in the fuel, buttons up the vest, and drives on. On the back, between the shoulders, the steam cocks and gauges are placed. As these would cause the coat to sit awkwardly, a knapsack has been provided, that completely covers them. A blanket, neatly rolled up and placed on top of the knapsack, perfects the delusion. The face is moulded into a cheerful countenance of white enamel, which contrasts well with the dark hair and moustache. A sheet-iron hat, with a gauge top, acts as a smoke-stack.

The cost of this "first man" is \$2000, though the makers, Messrs. Deddrick & Grass, expect to manufacture succeeding ones, warranted to run a year without repairs, for \$300. The same parties expect to construct, on the same principle, horses, which will do the duty of ten or twelve ordinary animals of the same species. These, it is confidently believed, can be used alike before carriages, street cars, and ploughs. The man now constructed, can make his way, without difficulty, over any irregular surface, whose ruts and stones are not more than nine inches below or above the level of the road.—*Late Paper.*

The "Walled Lakes" of Iowa.

The unusual situation and appearance of these curious bodies of water have led to no little discussion and speculation. The mystery appears to be satisfactorily disposed of by White, State geologist of Iowa, in a late communication to the *Dubuque Herald*. He says:

"From time to time, during the last ten or fifteen years, the public have been treated to accounts of the so-called walled lakes of northern Iowa, one of them being situated in Wright and the other in Sac county, and almost every writer seems to have entertained the belief that the 'walls' were the work of human hands, and those were the hands of a departed race of men who, ages ago, inhabited that region. While making examinations of the peat marshes of that part of the State during the past season, I had excellent opportunities to examine both of the lakes just named, as well as others of the same character, fourteen in number, of which the following is the list:

1. Clear Lake, Cerro Gordo county.
2. Rice Lake, Worth county.
3. Silver Lake, Worth county.
4. Bright's Lake, Worth county.
5. Crystal Lake, Hancock county.
6. Eagle Lake, Hancock county.
7. Lake Edward, Hancock county.
8. Lake Mary, Hancock county.
9. Lake Flora, Hancock county.
10. Owl Lake, Humboldt county.
11. Lake Gertrude, Wright county.
12. Lake Cornelia, Wright county.
13. Elm Lake, Wright county.
14. 'Wall Lake,' Wright county.
15. Twin Lakes, Calhoun county.
16. 'Wall Lake,' Sac county.

Almost every one of these lakes presents the same phenomena, and is just as worthy the name of 'walled lake,' as those are concerning which

so much has been said. They vary from half a mile to five miles in length, some of which are beautiful little sheets of water, but others are so grown up with wild rice and rushes that they are quite uninteresting in appearance, and all of them are shallow. The region where most of them exist has a gentle, undulating surface, and the depressions between the numerous rounded elevations not communicating so freely with each other as the depressions in well drained regions do, many of them have become occupied by peat marshes and small lakes, which drain into the upper branches of the rivers that rise in or flow through that region.

The 'walls,' or, more properly, embankments, are really very interesting natural objects, and it is not surprising that they have attracted some attention. They vary much in height and width, as well as in the materials which compose them; sometimes they are principally of boulders, but more often of sand, gravel and earthy material thrown out of the bed of the lake. In many instances where a peat marsh extends out like an arm of the lake, it is entirely separated from it by an embankment of turf thrown up by the same agency, but of turf, because that, and no other material, was within reach of the ice. These turf embankments sometimes have a growth of willows upon them, and have been called beaver dams; but beavers never attempt to dam still waters. They dam running streams to obtain ponds of still water. These turf embankments very much resemble the material thrown out of a ditch in draining a marsh, but their origin is unmistakable. When the embankments are composed principally of boulders, they are usually thrown up from two to four feet high, and from five to fifteen feet wide, and imbedded in sand, gravel and earth, the outside of the embankment being usually as steep as the inner or lake side; and the latter often faintly resembles an artificial levee. Although they sometimes have a degree of regularity, the boulders which compose them are never arranged in any order, nor is there an appearance of any work of art upon them.

The water in these lakes is almost always low in the latter part of the year, and the frosts of winter still further reduce the actual depth, so that very little unfrozen water remains in some of them. This is often known to be the case, and only a few winters ago nearly all the fish of Wall Lake, in Wright county, were killed by that means.

It is evident that wherever the ice became frozen to the bottom of the lake, it would freeze fast to, and in many instances inclose the boulders and gravel which were strewn upon the bottom. Now when spring returned, the ice being raised by the rains and melting snows, would be carried with its burdens to the high water shore by the prevailing wind. Let this process be repeated year after year, from age to age, and it is evident that all the boulders within reach of the ice would be taken up and carried to the shore, and left exactly where the force of the ice ceased to act. Added to this, the almost constant dashing of the waves against the beach during the warmer parts of the year would have the effect of carrying out large quantities of gravel and sand, which would completely imbed the boulders. There is also another cause which doubtless assisted more than any other in giving the embankments their definite form.

The whole surface of these lakes freezes up almost simultaneously, and to a considerable depth. Now the natural expansion of a solid cake of ice, from half a mile to five in diameter, has, as every one knows, enormous power, quite equal to any amount required to throw up any and all the

boulders we find in the embankments, or crowd them quickly against the steeper shores. No natural force would bring them back again, and the annual repetition of the forces above referred to affords sufficient explanation of the phenomena.

It may be thought by some that the processes described would be too slow to produce the results which we see, but slowness is quite in keeping with the mightiest operations of nature. 'The mills grind slowly, but they grind exceedingly fine.'

The shores of Crystal Lake show two sets of embankments, showing that at a remote period the lake occupied a higher level, and that its surface was lowered by the deepening of its outlet, when the second embankment was formed.

Seeing, then, that the origin of these embankments can be accounted for by the action of natural forces alone, it is difficult to understand how any one could suppose the human hand had anything to do with their construction.

Excellence is never granted to man, but as the reward of labor. It argues no small strength of mind to persevere in the habits of industry, without the pleasure of perceiving those advantages, which, like the hands of a clock, whilst they make hourly approaches to their point, yet proceed so slowly as to escape observation.

THE FRIEND.

SECOND MONTH 8, 1868.

SUMMARY OF EVENTS.

FOREIGN.—Dispatches from Senegal announce that the British expedition for the invasion of Abyssinia was on its way to Ontalo the capital of the Tigre District. The Egyptian troops had been recalled at the request of the English government. Ferret's marines on the 3d inst. Consols 93½. U. S. 5-20's, 72½. Middling upland cotton, 11½. Breadstuffs firm and unchanged.

The bill regulating the press is opposed in the French Legislature. The Paris journals express the fear that the final result will be the extinction of whatever liberty the press of the country still possesses. Thiers, in a speech of great power, in opposition to the new law, urged the importance of allowing entire freedom to the press. One division of the French troops is about returning from Rome to France, the remainder of the forces will remain in Rome under the command of General Dumout.

Internal condition of Italy is becoming critical, and it is believed in Paris that the relations between the French and Italian governments are not so cordial as they have been. The policy recently adopted by Prussia on the Roman question has caused surprise, but an explanation of this course is found in the fact that in sustaining the temporal power of the Pope the Prussian government finds powerful means of conciliating its Catholic subjects, and of strengthening its influence over the Catholic States of South Germany. It is now considered certain that the General Council of the Roman Catholic Church will assemble at Rome in the latter part of this year. It is stated that the Italian government is about to send out a naval expedition to the Rio de la Platte, South America. Nothing is known as to the object of this movement. Meanwhile, when interrogated, declined to give any explanation.

Dispatches from Athens give accounts of another battle between the Turks and Cretans, in which the latter were successful.

In accordance with the expressed determination of the Spanish government to uphold the temporal power of the Pope, steps have been taken in Madrid for the formation of a corps to be known as the "Papal Legion."

A Copenhagen dispatch of the 2d inst. says: King Christian has signed the treaty with the United States

for the sale of the Danish West India Islands, and a special courier has left this city for Washington with the document.

A Berlin dispatch of the 2d says: A bill has been introduced by the government to grant large indemnities to the King of Hanover and the Duke of Nassau, and has passed the Diet. Much opposition was shown to granting the appropriations, but toward the close of the debate on the subject, Bismarck declared that if they were not adopted he would be compelled to dissolve the Prussian Diet, and threaten to effect.

The cholera, which has made sad ravages in Buenos Ayres, has subsided to a great degree, and its entire eradication is confidently anticipated at an early day. The disease, however, still prevails to an alarming extent in the allied army, on the Paraguay.

There has been no fighting since the departure of the last French troops from the city of Rome, remained at Humaita, and his forces are well supplied with provisions and munitions of war.

A severe famine prevails at Tangier and Tetuan, in Morocco, and a similar condition of things exists in Tunis. No adequate measures of relief are provided, and it is said that hundreds of persons die daily from absolute starvation.

UNITED STATES.—Congress.—The supplemental reconstruction act is still under discussion in the Senate. The House bill for the taxation of shares of national banks in the places where the banks are located, has passed the Senate. The resolution of the Legislature of Colorado, asking admission to the State, has been presented. The bill for the sale of the iron-clads was passed, with an amendment providing for the retention of a portion of them. The Judiciary Committee of the House of Representatives has been instructed to investigate a statement which has been publicly made that one of the Judges of the Supreme Court had stated in conversation that the reconstruction laws of Congress are unconstitutional, and that the court will pronounce them so. The bill concerning the rights of American citizens in foreign countries has been debated in the House. A joint resolution of the General Assembly of Ohio withdrawing the ratification by that State of the proposed fourteenth constitutional amendment, and requesting the return of all papers giving assent to said proposition, was received and referred to the Judiciary Committee. Among the bills offered is one to continue the Freedmen's Bureau for one year after 7th mo. 10th, 1868.

Philadelphia.—Fidelity last night, 235. Of consumption, 3½; consumption of the lungs, 20; palsy, 81; old age, 9. The mean temperature of the first month, according to the record kept at the Penna. Hospital, was 30.12, which is about 4½ deg. higher than that of the first month, 1867. The highest temperature of the month was 45°, and the lowest 11°. The amount of rain 3.52 in. The average of the mean temperature of the first month for the past seventy-nine years, is stated to be 31.15 deg. The highest mean during that entire period occurred in 1790, and was 44°, the lowest in 1857, when it was only 22.37 deg.

The South.—The several State Conventions continue in session, engaged upon the important business for which they were assembled.

General Carlin, Assistant Commissioner of the Freedmen's Bureau of Tennessee, has made a tour of inspection to Memphis and Chattanooga, and reports complaints of hard times among all classes and complexions. General Scott, of the Freedmen's Bureau in South Carolina, reports that not fewer than one hundred have made more than their provision for this year, and many are in debt to the planters, and therefore will be unable to support themselves.

In the cotton-growing districts the colored people will suffer to some extent, but General Carlin says it will prove to be a blessing, and that actual starvation will appear so forcibly to their reason, and impress on their minds the necessity of economy and prudent living. He will not take steps to provide for the wants of these people until it becomes absolutely necessary, except at Memphis, where many sick and destitute arrive from all quarters. He thinks there is more suffering and suffering the clamor about destitution in the South. There is lawlessness, lawlessness and dishonesty in abundance, and he hopes the government will disregard all attempts to induce it to lend money to planters, taking liens, &c.

General Carlin says a great national work could be undertaken by the government to aid the immediate and distant South, by giving employment to the white and black, and the advantage of the whole country, by rebuilding and repairing the levees along the Mississippi, and all the idle men in the South who are willing to work could find profitable employment, and the most fertile portion of the cotton and sugar lands could be reserved to cultivation.

It appears from the report of the Washington Prudent Aid Society, that six or seven thousand persons, mostly colored, in that city receive their daily food from that association.

Miscellaneous.—The Secretary of the Interior has made a contract with James F. Joy, of Detroit, for the sale of all the unoccupied Cherokee neutral lands in Kansas, at a uniform rate of \$1 per acre.

On the 30th ult., while some two or three hundred people, men, women and children, passengers by Ohio and Mississippi Rivers, and that were crossing the Mississippi river on foot to St. Louis, the ice suddenly broke loose from the shore and floated down the river. Happily the great field of ice did not break, and floating some distance down the river it pressed a steamer on the Missouri shore, from which plank pushed out and the terrified people were rescued. The people on this point, however, are now in progress for the construction of a dam.

On the night of the 29th ult., a most destructive occurred in Chicago, destroying many buildings and much merchandise. The total loss is computed at \$2,500,000, in which there was insurance to the amount of \$1,700,000.

The Markets, &c.—The following were the quotations on the 3d inst. New York.—American gold U. S. sixes, 1881, 111½; ditto, 5-20's, new, 107½; 10-40, 5 per cents, 104½.
